Address of President Truman

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by President Truman at a luncheon of the National Conference of Christians and Jews in Washington yesterday, as recorded and transcribed by the New York Times from a radio broadcast:

I congratulate the National Conference of Christians and Jews on another year of widespread and effective work in the cause of human brotherhood at home and abroad. I assure you of my support and enthusiasm for your program for the coming year, and, in particular, for your brotherhood week, which is to be held next February.

I know of no organization that renders greater service to the basic principles on which this country is founded than the National Conference of Christians and Jews. This country is founded upon an ideal—the ideal of the equality of men before God and under the law.

On the basis of this ideal, we have created a nation composed of people from many lands with many faiths and many beliefs. Here in this country men of different traditions and different faiths have worked together for the common good.

I have just come from the National Cemetery at Arlington, where I laid a wreath on the grave of an American hero. No American knows, no real American cares, whether that man was a Catholic, a Jew, or a Protestant, or what his origin or color were. That grave—the Grave of the Unknown Soldier—symbolizes our faith in unity.

We have achieved our unity in this country, not by eliminating our differences in religion and tradition, not by hiding or suppressing our political and economic conflicts, but by holding to a concept, which rises above them all, the concept of the brotherhood of man.

FIRST STEP OF ENEMIES

The first step of every enemy of this country has always been to attempt to separate the different strands of faith and belief out of which this Nation has been woven. Our enemies have tried to set up group against group, faith against faith—to create prejudice and to spread hate and distrust among our people.

The great service of the National Conference of Christians and Jews is to fight against the forces of intolerance, to bring light to the dark byways of prejudice, and to spread the spirit of tolerance and brotherhood which unites our country. This is a great patriotic service, and the country is indebted to the men and women in this organization who have given so much of their effort and substance in performing it.

In looking over your record of performance for the last year, I have been impressed by your comprehensive day-to-day program of education. Your efforts to promote understanding and eliminate prejudice have extended to almost every kind of organization in our society. You have reached not only the schools and colleges, not only the churches and synagogs, but factories and shops, the press, the radio, and the movies, and organizations of veterans, women, and young people.

You will, I am sure, go on to reach more of these groups and bring your message to every agency that helps shape those attitudes of mind which are important to good citizenship.

This fine work by your organization will reach its peak again next February in Brotherhood Week. I am happy to have the opportunity to serve again as honorary chairman of that event. I am sure that it will be a notable success under the leadership of my friend John Sullivan, former Secretary of the Navy, and with the help of those associated with him, who are gathered here today and who are listening in.

STRENGTH IN PRINCIPLES

The greatest strength of this organization lies in its fundamental principles. The National Conference of Christians and Jews has rightly recognized that the true foundation of the brotherhood of man is belief in God. The only sure bedrock of human brotherhood is the knowledge that God is the father of mankind.

In the history of the world, there have been some movements inspired by a desire for brotherhood and greater justice among men which have denied or forgotten the religious foundation of those ideals. Sooner or later these movements have wavered and lost their way.

They have become self-centered; they have set up their own interests as the only standard of right and wrong, and they have degenerated from movements of liberation into movements of tyranny and oppression. We can succeed in achieving brotherhood only if we acknowledge that the ideal of brotherhood is something outside or above us, something by which we in our turn will also be judged.

All the great religions represented in this organization, whatever their differences, acknowledge this belief in God as the father and creator of mankind. For us, therefore, brotherhood is not only a generous impulse but also a divine command. Others may be moved into brotherhood only by sentiment. We acknowledge brotherhood as a religious duty.

All the faiths represented here claim as a common heritage the great thoughts of the Hebrew prophets. The prophets were among the first of men who saw that the concept of the fatherhood of God required men to do justice to one another. They called on the people of their day, just as they call on us today, not only to recognize the humanity of others but also to work unceasingly for the achievement of a greater justice in human relations.

Those of us who believe in God, therefore, can never be content to live for ourselves alone. We must always be working to eliminate injustice, and to create a society which carries out our ideals.

If we look at ourselves in the true spirit of brotherhood, we must acknowledge that in the United States there are instances of discrimination and injustice because of difference in color, religion, or national origin.

But we are working diligently to overcome these violations of the fundamental faith which holds us together. It is encouraging to see that Americans all over the country are growing more and more aware of the importance of this problem.

ASKS LAWS FOR GREATER JUSTICE

I have asked that our Federal Government take an active part in this effort to achieve greater justice. I have called for legislation to protect the rights of all its citizens and to assure their equal participation in national life, and to reduce discrimination based upon prejudice. In view of the fundamental faith of this country and the clear language of our Constitution, I do not see how we can do otherwise than adopt such legislation.

We must strive abroad, as well as at home, to defend human rights and to expand the enjoyment of freedom. We have taken a firm stand in the councils of the United Nations against the violation of human rights. With the help of your organization and others like it, we have been able to play an important part in the United Nations in developing such historical international documents as the Declaration of Human Rights and the Convention on Genocide.

Furthermore, we realize that economic progress is essential to the peace and brotherhood that we desire for all mankind. That is why we are striving with other nations to create world economic conditions in which people may achieve freedom and dignity.

That is why we are undertaking our program of economic assistance and putting forward our proposals for helping underdeveloped regions of the world to achieve a better standard of living through their own efforts.

The task of achieving greater justice and freedom will be long and it will be difficult. The beliefs on which we have founded our form of government and our hope of a better world are under attack. In various parts of the world today human rights and freedom are being deliberately violated and

suppressed. Men and women are being systematically persecuted for their religious beliefs. Campaigns are being waged to turn religion into the tool of the state.

These things are not only morally wrong, they threaten to undo the slow and hard-won achievements of civilization. They represent a new barbarism, more terrible than that of ancient times. These are the acts of men who conceive of other men as slaves and not as brothers.

My friends, I am doing everything of which I am capable to organize the moral forces in the world to meet this situation. I am trying to get all those people who look up and who know that there is a greater power than man in the universe to organize themselves to meet those who look down and who are strictly materialistic. That's what we are up against.

The defense of mankind against these attacks lies in the faith we profess—the brotherhood of man and the fatherhood of God. Men and women who have this faith will refuse to bow to force. They will refuse to worship the power of the state.

They will refuse to set their own nation or their own group above criticism. For they understand that above all these works of man there is the eternal standard of God by which we shall all be judged.

It is only the people of religious faith throughout the world who have the power to overcome the force of tyranny. It is in their beliefs that the path can be found to justice and freedom. Their religious concepts are the only sure foundation of the democratic ideal.

To them, therefore, we must extend the hand of brotherhood. This is a task for all men of good will, working together everywhere. There can be no higher challenge than to build a world of freedom and justice, a world in which all men are brothers. That is the goal toward which we must strive with all our strength.

Sustained and strengthened by one another, we can go forward under God to meet and overcome the difficulties which confront us. With His help mankind will come at last to a world where peace, freedom, and justice will be enjoyed by all people everywhere.

A Fitting Memorial

EXTENSION OF REMARKS

OF

HON. JAMES W. WADSWORTH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. WADSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and article from the Buffalo Courier-Express of Sunday, January 1, 1950:

A FITTING MEMORIAL

Two weeks from today—January 15—the $20,000,000 veterans hospital will be dedicated. This new facility will mean a great deal to Buffalo as well as to the veterans it will serve. But to have it known only as the Veterans' Administration Hospital in Buffalo or the Buffalo VA Hospital seems a mighty cold proposition. For this reason we strongly urge that it be given a more significant name.

The search for an individual to be honored, and at the same time one whose name would honor the hospital itself, brings us to one conclusion. Buffalo had just such a man. He served with distinction in World War I, rose from private to major, was wounded in action and won the Distinguished Service Cross for heroism. In World War II he also served with distinction; but this time he did not wear a uniform, though he had much to do with building the great military machines which forced aggressors to their knees at opposite ends of the world. Last year, weakened by overwork in behalf of his country, he died.

We therefore urge the Congress of the United States, which will convene day after tomorrow, to name the new hospital for a former Member of that body—to have it known as Walter Gresham Andrews VA Memorial Hospital.

We have already mentioned that Walter Gresham Andrews won the Distinguished Service Cross for bravery in action as he led an attack of the machine-gun company of the One Hundred and Seventh Infantry on the Hindenburg line on September 29, 1918, but we have not enlarged on the service he gave the armed forces during his 18 years in the House of Representatives. During World War II he was the ranking minority member of the House Military Affairs Committee. In the Eightieth Congress he was the chairman of that committee. Later he became chairman of the Armed Services Committee when that was formed to include Army, Navy, and Air Force affairs under unification. It was the tremendous work involved in this high position that weakened his heart, forced his resignation from Congress, and brought about his death last year. This record, to our way of thinking, makes Walter Gresham Andrews a veteran of veterans.

To stress another point, let us quote from a statement made by the late Defense Secretary James Forrestal:

"Regardless of political affiliation, all those in Government who have known Representative Andrews will learn with regret of his decision to withdraw from public life. Throughout his career, first as a member of the Military Affairs Committee of the House and then as chairman of the Armed Services Committee of the same body, he has rendered great public service."

We agree with Secretary Forrestal. Regardless of Representative Andrews' political affiliations, there should be no quibbling in Congress over naming the hospital as his memorial. We do not believe the men he led in battle against the Hindenburg Line asked if he was a Democrat or a Republican. They knew he was a brave soldier—and he was a brave veteran in later years, too.

These are the best of reasons for Congress to pass an act naming the VA hospital in memory of Representative Andrews. It would be fine if it could be done before the dedication 2 weeks hence. But whether it be done before or after dedication, Congress will be honoring itself as well as Mr. Andrews, Buffalo, and the veterans when it is done.

PFEIFFER PLANS BILL TO HONOR REPRESENTATIVE ANDREWS—MEASURE SLATED FOR INTRODUCTION TUESDAY WOULD PUT LEGISLATOR'S NAME ON VA HOSPITAL

(By Lucian C. Warren)

WASHINGTON, January 1.—Representative WILLIAM L. PFEIFFER, of Buffalo, tonight announced he would follow up immediately the Courier-Express proposal to name Buffalo's veterans hospital in memory of the late Representative Walter G. Andrews by offering a bill in Congress. He said a bill to provide the necessary authorization will be introduced Tuesday, the opening day of the second session of the Eighty-first Congress.

"The naming of the Veterans' Administration hospital in Grover Cleveland Park, Buffalo, in honor of Congressman Andrews," said PFEIFFER, "would be not only a fine but really fitting tribute to a man whose outstanding devotion to his country is hard to match."

The Pfeiffer bill follows the suggestion of a page 1 editorial in Sunday's Courier-Express advocating that the late Mr. Andrews' distinguished service in combat in World War I and as chairman of the House Armed Services Committee in World War II be recognized in the name to be given Buffalo's magnificent new $20,000,000 veterans' hospital.

It is the hope of PFEIFFER, who succeeded to Andrews' post as Representative of the Forty-second Congressional District, that the bill may go through Congress quickly enough to be in time for the dedication of the hospital January 15. He said he would do his utmost to have the bill passed in record time, but that if it is not enacted in time for the dedication he would continue to push for its passage until it becomes law.

The Veterans' Administration today made it clear that an act of Congress is required before the hospital can be named after Andrews.

The VA pointed out that two hospitals have been named for individuals, both through an act of Congress. One is the Royal C. Johnson Memorial Veterans Hospital at Sioux Falls, S. Dak., recently opened. In this case there was a background very similar to the proposed Andrews Memorial Hospital. Johnson was a former Congressman and a hero of World War I. The late Representative Andrews received the Distinguished Service Cross in World War I and also worked for veterans' interests as a long-time member of the House Military Affairs Committee and the first chairman of the House Armed Services Committee in the Eightieth Congress.

PEEKSKILL HOSPITAL CITED

The other hospital named for an individual is the Franklin Delano Roosevelt Memorial Veterans Hospital, now under construction at Peekskill. Several hospitals constructed during the war by the Army are known informally by the names given by the Army, though VA officials designate these hospitals by the names of the cities in which they are located rather than the Army name.

In announcing that he would sponsor legislation for the proposed Andrews Hospital, Representative PFEIFFER issued this statement:

"Ham Andrews loved the United States of America. He was my friend for over 20 years and I believe that many people still do not realize the important part he played in establishing and maintaining our national defense.

"He was almost a professional soldier. After he won the Distinguished Service Cross in World War I, Ham Andrews became determined that his services to the country were not ended but instead had only begun.

"As a Member of Congress—a Member whom I have the privilege of succeeding—Ham Andrews was able to understand exactly what was needed to maintain a well balanced national-defense organization. He was a major contributor in the writing of the Unification Act and a firm believer that unification was vitally needed in order to provide the country with the best possible system of national defense. This work sapped his strength and was a contributing factor to his untimely death.

"He was well liked by both officers and enlisted men. His knowledge of military matters was highly respected by the President, Cabinet members, and Members of Congress.

"By naming the new Veterans' Administration hospital in memory of Ham Andrews we will be performing a duty—a duty of giving credit to a person who devoted his life to the preservation of his country and fellowmen."

Resolution of Hospital Industries' Association

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include the following resolution of the Hospital Industries' Association, which I have been requested to insert in the RECORD:

Whereas the manufacturers and distributors of hospital equipment and supplies, operating under a system of free enterprise, have established the world's highest standard of scientific performance, treatment, and research, thereby helping the United States to become the healthiest major Nation in the world; and

Whereas the benefits of American medicine have been made available to the people of this country through budget-basis voluntary health insurance, the best health insurance which exists in the world; and

Whereas the experience of all countries where government has assumed control of medical services has shown that there has been a gradual erosion of free enterprise and a progressive deterioration of medical standards and medical care to the detriment of the health of the people: Now, therefore, be it

Resolved, That the Hospital Industries' Association does hereby go on record against any form of compulsory health insurance or any system of political medicine designed for national bureaucratic control.

That a copy of this resolution be forwarded to the President of the United States, to each Senator and Representative now in the Congress of the United States, and that said Senators and Representatives be and are hereby respectfully requested to use every effort at their command to prevent the enactment of such legislation.

That copies of this resolution be transmitted to the Presiding Officer of the United States Senate and the United States House of Representatives and to the National Education Campaign of the American Medical Association at 1 North La Salle Street, Chicago, Ill.

THOMAS G. MURDOUGH,
President.
GEORGE J. HOOPER,
Secretary-Treasurer.

State Medicine or the American Way?

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Memphis Commercial Appeal of May 29, 1949:

STATE MEDICINE OR THE AMERICAN WAY?

While it is unlikely that anything in the nature of a national health plan will be adopted by the Congress between now and early summer adjournment, the number of pending bills, plus the administration's continuing, intensive pressure, indicates very clearly that an ultimate decision will probably be made in the next session.

In the meantime, the American people owe it to their well-being to familiarize themselves with the various proposals and to weigh them, so far as is possible, in light of Britain's experiment in state medicine.

The people are going to have to decide whether they want similar, complete medical regimentation for which they will foot the tremendously heavy bill through new taxation, or whether they intend to continue to care for themselves and others in the traditional American manner—voluntarily.

The counterpart of the far-from-successful British plan is the Truman "cradle-to-grave," compulsory scheme to be financed by every American worker and employer, and which would provide state medicine for rich and poor alike.

This is the plan which has inspired greatest opposition, not only from the medical fraternity and thinking Members of the Congress, but from millions of Americans alarmed by the socialistic trend of Washington maneuvering.

There is little, if any, disagreement anywhere on the point of the Nation's need for better medical coverage—for improved public health programs, more medical schools, more doctors, more technicians, and more nurses.

The controversy is on how the needs can be met in the best American manner.

Under the administration's scheme, which, in the final analysis, would be politically controlled, everybody would get everything in the book—from false teeth to bifocals—from "a" to "izzard" in anatomical and mental care. That is what is promised. There is no guarantee of delivery.

The financing of this grandiose scheme would be threefold. The worker would contribute 1½ percent of his wages up to the first $4,800 annually. Another 1½ percent would come from employers. General tax funds in the United States Treasury would provide still another 1 percent. Those who paid nothing into the fund would get the same care as those who did.

Treatment could be general or specialized—in the home or at a hospital, and at the latter would include every type of service the well-equipped hospital could give. Doctors and hospitals could decide whether they wanted to take the patient.

Payment to doctors would be either on a fee or per capita basis. The Government would decide the amount. The number of patients to be served by one doctor would be determined by local committees.

The present grants-in-aid to States would be increased from the present $75,000,000 to $150,000,000 a year as a means of increasing hospital facilities.

To meet the need for more doctors the administration scheme would provide medical school aid of $300 a year for each enrollee up to past average enrollment. Beyond that the aid would be $1,700 for each new student. Other aid formulas are established for public health and sanitary engineering schools, dental and dental hygiene schools.

Construction and equipment needs along the school line would be met by a 50–50 matching fund plan. Funds would be provided for scholarships, too.

Monetary nurse training aid would be supplied at a rate of $200 a year for each student up to the average enrollment point and $1,200 annually above that point.

Research institutes would be established for special fields; grants and loans would be made to provide rural area services; for experimental undertakings financial aid is authorized for farmers' health cooperatives. The administration bill authorizes an expenditure of $70,000,000 for this purpose alone over a 5-year period.

Local health programs in both treatment and training categories would be financially aided.

The boss of all this would be the politically appointed National Security Administrator. The cost, says the Administration, would be $6,000,000,000. The amount would probably be astronomically greater.

Divided Ireland

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Daily Globe of November 29, 1949:

DIVIDED IRELAND

One of the embarrassments of being a statesman, and making frequent professions of fealty to principles of government, based upon the expressed will of a majority of the people in any country, is that some of those people may take you at your word. The inspiring thesis you propounded to rally support for your policy in far places comes, as it were, home to roost.

"Your policy," spokesmen for a small state at your doorstep rise to remark, "your policy is admirable. We concur heartily. We agree that every country has a right to its own unity when history, geography, and the will of the majority of its inhabitants fortify claim to that unity. We agree that the more unity in the world today, the better for all concerned.

"We acclaim your insistence that the selection of free government is, and ought to be, the concern of the people who are to be governed; and that it should not be a prerogative exercised by some powerful neighbor, which maneuvers a minority regime into the saddle and then rigs arrangements to insure their continuance in power.

"With all these admirable utterances of yours, we find ourselves in complete agreement. Will you now be good enough to inform us when you propose to apply them to the small nation for which we speak? Surely, principles so well tested, and so devoutly supported by you, are not championed solely on a geographical basis. If sound and desirable in one-quarter of the world, they cannot become a dubious matter in another. It is difficult, we realize, to get them functioning in distant lands, dominated by a monolithic despotism. But we are your neighbors."

This, in substance, is the plea being raised today in Boston by three distinguished visitors from Ireland, one from the south, the other two members of the Parliament in the six counties of the north. The issue created in the partition of their country by act of the British Parliament in 1920 has been sharpened since last May, when the present British Labor Government enacted in Commons its new statute, redefining the relationship between Eire and England consequent to Ireland's affirmation of independence.

The bone of contention tossed into Anglo-Irish relations by that act was defined in clause 1. "The Parliament," runs the statute, "hereby * * * declares that northern Ireland remains part of His Majesty's Dominion and of the United Kingdom, and

affirms that in no event will northern Ireland cease to be a part of His Majesty's Dominion and of the United Kingdom, without the consent of the Parliament of Northern Ireland."

To the harassed labor government at London doubtless this seems a logical and sensible arrangement. It may even appear to be endowed with a savor of democratic principle. The trouble with the proposal, however, is that it rests upon a basis of externally applied force in defiance of the wishes of the majority, not of southern Ireland alone, but in the north as well. Partition in 1920 did not occur by agreement. It was an external act of coercive power. Reaffirmation of partition in 1949, again by the British Parliament without consultation of the people of Ireland, clothes it with no more validity in morals or principle than it had in the first place.

London's action, as the Prime Minister of Ireland has pointed out, purports "to prevent the British Legislature itself from passing legislation dealing with a subordinate Parliament of a small area created artificially by a previous act of Parliament, an artificial area created for the express purpose of enabling a particular majority always to be in power in that Parliament." The gerrymandering of constituencies in northern Ireland's six counties in the interest of perpetuating the present set-up is notorious. Fermanagh's population is 55.3 percent in favor of reunion; but Fermanagh gets but 33.3 percent representation in the northern Parliament. Tyrone has a majority—55.2 percent—for union, but only 44.8 percent representation. Of the entire 4,248,000 population of Ireland, 80 percent want a united Ireland. Of the entire 32 counties, north and south, 30 seek union. Of 199 representatives elected to both Parliaments in the two areas, 159 want union.

The issue here involved will not wisely be ignored, either in London or Washington, if consistency be part of their political doctrine.

UNCLE DUDLEY.

Increasing Cost of Government

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include excerpts from the speech which I made some time ago before the Worcester County Selectmen's Association at Auburn, Mass.:

The war has undoubtedly contributed greatly to the expansion of the Federal Government. The demand for new social services has been another factor. Despite economy efforts there are many items in the Federal budget which cannot be reduced at this time without imperiling the national security or in some serious way affecting the welfare of the Nation.

It is also true that the cost of local and State government has followed suit. At the local level, partly because of the impact of programs initiated by the State or Federal Governments, expenditures and, consequently, tax rates have risen to an all-time high.

Thoughtful persons cannot view these conditions without gravest concern for the future. Most regrettably, the heaviest part of these tax burdens fall upon the ordinary rank and file of our people. Withholding taxes, and other taxes too numerous to mention, taking money out of the pockets of working men and women that otherwise could be used for their own improvement and security, are beginning to undermine our high standards of living which we believed were resting on a solid foundation.

The painful part of this situation is that the end is apparently not yet in sight. Current governmental deficits are steadily rising, expenditures are getting well ahead of income. During the past 15 weeks the Federal Government is reported to have spent about $2,500,000,000 more than its income. If this trend continues, by the end of the fiscal year the Nation will face a deficit of perhaps more than $5,000,000,000. This deficit will have to be made up by taxes, including onerous and shocking taxes upon our poor working people who can ill afford to pay out a larger share of their present meager incomes into the coffers of the Government.

But that is not all. Operating business throughout the State and Nation upon which our working people depend for jobs, high wages and steady work will be immeasurably penalized, hampered and discouraged by increased tax burdens. If this situation continues long enough, it is entirely possible that our institutions of private enterprise and free economic activity will be brought to a state of stagnation.

Every effort must be made in ensuing months by appropriate officials of the Government to implement existing plans for economy and the elimination of waste and extravagance. But this cannot be done without cooperation of our local and State officials who in their respective communities by intelligent courageous planning can furnish a striking example of the good results that can flow from economy and efficiency in checking and diminishing the heavy burdens of our people.

PHILBIN also dealt with aspects of the current international impasse and urged a united, coordinated front against global communism and its manifestations in the United States.

Military conquest is not the only way by which this Nation can be reduced. Systematic infiltration of Communist ideals, unsound and unwise fiscal and governmental policies, extreme and unbearable taxation can in time accomplish the same end. Your organization which has the confidence of the people where your members reside and serve can wield a direct and powerful influence in molding and mobilizing public opinion in behalf of sound progressive government. That you have achieved so well and so constructively is not only an evidence of your loyalty, energy, and ability but also a very great encouragement to all those of our rank and file who are interested in preserving the essential patterns of American life and the freedoms we have cherished since America was founded.

Christmas Eve Message of President Truman

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Boston Sunday Globe of December 25, 1949:

TEXT OF PRESIDENT TRUMAN'S CHRISTMAS EVE MESSAGE

INDEPENDENCE, MO., December 24.—The text of a talk by President Truman broadcast from here in connection with the lighting of the national community Christmas tree on the White House grounds at Washington:

"My Fellow Countrymen: To each, to all, a Merry Christmas.

"Once more I have come out to Independence to celebrate Christmas with my family. We are back among old friends and neighbors around our own fireside. Christmas is the great epic of home. Our homecoming here on this Christmas eve in familiar surroundings sanctified by family associations through the years—memories of joys and sorrows, of life and death—is typical of similar family gatherings all over the country.

"The memories of most of us go back to childhood when we think of Christmas. After all, the first Christmas had its beginning in the coming of a little child. It remains a child's day, a day of childhood love and of childhood memories. That feeling of love has clung to this day down all the centuries from the first Christmas. There has clustered around Christmas Day the feeling of warmth, of kindness, of innocence, of love—the love of little children—the love for them—the love that was in the heart of the little child whose birthday it is.

"Through that child love, there came to all mankind the love of a Divine Father and a Blessed Mother so that the love of the Holy Family could be shared by the whole human family. These are some of the thoughts that came to mind as I gave the signal to light our national Christmas tree in the south grounds of the White House.

"MUST NOT FORGET HOMELESS

"Sitting here in my own home, so like other homes all over America, I have been thinking about some families in other once happy lands. We must not forget that there are thousands and thousands of families homeless, hopeless, destitute, and torn with despair on this Christmas Eve. For them as for the Holy Family on the first Christmas, there is no room in the inn. Among these families—broken with the tragedy of homelessness—are myriads of little children who have never known what it was to have a home or a country that they or their parents or their brothers and sisters could call their own.

"Let us not on this Christmas, in our enjoyment of the abundance with which providence has endowed us, forget those who, because of the cruelty of war, have no shelter—those multitudes for whom, in the phrase of historic irony, there is no room in the inn.

"In this blessed season, let not blind passion darken our counsels. We shall not solve a moral question by dodging it. We can scarcely hope to have a full Christmas if we turn a deaf ear to the suffering of even the least of Christ's little ones.

"Since returning home, I have been reading again in our family Bible some of the passages which foretold this night. It was that grand old seer Isaiah who prophesied in the Old Testament the sublime event which found fulfillment almost 2,000 years ago. Just as Isaiah foresaw the coming of Christ, so another battler for the Lord, St. Paul, summed up the law and the prophets in a glorification of love which he exalts even above both faith and hope.

"We miss the spirit of Christmas if we consider the incarnation as an indistinct and doubtful, far-off event unrelated to our present problems. We miss the purport of Christ's birth if we do not accept it as a living link which joins us together in spirit

as children of the ever-living and true God. In love alone—the love of God and the love of man—will be found the solution of all the ills which afflict the world today. Slowly, sometimes painfully, but always with increasing purpose, emerges the great message of Christianity: Only with wisdom comes joy, and with greatness comes love.

"In the spirit of the Christ child—as little children with joy in our hearts and peace in our souls—let us, as a Nation, dedicate ourselves anew to the love of our fellow men. In such a dedication we shall find the message of the Child of Bethlehem, the real meaning of Christmas."

Construction of Jefferson National Expansion Memorial

EXTENSION OF REMARKS
OF
HON. JOHN B. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. SULLIVAN. Mr. Speaker, as the Representative in Congress from the Eleventh District of Missouri, it has been my privilege today to introduce in the United States House of Representatives, a bill providing for the construction of the Jefferson National Expansion Memorial at the site of Old St. Louis, Mo., in accordance with plans approved by the United States Territorial Expansion Memorial Commission, and for other purposes.

It is fitting that, as we enter the second half of this century, we turn our attention to the Jefferson National Expansion Memorial.

The one is a landmark of time, the other a landmark of history.

Just 145 years ago, our pioneer Nation sent forth the Lewis and Clark expedition to explore the vast territories of its breathtaking Louisiana Purchase.

Three years and four months later—long after they had been given up for lost—the small, brave group clambered up the river front shore of St. Louis.

They had accomplished their mission. It is there, on that same shore, that the city of St. Louis proposes the Jefferson National Expansion Memorial be built.

When Lewis and Clark returned from their long, silent journey, they brought with them a report of national wealth more staggering than the wildest imaginings of their time.

They had explored and charted thousands of miles of the Nation's newly acquired territory. They had mapped the great Missouri and Columbia Rivers, crossed the rugged western mountains, noted the rich, fertile soil and the fabulous reaches of timberland.

Out of their explorations, out of the daring foresight of one of our Nation's greatest Presidents, Thomas Jefferson, has grown much of our beloved and respected history, many of our great States.

To that, the river-front memorial will be a shrine.

But it also will be a symbol, a symbol of democracy and of faith in our United States.

For a tradition of our history, is our ever-present belief in the future, the belief that our freedom and the good things we enjoy and strive for must be preserved for our posterity.

This memorial, a monument to the pioneering spirit that sought out and conquered great and challenging frontiers, will remind us constantly both of our traditions and of our opportunities.

Our Nation deserves this shrine.

Address of President Truman at Dedication of the Carillon at Arlington National Cemetery

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following text of President Truman's address today at the dedication of the carillon at Arlington National Cemetery as carried in the New York Times of December 22, 1949:

Here in Arlington National Cemetery, in the presence of our war dead, we have come to consecrate a carillon.

In their nightly hymn, the bells of the carillon will sing of our faith in the kinship of man and God. Each time they sing that faith, they will proclaim our compact with the veterans of our Nation's wars who gave their lives that our faith might endure.

Our American heritage of human freedom is born of the belief that man is created in the image of God and therefore is capable of governing himself. We have created here a government dedicated to the dignity and the freedom of man. It is a government whose creed is derived from the word of God, and its roots are deep in our spiritual foundations. Our democracy is an expression of faith in the spirit of man, and it is a declaration of faith in man as created by God.

On these spiritual foundations, we have established a creed of self-government more precious to us than life itself. These soldier graves are a testament to this creed, for these men died for it. While freedom prevails, we—the living—shall keep our compact with these dead. And as long as this Government remains rooted in the dignity of man and in his kinship with God, freedom will prevail.

SAYS MANKIND IS WAR WEARY

If man could achieve self-government and kinship with his God throughout the world, peace would not tremble in the constant dread of war. Mankind is exhausted from the ordeal of conflict. All men are sick of blood letting and hunger, and weary of the trouble suffered for so many years. If we could mobilize world opinion among all men who walk the earth, there would never be another war.

This we cannot do alone. For the earth is deeply divided between free and captive peoples. There is no appeal to the brotherhood of men who live in daily fear of the concentration camp. Until the captive peoples of the world emerge from darkness, they cannot see the hand we hold in friendship. While they are made to respond to our handclasp with a mailed fist, we have no choice but to stand ready in self-defense.

Much as we prize peace and friendship, we prize freedom more. And much as we trust in God, while He is rejected by so many in the world, we must trust also in ourselves.

STRESSES NEED FOR COURAGE

In an age where peace must be protected we must resort to our own strength to hold aggression at bay. When good will prevails and peace comes to the earth, it will come because we have had the resolution to hold fast through perilous times, and we have had the courage to share our resources with other nations who believe in freedom.

By generous sharing of our material goods in the past few years, we have restored to many peoples faith in themselves, faith in their freedom, faith in the certain triumph of confidence over fear. Just as long as we continue to face our world responsibilities with the courage and realism we have already shown, we shall deserve the right to hope—and work—for lasting peace.

Meanwhile, our efforts in search of peace and security have not spared us problems at home. Not only do the security needs of our Nation seem at times to be in competition with social progress, but the attention we must give to weapons of defense may obscure the fact that the real basis of our strength is a strong and active faith in freedom.

HOLDS FAITH MUST BE MAINTAINED

As long as freedom remains a force for human welfare, men will cherish it in their hearts and defend it with their lives. In this present-day world where man's personal independence is cramped by the complexities of his economic existence, it is the duty of government to see that each citizen does not lose faith in his ability to provide freely by his efforts for his own welfare.

We have revived the belief of free peoples in themselves in many foreign countries; and we must continue to safeguard at home the belief in ourselves and belief in freedom as the greatest force for human welfare.

This is an age where faith in one's self, faith in freedom, faith in the kinship of man and God, are more important to our survival than all the mighty armaments of war.

As these bells ring out their hymns, they will proclaim that message of faith. As long as they ring, these honored dead may rest.

While faith lives, so does freedom.

While freedom lives, so does hope of a just and lasting peace.

Asleep at the Switch

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks, I include herewith the following editorial, written by J. H. Van Winkle in the Oregon City Banner-Courier, on the subject of the failure of the President to appoint a Chairman of the National Security Resources Board:

ASLEEP AT THE SWITCH

At the request of the President, Congress enacted laws setting up several agencies for national defense. These agencies were made responsible to the President. They were

created at his bidding and turned over to him. They were thought necessary by Congress as a major part of implementing our defense planning.

Three of these independent agencies are the National Security Resources Board, an almost all-powerful manager of just about everything that affects preparation for or against war; the Defense Research and Planning Board, which is charged with stock piling or finding substitutes for critical war materials we do not produce within the Nation; and Munitions Board, which has wide powers for the procurement and storage of armament and supervision over development and manufacture of modern improvement of munitions.

All three of these vitally necessary agencies have been fumbling around in the dark without a full complement of members and without President-appointed chairmen simply because the President has felt it more expedient to play politics than to implement the national defense.

The President deliberately has refused to fill the chairmanships because his democratically controlled Senate couldn't stomach his nominations. Those characters offered for membership were found repugnant even to the Senate controlled by the President's own party.

Investigation found them wanting in every respect except one—that they were of the right political faith and were cronies of the President. The Senate, wisely enough, protected us from having ne'er-do-wells on these important commissions. It refused to rubber stamp the President's political pay-off.

As a result, the President has turned huffy and pouts, in effect, by saying well, if you won't have the men I want, you'll have no one.

In other words, because the President's poker pals are not believed competent to fill the jobs, the Nation's defense can go to pot before the Chief will bother to consider seeking out responsible and able hands for the vacancies.

World War II Memorial Dedication, Chelsea, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include herein a statement I made during the World War II Memorial Dedication held in Chelsea, Mass., November 6, 1949. Dr. J. B. Toltz was the chairman of the memorial committee.

The statement follows:

We who assemble in reverent service at this dedication are separated by time and distance from the men who died for us.

As we grow old and new generations succeed us the meaning of this sacrifice will also be buried in the dry pages of history unless we raise a memorial to them which shall ever remind us of their gallant, generous, and immortal spirit.

From the dawn of history, man has built shrines and has worshipped before altars to those powers greater than himself. Through different stages of his development and by means of various creeds he has lifted his heart to the creative essence of life and has prayed to it for strength and consolation and guidance.

Once he worshipped the elemental forces of nature in fear. The sun and the rain—these were the life-giving elements which he was completely dependent upon for survival. To him a long dry spell during the growing season or the thunder and lightning of a storm were signs that he had incurred the disfavor of the gods. And so he sought to appease them with his primitive rituals.

But as he matured in faith and understanding, the one true God in whose image he is created was revealed to him. Through prayer and good works he seeks to make himself worthy of that eternal love.

And to that Creator he offers the supreme gift of sacrifice.

Not in abject fear or under compulsion, but as the joyful offering of his heart.

In many quiet ways, on this journey through life, average men and women have moments in which they rise above the selfish claims of existence and "do unto others as they would have others to unto them."

It was so with these men whose memory we honor today.

They did not want war.

These fine young men, in the glory of their youth and health, wanted the same chance to live as others who had gone before them.

But when we were attacked there was no other choice. Only the best among us were capable of defending the rest.

And so they went forth, torn by the first wound of separation from happy homes often blessed with wives and children. Others left sweethearts behind them. All put aside their dreams, ambitions, plans to face with the sternest test of their manhood our responsibility.

Shouldering this double burden they went out to meet the fearful unknown, never to return.

When the war that they won at great cost came to an end we rejoiced.

The war was over, but they did not come back.

Today we gather together in a more sober mood, seeking comfort in the company of the living as we reckon our great loss.

Why, why must the cream of a nation's youth be called upon to die for our mistakes? Why didn't we exert every effort beforehand to prevent the tragedy of war? Where were we and what were we doing during those years when the danger was slowly mounting?

For the dead of World War No. 2 it is too late to ask such questions.

They sleep, their lives cut short by our neglect. Even now we reach out through memory to recall their smiles and laughter and the eagerness of their youth which brightened our homes, but memory cannot take the place of life. They are gone, and the world is darker without them.

The door of death has closed on a wealth of character and ability that was denied the opportunity to offer its great gifts to life. We who mourn are the losers in more ways than one.

Time and distance and forgetfulness.

They are merciful to those who have lost a loved one.

But we cannot, we do not want to forget completely.

To do so would betray those who sacrificed that we might learn, and would repeat the careless complacency from which they saved us. Next time, if we should permit the tragedy of war to come again through our blunders, they will not be here to help us, and that may be the margin by which we could lose everything that we cherish.

We cannot fail a second time.

The children of the heroic dead and all children who are so happy on this Sunday afternoon trust in our protective strength and wisdom. They will never forgive us if they at some future date should have to surrender life itself because we would not work for peace.

Standing as we are between the dead and those who are young in life, I believe that we are aware of this responsibility.

We have come to dedicate this memorial so that we shall not forget.

It is made of stone and steel, as imperishable as mortal hands can make it.

But this memorial will not serve its purpose unless we repeat its meaning to ourselves each time that we pass it on our way to work or recreation.

They faced the unknown with fear and with a courage which conquered that fear.

Can we do less and still call ourselves their brothers?

No.

Because ours is an easy job by comparison. We are being asked to solve those problems which will prevent war. Difficult as it may be, this, the greatest of all possible victories, can and will be won.

That is, if we emulate the unselfish devotion of the men from Chelsea who gave their lives in World War No. 2.

This memorial is a shrine to valor.

To young men who once walked the streets of this city even as those we see today, ordinary men who became great under the pressure of crisis. We look up to the high example of courage which they have set before us, proud of them even as we grieve for them. They were members of our human family. They lived in our city and perhaps one or two of them lived on our street. We watched them growing up as children and were shocked when we heard that these youngsters had become men overnight and had died defending us.

And we ask ourselves the question: "How can we be as worthy of life as they have been?"

Perhaps wrapped up in our own problems we have not seen the many small ways in which we could be of help to our city, our Nation, and the world. With the extra years granted to us, we have a greater opportunity to live fully, knowing that we go this way only once and determined to be a good neighbor and a good citizen, for only by this effort can we contribute to understanding and the cause of peace.

A few men with too much power at the head of any nation are responsible for most wars. The hope of the world is in the common people. They get along well together because they have learned the sturdy values of cooperation. This experience must be extended.

It is up to national leaders to learn from them, as we have learned from our young men who made the supreme sacrifice.

By their dying they have opened our eyes to the need for greater courage from the rest of us, the courage to face the larger problems of this life, to think of them, to make ourselves well informed concerning them, and to express them as part of the great voice of public opinion which no leader can ignore.

I know some people who don't want to hear the word "atom" mentioned. It terrifies them. Now, I say that this is fear of the unknown. The power of atomic energy is a fact and a responsibility. We cannot run away from it. Rather, we must work to find some way by which we can be sure that it will be applied to the constructive tasks of peace. That will require effort, patience, and courage. The courage which the heroic dead whom we honor today expect from us.

With this plaque to ever remind us, is it not better for us to become their living memorial, advancing with increasing tolerance and intelligence toward that better world for which they died?

I believe that these young men did not die in vain.

A life lived for others and given for others is the noblest life that any man can live.

It illuminates the way for those who follow by its shining example.

It nourishes us with the immortal spirit which it so clearly revealed.

Four times and more the seasons have come and gone since these gallant men went through the valley of death to that country from which no traveler returns.

Most of their remains have been brought home so that their last resting place may be carefully tended for by their loved ones.

The city of Chelsea goes further. As evidence of a community's reverent regard it is dedicating this memorial on which their names are inscribed in their honor.

So that generations yet to come may pause, and remember, and thank God that the United States had men such as these to save for all her people the blessings of peace, security, and freedom.

Time To Weigh Our Gains—Foreign Aid

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial that appeared in the Detroit Free Press of December 28, 1949:

TIME TO WEIGH OUR GAINS—FOREIGN AID

High and hot on the agenda of the Eighty-first Congress' second session, will be European aid expenditures—economic and military.

There will be strong congressional sentiment for sharply cutting this huge outflow of taxpayer dollars. And this opposition will bring dire predictions. Pressure will be turned on to keep Americans in a mood both generous and fearful.

The taxpayers will hear that any appreciable reduction in Marshall plan or related spending will pave the way for Communist imperialism.

Before national opinion formulates, let American taxpayers weigh objectively the things their money being spent abroad has bought, and what a future outlay can buy.

Economically, distressingly little has been purchased. Europe doggedly maintains its old barriers to self-sufficiency. Despite the fine talk about constructive spending and the fallacy of mere stopgap giving, all we have managed is the latter.

Europe's own attitude has frustrated our best intentions.

We have kept things going and by artificial expedient have fended off communism's westward spread. But we can't keep it up forever and survive ourselves. America will be as broke as Europe, with nothing gained and all lost.

Military free spending on behalf of Europe is more a proposition for the future than an existing fact, but the move to make it a fact is far along.

That our money can ever buy a military line of defense east of the English Channel is the remotest of possibilities.

France, which would have to be the continental kingpin of an alliance, can't maintain a government. Under its conception of military teamwork it must be the quarterback, line, backfield, and coach, with only the role of water boy reserved for its friends.

Exemplifying its individualism, jealousy, or whatever you care to term it is "Chairman" Montgomery. Britain's Marshal Montgomery is nominal chief of the feeble military team into which western Europeans have banded themselves.

So faction-ridden, so plagued with national egoisms is this alliance that its principal military man cannot be accorded a military title.

In truth, it isn't an alliance at all, but a committee. And a defense run by a committee couldn't hinder the march of the Honduras constabulary.

Britain, within the limits of her size and poverty, doubtless would stand as firmly as she could. So might some of the very small countries, but their potence in a major conflict would be so trivial as to be almost invisible.

So tax money sent overseas to arm Europe can hardly be counted a judicious direct spending for a military hedge against communism on the march—with tanks and cannon.

The best you can say is that perhaps it would contribute to an atmosphere of kinship and comradeship with what America stands for as a democracy. Maybe it would implant a habit of thought, make the western European, no matter what might befall, feel himself a partisan of democracy.

But this is all highly problematical, the more so since investigation indicates that the ordinary European has almost no real knowledge of America's part in his welfare, and that often his appreciation is even less than his information.

To say the least it is a dubious type of insurance for us. If the day ever came to collect on our policy we might find we had been paying our billion-dollar premiums for nothing.

That day for collection would be one on which either by military aggression or political coup the Communists took over lands we have been assisting. If these, even in the hands of communism, remained obdurately loyal to the remaining strongholds of democracy it would help vastly in their rewinning—given time.

But this is decidedly a long-shot chance. There is nothing in the form sheet to support it. And staking billions, year upon year, on a long shot in power politics is no wiser than doing the same thing at a horse track.

The Majority Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following excellent editorial on our majority leader, the Honorable JOHN W. MCCORMACK, which appeared in the Lynn Telegram-News, Lynn, Mass., on Sunday, January 1, 1950:

A TRIBUTE TO A TRUE MAN

This is New Year's day of 1950. It is the commencement of a new year freighted with opportunity but frightening with possibilities. This is the first day of the month that was named in the Roman calendar after Janus, the god with two heads, one looking forward and the other looking backward.

So on New Year's Day, it is our custom to look ahead to the future as well as look back at the past, in order to make a proper appraisal of events as they pass in review. The importance of government as well as governmental affairs as it pertains to our daily life, cannot be overemphasized in these days.

Accordingly, we must look to our national leaders and their leadership in order to get a proper picture of our direction. Any endeavor to obtain such a perspective will bring into focus the personality and achievements of our own Massachusetts leader, the Honorable JOHN W. MCCORMACK, majority leader of our National House of Representatives.

The proud record of the Eighty-first Congress established under the direction of Congressman MCCORMACK is one of which all Americans should be proud. Majority Leader MCCORMACK again and again asserted his brilliant leadership for his party, his State, and his country. Years ago, JOHN MCCORMACK was a pioneer in raising his voice in protest against the growing Red terror, south of the border, in our neighboring country of Mexico.

Again and again, he battled against the antireligious drives that would result in chaos and disorder in old Mexico.

His voice was then a voice crying out in the wilderness. Today, all well-informed persons acknowledge the debt of gratitude that is owed to Mr. MCCORMACK for his courage and intelligence in uncovering the dangers that lurked in such a campaign.

When later, world-wide communism commenced to rear its ugly head and to make threats against the American way of life and its peace and serenity, again it was the same leader, MCCORMACK, who sounded the tocsin that Americans must be on guard against the Red peril.

Leader MCCORMACK's work in the Eighty-first Congress was outstanding. It was truly said to be a "triumph for peace and democracy." Mr. MCCORMACK helped in the shaping of our policies for international recovery and peace, for our national defense and security, for housing, for the programs underlying social security, health, and welfare, as well as those affecting the reorganization of our governmental set-up, our national economy and our agricultural problems. He contributed his political genius to legislation in behalf of labor, the veterans, and did his best to guarantee to all Americans equality of opportunity and civil rights to all, regardless of race, color, or creed.

In his own words, delivered on the floor of Congress on October 19, 1949, Majority Leader MCCORMACK summed up the results of his statesmanship in these words:

"This Congress backed up the impressive foreign policy of President Truman not only with the necessary legislation, but with funds to aid friendly countries to rehabilitate their economic and military strength.

"This foreign-policy program, the prime purpose of which is to bring peace and prosperity to the world, is the greatest undertaking by any government on earth. Our esteemed President, Mr. Harry S. Truman, instituted it and history will record his effort as the greatest ever made to wipe the ravages of war from the face of the earth. Personally, I am proud, and I know my colleagues are proud, to be a Member of the Congress which gave the tools to our leader for the most gigantic enterprise ever undertaken in the history of mankind."

And so, again, the Lynn Telegram-News is glad to publicly acknowledge the debt of gratitude that is owed to Congressman JOHN W. MCCORMACK, and on this joyful New Year's Day, may we express our best wishes to the Congressman and his gracious and charming helpmate, Mrs. John W. McCormack. May they both enjoy all the blessings and the good things of life that they have so well earned and so richly deserve.

Preservation of the American Way of Living

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. DAVIS of Georgia. Mr. Speaker, the Research Engineer is a monthly publication of the Georgia Institute of Technology, Atlanta, Ga.

In its issue for the month of November 1949 there was published on its editorial page a statement by Col. Blake R. Van Leer, the president of the Georgia Institute of Technology, regarding the meaning of the phrase "Preservation of the American way of living," a phrase which has been widely used recently.

Colonel Van Leer's statement regarding the American way of living is one of the finest which I have seen relating to this important subject. In it he presented some great truths in plain and understandable fashion. I was so impressed with Colonel Van Leer's statement, which is short and to the point, that I asked his permission to insert it in the CONGRESSIONAL RECORD. He was kind enough to grant my request, and I insert the article herewith:

"Preservation of the American way of living" is a catch phrase much used today by men with vastly different viewpoints. To the hide-bound isolationist it means the same as the prewar "America First"—nothing for any other country if it would deprive us of an iota of our well being. To the average citizen it means defending our constitutional rights and privileges against the onslaughts of isms, maintaining that atmosphere in which men are individuals instead of units of a state system. To the extreme radical it means free license to advertise his beliefs without fear of the reprisal which the system he advocates would inflict.

To the scientist and engineer—assuming that this group also agrees with Mr. Average Citizen—the phrase "Preservation of the American way of living" is a challenge to increased efforts to find new and better methods and products. To this group, particularly, the "American way" is not a static one; it is progressive. Our method of living has developed, not stood still. It is the outgrowth of the efforts of many men. "Preservation" of this mode of living, therefore, means preservation of a dynamic balance between the best elements of the present and what the future can bring if we strive our hardest.

BLAKE R. VAN LEER,
President, Georgia Institute of Technology.

Government Detectives

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Clement Norton which appeared in the Telegram-News, Lynn, Mass.:

DETECTIVES

Our Government has done a great job at protecting us. They "planted" reliable intelligence agents right in Communist meetings for years. As a matter of fact, the agents became members of the party and officials of the same. Why not? If the "Commies" are out to destroy our form of government, then we must know these facts. Likewise, if they are not out so to do, then our agents will so report.

Man has more freedom here than any land of the world. I marvel at it. When I go abroad and see how others live. See how little freedom the common man has—why I admire the homeland more and more. This is heaven on earth if you think and read and study and appreciate.

CRIMINAL

It would be criminal negligence for our leaders to stand by and allow Communists or any other group to meet and conspire to destroy this Government, and do nothing about the same. So, of course, we had not only the right, but the duty to "plant" intelligence agents in the meetings of any suspected group. If you woke up some morning and found the gestapo agent at your door, with a gun, then it would be too late.

I'm no hysterical hate-monger. I'm no fanatic against the Commies. I believe that every group has the right to free and open expression of opinion in America, but freedom is not a license to conspire to destroy our Government. If those very same Communists who meet on American soil, and plan to destroy our democracy, were to meet on Russian soil, and plan to destroy Stalin's form of government, they would be taken right out and shot. There would be no trials. No bail. No witnesses. They would just "disappear," the most awful thing that can happen to you in Russia. Disappear as did the 10,000 officers of Poland's army, the "cream of the crop," who were later found buried at Katyn, in Russia, by the Germans, and each officer was shot in the back of the head.

WHY?

So, why should there be any question about the right of our Government to "plant" intelligence agents, in communistic meetings? And yet, when some of our agents testified at the recent Commie trial in New York, I heard a few unthinking citizens remark: "That was a dirty thing to do." No, it was the right thing to do. It was the proper thing to do. It was the patriotic thing to do, for no one must be allowed to plot to destroy our country on American soil without our leaders, and our people knowing about it.

Clyde M. Reed

EXTENSION OF REMARKS
OF
HON. CLIFFORD R. HOPE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. HOPE. Mr. Speaker, because of his long and distinguished public service, the people of Kansas came to know CLYDE M. REED well in his official capacity. Through the years he had a wide personal acquaintance. However, because he was such a busy man and so diligently devoted to his public duties, there were many who knew him well in his public capacity who had no opportunity to know CLYDE REED as he was known by his family and close personal associates.

Following Senator REED's death his public service was widely acclaimed in the editorial columns of the Kansas press by men who had been long associated with him in the newspaper profession and in public life. These editorials told of the life of CLYDE REED as a great and distinguished public servant. Another and less well-known side of CLYDE REED's life and career is presented in an editorial appearing in the Parsons (Kans.) Sun on November 10, 1949, by Clyde M. Reed, Jr., the present able editor of that paper. I feel sure that his former associates in Congress and in official life in Washington will be interested in reading this beautifully written and poignant picture of CLYDE M. REED as his family knew him:

CLYDE M. REED

My father left this world as he would have chosen, at the peak of his career. Retirement to him was unthinkable because that meant inactivity and he never had known much of that in the busy 78 years which made up his life.

Others knew him as a Senator, a Governor, a newspaper publisher, and an active public man. Our family saw him in that light, but possibly were too close to judge him objectively. We knew him best as a loving father, the head of a large family. He took a deep interest in all of us, despite demands made on his time by other interests. His pride increased with the arrival of each additional grandchild. He was pleased as punch when Clyde M. Reed III, came into the world. He hated to lose at anything, but when the young man, now 7, beat him in checkers twice one evening not so long ago at the hospital, father had a twinkle in his eye that said more than a thousand words ever could tell.

My earliest recollections of my father were as a busy man, constantly on the go. His body rested at times, but his mind never did. In my early years, he was in work that laid the foundation for his wide knowledge of transportation. We had freight rates for breakfast, boxcars for supper. Occasionally I was able to get in a word about football and there would be brief attention given to my sisters' current boy friends, but then we got back to more serious things.

Whether boxcars, freight rates, or later, the State highway system which was inaugurated when he was Governor, or still later, the many national and international questions which came before him as Senator, underneath them all was a deep sympathy for and understanding of people as human beings.

He understood because he had been faced with many problems himself on his way up the ladder. His sympathies were not those of a professional do-gooder or one who got his knowledge of human problems from a textbook. He learned from first-hand experience. His friendships knew no bounds.

One of the daily pleasures he anticipated here at home was a visit to the barbershop of the Grimes brothers. He and Tom and Otis Grimes would discuss a little bit of everything and he got many chuckles and not a few pointers from them. That Tom and Otis are of another race never entered his mind. They were friends, first of all.

He was vitally interested in the work of the Sisters of St. Joseph who operate Mercy Hospital in Parsons. That interest often took precedent over matters of national importance which confronted him, but the sisters were serving humanity, working with people and more than that, were providing

an indispensable service in the community he loved and called home, and those things were important in his mind.

In his political life he was known as a fighter, a scrapper. The family knew him in those roles because he brought them home with him and we talked about them. He couldn't leave his work at the office because he was a bundle of energy that functioned 12 hours a day on the minimum and 16 hours on average and the thought that he should slow down some time was mentioned often but never caught on.

Because he was a fighter, he lost battles as well as won them. The defeats hurt. He was pictured by friend and foe alike as a hard-shelled man. On the surface, perhaps. But underneath was a soft heart that reacted to the ups and downs which come with a career like his.

He suffered some low blows. They hurt most of all. He placed unlimited confidence in his friends. It took him a long time to get over the fact that on rare occasion such confidence was misplaced. He was a sentimentalist who tried to hide it and got away with it to all except those of us who saw him at closest range.

That he accumulated his share of worldly goods in a life which began in that regard from scratch never was as important to him as the fact he had stood fast for a set of principles throughout his career and had come to be recognized for them.

Basic in his philosophy that it was better to be right than popular. He was more concerned with the correctness of the thing than whether he would be riding the high tides of public opinion. He believed that when you were right, the rest would come eventually. He lived to see many one-time foes become steadfast friends and supporters. That the lag between rightness and popularity often was a matter of years never concerned him.

Carrying him through in the meantime was courage of a high order. In later years, when declining health and advancing age plagued him, raw nerve pushed him on. Always he was able to arise to the occasion. Advice that he should spare himself was brushed aside. He had come up the hard way, by sheer work and determination. He was determined to finish that way. He did.

Merciful Providence has taken him into another world. Behind he leaves a precious heritage that will live with members of his family always. We are sad, but find unlimited comfort in the fact he was with us so long and that we could do our bit from the side lines to help him make his life what it was.

That was, and is, our father, CLYDE M. REED. We leave him now with his God.

C. M. R., Jr.

Hoover Report on Veterans' Administration Hospitalization

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following very enlightening statement made by John M. Barry, M. D., of Lawrence, Mass., at a special conference between the Department of Massachusetts, American Legion, and the Massachusetts congressional delegation, held in the Parker House, Boston, on December 19, 1949:

In this report the Commission recommends (No. 1) the establishment of a United Medical Administration, into which would be consolidated most of the large-scale activities of the Government in the fields of medical care, medical research, and public health (including preventive medicine). The responsibility for furnishing medical and hospital care for veterans would be included in the consolidation by transfer of the functions, facilities, and personnel for medical care from the Veterans' Administration (No. 4). Likewise, out-patient service in field offices and special services incidental to hospitalization would be transferred, though the Veterans' Administration would continue to certify patients for treatment and would determine disability ratings, etc.

I would like to call your attention to the fact that we in the Legion are considering only that portion of the Hoover Commission report which deals with Veterans' Administration hospitalization. At this time we are not discussing that portion of the report considering a United Medical Administration for the Military Establishment and the Public Health Service. In brief, at this time we are concerned only with the problem of former service men and women who are now civilians requiring Government medical care through the Veterans' Administration.

I would also like to point out at this time that although the American Legion and I personally have been among the severest critics of the Veterans' Administration, we wish to point out that the Veterans' Administration has made truly tremendous strides toward increased efficiency in the past few years. Legion experience, of course, dates back to the period immediately following World War I, whereas my own experience is limited to the period of time since my separation from the Army in 1945. It has been our common experience that the Veterans' Administration has steadily and progressively raised its standards of medical care and increased the scope and speed of its service.

This proposal of the Hoover Commission is in basic conflict with the traditional policy of the Government to accord to veterans, as a class, special consideration through one single agency responsible for administering the various benefit programs. In addition, it would put individuals who are now civilians under the same regime of care and discipline as the armed forces personnel, their dependents and merchant seamen, and it would produce an intermingling for care of strictly service personnel with strictly civilian patients. It would also impede the efficient handling of claims for compensation, pension, insurance and other benefits where a physical examination is necessary. We should also bear in mind that this policy of caring for veterans through a central agency is not a radical departure which sprang up over night like an unwanted weed, but rather it has had a natural, healthy growth based on the bitter and frequently tragic experiences of divided responsibility over a period of years. This has resulted in the evolution of a system which is really working and constantly showing progress. This progress has been the result of the direct interest and concern of the Veterans' Administration, especially its Bureau of Medicine, aided by the cooperation of organized medicine in the formation of the various deans committees to raise professional and teaching standards and further aided by the influence and cooperation of veterans organizations, particularly the American Legion. As a result of this cooperative effort, a truly enviable position has been achieved in medical care by the Veterans' Administration.

You have already heard from Father Reardon the historical background of the development of the Veterans' Administration program. We should keep in mind that disability compensation and pensions and insurance benefits predicated upon disability require medical examinations, including hospitalization for observation. The monthly payments in cases of veterans without dependents are subject to reduction while receiving hospitalization or domiciliary care. The amounts of monthly payments in many cases are dependent on the veterans' social adaptability requiring field investigations. The feasibility of trial home visits looking to complete discharge from the status of a hospital patient requires investigations of home conditions. Entitlement to new and reinstated insurance is often dependent upon proof of insurability proven by medical examination. Entitlement to vocational rehabilitation under the provisions of Public Law 16, Seventy-eighth Congress, as amended, is dependent upon medical-examination findings. Entitlement to assistance in acquiring specially adapted housing under the provisions of Public Law 702, Eightieth Congress, is dependent upon medical examination and other medical findings. In brief, major benefit programs are so dependent upon and integrated with the medical, hospital, and domiciliary-care programs as to preclude their separation from the Veterans' Administration, of which they are a part, without disastrous effects on the efficient administration of veterans' benefits.

In view of the historical facts which have been outlined and the experiences gained therefrom, it seems clear that the proposed plan would not work without detriment to the efficient operation of the program of medical and hospital care and other benefits provided for veterans. The high standards of care which have been attained by the Veterans' Administration would necessarily be lowered by a merger of our program with other programs.

Under the circumstances, the Committee on Hospitalization for the American Legion of Massachusetts must strongly recommend against the adoption of this plan to incorporate the Veterans' Administration into a United Medical Administration. We believe it more advisable to recommend that the Veterans' Administration be retained for the medical and associated care of veterans, and, secondly, that with the cooperation of Government, organized medicine, veterans' organizations, and the Veterans' Administration itself, a concerted effort be made to aid the Veterans' Administration in accomplishing its mission with the highest degree of efficiency at the least cost.

I would like to add as an addendum that we must also remember that many so-called non-service-connected cases on admission to a Veterans' Administration hospital later become actual service-connected. One other frequently overlooked factor is the problem of the medical indigent. At present cost and in the light of present medical knowledge, practically all patients with a diagnosis of tuberculosis, neuropsychiatric conditions and those requiring hospitalization beyond a period of 90 days, sometimes 60 days, are medically indigent. In addition, due to particular circumstances, a given individual may be medically indigent on a given date, whereas he would not be indigent at another time. Individuals falling in this category who are veterans require assistance from the Veterans' Administration, and the quickest and safest determination of this need is best made at local level under conditions as they now exist in the Veterans' Administration.

Who Won the War?—Visit of Banker Abs to United States Seen as Plan To Restore Nazi Order in Germany

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes which appeared in the Washington Star of December 16, 1949:

WHO WON THE WAR?—VISIT OF BANKER ABS TO UNITED STATES SEEN AS PLAN TO RESTORE NAZI ORDER IN GERMANY

(By Thomas L. Stokes)

Every so often the curtain is lifted and we get another glimpse of how the old Nazi order is being restored in Germany with our kind cooperation—as our war aims go glimmering.

We discover now, for example, thanks to Senator GILLETTE, Democrat, of Iowa, that Herman J. Abs, formerly a director of the Deutsche Bank when it was one of Adolf Hitler's chief agents in exploiting occupied Europe, has been in this country for several weeks—since November 17—conferring with New York bankers but also incidentally visiting the State Department.

Herr Abs long ago wormed his way back into the high councils of German finance and those of the victorious allies. He was permitted to go through the British lines 2 days after the fall of Berlin with 7,000,000,000 of marks in cash to reestablish his business in Hamburg in the British zone, and afterward acted as economic and financial adviser to Sir Sholto Douglas, commander of the British zone.

VISIT EXPLAINED

In explanation of this latest episode here, the State Department, on inquiry from Senator GILLETTE, said that the Department was not trying to keep his visit a secret, but did not want to enhance his prestige in Germany by drawing attention to his activities here. He came to this country, it was said, to confer with American bankers who hold about $30,000,000 of German credits and spent a day in Washington during which he called on officials in the German Division of the State Department to discuss technical matters.

He came, it was explained, with Wilhelm Vocke and Hans Treue, officials of the Deutsche Leander Bank, a trizonal bank of all the German states set up in April 1946 by the United States, Great Britain, and France, and as a private citizen, though he is not exactly that, being a director of the German Reconstruction Loan Co., an agency of the West German Government. His visa expires December 25.

Who is Herman J. Abs and what was his role in Hitler's conquest?

This was clearly spelled out in a special report in June 1947 by Gen. Lucius D. Clay, then American Military Governor in Germany, based on an exhaustive investigation by AMG experts. It said he was influential in operations of the Deutsche Bank when it, along with the Dresdner Bank, "acted virtually as an economic branch of the Wehrmacht in exploiting the resources of the occupied countries.

The desire to acquire certain institutions or corporations sometimes originated within the banks, sometimes within the Nazi Government, but all acquisitions had one aim in common, namely, the economic and political domination of Europe by Germany. * * * Both banks obtained a share in the spoils."

BANKS PLUNDERED JEWS

Herr Abs was identified as the key figure in the Deutsche Bank's seizure of French-Belgian properties in Czechoslovakia, Luxemburg, Yugoslavia, and Romania. Before the two banks spread out their operations to other countries, they plundered the Jews in Germany, which is told in a section of General Clay's report on Role of the Banks in Aryanization of the German Economy. It says:

"In this way the Dresdner and Deutsche Banks acquired properties for their own account, financed acquisitions of Aryanized property for customers, selected and appraised property for future Aryanization and even searched for prospective customers interested in this type of transaction. This experience gained in Aryanization activity in Germany served the banks in good stead in their subsequent economic spoliation of occupied Europe."

Herr Abs turned up prominently after the war. When the new trizonal bank of the German states was organized its German board of directors elected him president and August Schniewind, a director of the Dresdner Bank in the Nazi regime, as chairman of the board, but on condition that these two jointly would have a veto on the board. This scheme was spiked by General Clay.

Herman Abs turned up also on the list of German trustees on the control board for the Ruhr iron and steel industry, along with other ex-Nazis, who were picked by a German, Dr. Hermann Punder, president of the executive council of the Bizonal Economic Administration, but this was too much for trade union leaders to take and they protested so vigorously that Herr Abs and some of the others were dropped.

Now he turns up in the councils of the mighty in Washington and New York.

Who won the war?

Address of Hon. Joseph K. Carson, Jr.

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Commissioner Joseph K. Carson of the United States Maritime Commission delivered at a luncheon given by the Minneapolis-Honeywell Regulator Co., Waldorf-Astoria Hotel, New York City, on Thursday, December 8, 1949:

I am honored by being afforded the opportunity of taking part in this occasion, sponsored by Minneapolis-Honeywell. Our chairman, Maj. Gen. Philip B. Fleming, has asked that I express to you his interest in your enterprise and that you will not only cause to be expressed your best effort in the work you are now doing in which the Commission is interested but that you will continue the improvement of your process and product.

It is always worth while for those charged with the performance of public duty to meet with those in industry whose genius and practical ability make it possible for government, and through government, the people, to enjoy the fruits of the inventive minds and productive skill of forward-looking private enterprise.

This meeting, held as it is, under the auspices of Minneapolis-Honeywell, let us say for the purpose of brevity, is an affair which is in its essence a commercial. To use the vernacular, let us call it a little horn tooting. Well, I just love horn tooting.

I remember the time during the war when I was present at a meeting held in Brighton, England. I was seated next to a lady who said, "Colonel, I suppose you Americans think we are terribly antiquated and behind the times." I said, "No, I shouldn't think we feel that way at all, because after all, the British are a literate people and if you want or need all the modern things we enjoy in America, you would contrive some way of having them." I then went on to say, "We shall adopt many of the practices which we are learning from you people while we are here in your country." She replied, "Really, but I should wonder if your pride would let you do that?" I said, "Our pride would not let us do less. We pride ourselves upon having imported and put into use in America all of the good things we have found in every land and clime."

Prosperity in the United States is dependent upon the invention, production, use, and consumption of the things we do not have to have for existence and propagation. Therefore, it is advertising, putting our best foot forward and tooting our own horn that has brought to the people, in this our promised land, the greatest abundance the world has ever known—and with enterprises such as yours being permitted a free hand within the law to progress further, we are in reality only at the beginning of a better way of life for all mankind. For my part, a light under a bushel is no light at all. Good works should be emblazoned across the firmament of the heavens.

Let me state emphatically at the outset that Minneapolis-Honeywell has earned the esteem of the marine industry by its proven ability to make a real contribution to the American Merchant Marine by handling large contracts involving the installation of improvements in ships to make them truly modern and thereby enabling the industry to improve the service offered to travelers and shippers under the American flag.

Our interest today is focused on air conditioning. The Maritime Commission has been interested in air conditioning for a long time. Even before the war the Commission devoted a great deal of attention to air conditioning and better ventilation of ships. As the result of tests made under Commission sponsorship, we have been able to establish certain standards by which more economical designs have been produced than could have been achieved with conventional practices.

During these investigations into the proper use of air conditioning aboard vessels, the Minneapolis-Honeywell organization has been one that stood by and cooperated with the Commission, not alone in the interest of securing contracts, an entirely legitimate aim, but to throw the weight of their experience and technical ability into the effort to produce the best possible results. That is the sort of thing on which a sound business reputation is built.

Now a few words about what air conditioning means to the success of the American merchant marine. It is by no means a far-fetched connection. It costs much more to own and operate ships under the American flag than under any foreign flag. That is why we make subsidy allowances, under the Merchant Marine Act of 1936, to place our operators on an equal footing with their foreign competitors. In other words, these subsidies make up the disparity between foreign and American building and operating costs.

The reason that American costs are higher, and the reason that such a disparity exists, is a very important and fundamental one. We have in this country a tradition of free enterprise. We strive to have every business organization stand on its own feet and make

its own way in a freely competitive climate. We do not approve of collusion among companies or business organizations. That would restrain trade or attempt monopolistic control of costs of production. In fact, we have laws that prohibit such activities. Compare this with the situation abroad, where for centuries the economies of countries and entire regions have been controlled by cartels, trade associations, or whatever they may be called, for the purpose of regulating production, prices, and wages wholly for private and selfish interests.

In America, on the one hand, we have had free enterprise in the public interest. Abroad, on the other hand, there has been and still is regulation and restriction by private interests for their individual benefit. The result is that today we have in America a land bountiful in blessings, with opportunities for all, while abroad we see some nations struggling bitterly not only to recover from the ravages of war but to rebuild their economies along the lines of the old concepts.

Here in the United States one business can compete with another because all operate in the same atmosphere of free enterprise. When an American business attempts to compete with a foreign business, however, it is quite a different matter. An American steamship operator in competing with a foreign-flag company is forced to do so under many disadvantages. Among those disadvantages are higher wages, costs of fuel and ship's stores, original construction and repair costs, and higher standards of safety and sanitation.

Therefore, we are always alert to find means of meeting and offsetting these disadvantages. One means of accomplishing this is provided by law which authorizes construction and operating subsidies to operators which perform specified regular sailings over trade routes found by the Commission to be essential in the foreign commerce of the United States. Although we offset certain cost differentials by allowing construction and operating differential subsidies, American-flag shipping must go further than receiving financial aid from the Government if it is to compete successfully with foreign flags. In other words, what I am pointing out is that the subsidy merely makes up the cost disparity. From there on out the American subsidized operator is on his own, and whether he makes a profit depends on the kind of a businessman he is.

In competitive fields of passenger and cargo lift a steamship company must offer the public service. By that I mean careful handling, stowage, and preservation of cargoes. By that I also mean well-designed, adequate, comfortable, and attractive accommodations for passengers.

To compete successfully against the international field, therefore, we must offer superior service that will attract both shippers and travelers to American-flag lines. One of the most effective ways in which we are doing that is through the development of air conditioning, both for the protection of cargo and the comfort of passengers.

As I have said, the Maritime Commission has been interested in the development of air conditioning since before the war. Although the war itself side-tracked some progress that was being made along the lines of full air conditioning, it actually accelerated the application of mechanical ventilation because blackout regulations made it impossible to use the conventional methods of natural ventilation. During the past 11 years all passenger ships built in the United States have been provided at least with air-conditioned dining saloons, and most ships built in the last few years have had all passengers' quarters air conditioned and at least half of those have had the crew's quarters so treated. All passenger ships designed in this country within the last 3 years are completely air conditioned, including all passenger and crew accommodations.

Air conditioning is the most important advancement in passenger comfort in passenger liners in the last generation. Yet, few people who take air conditioning in land establishments for granted understand or appreciate the difficulties under which engineers work when designing and installing such systems aboard vessels. We in the Maritime Commission know, for instance, that difficulties experienced in planning of ship construction are far greater than those experienced in planning for structure on land, and that this applies particularly to the inclusion of air-conditioning systems in a large vessel. Fortunately, ship owners are keenly aware that efficient ventilation and air conditioning are not merely a desirable feature, but that sharp competition in the passenger trades makes them an asset to the business which will pay dividends. Consequently, air-conditioning systems are now considered as "musts" in the original designs of all our passenger vessels.

Most of the ships in which air conditioning is a must will be built with Government financial aid and in return for Government aid the purchaser of the new vessel is obliged to accept plans and specifications which meet with the approval of the Commission. Because the presence of air conditioning is an indispensable part of a truly modern passenger vessel, the Commission will not, I am sure, furnish any financial assistance in the construction of any vessel without it. I am certain we would not build an out-of-date ship or one that did not contain the maximum appointments for passenger and troop health and comfort.

First of all, we require air-conditioning systems that are reliable. That means that they must be large enough and rugged enough to do the maximum job required without more than ordinary attention and servicing at sea. We require systems that are reasonable in original cost and in cost of operation. With the exception of refrigeration machinery, cooling coils, controls, and chilled-water piping, a system should certainly not cost more than a first-class marine heating and ventilating job, particularly when provision has been made for it in the original designing of the ship. And we must bear in mind that in passenger ships air-conditioning systems must be such that will not only produce maximum comfort for the people aboard, but will also comply with safety requirements of vessel design and construction, and the specific needs placed upon a vessel as a troop carrier in time of war.

Inertia to change is always with us in every field of endeavor. It is one of the fateful things of life, but progress in America has been made in spite of it. Through the course of our history, practically every invention which has added to the fullness of life has been figuratively thrust upon a skeptical and unreceptive public through the artifices, if you will, of promotional advertising. In earlier times many an inventor went to his grave never knowing that the fruits of his genius, which he could not sell for the price of a little food and shelter, would within a few decades become commonplace in the life of the community. In reverie, I sometimes wonder whether our great men of invention, production, and distribution today are not often amused as they prepare some new blessing of modern science and industry for the sharp battle it must undergo before it is accepted and put to universal use by a still skeptical and unreceptive public. These men must withstand the insults and accusations of windbags, marplots, and ne'er-do-wells who blaspheme and abuse their benefactors with charges that they are interested only in private gain. True, business is run for profit in this capitalistic world of ours, but let me tell you that if it were not for the great forward vision of our large industrial organizations, where extensive research programs are constantly being carried on at private expense to wrest from nature and the universe all that it has to offer for a higher and finer civilization, there would be little hope for the future of the human race. Yes, our industrialists must possess a humor tinctured whimsy as they thrust aside the fulminations of their traducers and turn to produce more of the good things for all of us to enjoy.

The resistance to progress is ever present in shipbuilding. There are several schools of thought, among both technicians and laymen, concerning the value and use of air conditioning. Among engineers and designers themselves, there are those who think that only dining salons and staterooms should be air-conditioned, while lounges and other public rooms should be ventilated only by the outside air. We are coming to the general belief, I think, that it is best to provide air conditioning for the entire vessel with individual room controls so that the ship may be kept comfortable no matter where or under what weather conditions she may be operating. This is particularly important from the troopship standpoint, since a liner which operates regularly in the North Atlantic, let us say, in peacetime, may find herself in the Tropics a good part of the time during war.

Air conditioning on passenger vessels when employed commercially is primarily for the comfort and convenience of the traveler and it is, therefore, the aim of the Commission that this desirable feature be so engineered and installed as will permit the occupant to use, regulate, or dispense with it in his own quarters.

The importance of air conditioning when a vessel is used as a troop transport, cannot be over-emphasized. War lowers the standard of living for everyone, but particularly for those in combat. When we send men overseas we are not able to limit room occupancy as we do with our first-class passenger accommodations. We put 8 or 10 or even more in a room, stacked up in berths from deck to ceiling. Therefore our air-conditioning systems must be able to provide enough air for several times the number of persons who ordinarily occupy the space, in order that our troops may be made as comfortable as possible. This is important both to the health and morale of men traveling in troop ships under wartime conditions when anxiety and general strain are at a high peak.

I am aware that air conditioning is going to cost a tidy sum, approximately half of which the Government must pay if the vessel is built with a construction subsidy. While I am not an engineer, I know that the increase in cost will not only be attributable to the distributing systems required to carry the clean and healthful air to all parts of a great ship, but will entail greater electric generating capacity and added fuel costs. But it will be worth it. Consider for a moment what we mean when we say that American shipping must compete with foreign-flag shipping. We are not thinking in terms of this Nation competing with another. We are thinking in terms of the United States competing with all the rest of the world.

It is with a stark realization of the world condition which confronts us which calls upon us to marshal the efforts of all who can make a useful contribution to the construction of the best-equipped, safest, and most suitable vessels for the transportation of passengers and cargo that science and the will to achieve can produce. As a part of such an effort Minneapolis-Honeywell is making a substantial contribution. I am told, and I address this to that organization, that you have the contracts for the installation of air conditioning in all of the six new ships the Maritime Commission has under construction. Had you not been able to demonstrate your capacity to discharge with competence

the undertaking you have embraced you would not have been chosen for the job.

You may not get the next job in which the Maritime Commission is interested. Competitors may challenge your work. Instead of Minneapolis-Honeywell smugly preening itself with satisfaction in its own works, it too will strive for greater perfection. If you attain success it will not be through change—it must come through painstaking work and dogged diligence. If you fail to achieve success, all society loses. If, on the other hand, you are successful in your present undertaking and in all of your works, you'll earn dividends for your stockholders and the people will get their dividend in better service, comfort, and health.

In truth you are playing in a great game—one in which financial winnings for you mean bonuses in better living for everyone.

Letter From Hon. Edwin Arthur Hall

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES.

DEAR FRIEND: Congress goes back in session this month. As usual, I am at your service in our Nation's Capital.

Every man and woman in our congressional district, regardless of race, religion, or color, has a right to call on me at any time for help with problems.

Don't let the stooges of Stalin scare you from writing to me because I am always glad to hear from you. I value your opinions and often I am in the spot to do you or your loved ones a favor. All you have to do is ask me.

Before I vote on the following questions I want to know how you feel about them.

1. Do you want compulsory health insurance? ------

2. Do you want Federal aid to education? ------

Mark your answers "Yes" or "No" after these questions.

Your interest in your Government will keep America free.

Your Congressman,
EDWIN ARTHUR HALL.

St. Vincent's Hospital—100 Years

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. KEOGH. Mr. Speaker, all of us know that getting sick is an expensive matter. Few of us are in a financial position to regard with equanimity the cost of medical care for a major illness. Even so, it is difficult for us to comprehend the impact of a serious sickness on the families of the very poor—the empty, helpless feeling that must come with the realization that the breadwinner, or the hard-working mother, will be lost to the family group through hospitalization.

In thinking of such situations, it is heart-warming to recall the friendly, understanding services of the voluntary charitable hospitals.

An outstanding example of such institutions marked its centenary recently. This is St. Vincent's Hospital in New York City.

St. Vincent's was the first Catholic hospital in the city when it was established 100 years ago. It also was the first voluntary hospital established to care particularly for the sick poor. Through a century, its area of usefulness has widened steadily. But St. Vincent's has remained faithful to its primary charge—to provide adequate medical care for those whose means permit them to pay little, or nothing, for it.

It is a Catholic hospital, operated by the Sisters of Charity of St. Vincent de Paul, the oldest order in the Archdiocese of New York. But no consideration of creed ever has controlled its readiness to care for an indigent sick person. It is a voluntary hospital in the purest sense.

New York's growth has changed St. Vincent's drastically in a physical way, but its spirit—that of comfort for the afflicted—has remained unchanged. The devoted nuns who minister there today are one with the sisters of 100 years ago.

It is a privilege to note the centenary of St. Vincent's at this time and to express the hope that God's blessings will continue to favor its works of mercy as it enters on another century of service as an element of the Catholic Medical Center.

Some Miracles To Ponder

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, one of my distinguished constituents, Mr. LeRoy G. Davis, of Sleepy Eye, Minn., this past year celebrated his ninetieth birthday and has been engaged in the practice of law for over 67 years. He is the author of a poem, Some Miracles To Ponder, which is a beautiful expression and was contained in his 1949 Christmas greetings. Under the leave to extend my remarks in the RECORD, I include his poem:

SOME MIRACLES TO PONDER

Who planned the mechanics
That prints without fail
The white on the tips of
The cock robin's tail?
And who do you think fixed
That beautiful thing,
The red on the bend of
The blackbird's wing?
And how?
Who planned for the black on
The meadowlark's throat,
Which comes by a rule that
No man ever wrote?
Who planned the contrivance
From dust of the earth:
That brain for your thinking
You had at your birth?
And why?

—*LeRoy G. Davis.*

1949.

Bishop William T. Manning

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. KEOGH. Mr. Speaker, during the recess of the Congress, New York and the Nation have lost a distinguished churchman and most valuable citizen—Bishop William T. Manning.

For 26 years, until his retirement less than 2 years prior to his passing, Bishop Manning was the head and symbol of the Protestant Episcopal Diocese of New York. He died at 83—a revered statesman of his church who retained an active interest in its affairs.

To one not of his faith, the striking characteristic of Bishop Manning was his intellectual integrity. He was forthright, courageous and uncompromising in his advocacy of social principles he considered to have the highest validity. In this, he provoked bitter criticism, as well as firm support.

On occasion, he was impatient with those who were disposed to place a tortured construction on the words of the Holy Bible in an effort to shape it to their conception of modern life. He said:

The Bible teaches religion, not science.

Bishop Manning was born in Northampton, England, and came to the United States with his parents at the age of 16. He was educated at the University of the South, Sewanee, Tenn., and later returned there as a teacher of theology. He held rectorships in Redlands, Calif., Lansdowne, Pa.; Nashville, Tenn.; and New York City, where he officiated in Trinity Parish.

In 1920 he became Protestant Episcopal Bishop of New York. While he was a stern defender of his Anglican beliefs, he made the pulpit of the huge Cathedral of St. John the Divine available to clergymen of other faiths. As early as 1933 he was attacking Hitler for his persecution of the Jews. And last February he was condemning the trumped-up conviction of the Catholic Cardinal Mindszenty in Hungary.

Although essentially a conservative, he supported such social reforms of President Franklin D. Roosevelt as anti-child-labor legislation and unemployment insurance.

If he needs a tangible memorial, his cathedral will serve admirably. Its present magnificence is attributable

principally to his unflagging determination to make it a complete temple of God.

All faiths can admire his crusade against spiritual lethargy. Throughout his long career in the clergy, Bishop Manning fought to arouse renewed awareness of the presence of God. He could not countenance passive faith.

We can all admire and salute his noble character—his militant devotion to God.

Toward World Stability

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address entitled "Toward World Stability—An Attack on One Is an Attack on All," which I delivered at the Institute of World Affairs, held under the auspices of the University of Southern California, in the Mission Inn, Riverside, Calif., December 13, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TOWARD WORLD STABILITY—AN ATTACK ON ONE IS AN ATTACK ON ALL

Throughout the history of governments the test of the worth of a constitution has always come in wartime. If we overlook the Kellogg-Briand Pact, which in theory outlawed war, we did not have in the history of governments until the promulgation of the present Japanese constitution a constitution based upon anything but force. The Japanese constitution is one within a superior rule. The projected union of Asiatic States is to be based wholly upon morals. The implementation of arms for the North Atlantic Pact finds America once again acting with words used to inspire unity in repelling an aggressive attack. Seldom has it been mentioned, that when Jefferson heard of the use of British troops against the people of Massachusetts before our Declaration of Independence he justified Virginia's interest in what was taking place in Massachusetts by use of words that are now part of one of the greatest positive law treaties that America is a party to, the North Atlantic Pact.

America, in all that she has done in advancing the concepts of liberty and freedom in the world, has always acted bigger than she thought. And never in her action has she failed to back up her words, if need be, with deeds. America has always been stronger than she thought, and her strength has helped in her leadership in the world.

When the people of Philadelphia celebrated the signing of the Constitution they offered two toasts; one, "the United States of America;" the other, "liberty and freedom to all mankind." Thus in America's beginning our people who were near to the spirit of those who wrote the Constitution interpreted that document with a dual meaning; one, an accomplished fact; the other, a hoped-for ideal. America's foreign policy today stands just where it did that night at Philadelphia; first, to keep America strong; second, to maintain our hoped-for ideal.

When our forefathers founded the United States of America they framed a Constitution which assured us our individual rights, liberties, and safety of person and property. They made it an indestructible instrument for the preservation of democratic principles, by which men would be assured that their innate dignity would be respected by government and society. They made it a flexible instrument which guaranteed representative government. In providing for decision by majority vote with full safeguards for minorities they bequeathed us a way of life which has brought us to our present position as the leading power of the free world. By substituting ballots for bullets, peaceful collaboration for decision by violence, they devised a principle of political action which was then, and is now, the highest attainment of man for the ordering of his affairs. Peaceful change deliberately arrived at—an American governmental invention which we have followed for many generations and which the world is now free to adopt—that is America's gift to the world. Direct actionists do not like it. Change by violence is still their way. An election instead of revolution is the democratic way within a nation. Collective action instead of the marching feet of the aggressor is the substitute the world is offered for war. The struggle is not yet won, but the people have seen the point. They believe that aggressors can be curbed, that a substitute for war has been found, and that ultimately mankind can live in a world of peaceful change instead of one of violence.

Throughout the history of this Nation, we have in theory steadfastly applied these democratic principles in the management of our domestic affairs and in the conduct of our foreign affairs. We have expressed in our international relations the same respect for human rights and liberties as we have zealously sought for ourselves. Traditionally, we have gone to the aid of the oppressed and spent our blood in the defense of the territorial integrity and the political independence of other nations as well as our own. Throughout our history in many parts of the world our actions, our force and our flag have stood for what the world learned to recognize as an American doctrine. We did this in 1898 and in the first World War. We did it again in 1941.

We are sometimes criticized for lack of foreign policy and paradoxically at other times for inconsistencies in our policies. Always admitting that we are human and therefore possessed of human frailties and contradictions, I submit that such accusations arise from an imperfect knowledge of our past. Many of our policies are not as new as some would have us believe. Most of them are deeply rooted in history.

The North Atlantic Treaty as an instrument may be new, but its underlying philosophy is the logical outgrowth of our age-long search for security for this hemisphere as expressed in the League of Nations Covenant, the Charter of the United Nations, in the Rio Pact, and in the Act of Chapultepec. These look back to the Monroe Doctrine, and that in its turn is deeply couched in the past. Indeed 12 years before that memorable message was delivered to the Congress President Madison in an earlier confidential message to that same body, dated January 3, 1811, said: "I recommend to the consideration of Congress, the seasonableness of a declaration that the United States could not see, without serious inquietude, any part of a neighboring territory, in which they have in different respects so deep and so just a concern, pass from the hands of Spain into those of any other foreign power." In response to this message Congress acted with a resolution that laid down the policy of what became a half a generation later the Monroe Doctrine. And troops were used to show we meant it. It was a congress that gave us our Declaration of Independence. It was a congress called convention that gave us our constitution. It was Congress that gave us the resolution that led to the Monroe Doctrine. It was a Senate resolution that paved the way for the United Nations. It was another Senate resolution that directed what became the Atlantic Pact. In each of our great steps towards carrying out the second part of the Philadelphia toast it was the representation of the people that bespoke the policy. American democracy has functioned in the making of our foreign policy.

These things we must never forget. America means popular sovereignty. It accepts the theory that men can act as a result of deliberation and reasoning. America's contest today is as it always has been, a contest against absolutes, the single will, legitimacy, divine right of kings, and dictatorship.

We need not think that article 51 of the Charter of the United Nations, which speaks of the natural right of individual and collective self-defense, nor article 5 of the North Atlantic Treaty, which covenants that an attack on one signatory shall be considered as an attack on all the other signatories, are new concepts. It was Thomas Jefferson who said, "An attack on one is an attack on the whole."

Indeed, we might go on the same way with most of our foreign policies, for Thomas Jefferson said, "Make our hemisphere one of freedom," and he struggled for a good-neighbor policy over a hundred years before President Wilson uttered his Mobile address and Franklin Roosevelt embarked upon that same policy under the specific name, "good-neighbor policy." Jefferson also advocated a moral society and a united world which long preceded our participation in the United Nations.

Among the oldest policies we have is that of seeking to establish a stable world in which we and other countries may safely live.

In our present relations with the rest of the world, in problems affecting the United Nations, in the European recovery program, in efforts to end the Greek civil war, in aid to Korea, and in many other current relations, it is therefore consistent with our traditions that we should seek stability.

Thus, too, in our relations with the U. S. S. R., which often dwarf all other problems, it is only normal for us to seek that same stability. And it is in the striving for that stability that we most frequently find ourselves opposed to the deliberate Soviet campaign of threat of force, infiltration, propaganda, and sabotage, to subvert nation after nation, and to reduce the entire world to a collection of puppet states subserviently following without question a single will.

The world knows now that the dictator technique is to exploit instability wherever it exists and to create it where it does not; to incite turmoil, distrust, and violence; to trade on human misery by empty promises of abundance to come through communism; to capitalize on fomenting mass movements toward nationalism in the hope of diverting them into a pattern of puppet governments; and to sabotage any and all efforts by the free nations to establish political, military, and economic stability throughout the world by collective agreement. All this amounts to the creation of social and political chaos for power purposes.

In contrast, to avoid the terrible consequences of falling before the promises of single-will magic and to assist the free peoples of the world to escape totalitarianism,

the United States is pursuing its time-honored and tested course. Wherever possible, we are joining with other nations and peoples in a great endeavor to achieve world stability, for the protection of the freedoms, rights, security, and economic well-being of freedom-loving peoples everywhere. Two world wars in succession have convinced us that the destinies of all peoples are now joined inseparably, and we must either work together to stabilize this closely interdependent world community or allow it to be wrecked. Half the world has apparently not yet learned this lesson, hence enormous energies and resources which might be applied to constructive purposes must instead be marshaled to counter the Soviet threat of destruction. From an American standpoint the fight today is the same as it was against German imperialism, Hitler nazism, Italian fascism, and Japanese Tojoism. The struggle is the same whether it be against the pirates of the Mediterranean, the Holy Alliance, a Napoleon, a czar, a Boxer, or a Spanish king who would enslave our neighbors in the Caribbean.

Today and yesterday, by refusing to respect and comply with their solemn pledge to support and abide by the Charter of the United Nations, the Soviet Union has prevented this great collective means of safeguarding peace from reaching fully effective stature. There is little question that the Soviet has done and is doing this designedly. The United States, enjoying a monopoly of the atomic bomb, offered to share in an international system of atomic inspection and control and to forfeit thereby its great military advantage over other nations. The Soviet Union, counting perhaps on the unwillingness of the United States to exploit its dreadful weapon, has by its veto thwarted the overwhelming will of the UN majority to set up that necessary control. Soviet vetoes have similarly blocked efforts to reduce conventional armaments and to make the Security Council an effective guardian of peace. Let's give our former ally the benefit of the doubt; but lately the inference is inescapable that the Soviet Union does not want international security and an effective outlawing of war, but instead harbors designs and ambitions whose ultimate fulfillment could only be accomplished by crushing democracy.

We see the same pattern for instability in other directions in the disputes and conflicts which have arisen within and between nations to endanger the security of all others. Two spirits are in the world—the persistent veto in the UN or refusal to cooperate in efforts to settle political struggles and armed conflicts in the Balkans, the Middle East, Europe, the Far East, and Southeast Asia. We have only to catalog such names as Greece, Korea, China, Berlin, and Indonesia to expose the mark of noncooperation and note incitement to conflict. Equally, in all these cases, we see the clear record of the democratic spirit wholeheartedly seeking to apply the peaceable, constructive methods set forth in the UN Charter for the establishment of concord within and among all nations and our efforts toward stability through relief, collective action, and military aid.

The great obstacle which stands in the way of world peace is noncooperation. Let us briefly assess its magnitude and far-reaching character. For the moment the issues involved are most clearly set forth in the Far East.

The conclusion of a peace treaty with Japan would unquestionably have a beneficial, stabilizing effect both throughout the Far East and in the rest of the world. It would enable the new, democratic Japan to play a more constructive role in supplying important goods to other nations and would serve as an example of restored political balance which could have a good effect on other countries still beset by political dissension. General MacArthur has declared Japan to be now fully qualified and ready for the treaty and the greater freedom of action which would follow. However, there are forces in the Far East and elsewhere who oppose a treaty now. To me the saddest phase of the peace, following the unconditional surrender, was the dividing up of both the Japanese Empire, a defeated nation, and China, a victor, by the surrender papers. Adjustment is a necessary key to peace in the Far East.

Korea is another example of efforts toward integration and political stability which are being blocked by single-will adherents. The United Nations has put its seal of approval on the democratic government formed in south Korea and has sought to promote the entry of north Korea into that democracy. However, the northern sector is firmly in the grip of a militant Communist minority and is condoning, and perhaps instigating, threats of invading and subjugation of the legal recognized republic of the south.

Turning to China, we see still another situation calculated to disturb the rest of the world. The Chinese Communists have control of China's millions by force of arms. The ominous influence of that part of the world that opposes stability has been publicly displayed by the Chinese themselves in their announcement of their allegiance to the Soviet and in the declaration of Mao Tse-tung. What this means, in the way of world-wide Communist growth, is shown in the special commercial and other privileges which the Chinese Communists have already granted to the Soviet Union. They will most certainly not offer equivalent privileges to other nations, nor would any of the free nations wish to accept them and thereby exploit the Chinese peoples. In this new compact between totalitarian Chinese and power-hungry Russians, there is danger not only to the East but to the entire world.

Almost everywhere else in the Far East, militant Communist groups—some composed of Chinese immigrants outnumbering native populations—are openly striving for political control, creating instability and endangering the uneasy peace of the world. The far eastern peoples themselves are under no illusions as to the Soviet Union's interest in these subversive movements. The heads of some of these states have publicly called for joint action to end the threat to them all of dictator-inspired and directed movements aimed at seizing political control.

But the danger, as we know, is not confined to the Far East. Almost anywhere we look in the world, we see that the policies and actions of advantage-takers within nations as well as those from without are delaying and threatening the efforts being made to find reliable security and political stability throughout the entire community of nations.

The key to our policy lies in the efforts to offset this world-wide organized campaign for chaos. Accordingly, while continuing our efforts with the UN majority to organize world security, we have had no recourse but to supplement that effort. We have done this by joining with other free nations in regional, collective defense arrangements, in harmony with the UN Charter, to assure sufficient strength to deter aggression. Failure to accept the spirit of peaceful change had made the Rio Pact, the Atlantic Pact, and the military assistance program essential. Without them, there could not be sufficient confidence to enable us to proceed with the great task of repairing the damage of war and moving on to new levels of human productivity.

And there again, in the field of economics, we encounter the same grim contest between the seekers after chaos and the architects of stability.

When it became apparent that the economic health of the entire world was endangered by Europe's inability to recover unaided from the devastation inflicted by the war, the United States came forward with the Marshall plan, saving the peoples of Europe from despair and giving them the physical means to rebuild their productive capacity in agriculture and industry, and to reenter world trade on a scale beneficial to themselves and all other peoples. The Soviet response to this great undertaking was to forbid the participation of satellite states of eastern Europe and to endeavor to wreck the recovery program. Happily, the eastern bloc failed in its effort and Europe is now advancing toward recovery.

While the Soviet continues to boycott the constructive programs and activities of the UN specialized agencies, the United States continues to support the manifold efforts to increase food supply, eradicate disease, raise standards, build labor forces, improve education, modernize agriculture, and apply modern technology to the development of human and natural resources throughout the world. The President's point-4 program of technical and capital-investment aid to the underdeveloped areas of the world has been successfully developed in the UN Economic and Social Council, and there are indications that this great enterprise—which has created new hope among many millions of handicapped peoples—will be put into operation in the near future. During the discussions in the Economic and Social Council, Communist-inclined delegates at first attacked point 4 as a scheme of capitalist exploitation. Subsequently, the Soviet Union and its satellites joined with the majority in supporting plans for a greatly expanded UN program of technical assistance to underdeveloped areas. Even the obstructors dared not oppose this effort. This is the most hopeful sign we have yet had that a united world may realize at last that the true interests of all peoples will best be served by cooperating instead of opposing every constructive measure undertaken for the benefit of mankind.

When 34 nations met recently at Annecy, France, to draw up new tariff agreements offering multilateral benefits and assuring a greater volume of world trade, the United States was notable by its presence and cooperation, the Communist-controlled nations were notable by their absence. Similarly, when the 1949 World Wheat Agreement was concluded last spring in Washington, the United States was present as a participant and a leading force; the Soviet Union came, observed, and withdrew. The effect of that pact in stabilizing half the world trade in wheat, at prices fair to consumer and producer, will be to put more bread within reach of millions of people and to keep it within their reach.

The list could be continued indefinitely, but there is no need to do so in order to establish the fact of the two spirits in the world—one working for stability, the other working to promote chaos to accomplish political ends.

We know that any solution of the grave issues which confronts us transcends the powers and abilities of any single state. It is a collective job. The instrument we need lies at hand and calls for perfecting and support. We must strengthen and back the United Nations to the fullest. If we do, I am convinced that the single-will dictators of the world will be forced to admit the futility of their ambitions and will have to bow before the enlightened, determined will of aroused free peoples.

There is a powerful new current running through the affairs of all mankind—the current of collective desire to find a universally acceptable and practical method of solving problems now too great to be solved by nations and peoples acting alone.

Almost half of the Senators during the past session of the Congress have joined in

the introduction of bills designed to strengthen the United Nations and to create world government. These measures seek stability through some form of international organization which will escape the veto and control the hitherto unbridled acts of a minority. It is my honor to serve as the chairman of the subcommittee of the Senate Committee on Foreign Relations, which will consider all of these bills during the next session. We plan to hold hearings on them in January and hope that they may serve as the basis for another resolution of the Senate in foreign relations comparable to the Vandenberg and Connally resolutions. By such steps as these we press forward to eventual peace.

The stability which we seek in company with other free nations grows stronger day by day. The tasks ahead are difficult and enormous, but we have found the method that works, and we will use it. We look forward to the day when all peoples will stand beside us as full partners in the interest of all humankind.

Organization of the Executive Branch

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on the organization of the executive branch, which I made before the Greater New York Citizens Committee on the Hoover Report at the Hotel Astor, New York, on Thursday, December 1, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

You have very kindly asked me to tell you in a few words why Representative BROWN and I, early in 1947, brought forward the Lodge-Brown bill which gave birth to the Hoover report which your organization is dedicated to advance.

Certainly one thought came from the fact that I had just been in the Army and had seen some of the waste of war. I was also deeply impressed with the way in which the Government had mushroomed, first, during the prewar years of depression, and, secondly, during the war itself. Certainly, so it seemed to me, there had never been a time when reorganization was more needed and when the need for it would be more apparent to everyone.

It was clear that this reorganization would have to be accomplished on a bipartisan basis or it would not be accomplished at all.

It was plain that the concept of economy and efficiency must be linked together. Service in our State legislature and in the Senate before the war had convinced me that economy by itself arouses little enthusiasm.

I also remember reading, shortly before I returned to the Senate, in 1946, a newspaper account of an exchange at a hearing between a Senator and a representative of the Interior Department. The Senator asked the witness: "How many employees could you fire and still run the Department?" The witness replied: "That is a very difficult question to answer. I can only say there are places where reductions can be made." The Senator then had the understandable reaction. He said: "I think that a good way would be to fire about half of these Government people and then see if the public complains of poor service."

This exchange struck me as peculiarly significant. In the first place, the Senator was simply stating an approach to Government economy and efficiency prevalent not only in Congress, but in the country as a whole. There existed then, as there exists today, a widespread, if often inarticulate, protest that our Government is needlessly costly and cumbersome and that the best way to solve the problem is to get out the meat axe and proceed forthwith to chop off large slices of Government, letting the blows fall where they might.

This was a familiar reaction to a familiar situation, but it seemed to me wholly the wrong approach. Organization of the top-heavy governmental structure can never successfully be accomplished by the meat-axe technique. This has been tried again and again by a Congress faced always with the dilemma of either cutting too much or cutting too little—in the wrong places, at that. The situation seemed to me one which required not the brutality of the butcher's axe, but rather the sensitivity of the surgeon's scalpel.

The trouble was that we needed the expert diagnosis of the best surgeon, and here we have always found ourselves up against a stone wall. The representative of the Interior Department, whose testimony I have just quoted, emphasized this universal perplexity when he plaintively remarked that he simply did not know how many employees his department could do without, although he felt certain there were places where economies could safely be effected.

This was indeed the Government that nobody knew. Fiscal responsibility extended off in one direction, while management responsibility went off in the opposite direction. Everyone seemed to be aware of incredible waste, inefficient duplication, and ponderous clumsiness. But there was no one to turn to for the indispensable diagnosis; we had no X-rays of the gigantic patient; there was no surgeon with the training, experience, intelligence, and vision to whom we could look with either confidence or enthusiasm.

These were some of the considerations which led me to the conclusion that talk of Government economy and efficiency was utterly meaningless unless and until we found the surgeon so desperately needed. In this instance, however, we had literally to create our surgeon. It was essential, first, that he be preeminently qualified, the best the country could find. Second, he should be free from any political taint. Further, he should have plenty of time in which to complete his job. He should be given ample funds and all the assistance he needed. It should be clear that he do his work not as a witch hunter or as a headline seeker, but with the purity of the true crusader.

Thus it was that on January 13, 1947, the so-called Lodge-Brown bill was introduced. Its aim was to establish a group of men, to be known officially as the Commission on Organization of the Executive Branch of the Government. This Commission would be our expert surgeon who would at last introduce us to the Government nobody knew, who would go through the baffling governmental maze with a fine-toothed comb, casting light and focus into all the dark and fuzzy places.

Thus the effort began. The legislative history of the Lodge-Brown bill in the Senate, at least, was not without some obstacles. The Budget Bureau, while agreeing to cooperate, pessimistically complained that commissions on Government reorganization were an old story and that such commissions had studied and submitted reports during the Taft administration without any constructive result, so why, it said in effect, go through the futile motions again and simply provide more voluminous reports as material on which the dust would gather? The Comptroller General in a lengthy letter said that an attempt to reorganize the Government, undertaken in 1798, had not worked. Once it was explained that the present situation differed from that which existed in 1798—or during the Taft administration—the doubting Thomases subsided. But we still faced the obstacle of congressional inertia. Here was a manifestly workable solution to a problem of the vastest complexity to which no one seemed to object, but still it was difficult to get anything done. At last, however, both Houses of Congress, by a unanimous, nonpartisan vote, approved the bill in the spring of 1947, the President signed it, and the path was clear for the Commission to commence operations.

Since those days I have had nothing but a series of pleasant surprises. I was first surprised at the extraordinary high caliber of men appointed to the Commission by President Truman, Senate President pro tempore Vandenberg, and Speaker of the House Martin. I was surprised and inspired at the way in which President Hoover subdivided the subject, organized the Commission, and laid out the work. I was delighted at the way in which the activities of the Commission were completely kept out of the Presidential campaign of 1948. To be sure, the bill was drawn so as to keep it out of politics, but the language of a law is never enough, by itself. Another surprise came to me in the quality of the Commission's recommendations which, of course, have aroused the praise of Americans in every part of the country. In fact, the entire Hoover report is now a subject for widespread public confidence and praise and, of course, this praise is music to my ears.

So now we have the report. The expert surgeon has given his diagnosis. It is a report in 19 separate parts which makes more than 300 recommendations. It stresses three things: to fix responsibility clearly, to give ample authority, and to set up a framework of control.

The report found, for example, what one commissioner described as "a complete lack of cost consciousness within the armed services"—something to remember today while Secretary Johnson struggles to carry out the unification law. Mr. Arthur S. Flemming, of the Hoover Commission, reports that Secretary Johnson has already effected economies of $300,000,000 during this fiscal year and will save about $500,000,000 during the next fiscal year. As much as $1,500,000,000 can eventually be saved in the armed services as a whole and without sacrifice of military strength. It is wonderful what can be accomplished by men who are not constantly thinking of new ways of spending money.

But there is still much to do.

The Commission found an absolutely indefensible competition for the taxpayer's dollar between the Reclamation Bureau and the Army engineers in an area where spending amounting to more than $50,000,000,000 is contemplated.

In the field of land management it found a three-way race going on between the Reclamation Bureau, the Forest Service, and the Soil Conservation Service.

Overlapping in Government medicine had created a situation in which there were only 155,000 patients in Government hospitals having a capacity of 255,000.

Recommendations were made to cure all these evils and these recommendations would save from $3,500,000,000 to $4,000,000,000—not millions, but billions.

So we have, thanks to the Hoover report, already accomplished something which no one would have thought possible; indeed,

even if we stopped there, the result would have been worth while in terms of public education. But we have not stopped there. Fully 20 percent of the Commission's recommendations have been enacted, which means a potential saving of $1,500,000,000. Congress has already passed one law which gives the President the right to submit plans which become law unless vetoed by Congress and six out of seven such plans have been already accepted. It has also enacted legislation to simplify and consolidate the housekeeping functions of government, to unify the armed services and to reorganize the State Department.

If the next session of Congress enacts as much as 60 percent of the remaining recommendations it can bring further economies of at least $2,000,000,000. But if Congress is to do this, it will need the guidance and help of Mr. Hoover and the Commission, who must prepare detailed reorganization plans and precise legislative proposals. The progress of the Hoover report cannot be aggressively advanced unless it is formulated into definite bills on which public opinion can focus. I hereby request Mr. Hoover and those associated with him to get these bills ready so that Congress will be given every facility for action.

This is a good place to pause and to pay a tribute to a man who surely must have had his fill of tributes, for he has received from people of every race, creed, and color, coming from every part of the world and from every walk of life. Yet each one of us who has had some contact with Herbert Hoover can add his own special and personal word of praise. For a period of time I saw him under circumstances which were in their way unique and which I shall always remember. In the full tide of his wisdom he would kindly consult with me as the work of the Hoover Commission progressed. I will not burden you, his friends and admirers, with my comments on his vast knowledge of government, his genius for organizing huge and complex work, his skill at keeping men of differing philosophies of government together, and his realistic sensing of the need for a truly effective follow-through in Congress. The memory that will always stay with me and which I particularly want to stress is of the way in which he never spared himself trouble, work, and fatigue. I think of him in the sweltering summer heat of a hotel room. I remember him—a former President of the United States—making the rounds of offices in the Senate Office Building, calling on Senators to discuss this great work, wearing out shoe leather and expending his energies at a time of life when most men enjoy the well earned ease of retirement. This was love of country indeed and it will always inspire me.

Much has been done but there is still much which remains. The job is still big. A government which has gone from 5 departments with 1,000 employes in President Washington's time to 180 agencies and 208,000 persons under President McKinley and then has increased to a point where today we find President Truman grappling with 1,812 agencies employing 2,100,000 persons cannot be untangled overnight. The deficit of the Post Office Department this year alone will be almost as much as the whole cost of government in McKinley's time.

And all this translates itself into such items as the $10 purchase order for the 50-cent typewriter ribbon, the penny post card that costs 2½ cents to deliver, and the $6,000,000 dam that cost $93,000,000.

All is inexcusable waste. None of it can be condoned on grounds of generosity or liberalism. In fact, the convinced socialist should be leading the cheering for the Hoover report since he wants the Government to do so much. The billions of dollars which enactment of the Hoover report would save are indeed of vital importance. But it was Calvin Coolidge who said: "I favor economy not because I want to save money but because I want to save people." And—to maintain the essential nonpartisan tone of our proceedings—it was Franklin Roosevelt who said: "Liberal governments are often wrecked on the rocks of loose fiscal policies."

What is at stake, therefore, is nothing less than our liberal Government and the viewpoint about man which this Government represents. For our system of government cannot be expected to endure if, in military parlance, it is no longer operational. It must be an effective instrument for translating into action the aims and aspirations of the people.

The reason for the destruction of democracy in so many countries of the Old World is that it did not or could not give effect to these aims. Let it never be said of us that we lost our democracy because we could not keep our Government lean and vigorous and effective.

Problems Confronting Municipal Governments

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a very timely address delivered by the Honorable R. Ray Shute, mayor of Monroe, N. C., before the Fortieth Annual Conference of the North Carolina League of Municipalities.

This meeting was held in Winston-Salem in October, and this address contains much food for thought with reference to the municipal governments and to other problems which confront governments at all levels.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

On the occasion of this year's annual meeting of the North Carolina League of Municipalities, it would be timely to conduct a sort of orientation course for our new municipal officers, due to the fact that the mortality rate has become exceedingly high of late with our official family. It is the sixty-four-dollar question, whether Johnny Q. Public gets more provoked with his city officials than they do with him. At any rate, we are suffering a tremendous turnover in local government, whether we like it or not. I have the greatest admiration for those who are willing to make the personal sacrifice necessary to holding public office on the local level, because it is usually there that the going is toughest. And may I add, parenthetically, those of you who are considering sponsoring the city control of alcoholic beverages in counties that have already voted against control, would do well to converse privately with the speaker. I have just come through such a campaign and I assure you that I was exceedingly lucky to preserve my trousers in the ordeal. The Allied Church League even demanded my impeachment, and had they not won the election probably would have attempted it.

The city is the earliest form of self-government and is the mother of all levels of political enterprise. It is, therefore, not unnatural that citizens expect, and as a rule receive, more services from their city than from any other level of government. In the present complicated system of interrelated government it is perplexing, to say the least, to see the local unit so completely obscured when consideration is given to remedial legislation by either the Federal or State legislative bodies. With this specifically in mind, the American Municipal Association has sponsored legislation to create a Federal commission on intergovernmental relations, which aims at a vertical reintegration of government and we should lend our wholehearted support to this commendable undertaking.

Where once every house had a Chic Sale's nestling peacefully behind a floral design of morning-glories and sunflowers, had a well in the side yard, and an ever-burning trash pile in the back yard, today we have municipal sewer and water systems and garbage disposal. The kerosene lamp has been replaced by the incandescent bulb and the volunteer fire brigade has been replaced by professional firemen and the old vigilante patrols have been replaced by policemen. Dusty and muddy sidewalks and streets are now paved and kept clean by our sanitary and street departments, while the ditches and ponds and puddles are now safely replaced by adequate storm-sewer and drainage systems. Yes; we have come a long way in municipal government and still we are progressing.

Libraries, hospitals, parks, playgrounds, stadiums and other recreational facilities, armories, schools, health centers, airports, courts, prisons, traffic and parking facilities, zoning, planning, retirement, merit systems, public relations, research; yes; even cemeteries are now all a part of municipal government. It is a far-reaching and intricate system of conveniences and services and has so expanded, and so continues to expand, that efficiency experts, business managers, accountants, and a host of specialists and technicians are needed to operate even a modest city.

Today, as never before, we need men in office who are willing to familiarize themselves with the many intricacies of city government and we also need good educational programs to educate our urbanites on the varied problems of municipalities. It is no easy or simple matter to operate city government today, as every single one of you present here today can honestly testify. Ours is a responsibility and a challenge worthy of our mettle. Faced, as we are, with increasing budgets every year, demands for more and better services and, at the same time limited sources of revenue, municipalities face a future whose glowing symbol seems to be a gigantic question mark. In North Carolina the progress which has been made by our cities is all the more phenomenal when consideration of our restricted finances is fully understood. It is, I think, a tribute to our municipal officials.

In the past we have painstakingly discovered new sources of revenue, effected economies all along the line, planned and financed carefully and safeguarded every fiscal and psychological gain. We have hoarded and budgeted our funds and diligently scrutinized and controlled our bond issues and capital expenditures and we have kept our current expenses at a very low level. It is, therefore, to different avenues of relief and assistance that we must now turn to meet the ever-increasing demands being constantly made. We must seek a redefinition of authority and a reinterpretation of certain State fiscal policies as they relate to municipal operations.

While we can expect little increased tax powers, we should at least seek legislation on a positive level which would, for example, permit us to tax wherever we are not specifically denied the right. As it now stands, we are authorized to levy and where specific authority is not granted, we are prohibited—it

is a negative method. There are many other ways and means of finding tangible assistance for our cities if we had the support and understanding of both the Legislature and the administration. It is, I think, in these areas that we should seek for answers to many of our problems.

We must not lose hope or feel that ours is a losing fight, regardless of the many disappointments we experience. We are making gains and we are nearer to the people than any other governmental unit. We will eventually win our battle and secure many of the goals that we have heretofore set. We have a cumulative gain and some day a legislative spirit of understanding and cooperation will be manifested. It will not always be as absurdly one-sided as it now stands. More than one-half of our population is now urban and this will increase with the passage of years.

We must continue to exert every effort to operate efficiently and to plan carefully. We must keep our people informed on our problems and solicit their continued cooperation and understanding. The future is not too bright, I'll willingly admit, but it is not entirely without hope. To date, we have exhibited the most efficient operation of any unit of government and we will find newer and better ways of doing things.

There is one thing we must do and that is to guard against the evils into which we can fall—we must never become intolerant, class-conscious, or parties to discriminations and factionalizing. Let others say what they choose, but for us let that old spirit of true democracy continue in the future as it has in the past and we shall be happier and freer. Let us not lose our devotion to our fellowman nor our sense of proportion in these hectic times. Changes will come and men will arise who will have a new vision for the future, wherein democracy will become reactivated and a continuing force for the betterment of all. As in the past, so in the future, democracy must be our optative mood in life. It is our heritage and our only hope in years to come.

I sometimes find myself wondering just where this beautiful and meaningful experiment that we call democracy is destined to lead us in the eventful years that lie ahead. We have observed with no little interest and concern, certain very puzzling trends during the past two decades, which may or may not be indicative of fundamental changes in our way of life. Certainly we all applaud the many economic and social gains which have been made and many of us look with cooperative anticipation to still further gains in the immediate future. However, there are other signs of the times that hardly merit our approbation and if they are straws in the wind, then we should be most apprehensive of the current trend of our times.

In its inception, democracy—certainly the American brand—predicated its right of survival on the thesis of equal rights for all and special privileges to none. The individual, for the first time in recorded history, was given official status in government and the theory of democracy was declared to be a mutual sharing together by individuals in decisions affecting the lives of all. This was a new philosophy of life, refreshingly different, stimulatingly new and typically American. It was a new day in the conception of a way of life, later to be distinguished by the title "The Age of the Common Man"—a term not so well cherished by imperialists in the areas of political, economic, and social, not to mention religious experience. The idea of rugged individualism, private enterprise, and the inherent rights of the freeman became paramount. Under this system America has grown from a seacoast colony of minute proportions to the mightiest Nation on the face of the globe. The challenge of this thrilling new continent furnished the dynamic for Americans to develop a cockiness and confidence that has led us to successes undreamed of in the annals of man. The American way of life became a term associated with strength, courage, vision, and determination. We became a Nation to whom failure was an obsolete term and the impossible merely a challenge to our dogged adventuresomeness, imagination, and skill. Ours has indeed been a record of achievement unparalleled in all of man's history and the world has learned to live and move according to American methods and democratic thought patterns.

Yankee ingenuity has won out on many occasions and our cooperative potential has twice thus far in this century saved the democratic way of life for the entire world. However, today we observed the greatest paradox in mankind's existence. America has, let us hope momentarily, lost its zest for experiment, its spirit of aggression, its daredevil attitude of leadership, its positive urge and its determined will to progress and surge forward. Something quite serious has apparently happened. We no longer seem able to lead or even willing to strike out on our own. We have adopted an attitude as un-American as the Sphinx. Our every thought, every act, every concern, seems to be on Russia, and we have assumed a negative philosophy of life. We wait to see what the Soviet does—then we do the opposite. This new and unique attitude is most alarming to many of us and we deplore seeing the wealthiest, most powerful, and most prolific Nation on earth surrendering, by default, its position of leadership to an upstart conglomeration of slave states whose basic ideology is as inhuman as it is economically and politically unsafe and degrading. I think most Americans are becoming disturbed about this anomaly and as dislike becomes more intensified, perhaps we may hope for a rebirth of the American affirmation of life and see a resurgency of democracy that will sweep every opposing tenet before it, whether from the right or left, and lead our Nation and world into the challenging future of the atomic age. This, I take it, is the national imperative of this very hour.

While it may not necessarily be associated with this same attitude previously mentioned, at the same time we have developed a new, and to many of us a dangerous, system of government by and for vocal minorities and pressure groups. This departure from the truly democratic process is both un-American in its inception and exceedingly damaging in its operation. More and more we note the passage of important legislation predicated on the voices of pressure groups rather than the apparent needs of all of the people.

And may I pause here, for the moment, and say that I concur with our Governor in many, if not most, of his reforms and I am increasingly thankful that we have a Chief Executive who has the guts to strike out on his own for reforms which are so badly needed and it is my studied opinion that the vast majority of our people will go along on most of these programs. I am sure that every fair-minded citizen of North Carolina wants every segment of our people to go forward together; farmer, merchant, laborer, manager, borrower, lender—with locked arms and hearts and minds and spirits in a mutuality of sharing together in the blessings, the responsibilities, the gains, and the losses of our great Commonwealth. This is the only way that true progress can be effectually made and we of the North Carolina League of Municipalities offer the friendly hand and heart to our brothers of the soil and others in this great State and ask for peace and brotherhood and cooperation from every quarter. It can only be on this basis that we can hope for a future of promise. Let us pioneer and explore and dare to advance; let us do it together and in the true spirit of understanding and democracy.

As Tom Paine wrote on the head of his drum during the trying days of our national revolution: "These are the times that try men's souls." To be sure we live in trying times but only the coward would turn back and seek retreat from the realities of the now—whether they be good or bad. Hence, our course for the day and for the morrow lies ahead: Upward and onward. This is not the first time that we have encountered stormy weather and many times ere this our seamanship and courage have brought us safely through. Our ship is sturdy, our course is clear and behind the clouds the sun is ever shining. We have but to sail on and fear not, for the morning cometh and the lark will yet again sing and skies will be blue and the storm will spend its fury. I say, "Hold the Faith, have courage and be of strong heart." It is always darkest just before the dawn.

The United States Marine Corps

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the keynote address delivered by Col. Melvin J. Maas, president, Marine Corps Reserve Officers' Association, at the national conference held on October 21 and 22, 1949, in Philadelphia.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Since our last conference in Chicago in January of this year, many things have happened, but the Marine Corps still finds itself faced with the same determined efforts to drastically curtail it as a combat force. The fact that these objectives have not been accomplished is due in no small measure to the efforts of MCROA chapters and individual members who have devoted so much time and intense interest and effort in preserving the Marine Corps.

While our sentimental love of the corps might in itself be a compelling motive to spur us on in the battle to preserve the Marine Corps, that is not our basic motive. We are principally concerned with the necessity of having always available for instant readiness, an effective combat force of shock troops and amphibious teams. While the Marine Corps may not be the only method of accomplishing this, it is certainly the most effective and economical way to do it. The continued existence of the Marine Corps, maintained in a high degree of readiness, is the only assurance that we will have such a force. By the very nature of modern warfare under which hostilities start with stunning suddeness and develop with lightninglike rapidity, a combat-ready force in existence and capable of moving at an instant's notice is absolutely essential. In no other way can we buy the time necessary to even mobilize our defensive military forces, let alone have the opportunity for effective retaliation.

Those who would reduce the Marine Corps to guard-duty status and transfer its amphibious mission to the Army and transfer its air-support mission to the Air Force, are perfectly sincere in their belief that the Marine Corps constitutes a duplication and is therefore unnecessary. They are mistaken. They are mistaken because for while one understands long-range bombing and the other

understands mass troop movement, they do not understand the influence nor the effect upon an enemy of the pressure of sea power. They are under the mistaken delusion that a Navy is designed only to fight enemy ships. What they fail to appreciate, is that sea power is one of the most effective forces in putting pressure on any enemy, to help destroy his capacity and his will to further fight, even in the case of vast land-locked areas. Sea power can deny to the peoples of such areas their essential imports. Any nation's mass imports must ultimately come by sea, therefore the quickest way to strangle a nation's war potentiality is to deny it those parts of its economy which must come over the broad highways of the ocean.

Because we have never had unification of our military services in past wars, the soldier understands only fighting other soldiers; the aviator largely thinks in terms of aerial combat with other aviators. Neither knows nor understands the function and the mission of sea power. The seething conflict within our military services that has finally erupted into a congressional investigation, is not merely a conflict of either the self-interest nor the divergent professional points of view of our Navy or our Air Force. While what appears on the surface is an effort on the one hand of the admirals to retain their traditional roles, and on the other hand an effort by the aviators, because they are a new element, to assume unto themselves roles which heretofore were performed by the Navy and Army, this is only a side issue of the real story. It would be made to appear that we are witnessing merely a clash of personalities, a struggle for personal military power. Some people see this as the dying grasp of the straw by the drowning Navy, others see the newborn infant "air power" attempting to arrogate to itself all of the functions and missions of the older and more traditional services.

Actually all this is only evidence of a much deeper and far graver situation. What has been happening in the Pentagon and before the committees of Congress is evidence that the United States has not yet realized its dominant position of leadership in the world. We are relatively a young nation, but suddenly we find ourselves thrust into the role of world leader and champion of the democratic forces throughout the world. We and all that we stand for are challenged by a rising and formidable enemy whose ideology and methods are the direct opposite of ours. No; this is not a question as to whether the Navy is right and the Air Force wrong, or vice versa. It is not a question as to whether we can save money by duplicating the Marine Corps in the Army or whether all airplanes should be in one air force. The protests resulting in public outbursts emanating from the Pentagon by the Army, Navy, and Air Force are evidences that the United States has failed to adopt a world policy and a program which is essential if we are to assume our position as world leader. The reason that the Navy protests the Air Force's domination, the reason that the Marine Corps protests the Army's efforts to starve out the combat forces of the Marine Corps, the reason that there is a struggle between the Army, Navy, and Air Force for the control of guided missiles is that we have no formula within which to fit the proper assignment of the missions of our military services. We can have no firm, intelligent military program which will be understood and accepted by all within and without the military services until we do have such a formula. Such a formula is dependent first upon our having a national policy of our position in the world. Neither the people nor the Government have as yet stated nor even formulated what our world objectives are. Neither we nor our friends, nor even our potential enemies, know just what the United States stands for nor what its long-range policies will be. We find ourselves pushed around dangerously in various parts of the world because the opposition forces in the world are uncertain as to what our limitations are. They will advance their interests everywhere in the world short of war by pushing us around wherever we will permit ourselves to be pushed. While their objectives may be to accomplish their aims short of war, neither we nor they can be sure that it will stop short of war, since neither of us know just how far we can be pushed before we push back and war becomes the inevitable result. Our friends and potential friends throughout the world are hesitant because they do not know how far we will support them nor how long such support as we do give them will continue. Our military leaders are confused because they do not know just what it is they are to be called upon to do in the support of our national policies. How can they? Those policies have never been stated; in fact, no two people in nor out of Government can clearly define what our objectives are.

The military establishment has as justification for its existence, the implementation of our foreign policy. How can our military or our congressional leaders provide the proper size and type of military organization when they themselves do not know precisely what the mission is to be. The objectives of a nation's military force is not to win a war as such. . The objectives of a government including its military forces, is to preserve its integrity, independence, and peace. When war becomes unavoidable in attaining these objectives, the purpose in fighting that war is to destroy forces that are opposing those objectives with the further purpose of resuming those objectives when the hostilities are over, in other words, when the opposition to our policies has been removed.

Therefore, our international concepts and our military strategy and tactics must be such as to further those ultimate aims in war if it be forced upon us, but the war must be so conducted that we do not defeat our own purposes. We must as a Nation, for instance, decide whether we intend to adopt a Genghis Khan concept of totally wiping out our enemy in a war, or adhere to the traditional American idea that we will merely fight an enemy government with the purpose of liberating its peoples from their own tyrannical leaders. Under the latter concept our philosophy has always been that people so liberated would then be receptive to our democratic ideals and would ultimately achieve freedom, liberty, and economic independence. This is the basic issue behind the current flare-up within the Military Establishment. It strikes to the heart of the problem—that of the future of the world.

Our answer to this problem will determine what kind of a world there will be for the next thousand years. A wrong solution will mean another war and a war which will result in the destruction of everything that man has been fighting to achieve during the last thousand years. A right solution will mean not only the preservation of the achievements of mankind but will permit them to progress and advance as much during the next thousand years as they have during the last thousand.

Therefore, you and I are fighting not to preserve the Marine Corps in order to preserve an organization of which we are proud and to which we owe service allegiance. Whether we are conscious of it or not, we are fighting to assure this country a type of military force which will make it possible for us to continue to achieve our worthy objectives in the world. Without a striking force instantly available, retaliation may not become sufficiently evident to a potential enemy to deter him from over-stepping the bounds of our national self-interest. Without such an instantly available striking force as the Marine Corps alone provides, the nature of such a war, if forced upon us, may compel us to wind up with either Genghis Khan warfare, or at least the use of such mass destruction methods as will make it impossible for us to ever again lead the rest of the world in adopting our ideals and philosophy. No, this movement to preserve the Marine Corps is not merely service rivalry, nor evidence of fierce pride in a great and glorious corps. It is the inner conviction of people who have the knowledge that we must have what the Marine Corps can give the Nation in order to survive as a democratic nation, and to continue to be the hope of peoples throughout the world who aspire to ultimate democracy.

MCROA at its last conference, held in Chicago, called upon the leaders of our military services to end the interservice bickering and to accept the decisions of the constituted leaders once the decisions had been made. We called upon all officers, Regular and Reserve, to either accept the final decisions or get out of the service. MCROA, at that time, pledged its leadership in this demand by promising to set an example. We renew that demand and renew our pledge.

However, I wish to call your attention to the fact that our demand and our pledge was predicated upon the assumption that before the constituted leaders made their final decisions, all services would be adequately, fairly, and freely heard, and that they would all be dealt with on a basis of equality in their treatment. This does not necessarily mean equal appropriations, but it does mean that each shall have his problems and his requirements treated on a basis of equality with all the others. When I called upon MCROA in January to demand the end of interservice bickering, I proposed that the bickering be ended by an intelligent and fair elimination of the causes that were leading to this unfortunate controversy. I fear that what has happened in the meantime is that efforts have been made to eliminate the controversy by arbitrary suppression of the bickering and endeavoring to conceal the controversy from the public rather than by getting to the basic causes and removing the sources of conflict. The positive proof that this is what has happened is the fact that the bickering has not ended, the conflict has not been settled and, in fact, has continued to grow until it has finally exploded on Capitol Hill and has resulted in a congressional investigation.

Actually this situation cannot be entirely corrected within the military itself. The Congress and the people themselves must assume the major share of the burden for this situation. A final and lasting solution can come only from the people through the Congress. It is a healthy sign and still a most happy one that this service conflict could get out in the open and could reach the point where all sides could be heard by the legislative representatives of the people, the United States Congress.

Merely to suppress the evidence of the conflict is dangerous. Compare the situation that existed in prewar Germany. There, the military leaders were supreme. All opposition was suppressed so that the public was misled into believing that there was complete unity. This led to the feeling that the leaders had found the correct solution to their military problems. One branch of service dominated the military and, through them, the government of prewar Germany. Unfortunately, those particular leaders, while they understood well the problems of land mass armies, did not understand the potentialities of sea power nor the full implications of the new element—air power. Those who did understand these two elements were only half heard and then suppressed. The dominant military leaders in Germany saw sea power largely as limited

to undersea raiders and air power as merely long-range strategic bombing. Germany lost the war, because she did not bring adequate sea power to bear upon her initial victories, and then failed to follow through on total air power. Germany was doubtless capable of doing both but was prevented from doing so because the informed advocates of adequate sea power, and total air power were suppressed by those who had impatience with these concepts, an impatience due to ignorance of their full implications. Had adequate sea power been made available in Germany, American lend-lease would have been cut off. England would not have survived the furious onslaught of the Germans. The final blow to Germany came when the Luftwaffe lost the Battle of Britain through its failure to provide its strategic bombers with adequate fighter aircraft coverage.

Had the battle of Britain been won by Germany, there is very little doubt but that the United States would have been denied the opportunity to have even challenged Germany in Europe, for England was our only possible base of operations in Europe proper. Adequate sea and total air power on the part of the Germans would likewise have denied to us the opportunity of our African campaign. Even so, our African, Italian, and French landings were made possible only by the use of amphibious tactics and weapons developed by the Marine Corps long before World War II started. Every amphibious landing, whether in the Atlantic or Pacific, succeeded because it followed the pattern developed by the Marine Corps. The Marine Corps being a relatively small, closely integrated organization, employing every weapon, was able to study and develop the tactics, techniques, and the weapons necessary for successful amphibious operations. Neither the Army nor the Navy nor the Air Force each by itself can conduct such studies. It takes an integrated organization with all weapons available at all times, to successfully develop and continue the progress of amphibious operations. Furthermore, amphibious tactics are a complete lifetime military job. It cannot be developed on a part-time basis either by the officers or men engaged in it. The only military organization in the United States that was ready—that is, trained and equipped for the nature of World War II when that war came—was the Marine Corps. Traditionally, armies and navies prepare for the next war by getting ready to fight the last war better. The marines, on the other hand, traditionally forget the methods of one war, the day it is over, and begin to train and prepare for the nature of a future war. Thus, in 1921 the marines realizing that if another war came it would not again be trench warfare but would involve our attacking and landing on hostile shores everywhere in the world, reorganized itself and dedicated the whole Corps, including its air branch, to the development of modern amphibious tactics. So, too, at the end of World War II, the Marine Corps realizing that we would not again be recapturing the same islands in the Pacific we took in World War II, reoriented its entire concept for the nature of a probable future war. No time was lost in reorganizing the field forces of the Marine Corps, its supporting echelons and its tactics, techniques, and its weapons.

To destroy the Marine Corps as a laboratory in time of peace, for the study of future tactics, and as an assault force immediately available if a future war comes may very well spell defeat for the United States in the event of another war. Our national history indicates that if the Marine Corps is destroyed as a combat organization, we are very likely to enter world war III largely with the weapons, tactics, and techniques developed in fighting World War II. However, they simply will not be good enough. The Marine Corps is an essential and integral part of sea power.

So again I call upon MCROA to lead the way. I urge that MCROA insist that the interservice bickering be ended by a full, frank, and intelligent elimination of the causes that have led to this interservice conflict and further, that MCROA urge the people and the Congress to no longer delay in the determination and proclamation to the world of our national and international objectives. When this is done, a formula can be devised whereby military programs will result in providing the United States with security forces that will actually provide security and at a cost that will not wreck the economy of the Nation.

To the chapter presidents and all the members of MCROA, I hand this challenge. It is your greatest assignment. On the outcome, far more depends than any assignment you ever have had in uniform. To assure our objective of the continued existence of a Marine Corps capable of fulfilling its mission, it is essential that Congress provide that the minimum strength of the Marine Corps shall never be less than 6 percent of the total strength of the combined armed forces. Six percent spells security. Hand in hand with this necessity, is its twin—that the law must provide that the Commandant of the Marine Corps sit with the Joint Chiefs of Staff during consideration of amphibious matters, and on all matters affecting the Marine Corps. Not until and unless these two things are done, is this Nation assured of proper military security.

So, the order to MCROA is forward march.

United States Cultural Exchange Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the New York Times of Sunday, December 25, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION IN REVIEW—UNITED STATES CULTURAL EXCHANGE PROGRAM NOW COVERS 50,000 PERSONS AND IS GROWING

(By Benjamin Fine)

The United States, as never before in its history, is engaged in a tremendous program of cultural and educational exchange. The State Department, responsible for this project, is convinced that the democratic way of life can be made more secure and the false propaganda of the totalitarian nations more easily negated if the peoples of the world have closer contact with one another.

We exchange with other countries leaders in various fields of industry and professors, teachers, and graduate students. We maintain libraries in all parts of the world. Our experts cooperate with other countries in developing scientific and technical projects in such areas as agriculture, engineering, or medicine. A number of cultural centers in the Latin-American countries, sponsored by the State Department, have helped thousands of adults learn the English language.

At present 26,000 students from foreign countries are enrolled in American colleges and universities. More than 16,000 American students are studying in foreign universities. In addition, another 10,000 nonacademic persons who are specialists in such areas as social welfare, government, technical work or industry will come here or go abroad. As a result, the total flow of academic and nonacademic exchanges will go beyond 50,000. This figure is double the prewar total—and it is still rising.

The exchange program is stimulated to a large degree by the Fulbright Act, which President Truman signed on August 1, 1946. This is the first year that it has been put into effective operation.

The program is financed by the sale of American surplus property abroad. Under the Fulbright Act a country purchasing our surplus war material can pay for it in part by underwriting the education of American students in that country, and by financing the travel expenses of its own exchange scholars who come to the United States.

TOTAL ESTIMATED AT $140,000,000

The act limits the educational exchange in any one country to the equivalent, in their currencies, of $20,000,000. It specifies that the sums allocated for this project can be spent at a rate of not more than $1,000,000 annually. Before the act runs its course, it is expected that a total of $140,000,000 will be made available for the educational exchange program, making this the greatest project of its kind.

Three types of programs are included under the Fulbright Act: (1) Graduate study, (2) teaching, and (3) research. Scholars in each of these three categories will receive maintenance, tuition, incidental expenses, and travel. However, the United States has no funds for foreign scholars coming here under the Fulbright Act, since all available funds are in foreign currencies. The act provides for transportation to and from the United States in those cases where travel can be paid in foreign currencies. Various private agencies cooperate with the State Department in obtaining funds to permit foreign students to come here.

To supervise the operation of the act, Congress has authorized the establishment of a Board of Foreign Scholarships, consisting of 10 members who represent cultural, educational, student, and war veteran groups. The board is responsible for (1) approving policies for the educational programs under the act; (2) approving the types of programs and projects to be undertaken; (3) selecting institutions to be approved for participation; and (4) selecting all candidates, both American and foreign.

FOUNDATION TO BE OPENED

The countries which are participating in the program include Belgium, Luxemburg, Burma, China, Egypt, France, Greece, Iran, Italy, the Netherlands, New Zealand, Norway, the Philippines, and the United Kingdom. In each of these countries a United States educational foundation is to be established. These foundations will carry on the exchange programs and handle the funds, under supervision of the State Department. The foundations recommend programs to be followed in their particular countries, and suggest the candidates they feel should be sent here.

In the United States the Board of Foreign Scholarships has designated three agencies to assist it in selecting candidates.

These agencies are:

(1) The Institute of International Education, which makes the preliminary selection of applicants for student grants, both foreign and American. Under the chairmanship of the institute, a national committee representing various other private agencies reviews the applications and submits nominations to the board.

(2) The United States Office of Education makes the preliminary selection of teachers who want to be placed in elementary schools, secondary schools, and junior colleges abroad. The education office also reviews applications of candidates recommended by the United States educational foundations abroad for travel grants to take up similar positions in this country.

(3) The Conference Board of Associated Research Councils (composed of representatives of the American Council of Learned Societies, the American Council on Education, the National Research Council, and the Social Science Research Council) selects persons who wish to go abroad as professors, specialists in certain fields or advanced research scholars.

EXCHANGE TOTALS

According to present plans, the Fulbright Act will exchange a total of 3,000 persons each year. Of this total 1,500 will be American scholars who would be sent abroad, and an equal number who would come here. It is expected that the United States will divide its three categories this way: 750 graduate students, 500 research specialists or professors, and 250 teachers.

American groups and organizations subsidize the exchange program far more than the Government does—of the 26,000 foreign students here now, probably fewer than 1,000 get any direct funds from the United States Government.

Private groups are in the lead. For example, the Institute of International Education, a Carnegie-supported organization, serves as a clearing house for much of the exchange program. Last year it sponsored more than 1,000 Americans and citizens of other countries, who received scholarship and travel aid worth more than $2,000,000.

Scores of national, State, or local groups, both large and small, are supporting the exchange idea. For example, the American Scandinavian Foundation brought 515 students to this country last year at a cost of $500,000. The Girl Scouts financed 87 students or youth leaders from 31 countries. The English Speaking Union provided 41 scholarships. The Rotary International last year took care of 38 foreign students. In addition, many local Rotary Clubs had their own scholarships. Several college fraternities have raised scholarships to bring foreign students here.

BASIS OF UNDERSTANDING

Explaining the Government's position in this program, Dr. William C. Johnstone, Jr., director of the State Department's Office of Educational Exchange, declared that understanding based on an appreciation of differences in culture, customs, and history was essential to a world of international cooperation. In a recent interview with this writer, Dr. Johnstone expressed the hope that the exchange program would help build the foundation for a more peaceful world.

"As a Government we are doing everything possible to assist the people of the United States to have more direct contact with the peoples of other nations," he observed. "It is a program of peoples speaking to peoples. It is part of a total American effort to build a secure world. We believe that such security must come in a world in which men's minds are free to accept or reject ideas."

Unfortunately, the money available for this exchange is inadequate. Aside from the funds provided for under the Fulbright Act, the State Department has less than $5,000,000 available for this tremendous job. This is provided under the Smith-Mundt Act, which permits the Department to carry on various kinds of educational, scientific, and cultural exchanges throughout the world. Perhaps as the value of the exchange program becomes more apparent, the necessary funds will become available.

Socialism by Default

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Socialism by Default" delivered by Cecil Palmer, English publisher, author and journalist and one of the signatories of the manifesto on British Liberty at the fifty-fourth annual Congress of American Industry, sponsored by the National Association of Manufacturers, New York City, on December 9, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Nationalization undertaken by our present socialistic government is, without the possibility of contradiction, Britain's one-way passage to destruction—destruction of all which the people of my great nation have held dear for generations, yes, centuries—destruction of their right to work where they choose, where their talents best suit them—to a large extent, destruction of their right of ownership and enjoyment of property—destruction of their privacy with their physician or surgeon.

All this because the road on which we of Britain are now speeding—on which there is but a one-way passage (unless a miracle, not now foreseen, halts it)—leads from one state control to another state control until finally the state controls all.

I make no differentiation between socialism—which is the proper appellation for nationalization, though seldom mentioned by our socialistic government—and communism. Socialism and communism are identical twins, make no mistake about that. There may be this difference—whereas socialism merely paralyzes the soul of man, communism utterly destroys it. But where socialism takes hold, in even its mildest form, communism soon follows with all its destructive forces.

Under the past 4 years of socialistic nationalization, Britain has become a nation of frustrated, regimented, undernourished, dispirited people—perhaps nearly the most miserable people on earth. Their respect for law and order has dwindled ominously. In greater or less degree, we in Britain are all criminals now for it is utterly impossible for any man to abide by all the rules and regulations laid down by a socialistic, paternalistic bureaucracy such as is now inflicted upon our people.

How is nationalism accomplished? It is a dastardly story, but here it is.

The first move is to set the governmental propaganda machine in motion and to lay on the poisonous juice progressively until the selected industry itself begins to wonder how it ever came into existence at all. It is coaxed, threatened, cajoled, and insulted with equal hypocricy at every stage. It is told it is inefficient, costly, greedy, and quite incapable of working harmoniously with its employees. When as much as possible of this mud is firmly plastered over the industry, the next move is introduced.

The industry is set a minimum production target or goal. Even if the industry, left to itself, could attain it, the Government has no intention of allowing it to do so. With their rules, regulations, licenses, and permits, the Government already has the power of life and death over almost every private enterprise undertaking in the country.

The third move merely adds insult to injury. What is called a working party is imposed on the now tottering industry. Superficially, it looks fair enough, but, in substance, it amounts to nothing more than a committee of persons—persons who do not know the business—trying to pass on their ignorance to people who do know it. Usually without waiting for the working party's report, another move is inaugurated. The industry is asked to rob its stockholders by the limitation of dividends on the grounds that normal dividends, if distributed, would have an inflationary influence and give impetus to too much money chasing too few goods. The fact that these assumptions are 95 percent fallacious does not worry the Government one little bit.

By this time the industry, from a private-enterprise point of view, has had it. The stock-exchange prices reflect the situation grimly and graphically. The market quotations go down and down and down, and then, when the Government is advised that the break-up price has been reached, it steps in, freezes the current stock-exchange quotation as the purchase price for nationalization, and compulsorily acquires the industry. It is as simple and wicked as that.

The London Economist, which, more often than not, is a good friend to the present Government, made this comment: "The compensation clauses are as objectionable as ever. Indeed, in the case of steel, they are more so. To rig the market first and then to make compulsory purchases at the market price is more than sharp practice. It is plain dishonesty."

Nationalization has a blighting influence on the British economy as a whole. It relentlessly, ruthlessly, and fatuously reduces an economy of profit, which is the only economy that makes good sense, into an economy of loss, which makes utter nonsense.

At present, the losses of nationalization are being met by the profits of private enterprise—plus the very magnificent generosity of the United States and Canada, without which we would surely meet unthinkable disaster. And I might add, parenthetically, this is borrowed money, running into the billions of dollars, from hated capitalistic systems which the borrowers are so energetically trying to destroy.

Nationalization would seem to operate on the theory that a socialistic government can legislate unsuccessful people into prosperity merely by legislating successful people out of it. The thinking people of Britain are walking about with grim faces, chiefly because the rewards of endeavor, the glittering prizes of achievement are no longer attainable.

Under 4½ years of socialistic nationalization, Britain has become a nation governed by third-raters—not a big man in the whole socialistic governmental set-up—nothing but third-raters dragging down a first-class nation to their own puny level. Theoretically, they know all the answers—but, practically, they know none of the questions.

And this is not all that nationalization, or socialization, is doing to Great Britain. Today our prisons are full, juvenile crime is a national scandal, our state schools' curriculum is strictly secular and, on the material side, we are dissipating more wealth than we are creating. Having substituted state help—which is dear—for self help—which is cheap—we have lost both the desire and the capacity to save. For the first time for over 20 years the British people as a whole are not only not able to save, but are spending past savings. For the first 9 months of the financial year, 1948–49, withdrawals from savings exceeded deposits by $72,000,000. The one institution which continues to spend money as though it were as abundant as

water in the Atlantic Ocean, is the state. It has taught the unsophisticated among our people that "the state will pay," and now they do not realize that the status quo state is a pauper with a pauper's mentality when suddenly confronted with an opportunity of spending other people's money.

For instance, the nationalization of the railways, cost the nation as purchase price over $4,000,000,000. It will surely be granted that this is not a bad bit of extravagance for a nation whose government has had to admit that but for American and Canadian aid Britain would be confronted with an alarming unemployment problem and that her present low standard of living would have to be still further reduced. The chairman of the British Transport Commission has hinted, in an interim statement last November, that for the full financial year the deficiency between income and expenditure probably will be $112,000,000. And it will become worse as more and more would-be travelers learn that the trips they would have made in prenationalization days, they cannot make today because of increased cost of such trips.

Under nationalization of the coal-mining industry, the miners seem to be no more disposed to dig it out of the bowels of the earth than they were under private enterprise. In 1938, under private ownership, coal production was 227,000,000 tons. In 1948, the Socialist government urged its coal-mining comrades to achieve a modest goal of only 211,000,000 tons. They could not, or would not, make the grade. The actual production of 208,500,000 tons was 2,500,000 tons short of government expectations, and 19,000,000 tons less than was produced in 1938 under private ownership.

Now, in striking contrast, I would mention steel, still under private enterprise, though threatened with a large dose of socialization. In 1938, steel production was roughly ten and one-third million tons. Unlike the nationalized coal goal, which was lowered, the steel goal was raised by the Socialist government to an almost impossible and certainly improbable figure of fourteen and one-half million tons. The steel industry produced 15,000,000 tons, or 500,000 tons more than the goal—all accomplished by the hated private enterprise system.

And now, as to the individual himself and a free and unfettered democracy, the present Socialist government has almost succeeded in casting these into bondage. By a stroke of the pen, it has imposed industrial conscription, in peacetime, on every citizen of Great Britain between the ages of 18 and 50. All men and women, unless in an exempted category, can be directed to work under the control of engagements order, 1947. Britain today, under socialism, is only a little less than a vast concentration camp.

There has been an immense amount of ballyhoo put over by the governmental propaganda machine about its wonderful handling of the unemployment problem. It typifies the palpable dishonesty of its statistics. It claims to have maintained what it is pleased to call full employment. It has done nothing of the kind. A Truth commentator has pungently pointed this out in the following quotation:

"An ominous feature of the manpower figures to the end of 1948 was that national and local government services were employing 2,230,000 persons, which is 80,000 above the ridiculously high figure to which the government said the bureaucracy was to be reduced by the end of 1948. It is worth pondering what this means. Of the total in employment—20,328,000—2,230,000 are on unproductive, if not obstructive, tasks, leaving only 18,098,000 to do the nation's work. That is, for every eight workers there is one official. The figure in the United States is, I believe, about 1 in 16."

There can be no doubt the Socialists are maintaining this large bureaucracy of 2,230,000 employees to a great extent because it is a powerful factor in bolstering up the fiction of full employment. The correct description, of course, is "concealed unemployment."

And here is another disgraceful example of socialistic planning in Britain—the housing problem. There is an acute shortage of both houses and flats and the cost of them when built is preposterous and the quality deplorable. Home ownership is severely frowned upon. Houses for weekly rental are the order of the day. When the National Savings Committee issued a poster depicting a happy house owner, with the obvious implication that thrift had paid for it, the present Socialist government demanded its immediate withdrawal. Why? Because a Socialist government must not and will not permit its servile subjects to enjoy the feeling of security in home ownership.

Our Socialist government cannot even hold its own in its relationship with its fellow comrades, the Russians, much less make any tangible advance toward mutual understanding. I do not blame them in this instance for their failure. I blame them for their cocky boasting that they could do so much better than the men whose political positions they were destined to occupy.

But here is socialism's greatest racket—social security's cradle-to-the-grave fallacious fantasy. It seduces the people into allowing the state to do for them the very things they should be willing to do for themselves. Something for nothing just does not add up, and when the state exploits this kind of crooked arithmetic it is and can be only for an ulterior motive.

The National Health Service now operating in Britain exposes all the sinister implications of this foreign-conceived conspiracy to capture the bodies and souls of men and women and their children in sickness and in health. The nationalization of medicine is an integral part of the Socialist frame-up. Indeed, it is almost the last link in the chain that is being forged for the eventual communization of Britain. All dictatorships that have outlived their growing pains have found it necessary, sooner or later, to coerce medicine into doing their dirty work.

I am not suggesting for one moment that Britain's health service was conceived in this spirit. Nevertheless, all the necessary machinery is blueprinted for the use and abuse by some future tyrant if one such should emerge. Even today Britain's Socialist cabinet ministers have taken unto themselves powers and prerogatives which grossly and malignantly overstep the centuries-old established boundaries of our constitution.

The formula, issued as a statutory instrument, and in itself neither debated nor challenged in Parliament, reads as follows:

"Confirmation by the minister shall be conclusive evidence that the powers of the act have been applied and that the order lies within the powers of the act."

Our state medical service in its first 9 months' working has exceeded the estimate by nearly $234,000,000, and as the original estimate allowed for an expenditure of approximately $700,000,000 it is not unfair to assume that the aggregate cost per annum will be not less than $1,000,000,000. Such colossal state expenditure on a single item in the social-services program would be fantastic at any time. In Britain's present financial situation, it is stark, raving madness.

The government cannot and has not delivered the goods. There are not enough doctors, or nurses, or hospitals, or clinics. The hospital situation is especially acute and it hits hardest of all the poor patient who, under the voluntary hospital system, could always count upon and always did receive priority treatment. Many of us foresaw the deplorable state of affairs that would follow the introduction of the National Health Service. It was clear to all who observed, that the sudden opening of hospital doors to every citizen, irrespective of his income, would overcrowd these already full institutions. Prior to the effective date of the National Health Service, the man of small means had complete priority of admission to a hospital bed—and rightly so. After that date the hospital beds remained the same in number, but the candidates for admission increased enormously. The Socialist government had come to the rescue of the rich man and abolished the priority of the poor man. This has all been a revelation of thoughtless and careless hospital planning.

The scheme is a political fraud because it has been foisted on the public as a free medical service. It is nothing of the kind. The patients', real and potential, contributions to the Health Service alone is $2,800,000 a week. If that is free medical service, it would be nice to have an estimate for one that isn't. It might be cheaper. It couldn't surely be dearer.

The state medical service has done two things. Firstly, it has revolutionized the status of the doctor. His livelihood, his professional advancement, his loyalties are now at the mercy of the state—the state which pays him with the citizens' compulsory contributions. And, secondly, it has destroyed the relationship between doctor and patient. Privacy and secrecy have gone despite the parliamentary assurances of the Minister of Health. In an official leaflet explaining the new services and issued to all householders in Great Britain and Northern Ireland, a categorical assurance is given in the following terms: "Your dealings with your doctor will remain as they are now, personal and confidential." Only a few weeks later the Minister of Health issued a statutory instrument, No. 506, which flatly contradicted this assurance and created an entirely new position in the Ministry's own relationship with the doctor. Under the heading, "Term of service," every practitioner enrolled in the service is required, and I quote from that instrument, "to keep record of the illnesses of his public patients and of his treatment of them in such form as the Minister may from time to time determine; and to forward such record to the local executive council," which council, I must explain, consist largely of lay persons. Women especially are furious about this barefaced breach of confidence. They point out that Mrs. Smith, the patient, living in block A discovers to her horror that Mrs. Brown, a member of the council, lives in block B with all the possibilities of neighborly gossip about Mrs. Smith's ailments.

From time immemorial, doctors in Britain have voluntarily accepted the Hippocratic oath as binding upon them professionally. Indeed, it was strictly enforced by the British Medical Association and any doctor breaking it made himself liable to be struck off the medical register, a punishment that in effect precluded him from practicing. Thus, a doctor's real dilemma has been created. If he abides by his oath, he must disobey his new master to whom he is now dependent for his salary. If he disregards his oath and places his patients' confidences at the disposal of the Minister, he is clearly guilty of "unprofessional conduct."

Under the scheme, doctors practising in large areas are called upon to accept 4,000 patients. In smaller areas the number is reduced to 2,500. Each doctor receives a per capita fee of approximately $3.25 per patient per annum. It has not taken the doctors long to discover that their net incomes, after deduction of heavy expenses and income tax, are totally inadequate and

they are now, through the British Medical Association, pressing the Minister for a reconsideration of this and other difficulties in the working of socialized medicine.

Furthermore, there is considerable significance in the fact that within a few months of the act coming into operation a new organization, under the leadership of Lord Horder, the eminent physician, and calling itself the Fellowship for Freedom in Medicine, has come into existence and is being strongly supported up and down the country by medical men who have quickly realized that the high standards of British medicine are in jeopardy.

It has been estimated that doctors today can give their public patients only an average of 5 minutes per patient for both diagnosis and treatment. The state, on the other hand, claims under the scheme that "it is the duty of the citizen to keep well," and demands from the doctor a willingness to exercise "harsh certification," which, in plain English means disposing of illness or disability in the shortest possible space of time.

One Cabinet Minister recently told the world that the British were a fine people but that "an occasional crack of the whip" paid handsome dividends. It is my very confident guess that the day is not far distant when the doctors will make the discovery that they are expected to "crack the whip."

Perhaps, after all, the late Stephen Leacock was not so greatly wrong when he facetiously observed that socialism will work only in heaven, where they don't want it, or in hell, where they have got it already.

Reason for Dulles Defeat

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. KILBURN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include an editorial which appeared in the November 15, 1949, issue of the Commercial Advertiser, Canton, N. Y. I thought it was one of the best things I have read on the New York election and the state we presently find ourselves in. It was written by Mr. John A. Finnigan, whom I consider one of the best country editors in our State. It follows:

EDITORIAL COMMENT

The editorial writer and the columnist become editorial writer, the man on the farm and on the street, in the little shop and the big factory have been given to post mortems on last week's election. But few if any hit the point. As a matter of fact, so long as millions are receiving generous hand-outs from the administration in power, so long will these millions desire that the system be not changed. The average person of maturity doesn't look beyond the point of their nose.

It is easy to say that Lehman, Truman, and others more fully represent the needs of the Nation than John Foster Dulles and Dewey and those who represent the party now outside the Federal feed pen. It must be recognized, put party aside, that the people who profit by a system of government handout, call it dole or call it something else, don't wish the system changed. The farmer as a rule takes those subsidies and other things that come along. The laborer is getting his, there are millions who believe the Government owes them a living and they are riding the Government pensions or something else that means about the same thing.

There is along here a question that millions have not answered, if they have even thought about it. Where is the money coming from? Is there anywhere along the line that last straw that breaks the camel's back? Is there any such thing as national bankruptcy? Look at England today that started out in this merry ride of spending and is admittedly bankrupt. Where is the money to come from?

Those who are old enough to remember, recall days when old people and young people were thrifty and laid away for the rainy day. There were exceptions to the rule, however, always were and always will be. The writer as a boy knew many elderly people in their little homes not looking for doles; their needs were not large. They had lived lives of thrift, they abhorred waste. Perhaps they had one or two cows and a pig or two and a few acres of land. They were not the objects of charity. In fact they were too proud to accept charity.

Standing in the welfare office in the town hall a few years ago among those present was Prof. Herbert Philbrook Morrell, a member of the faculty of the Theological School of St. Lawrence University. Both the Reverend and Mrs. Morrell were givers to charity and to other things to the extent of their ability. They gave so much of their substance that they were in want, yet they gave.

On the occasion mentioned, Professor Morrell remarked, "The trouble with what we are doing is that if we continue we will become a nation of beggars." He was right and we are largely to blame as people for the system that is creating a nation of beggars. We are telling men and women they are not fit to work after 65. An attempt is being made to lower that age if it is not already lowered. We have a system of employment that invites the worker to quit his job and take a vacation at $25 per or better. Many a good man or woman is out of a job through no blame to them, but there are others, as many more who work just long enough to get that 6 months' vacation with pay.

The system is wrong. The whole thing is a sort of vote-buying excursion of those who run it and those who accept the free handouts of Government. The writer recalls the instance when assistance was being given certain people and they were spending it for booze and local authority objected and cut off the assistance, the persons appealed to higher authority and a representative was sent to Canton to investigate. This representative called on J. Fred Hammond both supervisor and welfare officer at the time. When questioned, Mr. Hammond explained that the money was being thrown away in things not needed and that were not good for those who used it so. The conversation became heated and finally the outside agent put it this way, "It is none of your damned business what they do with the money, drink it up, throw it in the fire, you must give, or we'll take care of you."

There is the explanation of election results in New York City and in your little country town—they are voting to get all they can, regardless of national or local bankruptcy. The only remedy is to change it. In the old days it used to be charged that the Democrats or Republicans had millions of dollars in campaign funds and would spend to the limit to remain in power or, if out of power, get in power. There you have what has been, but the picture today is reversed. The party in power has the stupendous volume of political patronage, pork-barrel legislation, and every other kind of legislation to subsidize the vote of the country. Instead of voting for the public welfare, millions are voting for their own pocketbooks.

The writer recalls that a little over 10 years ago the village of Canton had a piece of public work performed. The building of Main Street from the corporation line on the Potsdam Road to the corporation line on West Main Street, and Gouverneur Street to the underpass. A man or a boy couldn't get a job on that contract unless he was either a Democrat or would become so when of age. The same thing might have happened had the contract been under Republican administration. That it was and might be so shows the weakness of the whole system.

The country is on a spending spree, a give-away campaign. It wasn't always so and it won't be so long now at the present rate, this country will be in financial ruin. We have the example of England. We have the example of all western Europe on which we have been spending billions.

There is the explanation of why John Foster Dulles didn't win the other day; there is the reason the weak Harry Truman defeated Dewey in 1948—the system—the handouts must go on, rich man, poor man, beggar man, thief, doctor, lawyer, merchant, chief.

Keep Your Eggs

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. GROSS. Mr. Speaker, it is most interesting to listen to the blatant voices of some proponents of the so-called Fair Deal as they speak of the vaunted prosperity in which the farmers of this country are allegedly wallowing.

They can only be excused on the grounds that they are ignorant of the fact that in the past few weeks egg prices to farmers have dropped to as low as 18 cents a dozen.

In order that Members of Congress, who may be unaware of some of the economic facts of life, become enlightened on the current situation with respect to the farmers, I submit the following lead editorial from the Iowa Falls (Iowa) Citizen:

KEEP YOUR EGGS

It's been a long time since we've seen a sign like this. But it showed up last week—tacked to the back door of an Iowa Falls' grocery store:

"We are paying only 18 cents a dozen for eggs."

We gather that the intent of the sign was to save the farmer's time and breath in bringing his eggs in—if he expected more than 18 cents.

Recent sharp declines have been the result of a 25-percent increase in production over that of a year ago—plus the uncertainty that grew out of the shift from a Government price support of 90 percent of parity to 75 percent of parity.

A good many people think that egg support prices have been too high. And the fact that the Government has spent $90,000,000 in order to carry out the 90 percent of parity support price would seem to bear out that viewpoint.

Nevertheless, the sign tacked on the back of that Iowa Falls' grocery highlights the need there is to stabilize farm prices and give farmers some protection from the vast fluc-

tuations which too frequently occur in their markets when things are left entirely to God and free enterprise.

Of course, we wouldn't be confronted with situations like that if, some morning, we woke up and found signs like this on every farmer's gate:

"Eggs are only 18 cents: Therefore we are paying only $1 a pair for overalls, $850 for a tractor, and $50 a ton for protein supplement."

Privately Supported Hospitals and the Public Health

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the December 16, 1949, issue of the Reconstructionist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRIVATELY SUPPORTED HOSPITALS AND THE PUBLIC HEALTH

Columbia University, at the request of the New York State Joint Hospital Survey Planning Commission, recently completed a study on hospitals in New York State. The study, directed by Dr. Eli Ginzberg, of the Graduate School of Business, has important implications for the problem of health throughout the country.

The hospital study concluded, for example, that the data collected by the research staff did not justify introducing a compulsory system of health insurance for any of the richer States like New York. It was pointed out that coverage could be achieved, with some effort, for about 85 percent of the State population through Blue Cross and commercial health insurance. At the present time some 57 percent of the New York population receives some kind of coverage through the voluntary plans. Dr. Ginzberg suggests that the combination of privately sponsored hospitals, voluntary protective plans, and an expansion of the present State facilities can achieve the ideal of guaranteeing medical care for all the citizens of New York. But he warns, "If one does not look with favor on the expansion of Government into the voluntary hospital field, then one must see to it that it doesn't become necessary. This means that the hospitals must get enough charitable support for their free and partly free work, for medical education and research, and to replace obsolete facilities and get new equipment."

There are many problems raised by the facts revealed in the study and by the suggestions made by its director. Here we should like to discuss just a few of them. In the first place, there appears to be need for widespread publicizing of the facts about medical facilities. At the very luncheon at which the completion of the study was hailed, Governor Dewey declared his concern over "the steady march toward government ownership of hospitals" and "the half bankruptcy of our voluntary hospitals." Yet the study reveals that the voluntary hospitals are approaching "a tolerably decent economic position." Apparently Governor Dewey and other public officials like to set forth their prejudices as objective fact. Citizens must be prepared with the data necessary to evaluate such political utterances.

Secondly, we are somewhat disturbed about the apparent conclusion that government assumption of more and more responsibility for the care of health is something to be avoided. The study asserts that 85 percent of all residents of New York could afford the coverage given in the voluntary plans. Yet the amounts required by such plans do not fall equally among the 85 percent who can afford to pay. A $60 annual payment can conceivably be afforded by a person earning $3,000 per year, as well as by one earning $7,500. But why should not the ability-to-pay fomula apply to contributions for public health as it does to taxation generally? Must we not reckon, moreover, with the reluctance of people in good health but with modest incomes to spend money on insuring their health unless required to do so by law? Also to be considered—and this is revealed in the study—is the fact of the limited extent of coverage in the voluntary plans. Diagnosis and the care of long, serious illnesses are rarely supplied. The poor man must still, under these circumstances, turn to the free wards of charity or State-supported hospitals. It seems, therefore, that much initiative for public health needs must still be taken by government.

The study, as reported in the New York Times, asserts that voluntary hospitals ought to "offer a maximum opportunity for qualified doctors to join the staff." The fact is, however, that in privately sponsored hospitals there is much discrimination against doctors because of their race or creed. Much of the demand for Jewishly sponsored hospitals, for example, stems from difficulty facing Jewish doctors in gaining entry to those that are not under Jewish sponsorship. Here is another instance where the emphasis on private rather than State support for hospitals appears to ignore the evils that inhere in the sectarian responsibility for medical health.

Let it also be emphasized that, as we cited above, Dr. Ginzberg declared a compulsory system to be unnecessary in the richer States. What are the implications of this remark for the backward areas of the United States? Do we need some form of socialization of health services in such places? Or can we rely there, too, on voluntarism and the good heart of the local citizenry?

These are only a few of the issues suggested by the Hospital Survey, which is now available in a volume entitled "A Pattern for Hospital Care." The American people owe a debt of gratitude to Dr. Ginzberg and his associates for their careful collection of the data and their forthright recommendations. The report deserves the close attention of those who would like to see medical care extended to all who need it.

One Hundred and Sixty-second Anniversary of Ratification of Federal Constitution by Delaware

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting and scholarly address delivered by State Senator E. Paul Burkholder, before the Georgetown-Millsboro Rotary Club at the official Delaware Day Observance in Georgetown, Del., on December 6, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are gathered together to commemorate the one hundred and sixty-second anniversary of the ratification of the Federal Constitution by the State of Delaware.

It was only another link in the great chain of human events that has taken place to enable all mankind to achieve and maintain their freedom. In every generation, men and women have struggled and died that the human spirit may be free. From the creativenes of mankind's liberated mind and spirit has come a host of ideas, discoveries, and inventions with their benefits of comfort and opportunity, and with all of them has come a burden of responsibilities and problems.

Sometimes these responsibilities would be assumed and the problems would be solved by a capable and energetic government in favor of the welfare of the people. In other periods of human history, the freedom of the individual was ignored and tyranny would rule. Then it was, when those men and women who were able would leave their homeland with its oppression and misery and flee to other parts of the world where they hoped to be free.

So it was in the year 1631 when a small ship named *De Walvis*, commanded by Peter Hayes, with about 30 liberty-loving persons aboard set sail from Hoorn, Holland, braved the perils of the Atlantic and finally dropped anchor on the banks of the Delaware. A settlement was made near the site of the present town of Lewes and they named it Zwaandendael. It was known as the De Vries expedition, but De Vries, who organized the party, did not accompany the ship, but appointed Peter Hayes to be the leader. This settlement lasted a short time. In some way, not fully explained, the whole colony was put to death, the presumption being that they were all killed by the Indians. De Vries, afterward in command of two expeditions, came to the Delaware River and explored the same as far north as the present site of Philadelphia.

In 1632, the King of England gave Lord Baltimore a grant of land that was not then cultivated, bounded on the west by the Chesapeake Bay, on the east by the Atlantic Ocean, on the north by the fortieth parallel, now the southern boundary of Pennsylvania, and on the south by the Potomac River.

Even though the colony in Lewes did not last very long, it did prevent Lord Baltimore from acquiring immediate possession of what is now called Delaware. That is why you will find the statement inscribed on the monument erected in Lewes the words: "That Delaware exists as a separate Commonwealth is due to this colony."

In 1638 a group of Swedes, led by Peter Minuet, settled on the Delaware, their location being at Fort Christina, now a part of Wilmington. A park and monument now mark this spot. This colony grew and expanded without interruption. At least 10 shiploads of people arrived during the next decade. Governor Ridder followed Minuet and Governor Printz followed him.

Almost 30 years later, in 1635, the Dutch who were in control of New Amsterdam, now New York, came south and captured all of the settlements on the Delaware, including Christina.

In 1681, the King of England gave a grant of land to William Penn, now the State of Pennsylvania, and in 1682, the Duke of York gave Penn the tract of land now known as the State of Delaware. There is some doubt as to whether the Duke of York had the authority to make this grant.

However, all of the settlements along the Atlantic coast now came under the control of the English. Sir Thomas West, who held the title of Lord De La Warr, became Governor General of the English Colonies and named the territory Delaware. The three

lower counties were named New Castle, Kent, and Sussex. Wherever there were a hundred families, the territory thus inhabited became known as a hundred. Zwaanendael was named Lewes and Christina was renamed Wilmington in honor of Lord Wilmington, a personal friend of William Penn.

From then on until the Declaration of Independence this territory was under the control of the State of Pennsylvania although most of the time it had a separate general assembly.

During all of these years, a growing unrest developed throughout the Colonies which finally culminated in the drafting of the Declaration of Independence for presentation to the Continental Congress.

The Delaware delegates were Thomas McKean, George Read, and Caesar Rodney. McKean and Rodney were for independence, while Read was opposed to it. Rodney was absent from the session, thus leaving the vote of Delaware divided. On the day before the vote was to be taken, McKean sent an urgent note to Rodney asking for his immediate return to the Continental Congress. It was then that Caesar Rodney made his now famous ride from Dover to Philadelphia, arriving in time to cast the deciding vote of the Delaware delegation in favor of the resolution for independence.

Of course, this action brought on the War of the Revolution. Four thousand Delawareans served under George Washington. The battle of Cooch's Bridge was fought on Delaware soil. Two outstanding military figures from this State emerged from the conflict. One of them was Colonel Haslet, who lost his life at the Battle of Princeton. The other was Captain Caldwell, who was born on a farm near Felton. In those days the soldiers amused themselves between engagements by staging cock fights, and it soon developed that some of the roosters brought up from Delaware seemed to be as game as any of the rest, whereupon the Delaware boys would claim that it was a chick from a blue hen. Before long the soldiers from this area were called the Blue Hen's Chicks and Delaware became known as the Blue Hen State.

After 7 years of fighting the war came to a close and the American Colonies at last were free. The Continental Congress now set up a government under the Articles of Confederation.

It was soon discovered that these regulations were entirely inadequate when applied to the actual working of the Government. The Federal Government was bankrupt financially and spiritually. It commanded neither obedience or respect. It owed immense sums of money at home and abroad and had no way of even paying the interest. It had no revenues of its own and no powers of taxation. It could make requisitions on the States, but could not enforce its demands. We had no minted money of our own, and with the exception of some copper coins, all the coined money in circulation was that of foreign nations which fluctuated widely in value. The continental paper money was worthless. Some of the States had issued paper money, and this too was of uncertain value.

We were not a nation, but a collection of 13 States, suspicious of and antagonistic to each other. The strong States oppressed the weak. Export and import duties were freely imposed. Navigation of our rivers was either prevented or hindered. Some of the States were anxious to make a separate alliance with England. Other foreign powers were watching for an opportunity to take control of this weakling among the nations.

Many of the States hoped to absorb the others. There was a proposal made that New Jersey become part of New York, that Rhode Island be a part of Connecticut, and that Delaware be ceded to Pennsylvania. Maryland claimed the southern shore of the Potomac River as her boundary, thus giving her control of the river. In an attempt to bring order out of chaos and to save this infant Nation, Virginia called a convention in 1786, to be held in Annapolis, for the purpose of setting up uniform regulations of trade. Five States, including Delaware, sent delegates. On account of the small number of States represented, no business was transacted, and the Continental Congress issued a second call for a convention to be held in Philadelphia in May 1787 to consider such alterations to the Articles of Confederation as were necessary to make the existing system of government adequate. No mention was made of an entire change in the system.

On February 3, 1787, the Delaware General Assembly passed an act appointing John Dickinson, George Read, Gunning Bedford, Richard Bassett, and Jacob Broom deputies to the Convention. Little did these men suspect what important part in world history they were destined to play.

John Dickinson, a native of Maryland, moved to Kent County and lived on a large farm along the St. Jones River. He studied law in Philadelphia and London and practiced successfully. He was known through the Colonies for his political writings. Politically he had been President of Pennsylvania and also of Delaware, as well as a Representative in the Continental Congress.

Gunning Bedford was a native of Philadelphia, graduate of Princeton, where he was valedictorian of his class. He practiced law in Dover and Wilmington. Politically he had served as a member of the general assembly, attorney general, a Member of the Continental Congress, and judge of the Federal court.

Richard Bassett was a lawyer and wealthy man, having three homes, one in Dover, one in Wilmington, and one in Maryland. Politically he was a member of the general assembly, but later became Governor and United States Senator.

Jacob Broom was a native of Wilmington, surveyor by profession, having made maps for George Washington. Politically he had served as burgess of Wilmington, as well as postmaster, and was a member of the general assembly.

George Read was a native of Maryland who moved to Newcastle, where he practiced law and served as attorney general under the English rule. He was a member of the Continental Congress and later became United States Senator and Chief Justice.

The average age of this group of men was 45.

The Convention finally met and was organized on May 25, 1787. George Washington was selected as chairman, and James Madison became the floor leader. Seventy-four delegates were present. The New Hampshire delegation was elected but never arrived in Philadelphia. Rhode Island did not send a delegation. This left Delaware as the only small State represented in the Convention.

Even though the Convention was called for the purpose of amending the Articles of Confederation, it soon became evident that a new basic law of the land would be formulated. In the old Continental Congress, each State had equal representation, regardless of population. The great question in this Convention was whether or not each State should have equal voice in the new government. Before many days passed, it was agreed upon that the States should be represented according to their population in one branch of Congress, and the small States fought for an equal voice in the second branch. This proposition was bitterly fought by the larger States. All during the month of June the debate was carried on with the large States winning every argument. On June 11, Sherman from Connecticut moved that each State should have one vote in the upper branch. This was defeated 6 to 5. The tension was great, and after a few more weeks of debate, Gunning Bedford, from Delaware, arose in the Convention on June 30 and attacked the larger States. He accused them of being actuated by their numbers, wealth, and ambition for power. Furthermore, he warned them that if they persisted in their attitude, the small States would find a foreign power that would give them just recognition. This speech threw the Convention into a turmoil. After a few more speeches from delegates of the larger States, the Convention adjourned until the following Monday, July 2.

Immediately after the Convention reconvened, Pinckney, of South Carolina, proposed that a committee be appointed with one member from each State to devise a compromise and report back to the Convention. Benjamin Franklin represented Pennsylvania and Gunning Bedford represented Delaware on this committee.

On July 5, the committee reported that they had agreed on a plan whereby each State was to have an equal voice in the Upper House of Congress and placed it before the Convention for their consideration. Gunning Bedford again arose and defended the smaller States and warned the larger States of the dire consequences if they were ignored. On July 10, Madison the floor leader went home in disgust. He was followed the same day by the New York delegation. Dayton, of New Jersey, and Martin, of Maryland, stated that they would never agree to anything less than equal voice in the Upper House for each State.

The stage was finally set for a vote on Monday, July 16. The fate of the Constitution and perhaps the entire Nation depended on this decision. You can imagine the tenseness of the situation, when you realize that 10 States were left to decide this momentous question, New Hampshire and Rhode Island not represented and New York having gone home. Finally all debate ceased and the roll was called. Massachusetts, not voting; Connecticut, yes; New Jersey, yes; Pennsylvania, no; Delaware, yes; Maryland, yes; Virginia, no; North Carolina, yes; South Carolina, no; Georgia, no—five yeas, four nays.

The great battle was won. Not only a victory for the small States, but also a victory for Gunning Bedford, the delegate from Delaware. Thus because of this victory each State has two Senators in the United States Senate.

During the next 6 weeks, the various provisions and details of the Constitution were agreed upon and on September 17, 1787, it was finally adopted and presented to the States for the ratification.

In November of that same year, the Delaware General Assembly passed an act calling for an election of delegates to a convention for the purpose of considering the Constitution. The act specified that 10 delegates were to be elected from each county to convene in Dover on December 3. The election was held and the Convention convened in Dover on December 3. What they did for 4 days is not known, but it is a matter of record that they ratified the Constitution on December 7, 1787, thus making Delaware the first of the Thirteen Original States to take this action. That is why Delaware is called the first State and why December 7 is an important date in our history.

The struggle for human freedom marches on.

In the War of 1812 we had Commodore MacDonough, who defeated the British in the Battle of Lake Champlain and thus prevented our country from being invaded from the north.

In the Mexican War two Delaware marine lieutenants named Rogers and Chambers were among the first men to storm the fortress of Chapultepec, in Mexico City.

Seven regiments were furnished for the War Between the States, and Commodore Samuel Du Pont was a naval hero.

In World War II we had Major Welch, Admiral Halsey, General Reybold, and General Holcomb, as well as the two Congressional Medal of Honor winners, Sergeants Nelson and Conner.

In every war Delaware has furnished more than her quota in men and money.

Besides military and naval heroes she has given the Nation three Secretaries of State, one Secretary of the Treasury, one Attorney General, five Ambassadors to foreign countries, as well as more than a hundred writers, painters, and inventors.

In the field of education Delaware had her church schools in colonials days and boasted of 22 private academies in the year 1800. She has taken great pride in her educational system ever since.

Delawareans have always been a God-fearing, religious people. Among the early Swedish settlers were two Lutheran clergymen. Old Swedes Lutheran Church was built in 1698. The cradle of Methodism, in the form of Barrett's Chapel, built in the year 1780, still stands in Kent County, north of Frederica. The early shrine of the Presbyterians, built in 1773, is Old Drawyers Church, near Odessa, in New Castle County.

Yes, Delaware has played her part in the march for freedom, and will continue to do so as long as she is true to her heritage.

Statesmen live and pass from the stages of government. Governments arise, thrive, and decay. Principles of freedom and justice live through eternity.

Statement of John Tope

EXTENSION OF REMARKS
OF

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. BROWN of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following text of statement by John Tope, chairman of the Young Republican National Federation, on the state of the Union for young men and women, Washington, D. C., January 3, 1950:

There are some 46,000,000 young men and women in this country in their twenties and thirties seeking to make their own way through life. For them the state of the Union today is one of danger, diminishing opportunity, and frustration. More and more we young people are becoming the ones who are going to have to pay and are paying for the disastrous policies of the Truman administration. Therefore, we, like President Truman, are also obligated to present our views on the state of the Union to the American people.

I. THE ADMINISTRATION'S FLIRTATION WITH SOCIALISM

Ever since the advent of the New Deal, in 1933, the Democratic Party's administration, lacking faith in the American people, has followed a policy of flirtation with socialism. This policy has kept us in an atmosphere of perpetual crisis; it has brought us one trouble after another; and now this policy places us on the very brink of disaster.

The socialistic theme of the administration is that our prosperity as a people depends upon governmental fixing of the prices of goods and commodities and upon fixing of the wages of labor and Government competition with business. This argument began with the NRA in 1933, which proved to be a dismal economic failure and repugnant to the American way of life, even before it was declared unconstitutional. It was continued with the peacetime OPA, which in 1945 left the country in chaos, with empty shop windows, housewives standing in line, and the bootleggers of the black market controlling the necessities of life. Although these disastrous conditions forced President Truman to terminate the OPA in 1946, in 1948 he came back again with a proposal for peacetime OPA. Then in February 1949 this flirtation with socialism reached its peak with the introduction of the Democrat-sponsored Spence bill, H. R. 2756, now pending in Congress. This bill provides for governmental price fixing of all goods, commodities, and wages, and proposes to put the Government into business in direct competition with private enterprise. This bill would nationalize industry into a carbon copy of the Russian system. And as a build-up for these proposals, business all over America has already been hamstrung by hostile Government regulation.

II. THE DEPLORABLE STATE OF THE UNION

These are the burdens placed upon the youth of America by the administration's flirtation with socialism:

A. Living on borrowed money: Each and every day the United States Government now spends $15,000,000 more than it takes in, even at the high tax rates now in force. This reckless spending has resulted in a $5,500,000,000 deficit in this year of high business activity, a year when some of the $250,000,000,000 national debt should have been reduced. Yet the Federal Government ever proposes to keep on spending and going into debt, even in these times of high income, just as if debt were no problem and there need never be a day of reckoning. But a nation that spends more than it takes in in taxes, like a man who spends more than he earns, borrowing year after year, is headed for bankruptcy and its people for the poorhouse. President Truman's administration insists on borrowing more and more money to finance its present policies, and indeed now proposes new and more fantastic hand-outs, leaving to the youth of America the bitter inheritance of inflation, a crushing load of unbearable taxes, and poverty and chaos. The true state of the Union today is that it is rushing toward absolute ruin.

B. The fantastic cost of "Truman prosperity": The cost of direct relief in the United States in the so-called full employment year of 1948 was more than double the payments to individuals for direct relief in 1934, a year of national depression. In 1934 Federal, State, and local governments made payments to individuals for direct relief of $745,000,000. In the so-called prosperous year of 1948 these same payments were more than doubled at $1,727,000,000—and the above figures do not include social security, pensions, unemployment insurance, and the like, which average $9,400,000,000 for each of the last 3 years. Moreover, these expenditures have been increasing at the rate of about 20 percent a year since the end of the war. Hence the relief hand-outs under "Truman prosperity" make the payments under Roosevelt's depression dwindle to insignificance. If all this is the cost of "Truman prosperity," may God help us in the next depression.

C. Punitive taxation: Coupled with extravagant spending and piling up of Government debt, the Truman administration has maintained wartime taxation to the point where it injures the people because it heavily penalizes individual incentive, compels every worker to give a larger and larger part of his earnings to the Government, deprives the country of risk capital, and prevents the establishment of new enterprises and the creation of new industries. This has made it extremely difficult for new business undertakings to grow and expand and to compete with those already established.

D. Paralyzing the country with class warfare: The people of the United States have just suffered many hundreds of millions of dollars of damage due to the coal and steel strikes. Innocent parties have suffered—workers and employers alike—in the railroad, steel fabrication, and automobile industries, as well as the merchants in the strike areas, and others. Yet not a word of disapproval has come from the President or any member of his Cabinet. We demand that President Truman explain on what theory of justice a special group can inflict such terrible damage on the people? It is the policy of the Truman administration to encourage class warfare, to set labor against management and employee against employer, and then to load the scales in favor of the labor bosses against the worker and his employer. Today the labor union chiefs with their enormous economic power and their millions of dollars paid for political gain and campaign expenses, enjoy a Government-sponsored monopoly of the use of manpower in whole industries. These labor bosses, aided and encouraged by the Government, now misuse their power to regulate production, create scarcities, and increase the cost of living. While labor unions have a legitimate right to organize and bargain collectively, their bosses have no right to misuse their power to tie up a whole industry at the whim of a single person or group, and cause millions of dollars of loss to innocent citizens of the community. The public interest must come first.

E. Political demagoguery: Recently the President has assailed certain "interests" as selfishly seeking to undermine America for their own evil purposes. We call upon the President in his forthcoming state of the Union message to identify the "interests" by name and address so that everyone may know who they are, and so that these sinister activities may be stopped. In the public interest, the President should abandon the coward's role of failing to identify those whom he accuses.

F. The colossal blunder in China: At the same time that it is spending some $22,000,000,000 a year for armaments and aid to fight communism in Europe, the administration has affirmatively aided the Communists in Asia, opening the whole Orient to the Red tide of communism. The administration aided the Communists by dealing the recognized Chinese Government a death blow. After the recognized Chinese Government had the upper hand over the Communists in 1945, the Truman administration forced the Nationalists to cease hostilities, placed an embargo on shipment of arms to China, attempted to force a coalition with the Communists, and enabled the Communists to arm themselves with Japanese arms captured by the Russians. These were horrible mistakes. The Truman administration's diplomatic blunder in the Orient is without parallel in our history. And the administration still lacks a global policy on communism.

III. RANK DISCRIMINATION AGAINST YOUNG MEN AND WOMEN

In conclusion, the state of the Union is not good. This is due to the socialistic program of the Truman administration which has thrown obstacles and stumbling blocks in the way of the American people. And if we young people allow this policy to continue we are bound to endure the poverty and suffer the frustration which has overcome youth in other parts of the world. In short, we want a state of opportunity instead of a state of charity for all. Moreover, we will not tolerate President Truman's rank discrimination against the Nation's young men and

women. We are entitled to the same chance in life that our forefathers enjoyed, and we call upon the American people to rise up and compel the President to put a stop to the trend which he has inaugurated now—before it is too late.

Conservation of Soil Resources

EXTENSION OF REMARKS
OF
HON. ROBERT C. HENDRICKSON
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. HENDRICKSON. Mr. President, the Library of Congress and the files of the Department of Agriculture are no doubt abundant with many fine articles on the subject of soil conservation, but for eloquence and brevity I have never read a finer exposé of the subject than the second prize essay in the Nation-wide essay contest on Conservation of Our Soil Resources, sponsored by the National Grange and the American Plant Food Council, Inc.

The winner of this contest was a young lady from my own State, Miss Natalie Snyder, of Pittstown, N. J.

Since New Jersey is justly proud of this splendid effort, I ask unanimous consent that the essay be inserted in the Appendix of the RECORD, where I hope it will be read by all Members of the Congress who are interested in soil conservation.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

SECOND PRIZE ESSAY IN THE NATION-WIDE CONTEST ON CONSERVATION OF OUR SOIL RESOURCES SPONSORED BY THE NATIONAL GRANGE AND AMERICAN PLANT FOOD COUNCIL, INC.

(Winner: Miss Natalie Snyder, age 18, daughter of Mr. and Mrs. William T. Snyder, Pittstown, Hunterdon County, N. J.)

Three centuries ago, when the first settlers journeyed to these shores in search of a new life, they were rewarded by a vast expanse of rich land which stretched out on every side. Because the land yielded bountiful harvests, the people prospered, and because it was free and plenteous, man enjoyed independence and freedom. It was thus that American soil served as a foundation for the great liberty-loving Nation which grew and became strengthened with the passing of time. Even today, soil is the basis of man's life; everything which man does, every gain he makes, begins with and depends upon its sustained productivity.

However, we were prone to take this great blessing of fertile land for granted, and did not trouble ourselves to become acquainted with the methods to best safeguard and preserve it. We grew extravagant and careless, gradually slipping into the shiftless habit of wasting this gift of nature by tragic misuse. Consequently, down through the years, erosion has destroyed 100,000,000 acres, and has severely damaged an equal amount. Each year adds more eroded acreage to the count, and the ultimate cost is growing daily.

Erosion not only results in wasted lands, but in ruined lives as well. The farmer's future is blackened, for the yield of his land is greatly lessened, and under such conditions he cannot prosper. Half of all the land in the United States has been affected by erosion. This, of course, reflects upon the welfare of the tiller of the soil, and many are forced into the depths of poverty.

According to statistics, we now have around 459,000,000 acres of good cropland in the United States. In addition, there are about 100,000,000 acres that need various improvements. All in all, we are allowing 500,000 acres to deteriorate each year. This waste is one of our country's chief enemies, for without farm prosperity, our Nation is drastically weakened. Not only our own land, but much of war-torn Europe is greatly affected, for the lives of millions across the sea depend to a large extent upon this country's economic stability. Thus, the importance of the conservation of our soil resources cannot be overemphasized.

What can be done to protect our land and to conserve what we have? The answer lies in the very definition of the term "soil conservation"; we must learn the proper use and management of our land. Most of our soil difficulties stem from ignorance on the part of man concerning measures to keep the land productive. Steps are now being taken to correct this situation by the Soil Conservation Service and other similar units, which are making great strides in education and technically aiding farmers in conservation work. Through extensive and continual research, the Soil Conservation Service has been able to learn much about the science of conservation, and many practices have been found to be highly effective in saving our soil.

Contour cultivation, a prime factor in this attempt, not only makes the work of the farmer less strenuous, but conserves the rainfall and reduces the amount of soil washed away as well, because of the rounded furrows resulting from farming the land horizontally rather than vertically. Strip cropping is another soil saver, and wind stripping, similarly executed, does much to prevent wind erosion.

Terraces and diversion channels are valuable in diverting damaging run-off of water, and hedges serve as a check to water and to forceful winds. Windbreaks, in the form of other trees and shrubs, are useful on the open prairie and plains.

Stubble mulching and the use of cover crops are beneficial in several ways. The former protects the soil from wind erosion, aids in controlling grasshoppers, cuts down soil erosion, evaporation, and baking, helps the soil to retain rainfall, and aids advantageous bacteria growth in the soil. Cover crops prevent erosion of cultivated areas, and may provide a humus for the soil.

Crop rotation, irrigation of arid areas, and drainage of wet and soggy soil are other imperative measures in keeping the land productive.

Of all the essentials of conservation, however, perhaps the paramount factor to be considered is that no bit of land is without value; every piece should be used to its best advantage. Therefore, it is our duty, as the youth of today and the citizens of tomorrow, to become acquainted with these values and to learn to use them wisely, for when ignorance of proper soil-conservation methods is completely overcome, both the farm and the Nation will be better places in which to dwell, and will be the foundation for a finer world for ourselves and our posterity.

Point 4's Human Goals

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the New York Times of December 5, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POINT 4'S HUMAN GOALS

Two conferences meeting in New York on Friday and Saturday heard discussions of some of the objectives of the point-4 program for aid to the peoples of underdeveloped areas. It was agreed by several speakers that concentration on economic objectives must not lead to an exclusion of consideration of cultural, humanitarian, and social projects. One speaker, Dr. Alva Myrdal of the United Nations, also warned that economic changes must not be too rapidly pushed lest they be detrimental to social values.

This emphasis is sound and we need its balance. But we need to remember likewise that Dr. Myrdal wisely remarked that "social welfare * * * cannot reach very far without economic development." As President Truman set forth the point-4 program and as it was embraced by the United Nations, it rests on the basis of extensive private investment. Unless that investment is forthcoming there will not be much of a program and the investment cannot be expected unless there is the prospect of making a reasonable profit and assurance against unreasonable loss, such as confiscation.

Fortunately investment for profit can be made to have its reflection in raised standards of living, and these can be translated directly into the humanitarian project that are major goals of the program. It goes almost without saying that one of the first items on any program for an underdeveloped people is a sound public health project. Part of the reason for underdevelopment at different points is the presence of endemic or epidemic disease. In Africa it is sleeping sickness, in East Asia cholera, elsewhere it is tuberculosis or malaria or both. Those scourges can be wiped out, but to do so will require money, and a lot of it. Similarly it is agreed that a wise educational program can contribute largely to human well-being and happiness, but this also will demand a very large outlay. That is where the investment for profit must come in, to develop the productive, taxable wealth for channeling into fields such as these.

The two phases of the program are not at all incompatible. In fact, they must be indissolubly wedded if the large goals of the project are to be achieved. What is required here is the combination of a big, warm heart with a good, hard head, and neither can be sacrificed to the other.

Republican Resurgence

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Republican Resurgence," written by Mr. Samuel Shaffer, and published in the magazine Newsweek for January 9, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REPUBLICAN RESURGENCE

To Republicans, the Fair Deal's insistence that a welfare state wasn't incompatible with free enterprise seemed a dangerous, if not

a deadly, delusion. Some Republicans suspected that many Fair Dealers didn't really believe it themselves, but were merely attempting to lull the Nation into somnolence while they saddled it with a kind of "creeping socialism." Others, more charitable, thought with less respect for Harry S. Truman's wisdom, said the whole trouble was the President's failure to understand the consequences of his acts.

They agreed that the President was far from a revolutionary and that he was pressing for such measures as compulsory health insurance and the Brannan plan without any thought of destroying the free-enterprise system, but they argued that he was driving the Nation to socialism nevertheless. For a welfare state would make socialism inevitable, they asserted. It was a simple case of cause and effect.

As the Republicans saw it, the only way to prevent socialism, therefore, was to scotch Mr. Truman's plans for a welfare state. Last week, as the Republicans returned to Washington for the wind-up session of the Eighty-first Congress, they came primed for a no-quarter fight on the welfare state in all its aspects.

NEW VIGOR

They were quite a different breed from the Republicans who had put up such an ineffective battle against the Fair Deal during the first session of the Eighty-first, a battle characterized by lack of strategy, divided counsels, shattered morale, and bedeviling doubt. At best, they had then fought a delaying action; at worst, they had broken lines to join the Democratic enemy.

Now they were acting like men who had discovered the way to political salvation, for themselves as well as for the country. With the fervor of repentant sinners, they were gathering together under a banner pledging death to spendthrift socialism. Political realists for the most part, they were not promising themselves or their followers a quick, easy victory over the Fair Deal. All they guaranteed was "a helluva fight." As one GOP leader put it, "the shadow boxing is over. Maybe we're in for another licking, but for once we'll have the satisfaction of going down fighting."

At long last the Republicans appeared to have recovered from the state of shock which gripped them on November 3, 1948. Throughout 1949 they had been numbed by a feeling of complete hopelessness and helplessness. Dozens of them had become almost convinced that it would be a waste of effort to run for reelection next fall. Publicly, they blamed Thomas E. Dewey and Earl Warren for their plight, saying that it was their overconfidence which had cost the Republican Party victory in 1948. Deep down, however, they knew they had been just as guilty themselves.

What nagged them most was the fear that perhaps the country really wanted the welfare state, after all. Did they face no alternative except to let the wave of the future engulf them, or else swim quickly to its crest?

THE PAST

At times, during the opening session of the Eighty-first Congress, party discipline had evaporated entirely while the soul searching went on. Minority Leader JOSEPH W. MARTIN, JR., dropped the reins for weeks at a stretch. At least twoscore of the Republican legislators voted almost automatically for every welfare-state measure proposed. Another 50, gripped by despair, voted frequently with the Democrats. On some issues, nearly half the House Republicans broke party lines.

There was, moreover, no liaison between House and Senate GOP leaders. Months went by without a phone call or a visit to coordinate strategy. The Senate leaders went off in one direction; the House leaders, in another. In the Senate, ROBERT A. TAFT, of Ohio, fought for public housing. In the House, the Democrats were able to wave TAFT's name in the face of Republicans who opposed it. JOE MARTIN's all-out effort to kill the public-housing measure, therefore, was doomed to failure from the first.

The uncertainty about their future and the divisions in their leadership weren't the only factors that had depressed the Republicans. There was also the bitter fight over the chairmanship of the Republican National Committee between the pro-Dewey and anti-Dewey forces, which ended in the victory of the latter and the election of Guy G. Gabrielson. And finally, there were the insistent letters that kept flooding in from their home districts, demanding: "What does the Republican Party stand for, anyway?" The GOP legislators weren't sure themselves.

What brought about the sudden switch in morale and point of view? The Republican legislators themselves last week offered several explanations:

During the recess between congressional sessions they learned that, from the GOP standpoint, the picture wasn't nearly as black as they had thought. Throughout the country they found resentment over high taxes, the high cost of government, and deficit financing. They found a genuine fear of a Fair Deal drift toward socialism. Where they had previously wondered if they didn't represent a futile minority in their opposition to Mr. Truman's program, they now were convinced they spoke for the majority.

In Washington they had been scared to political paralysis by what they believed was the sure-fire appeal of the Brannan plan. At home they had discovered that it was leaving the farmers cold. Representative AUGUST H. ANDRESEN, of Minnesota, a ranking Republican member of the House Agriculture Committee, last week told his big-city colleagues over lunch in the House restaurant: "Why, the farm organizations back home are beating the brains out of the Brannan plan."

They discovered that even the Democrats, including HUBERT HUMPHREY, of Minnesota, HERBERT H. LEHMAN, of New York, and PAUL H. DOUGLAS, of Illinois, were equivocating or beating a downright retreat on compulsory health insurance.

They analyzed the New York State election in 1949 and drew considerable comfort from it. The GOP candidate for the Senate, John Foster Dulles, had been a political unknown, with only 5 weeks to campaign against the best Democratic vote-getter in the State. He had waged an all-out fight against the Fair Deal in what for years had been a Fair Deal stronghold. He had lost by only 2 percent. Although less partisan observers might insist that Dulles' showing was made possible not by his attacks on the welfare state but by Catholic defections—the result of Lehman's siding with Mrs. Eleanor Roosevelt in her dispute with Francis Cardinal Spellman—the Republican legislators preferred to consider it a great moral victory for the principles of Republicanism. In New Jersey, they said, Republican Gov. Alfred E. Driscoll won despite his me-too campaign; his victory was merely a repudiation of the Hague machine.

Significant of the new attitude of the Republicans was the strategy that Representative RICHARD NIXON, of California, had worked out in his campaign for Democratic Senator SHERIDAN DOWNEY's seat. NIXON, a youthful, handsome, curly-haired, and strong-jawed former Navy officer, who is widely considered one of the most capable Republicans in the House, had come out in flat opposition to everything the Fair Deal stands for.

He had announced his candidacy in these words:

"The issue * * * is the choice between freedom and socialist baloney. They can call it planned economy, the Fair Deal, or social welfare. It's still the same old socialist baloney any way you slice it. Believe me, I am well aware of the Communist threat, and I do not discount it. But I am convinced that an even greater threat to our free institutions is presented by that group of hypocritical and cynical men who, under the guise of providing political panaceas for certain social and economic problems in our society, are selling the American birthright for a mess of political pottage. Slowly but surely they are chipping away the freedoms which are essential to the survival of a healthy, strong, and productive Nation."

It had been a difficult decision for NIXON to make—to declare war on the Fair Deal in a State which had always been so overwhelmingly Fair Deal that Republicans like Governor Warren were almost indistinguishable from Democrats. But last week, NIXON assured his colleagues that it was paying dividends. "Things look so good," he confided, "I'm worried."

THE FUTURE

This week, as the Eighty-first opened its wind-up session, the GOP was almost solidly united in the fight on the Truman program. Its ranks included only a handful of mavericks, like JACOB JAVITS, of New York, and JAMES G. FULTON, of Pennsylvania, in the House, and WAYNE MORSE, of Oregon, and CHARLES W. TOBEY, of New Hampshire, in the Senate. Even men like Senators HENRY CABOT LODGE, of Massachusetts, and GEORGE D. AIKEN, of Vermont, weren't expected to wander far off the GOP reservation.

In a now-or-never mood, the Republicans were planning to seize the initiative in pushing excise-tax cuts, antilynching, and antipoll-tax legislation, and slashes in foreign-aid and domestic welfare-state expenditures.

Although they still had differences on foreign policy, the chances were decidedly against a split even over that issue. Senator ARTHUR H. VANDENBERG, of Michigan, had made unity possible by calling for reductions in foreign spending. Even Senator KENNETH WHERRY, of Nebraska, who had consistently fought against the ECA, was prepared to make only a token fight against its extension if the appropriation was slashed by a billion or a billion and a half. And for once, the Republicans had something really to shout about—China and Asia in general, where communism had been making frightening strides, while GOP legislators like Senator STYLES BRIDGES, of New Hampshire, charged, the Administration dawdled.

The Republicans expected to raise a real furor over deficit spending, with a challenge to Mr. Truman to balance the budget by reducing expenditures. And they were prepared to make a covert alliance with the Dixicrats on all issues where it would stymie the Fair Deal.

Only on one Fair Deal issue would they go along: the expansion of social security. Industry generally favored it because it would serve to stifle labor's growing demands for noncontributory pensions. Moreover, the increasing number of aged people in the population made any other position political insanity.

The renewal of confidence and cohesion among the Republicans spelled genuine danger for the administration's program, including renewal of rent control, Federal aid to education, and expansion of public housing. The Brannan plan, compulsory health insurance, Taft-Hartley repeal, and any kind of tax increase calculated to offset probable excise-tax cuts and narrow the inevitable deficit were almost certainly dead.

SIGNIFICANCE

Thus, Democrats and Republicans alike view the 1950 congressional campaign as one of the most vital in the Nation's history. If the Democrats win, the Fair Dealers among them at least will accept the election returns as a mandate for the welfare state, and the chances are that enough conservative Democrats and even Republicans will agree with this appraisal to open the way in Congress for a major part of the welfare-state program.

In the present exuberant state of the Republicans, moreover, a Fair Deal victory will be a stunning psychological blow which

may well have permanent effects. It would be extremely difficult to rally the party again in the 1952 Presidential campaign for an all-out fight on the Fair Deal; 1952 might find the Republicans embracing "me-too" as a permanent policy. The issue of a welfare state would have been resolved. From then on the only question would be: How much welfare in the welfare state?

A Republican victory would not be quite so decisive. The Democrats aren't entering the campaign with the same feeling of desperation as the Republicans; they have been winning too many elections for too many years. They would view a defeat in 1950 as merely a temporary set-back, like the one in 1946. And just as they recovered from the 1946 debacle to press their campaign for the Fair Deal with renewed vigor in 1948, so would they be likely to revive the battle for the welfare state in 1952.

On the other hand, a Republican victory would completely block the Truman program on the Eighty-second Congress, it would reinvigorate the party, and it would increase GOP chances in 1952.

Communist Fronts Attempt To Mislead the Supreme Court of the United States

REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. RANKIN. Mr. Speaker, the Supreme Court of the United States is being invaded by Communist fronts in the most vicious attack on the white people of this country, especially of the Southern States, in the case of Henderson against the United States.

Never in all the history of this country have the relationships between the two races been better than they are between the whites and blacks in the Southern States today. The Negroes are enjoying more prosperity, more peace, more protection, and more security than they have ever known before anywhere in the world.

Yet, we find these Communist fronts going into the Supreme Court of the United States and filing briefs to try to destroy that relationship by wiping out segregation and destroying the present program of equal facilities for both races, knowing full well, if they know anything, that they are merely stirring race trouble and doing both the white people and the Negroes of this country infinite harm.

I am going to put the names of these organizations in the RECORD, and I am going to give you some of the low-down on some of the low-downs involved in this communistic drive.

This is a case where a Negro by the name of Henderson filed suit against the United States of America, the Interstate Commerce Commission, and the Southern Railway Co., because, while he was afforded equal facilities and was permitted to eat with the other Negroes on the train, he wanted to get away from them and eat with the white people.

The circuit court of appeals dismissed the case and this appeal was taken to the Supreme Court of the United States.

Certain Communist-front organizations, which I shall name here, went into the Court and filed briefs under the pretense of amicus curiae, or friend of the court.

One of the outfits that filed these briefs under the false pretense of amicus curiae was the so-called National Lawyers' Guild, a Communist-front organization that had been so branded and exposed by the Committee on Un-American Activities of the Congress of the United States and also by the Committee on Un-American Activities of the State of California.

In its beginning some very prominent lawyers, including Attorney General Robert H. Jackson, now on the Supreme Court, and Lieutenant Governor Poletti, of New York, joined this organization; but when they found out what it was, they both resigned, as did a number of other leading attorneys throughout the country.

In this case it is represented by Robert J. Silverstein, as its chief counsel, who signed a statement in 1941 defending the Communist Party. That statement was printed in the Communist Daily Worker on March 5, 1941, and is to be found on page 645 of the appendix No. 9 of the report of the Committee on Un-American Activities in 1944.

Another outfit that has filed a brief under the pretense of "amicus curiae" is the Anti-Defamation League, which is the gestapo for the B'nai B'rith, often referred to as a Yiddish Ku Klux Klan.

Members of this Anti-Defamation League are carrying on the most vicious persecution of white gentiles ever known in this country. They are a disgrace to the Jewish people whom they pretend to represent.

This attack on the white people of America, and especially on the white people of the South, is not made through any love of the Negro. They do not give a "tinker's dam" about the Negro. They are simply carrying on a program of persecution of white Americans and using this method of stirring up racial trouble throughout the country.

I call upon the Committee of Un-American Activities to investigate this outfit and put a stop to their communistic defamation and persecution of white Christian Americans.

They have a file on every white gentile in America of any standing, and whenever a man in public life or in business, or a Christian minister, if you please, says or does anything to displease the members of this alien organization, they immediately turn loose a barrage of smear propaganda, for the purpose of destroying such individual.

Another organization that has filed its brief in this case under the pretense of "amicus curiae" is the American Jewish Congress. They are not interested in the Negro. I should like to see the Committee on Un-American Activities investigate this outfit also.

These organizations are attempting to carry out the program of the Communist Party as announced through its vicious pamphlet called The Negro in Soviet America. They are going out of their way to try to wipe out our segregation laws, destroy our separate schools, bring about race riots, bloodshed, and revolution, if possible.

I cannot believe that the Supreme Court of the United States will fall for this kind of propaganda. Every intelligent individual on that august tribunal must know that if the position of these Red fronts is sustained, it will do infinitely more harm than good to both the white people and the Negroes in every section of the country.

Examples for the Western World

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Thomas L. Stokes which appeared in the Chicago Sun-Times of December 27, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EXAMPLES FOR THE WESTERN WORLD
(By Thomas L. Stokes)

WASHINGTON.—It is worthy of note that despite the lack of concrete results of a basic nature from the recent meeting of the United Nations General Assembly there did emerge from it in a new role an international figure who demonstrated a positive impulse for peace. Moreover, he symbolizes leadership of the kind that holds hope for the future.

It is significant that Brig. Gen. Carlos P. Romulo, of the Philippines, is the first veteran of World War II to be President of the Assembly. In that capacity he represents the men who fought the war and who had, and still hold in spite of everything, the dream of a new sort of world.

He was personally responsible for the one achievement that relates to the dark problem that overhangs the world—the atom bomb. He was the moving influence behind the resolution which revived and put back to work again the UN Atomic Energy Commission, which is trying to find some formula for international control of atomic weapons.

Beyond this, he offered and now has reiterated his own proposal for a temporary halt in production and use of atomic weapons to stop the race between the United States and Russia and thus provide a more favorable atmosphere for devising some permanent plan of international control and inspection.

There is another also in his part of the world, Pandit Nehru, of India, who finally led his people to an independent status.

Reflecting on the activity of these two, both men of spiritual quality as well as courage and intelligence, suggests that leadership in the campaign for world peace may come from that area of the world—the oldest—and from it we may get a new sort of spiritual revival that may, in the end, save us.

All we in this sphere, on either side, have been able to offer is to arm ourselves like rival bandits to protect ourselves from each other. That is the old way, which never has worked. It can only lead to conflict eventually. Meanwhile, it is draining away our resources that might better be used in other ways. And it is eating away at our funda-

mental liberties of which western civilization has been justly proud.

These are truths demonstrated by history and experience.

They are recognized by the Romulos and Nehrus. They deserve at least our thanks and our support.

American Policy With Respect to Communist Aggression and Expansion in Asia

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. JUDD. Mr. Speaker, on November 28, 1949, a mass meeting was held at Carnegie Hall, New York City, on the question of American policy with respect to Communist aggression and expansion in Asia. The meeting was held under the sponsorship of the Committee to Defend America by Aiding Anti-Communist China, whose national chairman is Mr. Frederick C. McKee, a distinguished citizen of Pittsburgh who has long been a prophetic and courageous leader in the development of a sound American foreign policy, especially during the last critical decade and a half. Speakers at the rally included three distinguished Members of the House of Representatives, the Honorable JAMES FULTON, of Pennsylvania; the Honorable JOHN DAVIS LODGE, of Connecticut; and the Honorable EARL T. WAGNER, of Ohio; and the Honorable HERBERT R. O'CONOR, United States Senator from Maryland.

Under leave to extend my remarks I include the following resolution passed by the meeting, outlining a constructive foreign policy for our Government with respect to China, and a letter to the President expressing opposition to any recognition by the United States of the Communist regime in China:

We, citizens of the city of New York, at Carnegie Hall in mass meeting assembled on this 28th day of November 1949, firm in the conviction that the envelopment of the Chinese Republic by the armed forces of Communist aggression gravely threatens the security of the United States of America and world peace, call upon our Government—

First. To declare now a policy of nonrecognition of any government of China imposed by force of arms and intimidation upon the Chinese people.

Second. To declare this Government's moral support of all elements in China opposed to and resisting Communist aggression.

Third. To give significant economic aid and military advice and supplies to those elements in areas of China not under Communist control.

NOVEMBER 30, 1949.

Hon. HARRY S. TRUMAN,
President of the United States of America, the White House,
Washington, D. C.

SIR: We respectfully call to your attention two resolutions adopted unanimously as to China policy and with two dissenting votes as to Communist arrests of American citizens and officials, at a meeting of more than 2,000 citizens at Carnegie Hall, New York, on November 28.

The speakers on that occasion, Democratic and Republican Members of the Congress, expressed views warmly received by the audience that the present policy of withholding by the United States of America effective support to anti-Communist forces in China is—

1. Inconsistent with the United States policy in Europe and the Middle East, and severely discounts the effectiveness of and warrant for that policy.

2. Inconsistent with our obligations to a faithful ally.

3. Discouraging to anti-Communist leaders in other Asiatic countries and the Malay Archipelago now in the shadow of Communist aggression.

4. A gesture of defeat and submission destructive of American prestige throughout the world, and a great encouragement to intensified Communist expansion.

These results are viewed as a grave danger to American security and world peace.

Respectfully yours,

FREDERICK C. MCKEE,
National Chairman.

Keep Our Freedom

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Wednesday, January 4, 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a remarkable sermon preached on November 27, 1949, by Rev. Earle B. Jewell, rector of St. Andrews Episcopal Church, Kansas City, Mo., entitled "Keep Our Freedom."

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

KEEP OUR FREEDOM

(By Earle B. Jewell, rector of St. Andrew's Episcopal Church, Kansas City, Mo.)

God send us men whose aim 'twill be,
Not to defend some ancient creed,
But to live out the laws of right
In every thought and word and deed.

God send us men alert and quick,
His lofty precepts to translate,
Until the laws of right become
The laws and habits of the state.

God send us men of steadfast will,
Patient, courageous, strong, and true:
With vision clear and mind equipped,
His will to learn, His Work to do.

God send us men with hearts ablaze,
All truth to love, all wrong to hate:
These are the patriots nations need,
These are the bulwarks of the state.

—*Frederick John Gillman.*

This is Advent Sunday, the New Year's Day of the Christian calendar. Today is the day we begin to get ready for the coming of Christ on Christmas Day. As we think about the coming of Christ and His life on earth, we ask, "What was one of the specific things Christ came to earth to do?"

We have been talking the last few Sundays about how to make God real in our everyday life. We have learned that Christ came to the earth to help us make God real in our lives. This morning I want to go a little further and see if we can get a specific activity where we can make God real.

I believe one of the specific things Christ came to earth to do was to give man a sense of dignity and to help man realize his worthwhileness in the world. He came to earth to help God become so real to us that we as individuals can understand why in God's sight we are important. God came to earth in the form of man, to dignify man, to lift man above the animal, and to make man conscious of his oneness with the Divine.

Man has existed on the earth, if we can believe science, for millions of years. However, only 7,000 years is the recorded period of man's progress. For 5,000 years man was struggling for a meaning to life. Man was struggling against his environment, his awakening consciousness, and his superstitions. He was making a pathetic effort to find a purpose in the world for his life and a reason for his existence. Then something happened in the world of men's aspirations that changed human life with the force of an atomic bomb. Christ was born into the world. Two thousand years ago a man came to the earth and told mankind that the individual was important in God's sight. Man learned that he was a little lower than the angels. Man was taught that God would give His spirit to human beings. Through this gift of God of Himself, man began to walk the earth with confidence and courage and to face life with an inner sense of diginity.

One hundred and seventy-two years ago, or seven generations (one generation equals 25 years) there was founded in the world of nations a new country—a country that was made possible and was brought about because man had received the truth that God intended man to be free. This ideal of freedom opened the door of man's concepts so that he knew that he could have and should have an opportunity to express self-initiativeness, and that he possessed the potentiality of private effort and private enterprise. One hundred and seventy-two years ago man knew that God existed in the world. Our proof is, that men and women seeking to fulfill their inner desire for freedom, came to this America of ours and established the only nation in all history that started on the preface that God intended man to be something in His own sight. America became a reality built and based on a faith in God. God was so real that men and women lifted their heads and their shoulders above the cry of their own defeat and established the only nation in the world built upon the Christian faith, that through God and God's reality, man was important. Man was a free agent in God's world.

Think of it. Man has been going toward civilization for only 7,000 years. Five thousand of those 7,000 years man was searching and seeking. Then just 2,000 years ago God came to this earth as a man and revealed that the individual man was real in the sight of God and God was real to man.

It was only 172 years ago that this great Nation was established on that ideal. Think what has been accomplished in 172 years. Men and women landed on the eastern coast of this continent. They found no buildings. They found no roads. Yet these people marched from the east coast across one of the largest areas in the world. They were propelled by the faith and the courage in the Christian idea that they were free. They conquered a continent and built up the strongest, finest Nation in the world. We call it the United States of America, built upon the Christian faith that God is so real to men that men are free, that men have a sense of dignity, that men know they are worth while in the scheme of God's plan, and that men have the right to express self-initiativeness and private enterprise. And, above all, this Nation was built upon the Christian ideal that God is so real that the individual man has the divine right and the divine gift to keep his self-respect by making his own living in the world without expecting the world to make a living for him.

This morning, after Thanksgiving Day, I am pleading with Christian Americans to awaken. I urge us as Christian Americans to get on our knees and ask God for more courage and more Christian faith to accept back again God's gift of self-reliance, dignity, and the right to express God-given personality. Yes, I am asking Americans to get on their knees and ask Almighty God to give back our lost self-respect. In this regained Christian faith, God again will become real. We will be aware that God intends us to give expression to our liberty. Then and only then will we be able to throw away the dole that is making Americans beggars before the throne of the universe. God will help us to stand again on our feet as men of courage and say, "We are Americans. Freemen. Our self-respect cannot be sold for a mess of pottage. Our freedom as Christian Americans, our freedom as individual personalities, is not for sale on the altar of political expediency. Our independence as freemen cannot be auctioned on the greedy altar of those organizations which deny God and yet demand a toll from every honest American who wants to express his own personality."

It is later than we think. When we destroy the self-respect of an individual we destroy his moral character. In the absence of moral character man becomes dependent, and he is no longer an upright free American. He is a slave to the dole, and the result is that God cannot be real to such a person.

If we can get enough men to lose their self-respect we will get enough people to lose their moral sensibility, and thus we will create a group of dependents who are no longer free Americans. These people become slaves to the dole. People who willingly deny God's gift of self-respect deny God. If we can get enough people to surrender their freedom for a mess of pottage called the dole, for the expediency of the now, we can destroy America, because we have destroyed the character of American people.

The morning paper informs us that the vote-bribing politicians plan to gave $100 a month pension to everybody over 65. Ah, yes, man doesn't have to be independent any more. Man doesn't have to keep his self-respect any more. Man doesn't have to have a moral character any more. All he has to have is a voice that says, "Give me," and a hand that can reach out, and an attitude that says, "Everything in the world is free." We don't know God when we think that way. We don't know the history of America when we accept that kind of foreign propaganda. We do not become aware of the sacrifices of people who have made this Nation possible for us when we expect a dole. We are throwing our freedom overboard in one generation.

Don't ask me if God can be real to this country. He can be as real to us as He was to the people of old. But He can only be real insofar as we accept His gift of dignity that causes us to fight to keep our freedom. Our freedom is based upon the conviction that God made us to be an individual personality. As an individual personality we are aware of the gift of freedom, the gift of self-respect, and the gift of our importance in God's divine economy of His universe. We refuse to have these gifts destroyed by anything in our environment or any easy promises made to us for our physical well-being.

Men of old did not go back on their faith in God when they started out from the east coast and went across this Nation fighting sickness, loneliness, storm, blizzard, flood, Indians, wild animals, and diverse forms of affliction. They kept going forward because they believed in their individual dignity. They knew that man without freedom is without dignity.

We can sell out if we want to. We can sell our divine gift as individuals to pressure groups, organized minorities or to some form of economic government. But let us remember that the moment we sell our personality for the temporary comfort of a mess of pottage, we cease to be recipients of God's divine gift to us of a free and dignified personality. We cease to become an individual man. We become a mere physical being.

I repeat, if we want to destroy a man's self-respect, make him dependent. The moment we make him dependent we destroy his moral character. After his moral character has been destroyed he becomes a cowardly slave. He is concerned only with his immediate comfort and protection.

It's later than we think. If this country of ours, through Christian people like us, keeps on condoning the dole, we have lost more in one generation than we have created in seven generations. America cannot exist as America without man's faith in God. Such a faith makes God so real that man is aware of his dignity and knows his importance as an individual. This man keeps his self-respect which is so strong that he is able to say, with conviction, "For everything I get I know there is a price tag on it and I am not going to sell out for the immediacy of my own comfort."

I know this is not an accepted doctrine in this country right now. I know that some of you people will say, "I do not go to church to hear economics. I do not go to church to hear politics." This morning I am not talking economics. I am not talking politics. I am talking applied Christianity. I am talking the kind of a message I believe the Christian church should give repeatedly throughout this Nation. Men need to be made aware that there is a danger that they will lose their freedom because their self-respect, their sense of dignity, their moral character is being undermined. When these are surrendered we will lose America and thus separate ourselves from our God because we have chosen enslavement rather than the divine gift of freedom. We become a people enslaved; enslaved to our own appetites and enslaved to the animal instincts of our own protection. We have thrown overboard Christ's crucifixion on the cross. We reject the offering of Himself. He offered Himself for us because He believed that we were so important as individuals that He hung on the cross to redeem us back to our manhood and make us men so that we could stand in His world and struggle with Him to make the individual free.

The moment we tie up our freedom with an economic badge, that moment we have sold out our freedom. We cannot build a moral character on lies or promises that cannot be fulfilled. We cannot build a Christian nation, a nation of strong courageous men and women, without asking people to believe that the God who created them gave them a spirit and a dignity that is beyond purchase price. Yes, we may take our dole now because it sounds so good. But we know the price we are paying for it. We are paying with our lost self-respect as individual free people, and we are taking something from future generations who have no obligations to us.

You ask me what I am going to do with the aged and the poor and the sick and those who can't take care of themselves. I am saying we ought to take care of them. But let's take care of them as a Christian people through the giving and the charity of individuals and of churches and of the charitable organizations that are organized to take care of them. But let's take our needy people off the pay rolls of a political party that stays in power because they promise something for nothing but do not reveal that they are knowingly taking away our freedom and self-respect.

Americans, let us hang on to our personality. Cling to our individual self-respect. Hold to the fact that God wants us to be men and women of strong character. We do this because God is real to us. Let us cling to these truths regardless of the price that may be demanded.

God did not come to this earth to give men a form of government or a form of economics. God, through Christ, came to this earth to give us life, and the blood of Him feeds our blood through the divine sacrament of His own gift of Himself. We can stand up as men filled with His spirit, fed upon His life, because we have accepted His blood through the sacraments of His love, and we become men again. We need not be afraid of those who destroy the body, but we fight those who destroy the soul.

Americans, awake. Get on your knees. Ask God to baptize us anew with His spirit that restores our manhood and makes us free because through Him we keep our self-respect. We keep our self-respect because we can say, "God gave us the world. He told us to work it, and by His grace and by His help we are men enough to work it."

God has paid the price with His love for us. He has paid the divine price of His own Son to show us how worthy we are in His sight.

Our allegiance is to a God who is so real that He says to us as individuals we are worth while. Our personalities are valuable to Him and to man, and so we keep our self-respect.

Awake, people of America. Let us get on our knees and ask God to help us keep our liberty through refusing to surrender our self-respect. Yea, and then by the grace of God we will be men again.

FOR VICTORY WITH GOD

O Christ, my Captain and my Saviour, help me to bear Thee always in my heart and to follow Thy commandments in my life that, as I meet the onslaughts of evil men and their denials of Thy truth, I may not fight against them in my puny strength alone but may draw on Thine eternal might and power and win all victories with Thee. Amen.

Stronger United States Role Urged To Bar Europe's Collapse at End of ECA

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following forthright article by Blair Moody from the Washington Star of December 25, 1949. He advocates precisely the action by our ECA officials in Europe that some of us tried in vain to get into the original European Recovery Administration legislation in 1948 and again in the act extending it in 1949. Better late than never.

STRONGER UNITED STATES ROLE URGED TO BAR EUROPE'S COLLAPSE AT END OF ECA

(By Blair Moody)

The United States must take a stronger hand in Europe.

In the next 2 years, we must discreetly increase our pressures and require basic, constructive reforms, in return for our Marshall plan dollars, beyond anything we have attempted in the past.

Failure to do this with sufficient perception and vigor may mean the failure of our whole, vast, costly undertaking for world peace and stability. Any other course almost certainly will confront us in 1952 with the choice of continuing to subsidize a dry-rotted system,

or—with Communists engulfing the continent—letting it collapse as it would have had the Marshall plan never been started.

The whole pattern of a future world in which Europe must be an integral part—whether communism or freedom finally wins the cold war—may depend on whether we find the way to insist without seeming to be offensive.

Europe has made a remarkable recovery from the shock and shambles of war, but it is not yet doing the things that must be done to stand on its own feet. Unless we insist, it will not do them.

NOT NOW CAPABLE OF SELF-SUPPORT

In 2 years, of course, Europe cannot possibly turn a feudal structure—shot throughout by antique customs, national boundaries, and special interests—into a model, modern social economy. But it can do much. At least, it can set a new trend of policy and thinking from which, once understood and undertaken, there would not likely be a turning back.

The cold fact is that western Europe, as it is now organized, is not capable of supporting itself without American aid. If it is ever to become capable of self-support, now is the time it had better begin making changes.

The United States must take the lead or wake up one day to find it has spent billions, and the free world is still in a mess, which is precisely what the Communists are counting on.

European statesmen worried by the trend will welcome—privately at least—a stronger use of American influence. Two high French officials told the writer in Paris that the United States must force Britain to form, with France, a duet strong enough to provide constructive leadership within Europe itself. If they don't, say the French, the Germans will.

GERMAN REVIVAL BLOCKED

Another Frenchman said he thought France had saved the United States bacon by blocking the impulse for hell-bent revival of German power, spurred by Wall Street interests, but added: "When it comes to a wise, moderate German program you must at least seem to force us. That will make it possible for us to explain to the French people."

An Italian official in Rome said: "Our country's future depends on other countries adopting the American program. They won't do it unless they are forced. So long as you are feeding them, you can force them. For heaven sakes, in their own interest, do it."

One of the most prominent civilians in Spain, who does not like Franco but supports him because he fears the alternative would be worse, pleaded that the United States make the Caudillo undertake reforms necessary to bring American credit and stave off economic collapse.

Paul G. Hoffman, the Marshall plan manager, is moving as rapidly as he feels he can. But the fight for fundamental change is just starting. The favorable production record of Europe since the war is deceptive because it is grounded in the artificial stimulant of donated American goods and materials. When the stimulants are removed, then what?

STILL CARTEL-MINDED

Europe is still cartel-minded. John J. McCloy, when he took over as American High Commissioner in Germany, found little had been done to break down the centralization of industrial power that paved Hitler's path to war. John Kenney, new Marshall plan chief in London, is trying to crack the British system in which 1,100 trade associations fix prices, control material supply, set production quotas, and discipline competitors. Jean Monnet, No. 1 economist of France, warns that the first results of the customs union between France and Italy have been talks looking toward new cartels.

American influence has to be strong in demanding that European nations balance their budgets and stabilize their currencies. But we have done little to urge continental politicians to improve the relative position of workers so they will have a greater personal stake in modified capitalism and be less suspectible to Communist agitators. This is the most important job of all, and it is proceeding with dangerous lethargy.

In a continent cursed by high prices and lack of mass buying power, wide profit-margins soak narrow, wealthy markets, and nothing much is done about it because the Communists have captured so many workers that the anti-Communist left is politically ineffective.

TAX SYSTEMS FAULTY

In Italy, centuries-overdue land reform seems quite imposing until matched against what there is to be done. Tax systems in most European countries range from reactionary to ridiculous.

France is pleading for closer teamwork with England. The British have such commitments in their sterling area that they cannot link too intimately with the Continent, although they are responding to our suggestion for a northern liaison with Scandinavia. They cannot pool their reserves, for example, in the new Federal Reserve of Europe.

But there is no reason the British should not agree with France on common policies on Germany before that nation builds to dominance of western Europe. And there is no reason the United States should not give British Foreign Minister Ernest Bevin a private bumping around if he refuses to do so.

Since we are giving the Continent billions, there is no reason why we should not exercise the same influence as any banker who loans thousands. It must be done carefully, since the Communists, now unable to deny the great good we are doing Europe, charge we are attempting to make it our colony. This gives them the double strategy of tearing down confidence in us and, by making us hesitant to insist on our views, keeping Europe in a state where it some day may tumble into their hands because it failed to reform.

Not a country in Europe can get along without our aid until it makes major reforms. The situation is that bad. The Continent has no leadership worth a continental. But they all know that our only selfish interest is in a stable world and peace, which is also theirs. And if we are reasonable and unofficious but lead strongly enough, they will follow.

Steel Prices and Steel Pensions

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Minnesota Labor of December 30, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STEEL PRICES AND STEEL PENSIONS

Just when talk about lowering costs and cutting unnecessary expenditures has reached a new high among businessmen, the hatchet swings down hard. Just as government, business, and labor seemingly had halted the trend into a depression valley in spite of many ill omens to the contrary, the dynamiters blew up these efforts.

Even while plunging farm prices and shrinking real wages of factory workers remain a daily millstone around the neck of those who struggle to keep depression out of America, along comes United States Steel and whams out a bell-clanging price boost.

As a result the rest of the steel companies, as has been past practice, fall into line with almost identical price inflations on their products. So costs to all producers and fabricators of products using steel zoom upward again. And prices to retailers will be notched to even dizzier heights as a result.

What does this recurring trend of inflation mean to the average person?

It's too soon to know, but the State CIO research department says that the raw steel price raise will increase prices of various products about as follows:

Automobile: $8 (sheet steel is up $6 a ton).

Refrigerator: 40 cents.

Kitchen cabinet: 27 cents.

Farm tractor: $3.

Garbage can: 4 cents.

The research department points out that retailers may not increase these and hundreds of other prices, however. It's getting tougher to move such merchandise. Retailers don't raise prices when sales are harder to make. Maybe they'll try to absorb these cost increases. This will cut their profits again. And in some cases the results will be to force many small-business men out of business.

A hardware store, the appliance retailer, automobile accessory salesmen handle large volumes at small profits. A hike in their unit costs, such as the research department points out, is a distinct possibility—if they can't pass it on in the form of higher retail prices—will push many of them out of business with conditions what they are today.

Why, then, did United States Steel raise prices?

It thinks it can get by with it. Demand for certain types of steel is still strong. Steel can raise prices, get what it asks for and continue to reap huge profits just as long as industry is able to pay the price. It is significant that not all prices were raised. Tin mill products, which are sold on contract on an annual basis, were lowered in price.

Benjamin Fairless, head of United States Steel—the corporation that turns out one-third of the Nation's supply—said the union welfare and pension plan costs made it necessary to increase prices.

The President's steel fact-finding board last September said the steel industry had used much of its recent big profits for wholesale plant modernization. This action "will substantially lower costs and thereby increase profits considerably, given no decrease in the demand for steel."

These lower costs would permit somewhat lowered prices, the fact-finding board of experts pointed out. Ah, but what about the increased costs caused by the pension plan the board recommended?

Said the board on this point: "The steel companies, under present conditions and under presently foreseeable conditions (which include cost reductions because of plant improvements) appear able to afford this and still put into effect the price reductions mentioned above."

And if the steel companies failed to so reduce prices, the board said, and if business continued to be generally favorable, then "There would appear to be justification for the union to renew its demand for larger participation in this industry's income." In other words, a fourth-round wage increase, which the union called off on the fact finders' advice last fall.

It is highly significant that Senator O'MAHONEY (Democrat, Wyoming), whose work on the prewar TNEC steel investigating

committee makes him one of today's top experts in Congress on monopoly prices in the steel industry, says the price increases are completely unjustified. He says that United States Steel in the first 9 months of 1949 earned $133,000,000 in profits—after taxes. That's about half again as much as it earned during the same period in 1948—$88,000,000.

What Is the Constitution of the United States Worth to American Women?

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 4, 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "What Is the Constitution of the United States Worth to American Women?" delivered by Helen Elizabeth Brown of the Baltimore bar before the Lawyers' Civic Association of Maryland, on Wednesday, November 2, 1949.

I have an estimate from the Government Printing Office which indicates that the manuscript will take one-fourth of a page more than the two printed pages allowed under the rule without a statement of cost, and that the cost will be $184.50.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHAT IS THE CONSTITUTION OF THE UNITED STATES WORTH TO AMERICAN WOMEN?

Although the Constitution of the United States forbids any State to deny to any person the equal protection of the laws, believe it or not—

Men, aliens, and corporations are persons entitled to the equal protection of the laws in this country; American women are not.

It is unconstitutional to try a Negro man with a jury from which Negro men have been excluded; it is not unconstitutional to try a woman, black or white, with a jury from which women have been excluded.

To exclude men from jury service would be to deny them a trial by a jury of their peers and the equal protection of the laws; excluding women from jury service is no such violation of the Constitution.

It is unconstitutional to place restrictions on men's liberty to contract; it is not unconstitutional to restrict women's liberty of contract.

It is constitutional to bar women from any lawful means of earning a living; such laws as to men are unconstitutional and void.

Women may be subjected to labor restrictions; men may not.

Women may be excluded from business and the professions; men may not.

Women in business and the professions may be discriminated against; men may not.

Women may be deprived of their property without due process of law; men may not.

Sex, marriage, and motherhood are the bases of rank injustice and discrimination against American women.

In utter amazement, people ask how such a thing can be in this American Republic. Bishop Hoadly had the answer when he said that, "Whoever hath an absolute authority to interpret any written or spoken laws, it is he who is truly the lawgiver, to all intents and purposes, and not the person who first wrote or spoke them." Justice Holmes condensed it when he remarked that the Constitution is what the courts say it is.

The Supreme Court of the United States has said that a woman is not a person who is entitled to equal protection of the laws under the Constitution and that the Constitution cannot protect her against inequalities and discriminations as long as they are based solely on sex.

INTERPRETATIONS

The famous fourteenth amendment to the Constitution was adopted in 1868, shortly after the Civil War. It states that all persons born or naturalized in the United States and subject to its jurisdiction are citizens and no State shall make or enforce any law abridging the privileges or immunities of citizens of the United States. It further commanded that no State shall deprive any person of life, liberty or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.

The Constitution is the supreme law of the land and is said to be a great charter of human liberty, unique in the history of the world. But, oh, what the Supreme Court has done to that great charter of human liberty where women are concerned. The interpreter is indeed the lawgiver. The Constitution has been prevented from protecting women from the rankest kind of discrimination, injustice and inequality by the interpretation—or misinterpretation—placed upon it, that is, by bench-made law.

After the adoption of the fourteenth amendment, many laws were challenged as violating it. The courts say whether or not a law violates the Constitution. If a law does conflict with the Constitution, it is void and cannot be enforced. Cases began to go before the Supreme Court, as the final authority, for decision.

EXCLUSION FROM JURIES

One of the early decisions involved jury service. A Negro man in West Virginia was indicted for murder by a grand jury from which Negro men were excluded and convicted by a petit jury from which Negro men were excluded. The West Virginia law limited jury service to white male persons. The law was unconstitutional, said the United States Supreme Court, insofar as it singled out colored people and expressly denied them all right to participate in the administration of the law as jurors because of their color though they are citizens and may be in other respects fully qualified. "This," said the court, "is practically a brand upon them affixed by the law."

The right of a trial by jury, said the Supreme Court, is guaranteed to every citizen and the constitution of juries is a very essential part of the protection such a mode of trial is intended to secure. "The very idea of a jury is a body of men composed of the peers or equals of the person whose rights it is selected or summoned to determine; that is, of his neighbors, fellows, associates, persons having the same legal status in society as that which he holds." The Court then topped this off by saying that the State could constitutionally place restrictions on jury service which were not based on color, such as confining the selection of jurors to males. (*Strauder* v. *West Virginia* (100 U. S. 303 (1880)).)

Many years later a woman in Massachusetts charged with crime challenged the array of jurors because women were excluded from it. She was not getting her constitutionally guaranteed right to a trial by a jury of her peers and her rights under the fourteenth amendment were being infringed, she contended.

The Massachusetts jury law did not confine jury service to males. It provided that a person qualified to vote shall serve as a juror. The woman's suffrage amendment had been adopted and women were voting in Massachusetts. Women were persons, the accused woman insisted, and they had some rights under the Constitution.

Whether women are persons or not, ruled the highest court in Massachusetts, depends on when and where that word is used. It was admittedly true that the jury law said "person," but when that law was passed women were not persons who could vote and it was not contemplated that they ever would be. The right to a jury trial was limited to a common law jury which was made up of "12 free and lawful men." Women could not serve as jurors at common law. On the theory that the word "person" without further limiting phrase could hardly be construed to include only a part of the male citizens, colored men were declared eligible for jury service, but women of any race were not. As for the nineteenth amendment, that related exclusively to the franchise for women. The fourteenth amendment was intended to take away oppression because of race or color, the Supreme Court had said so in the West Virginia case. The accused had not been denied the equal protection of the laws either, said the Massachusetts court, and pointed out that the Supreme Court of the United States had already decided that it was not a violation of the fourteenth amendment to deny to women the right to practice law in *Bradwell* v. *Illinois* (16 Wall. 130), and *Lockwood, Petitioner* (154 U. S. 116); to deny them the right to vote before the adoption of the nineteenth amendment in *Minor* v. *Happersett* (21 Wall. 162); or to deny them the right to contract for their labor in *Muller* v. *Oregon* (208 U. S. 412) and *Riley* v. *Massachusetts* (232 U. S. 671).

"These rights," quipped the Massachusetts court, "appear to us quite as essential to the privileges and immunities of citizens and equal protection of the laws as the duty to serve as jurors." (*Commonwealth of Massachusetts* v. *Welosky* (276 Mass. 398 (1931)).)

The Supreme Court of the United States placed its stamp of approval on this denial to women of a trial by a jury of her peers and the equal protection of the laws by denying a writ of certiorari in *Welosky* v. *Commonwealth of Massachusetts* (284 U. S. 684 (1932)).

Despite the Constitution, some States today exclude women from jury service denying to a woman accused a jury of her peers, those holding the "same legal status," and denying to all women the right to participate in the administration of the law as jurors thus placing "a brand upon them affixed by law." This cannot happen to Negro or white men under the Constitution.

LABOR RESTRICTIONS

Labor restrictions applied to working women while leaving men competitors and their employers free from the restrictions themselves and the attendant bureaucratic bother, report filing, Government inspections, and criminal penalties form one of the most curious chapters in American legal history. In this category, women were out of the Constitution, in again, out again, and this on again, off again, wobbling of the court from one side to the other usually hinged, not on law, but on the notions of one man, and at the most crucial point on the vote of one man who could not make up his mind. Cast on first one side and then the other his lone vote is now responsible for taking away from American women the protection of the Constitution against unequal and discriminatory labor laws.

At the outset the Supreme Court determined that labor restrictions could not be

imposed on men because such legislation violated their constitutional right of liberty of contract. As to men, the Court did not deviate from this ruling. New York State at the turn of the century passed a law limiting the working hours of men. The State courts upheld the law on the grounds of health, morals, and public safety. The State had a right to have healthy, able-bodied men at its command, said the New York court. Oh, no, said the United States Supreme Court, there is scarcely any law but might find shelter under such claims, but they can have no force against the fourteenth amendment to the Constitution of the United States which guarantees to the individual the liberty of contract, and the right to sell one's labor is protected by the amendment. Your law is void and you cannot enforce it because it violates the Constitution. (*Lochner* v. *New York* (198 U. S. 45 (1905)).)

When a few years later Oregon passed the very same law and made it applicable to women, but not to men, it was discovered that the "individuals" whose liberty of contract was protected by the fourteenth amendment were men only. Women had no rights and no claims to the equal protection of the laws that the fourteenth amendment guaranteed. Any kind of discriminatory labor restrictions could be imposed upon them, and as long as they were based solely on sex the Constitution did not protect them. (*Muller* v. *Oregon* (208 U. S. 412 (1908)).)

Before this decision, State courts, believing the "individuals" referred to in the Lochner case included women, had condemned such laws as unconstitutional. But when the Supreme Court declared that such legislation violated men's constitutional rights, but did not violate any constitutional rights women had, there was suddenly a great abundance of such laws which handicapped women in obtaining and keeping gainful employment, and they had the additional burden of struggling against them. Cases arising from this struggle kept coming before the Supreme Court.

In California a woman took a job in a hotel and agreed to work 9 hours a day because that was the time required to do her particular job. But California had a law prohibiting any female from working in a hotel for more than 8 hours. Women doing the same work in boarding or lodging houses were not included in the law. The woman's employer was charged with a crime and sent to jail. He obtained a writ of habeas corpus on the ground that his imprisonment was illegal because this law violated the California Constitution and the fourteenth amendment of the Federal Constitution. But the California court said the statute was a police regulation to promote the general health and welfare and sent the woman's employer back to jail. The case went to the United States Supreme Court, which said that this sort of thing could go too far; in fact, it could be pushed to a "wholly indefensible extreme"; but no constitutional rights had been violated here even though like legislation for men could not be sustained. (*Miller* v. *Wilson* (236 U. S. 373 (1915)).)

These statutes were indeed pushed to indefensible extremes. The "health and welfare" sham was used to eliminate women from competition in the labor market. Nobody cared about her health and welfare or how long she worked at any kind of drudgery as long as she did not get paid for it. But the minute she obtained paid employment and came into competition with men her health and welfare became of grave concern, and male labor organizations went to male legislatures to have a law passed against it. The laws themselves belied the health-and-welfare pretense in their coverage and exemptions. For instance, the California law in the Miller case applied to women working in hotels and exempted women doing the same work in boarding houses. There were no restrictions on jobs men did not want or could not get.

One of these laws, a minimum wage law for women and minors in the District of Columbia, which had thrown many women out of work, went to the Supreme Court on the question of its constitutionality. This time the Supreme Court said that it could not accept the doctrine that mature women require or may be subjected to restrictions upon their liberty of contract which could not lawfully be imposed in the case of men under similar circumstances and declared the law unconstitutional. (*Adkins* v. *Children's Hospital* (261 U. S. 525 (1923)).) There was great rejoicing. Women had at last broken into the Constitution. But this application of "equal justice under law" was of short duration.

Soon thereafter the waiters' union in New York was casting about for some means of eliminating the competition of women as waitresses in the late evening when trays were lighter and tips larger. So they went to the New York Legislature and got a law prohibiting women from working as waitresses between the hours of 10 o'clock at night and 6 o'clock in the morning. It was so very bad for women's health and morals to work as waitresses those particular hours. There was no concern as to what might happen to their health and morals if they lost their jobs. Neither were the sponsors of this bill interested in the health or morals of women working during those hours as singers, performers, attendants in ladies' cloak rooms, cleaning up in hotel kitchens, or even waitresses in lunchrooms run by employers for employees where there was not much pay and no tips. These women were not competing with them so they were not interested in their health or morals and they were exempted from the law, as it was easier to pass it that way.

After its enactment the law was challenged on the ground that it violated the fourteenth amendment by depriving the employer and employee of their liberty to contract and denied the equal protection of the laws by an unreasonable and arbitrary classification. The Supreme Court said it was not arbitrary and did not violate any constitutional rights. It pointed out that laws had been sustained by which women working in hotels could be restricted while those doing the same work in boarding houses were not and limiting the hours of women pharmacists and student nurses in hospitals but exempting graduate nurses. The Adkins case was brushed aside with the comment that it involved a wage-fixing law pure and simple and had nothing to do with hours or conditions of labor. (*Radice* v. *New York* (264 U. S. 292 (1924)).) Many waitresses lost their jobs and American women were out of the Constitution again.

A dozen years later they got back in—for just a little while. New York State made an extensive survey of labor conditions which very clearly showed what common sense makes abundantly clear, that if there was to be labor legislation of any kind it ought to apply to all workers and be based on the nature of the work—not the sex of the worker. It was demonstrated that men workers needed protection as much or even more than women. After all, the race does have fathers, and their health and welfare are important, too, not only to themselves but to their families and the community. It does not add to the general welfare if the workman's wife is left with little children to support and laws to hamper her in doing it. The survey further showed that to place restrictions on some workers and not on others was to handicap those restricted and give an unfair advantage to those left free of the restrictions. But the labor lobby wanted the restrictions placed on women only. They did not want any statutory limitations on men. The New York Legislature shifted its responsibility by passing two laws which were identical with the exception that one applied to all workers, men and women alike, and the other subjected women to its burdensome restrictions. Both bills were sent to the then Governor Lehman. The unions pressured him into signing the bill that restricted women but not men. The New York courts held this act unconstitutional, citing the Adkins case.

The United States Supreme Court said the New York court was right and invalidated the law on the authority of the Lochner and Adkins cases. Mr. Justice Butler, writing the opinion of the court, said, "That under circumstances such as those portrayed in the factual background, prescribing minimum wages for women alone would unreasonably restrain them in competition with men and tend arbitrarily to deprive them of employment and a fair chance to find work." *Morehead* v. *New York* (298 U. S. 587 (1936).) Women were back in the Constitution, but insecurely.

This was a 5-to-4 decision. Mr. Justice Owen J. Roberts was one of the five justices making up the majority of the Court. One vote alone gave women the protection guaranteed to all "persons" by the Constitution. Less than a year later Mr. Justice Roberts changed his mind and his vote and took that protection away from them. *West Coast Hotel Co.* v. *Parrish* (300 U. S. 379 (1937).) This was another 5-to-4 decision. By the vote of one man the Adkins and Morehead cases were destroyed, and women were out of the Constitution again. Justice Sutherland wrote a scathing dissent denouncing the law as an invasion of women's constitutional rights and made some sharp remarks about the exercise of the judicial function, adding some penetrating observations on government. But this did not change the result, and women are still out of the Constitution. The law of this land today is that labor restrictions against women only do not violate any rights women have under the Constitution.

BUSINESS AND PROFESSIONAL DISCRIMINATIONS

Women engaged in manual occupations are not the only ones subject to this oppressive injustice. The Constitution does not protect any American woman against the enactment by any State legislature of laws prohibiting the employment of women in any kind of business, in any profession or barring her from any lawful means of earning a living. Many States have done just that and the Supreme Court has ruled that in so doing they do not violate the Constitution. The Supreme Court has made the Constitution powerless to protect women.

Shortly after its adoption, the Supreme Court actually announced that the fourteenth amendment could not be set up to protect women against unequal laws which were a barrier against the right of females to pursue any lawful employment for a livelihood. Mr. Justice Bradley said that in *Bradwell* v. *Illinois* (16 Wall. 130 (1872)) and the court has not changed its mind. Myra Bradwell was denied admission to the practice of law although she met all the requirements and the Illinois statute said that any qualified "person" could practice. But Myra Bradwell was not the kind of "person" who was entitled to the equal protection of the laws. She was a woman, and worse than that, she was a married woman. If the legislature had not excluded women, it must have intended to, said Justice Bradley, besides it belonged to men to make, apply, and execute the laws. At the moment he was demonstrating what a mess some men can make of it.

Contrast this with the case in which the court with great anxiety and solicitude extended the protection of the Constitution to male aliens. It voided a law which contained no discrimination in itself but was being administered so as to be hurtful and an unfair discrimination against subjects of the Emperor of China. It was a law regulating laundries. It applied alike to all laundries and all persons operating laundries. But the law required the consent of a county board of supervisors regarding certain phases of the business. It seems the board was enforcing the law against Chinese laundrymen only. Such discrimination against these Chinese subjects would not do at all, ruled the Supreme Court, the Constitution forbids it. Said the court: "Though the law itself be fair on its face and impartial in appearance, yet, if it is applied and administered by public authority with an evil eye and an unequal hand, so as practically to make unjust and illegal discriminations between persons in similar circumstances, material to their rights, the denial of equal justice is still within the prohibition of the Constitution." (*Yick Wo* v. *Hopkins* (118 U. S. 356 (1886)).)

Aliens are entitled to the equal protection of the laws and equal justice, but American women are not. When it came to corporations, the Supreme Court did not even want to hear any argument about it, but simply announced that the Court was of the opinion that corporations were persons under the amendment (*Santa Clara County* v. *Southern Pacific Railway Co.* (118 U. S. 394 (1886))).

On top of that the Supreme Court said that the State of Virginia was not violating the Constitution by denying to Belva Lockwood the right to practice law in that State on the sole ground that she was a woman. Belva Lockwood had been a member of the bar of the Supreme Court and had practiced law in the District of Columbia for years. The Supreme Court said so and even pointed out that the Virginia statute provided that any person eligible to practice law in any other State, Territory, or the District of Columbia, could practice in that State, but the Virginia Court of Appeals denied her application. Nevertheless, it was not violating any constitutional rights a woman had because it was for the Virginia court to determine whether the word "person" as used in the Virginia law is confined to males and whether women were entitled to practice in that State. The Bradwell and Minor cases were cited in support of this (*Re Lockwood* (154 U. S. 116 (1894))). The Constitution does not require States to give to women the equal protection of their laws.

Once established in a profession, a woman is not safe from persecution and discrimination. California had a law limiting the work of all pharmacists to 10 hours a day. Then it passed a law that all women in hospitals, except graduate nurses, should work only 8 hours a day. One hospital affected had a pharmacist who was a woman. She and the board of trustees of the hospital took the case all the way to the Supreme Court. The Court said she had not been denied the equal protection of the laws. Of course, she was deprived of her means of livelihood when she lost her job to a man who could remain on duty a little longer but her constitutional rights were not violated, according to the Supreme Court (*Bosley* v. *McLaughlin* (236 U. S. 385 (1915))). What was the Constitution worth to her?

The very latest word on the subject by the Supreme Court is that women may be barred from any employment and deprived of the use of their property in spite of the Constitution (*Goesaert* v. *Cleary* (335 U. S. 464 (1948))). One of the last acts of Justice Rutledge was to protest against this in a dissenting opinion. Justice Douglas and Justice Murphy joined him, but their protests did not change the decision. It is now law.

American women have been read out of the Constitution of the United States by the Supreme Court of the United States. They have been compelled to work their way into this great charter of human liberty by amendments. The Constitution itself speaks of the rights of persons and citizens. Masculine courts have said women are not persons and citizens because of sex. With but a single exception, the United States Constitution is now worthless to American women. The one right guaranteed to them is the right to vote. This was accomplished by the nineteenth amendment which specifically forbids the denial or abridgment of the right to vote on account of sex.

THE EQUAL RIGHTS AMENDMENT

To make other provisions and guaranties of the Constitution a protection for women of this country, another amendment must be added. The new amendment is necessary to eliminate discriminatory bench-made law and make the fourteenth amendment mean what it says. The new amendment must specifically forbid the denial of due process of law and the denial of the equal protection of the laws on account of sex. Such an amendment, known as the equal rights amendment, has been pending in the Congress for many years. Its passage has been pledged by all political parties and is long overdue.

It is difficult to understand why the Congress has not submitted this amendment to the States for ratification. Lawyers see the need of it in their daily practice. Obviously we cannot do much of a job of selling democracy abroad with this sort of situation at home. Russia, China, Turkey, and many other countries have equal-rights provisions in their constitutions. The United Nations Charter provides for equal rights for men and women. Our own Constitution is prevented from making equal rights for all Americans effective by the crippling and mangling it has suffered at the hands of the Supreme Court.

Some serious thought should be given to these numerous oaths so glibly taken to preserve, protect, and defend the Constitution of the United States. Today's most urgent need is to save the Constitution—remove its shackles, heal it, restore it, put it back on its feet, and see that it does what it was intended to do for every American.

Address by Hon. Scott W. Lucas, of Illinois, Announcing His Candidacy for Reelection to the Senate

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, January 5 (legislative day of Wednesday, January 4), 1950

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered at Havana, Ill., on December 27, 1949, by the distinguished majority leader, the Senator from Illinois [Mr. LUCAS], announcing his candidacy for reelection in 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My old friends and neighbors, as I stand here before you tonight, I remember the crowded years of my life, the years which have been so exciting and so challenging, the years which have led me into so many battles and so many victories, the years which throw a blazing light upon the path ahead of me.

My life has been a very fortunate one. I was fortunate enough to be born in the Lincoln-Douglas country, in a region filled with the tradition of great men and great deeds. I was fortunate to grow up among the friendly people of the great progressive State of Illinois.

Let me tell you that I have expressed my gratitude to God many times because I had the glorious privilege of being born in the heart of America. Nowhere else upon the whole earth would the way be open for the son of a tenant farmer to become the leader of the United States Senate, the greatest legislative body in the world.

The story of my life is a familiar story here in America. It is the story of freedom and opportunity for the poor as well as the rich, the folks on the farms as well as the citizens in the cities. It is the story which rises from the well-springs of liberty.

All of you here tonight have helped me to make the record upon which I am going to run as a candidate for another term as a servant of Illinois in the Senate of the United States.

You selected me as your State's attorney, when I sought my first public office as a young war veteran. Soon after that, you recall that my comrades of the American Legion honored me by electing me as State department commander and a little later named me national judge advocate for 4 years. You sent me to Congress in 1934 to fill the place of a great man, the late Henry T. Rainey, who had become Speaker of the House of Representatives.

In my two terms in the House, I battled for the rights of Illinois farmers. Those were the stirring days when we passed the Soil Conservation Act and the second Agricultural Adjustment Act—two vital measures which have enabled the farmers of Illinois and the Nation to reach new heights of prosperity. I wrote into the second Agricultural Adjustment Act the first provision for mandatory corn loans which still stands as the basic method of our farm price-support program.

During those terms in the House, I did everything in my power to advance the interests of Illinois labor and Illinois business. To stimulate business, I advocated revision of the tax laws, and I urged special consideration for small-business men. To place labor upon an equal footing with other groups in our economy, I supported the National Labor Relations Act, the Employment Insurance Act, the minimum-wage law, and other measures to improve the living standards of all working people.

In 1938, with the support of the late Gov. Henry Horner and other outstanding leaders of Illinois, I asked for the privilege of serving you in the United States Senate. You gave me another magnificent vote of confidence, and I moved from the House to the Senate with a deep determination to render the devoted and faithful service which would bring honor to my home State.

My 11 years in the Senate have been the years of America's rise to world leadership. In this period from 1939 through 1949, our country has become the most powerful and the most prosperous Nation on earth. I am humbly grateful that I was permitted to take part in shaping the national policy which has brought us victory in war and bounteous plenty in peace.

Yes, my friends, we have shown the world a marvelous achievement here in the land of liberty. By using our Government as an instrument of progress in the hands of the people, we have spread the good things of this life among the vast majority of Americans without the loss of a single freedom.

For 16 years, the moaning men who have captured one of our major political parties have beat their breasts and cried out: "All this must stop. We've got to turn around. We must go back or we'll lose our liberties." These prophets of despair are blood-brothers of the fearful man who didn't believe America could win independence, who didn't believe America could even survive the War of 1812. These gloomy fellows have been predicting disasters and catastrophes for America since 1776.

Yet we have advanced, step by step, year after year, in national strength and national security. We have confounded the critics and astounded the aristocrats of entrenched privilege.

We have approached a new freedom, while we have maintained and cherished our old ones. We can speak freely, write freely, worship in any house of God, go where we please, work where we like, and criticize our Government without any threat of punishment, just as we have always done.

And we have added a new liberty—freedom from the grim specter of want. We have set a goal of full employment, to offer every American a job, and today we have 60,000,000 people gainfully employed at good wages. The profits of American business are reaching new peaks, and our national income is more than $220,000,000,000 a year. Our savings have reached a total of more than $150,000,000,000. Farmers are prosperous and happy.

All these things are reasonable in a country blessed by God with enormous resources. All these things are sound and sensible, and we know it. We are not frightened any more when certain leaders of the Republican Party tell us that we are on our way to the poorhouse.

We remember that the Old Guard men who control that party do not speak for the millions of progressive Republicans who have joined hands with progressive Democrats to overcome unemployment, to wipe out slums, to give pensions to the needy aged, to launch new projects which have raised the United States to the pinnacle of prosperity.

We know that the man who looks around America today, who sees our roads filled with new cars, the smoke of industry rising in our skies, and farm bins filled with bumper crops, cannot agree with the fearful gentlemen who talk about the perils of the poorhouse.

It is a sad thing, my friends, that some of the spokesmen for the Grand Old Party do not realize that the forward-looking Democrats and Republicans of this Nation are not ready to put their heads against a wailing wall and ask for crying towels.

Most of us are aware of the truth about America—and the truth is that our country is doing fine.

We have moved through the dangerous years of the postwar period without a disaster, without the depression and collapse which the moaners glimpsed around every corner.

We have met the challenge of aggressive communism by creating a bold program for European recovery known as the Marshall plan. That plan along with other kindred programs has sent a tide of hope and confidence through Europe, and that tide is weakening the walls of the Soviet slave states.

We have launched a giant housing program here in the United States of America. We have taken long strides toward reorganization of the executive branch of our Government to obtain greater economy and efficiency. We have strengthened our national defense to safeguard the ramparts of freedom.

You know my record. You know that I fought for every one of the major measures in our foreign and domestic policy.

In foreign affairs I have always lifted my voice against the deadly doctrine of isolationism. If you give me your support in the coming election, I will continue my determined efforts to keep America working in harmony with the free nations of the earth.

In domestic legislation, I have supported every measure to maintain and extend the economic prosperity which the American people have earned by their energy, their intelligence, and their skill.

As I look ahead, I see the future filled with challenges which will call for the highest statesmanship and the widest knowledge available. Because America holds the key to the destiny of all mankind, I believe that any man who seeks a post in the Senate today must dedicate himself to days and nights of strenuous effort to obtain a secure peace for the world.

We are going to have peace, because another war would hurl the nations of the earth into a blazing furnace of destruction.

To reach our goal of peace means the expenditure of billions upon billions for national defense and our international obligations. But I am willing to pay the price of peace, for in this atomic age, another war would be infinitely more costly in blood and treasure than the cost we must now bear for defense and aid to the free nations. If we do not win the peace and the holacaust of atomic war should fall upon us, all the talk of achieving governmental economy would seem a vain and foolish thing.

We must find the way to peace, because our sons must not be sent forth to die in a collossal conflict which would carry the victor down in the ruins with the vanquished.

With the guidance of Almighty God, we will use the fruits of the earth for the joy of mankind. With the wisdom which led us to the secrets of the atom, we will take the road which leads upward to the hills of happiness.

In the Eighty-first Congress, in which I have the honor of serving as majority leader of the Senate, we have gone far along the road of peace, progress, and prosperity.

Recognizing the inescapable fact that the forces of democracy and the forces of communism are contending today for the future of mankind, this Congress has extended our successful bipartisan foreign policy to maintain our world leadership.

We have placed our reliance upon a comprehensive series of measures to expand trade, to increase the productive power of the free nations, and to continue the scientific advances which have enabled America to lift the standard of living year after year.

While we have suffered a severe set-back in Asia through the collapse of the Nationalist Government in China, we have gained victory after victory in Europe and the Middle East.

The attempt of Soviet guerrillas to seize control of Greece has been defeated.

The aggressive desires of Russia to dominate Turkey have been frustrated with our aid.

The free governments of France and Italy stand with us, and the Communists in those countries have lost their power to disrupt the economic systems of those vital nations.

We have helped the 270,000,000 people of western Europe—very productive and highly skilled people—to take giant strides toward economic and social strength.

Thus far, we have invested more than $7,000,000,000 in the European recovery program. That is a tremendous sum—until you compare it with the cost of the possibility of fighting an atomic war against a vast nation led by tough and utterly ruthless commissars. If we heeded the cries of the short-sighted men who have been telling us that we cannot afford to continue the Marshall plan, if we retreated from the world struggle and let western Europe sink beneath the red tide of communism, what would it cost us to arm for a war which we would ultimately have to fight alone?

Here is the view of Paul G. Hoffman, the great Republican businessman, chosen by the President to administer the Marshall plan. Just 2 weeks ago, Mr. Hoffman declared in Cleveland: "If nations now free should become satellite police states, only one course of action would be open to us. We would have to increase sharply our defense expenditures." Paul Hoffman asserted that we would have to spend on arms, "25 billion or 30 billion" dollars a year. I assert that he made a very modest prediction.

We would have to convert our beloved America into a garrison state. We would have to keep huge fleets of planes patrolling the skies above our borders. We would have to keep our Navy and our Army in a perpetual state of readiness to prevent the possibility of a sudden attack which might snuff out the lives of 40,000,000 Americans and destroy dozens of our crowded cities.

I believe our present policy is the only sane and sensible course. Despite what the critics tell you, we are getting excellent results. These carping critics offer you no constructive alternative which gives hope for world peace and the betterment of mankind. Those who oppose our bipartisan foreign policy are deluded isolationists or following a course of political expediency.

Those who urge America to retreat into an iron shell are the faint-hearted men of little faith who call our successful policy a give-away program and a gravy train. Let us analyze these glib phrases for a moment.

The facts prove that the money we are spending for the Marshall plan does not go into gravy or lavish gifts. The money goes into orders for American factories—many of them right here in Illinois—and to buy the products of American farmers.

Here are the figures, my friends, which I have obtained from official sources. The United States is the major source for most types of goods going to the Marshall plan countries. We supply 96 percent of the machinery and vehicles shipped to the countries participating in the program. We sell 93 percent of the miscellaneous products, 68 percent of the raw materials and manufactures, and 62 percent of the food, feed, and fertilizer.

Yes, my friends, we are making a good investment in the Marshall plan. The dollars we appropriate in Congress come home to roost in Illinois and other great States, because our friends abroad must use these dollars to buy the supplies we produce.

Let me give you some examples. The Caterpillar Tractor Co. and other firms in Peoria have received orders under this program which total millions of dollars. During the first 9 months of the ECA, Peoria obtained $6,236,000. Moline received $1,597,000. Chicago got $42,000,000. And many other cities in our State shared in large orders.

Millions were expended under the Marshall plan to buy the products of Illinois farms which were urgently needed by the free nations. Remember these facts. The next time a smooth gentleman tells you we are pouring money down a rat hole, ask him whether he means the money which has gone to Illinois factories and the Illinois farms.

Because we are assisting our allies to create a better life, because we are trying to build a better world rather than retreat into selfish isolationism, because we have demonstrated our leadership in a good cause, we

have won the confidence of many millions of people around the globe.

In the coming fiscal year, we will be able to reduce our expenditures for the military forces by $2,000,000,000. We may be able to cut the size of the Marshall plan appropriation by almost a billion dollars below the amount appropriated for the current fiscal year.

We can do these things because our allies in Europe are growing stronger. The production rate in Western Europe is now 20 percent above the rate attained by European industry before World War II. The free nations will be able to do more and more for themselves and we can reduce our economic aid as their internal strength becomes greater.

But we are not going to slash the Marshall plan to the point where our recovery program may be endangered. I am sure you will agree with me that this Congress should not jeopardize our national defense in the name of meat-ax economy, or cause the Marshall plan to collapse in the name of a balanced budget.

You know that I regard an unbalanced budget as a terrible evil, especially at a time when our national income is very high and the Government is receiving revenues of nearly $40,000,000,000 a year.

You know that I have always met my personal obligations. I have never been a free spender. I do not enjoy the process of appropriating the hard-earned money of American taxpayers, because I am a taxpayer myself. I assure you that I am not one of those individuals who spend for the sake of spending.

But when our Secretary of Defense, Louis Johnson, and other leaders of our defense establishment, tell me we must spend billions to protect our homes, our families, our freedoms, from a possible aggressor, I find myself constrained to heed such warnings.

You know as well as I do that Secretary Johnson, who bears the responsibility for keeping our military forces ready to defend the Nation, is an excellent administrator who has demonstrated his determination to save hundreds of millions of dollars wherever he can do so.

I have talked with the President of the United States about this budget problem. I wish all of you could see the President going over the Federal budget. He demands a justification for every dollar to be spent. He orders the fiscal experts to examine every estimate, to check every sum, to search for places where economy may be enforced.

In spite of all our efforts, we are now confronted by the disturbing reappearance of deficit financing. We are confronted by the likelihood of another rise in our Federal debt.

I hate deficit financing. I hate to have the Government borrowing more money from the American people.

But if we must make a choice between a period of deficit financing to strengthen our chance for peace or running the chance of engaging in an atomic war, I will declare right now that I prefer the risk of deficit financing.

If we win a secure peace, if we save our sons from the agony of fighting in Siberian snows or dying in the wreckage of devastated cities, I believe our economic sacrifice will be worth while. I do not see how any patriotic American who loves his country and his fellowmen can come to any other conclusion.

We are not going to resign ourselves to an atomic arms race which might lead to a fiery finish for our whole civilization. But that does not mean, that we will not add to our stock pile of bombs. We will continue to send arms to our friends all over the world, and we will try harder than ever to find paths toward peace.

Why did the American people take the announcement of Russia's atomic weapon with such serene confidence?

We were calm and cool, because we knew we had embarked upon the right course, at home and abroad. We were prosperous, progressive, and prepared to win through any crisis which might come. We had proved our own good faith in the ideals of freedom and abundance, and we knew we could count upon liberty-loving men everywhere to meet any challenge which might arise.

Without hysteria and without panic, the Senate of the United States had ratified the Atlantic Pact, linking 12 free nations in a firm alliance to prevent aggression.

The Senate of the United States restored our reciprocal trade program to the liberal policy laid down by Franklin Roosevelt and Cordell Hull.

The Senate of the United States ratified the International Wheat Agreement, to guarantee the export of 168,000,000 bushels of American wheat at fair prices for the hungry nations of the world.

The Senate of the United States voted to send arms to our friends overseas, to enable them to resist any sudden attack and to lift their heads without fear.

We made history this year in the Senate, my friends, and I will thank God as long as I live that my colleagues entrusted the leadership of the Senate to me at such a vital hour.

We proved to the people of the earth that America measured up to the demands of our age.

All the clouds of confusion stirred by the communists cannot conceal the fact that America has made the greatest progress under a liberal government in recent years in spite of a catastrophic depression and the necessity of fighting a global war against the Axis Powers.

Compare 1949 and 1929 for Mr. and Mrs. America. In this year of grace, according to a noted economist, the average American receives 86 percent more dollars in his pay envelope than he did in 1929. Prices have risen by 39 percent. Taxes have increased too. Mr. and Mrs. America are much better off than they were 20 years ago, and these figures prove it.

The American workman can buy a pound of bread with the money he earns in 6 minutes of labor. In Soviet Russia, the workingman must labor more than four times as long.

Our shoe workers can earn the money for a pair of 89 shoes in one-third the time required by European shoe workers. Our dairy workers can earn the price of a pound of butter in one-sixth of the time necessary for Europeans.

Because their incomes have risen, the working people of America can consume greater quantities of meat and eggs, bread and butter, the products of farms, and still have money for manufactured goods and personal savings.

Because our farmers are getting good prices for their crops, farm income has multiplied many times. Farm debts have been reduced, mortgages have been paid off, and the savings of farmers have grown rapidly.

Yes, my friends, the progressive policy of your Government has brought benefits to every group in America. We have all advanced together, during the last 16 years. And we are going to continue our advance under a Democratic administration.

The President and the Congress are committed to a program designed to widen the liberties, to raise the living standards, and to assure more security for all Americans. Under the banner of freedom and progress, we are striving to attain a fair deal for American business, American farmers, American labor.

We are not resting on our achievements of the past—even though our accomplishments in the last 16 years have no parallel in the history of popular government.

We know that we must make it possible for more people with moderate incomes to own and enjoy homes of their own. Good homes in decent neighborhoods produce citizens who believe in democracy.

We know that we must extend and improve our social security system. We must enable millions of Americans to save for their age with the cooperation of far-sighted employers.

The House of Representatives passed a bill in the first session of the Eighty-first Congress to add 11,000,000 Americans to the lists of those who share in social security. As majority leader of the Senate, I promise you that this Congress will complete its action on this bill before we adjourn next year.

We are going to make a mighty effort to obtain a fair-employment law in the coming session of Congress.

We will try to enact a bill for Federal aid to education which will be satisfactory to Americans of all faiths.

Many other important measures will be given final form and enacted into law before the Eighty-first Congress goes down into history.

In the coming session we will devote much thought to our consideration of proposals for greater economy and efficiency in our Government. The President has informed me that he intends to submit additional plans for reorganization along the lines recommended by the Hoover Commission.

Let me remind you that this Congress has already approved more vital measures for streamlining Federal agencies than any other Congress in this century.

On June 20, 1949, we authorized the President to reorganize the executive departments to reach the essential objectives of efficiency and economy.

In addition to this comprehensive reorganization law, we gave our approval to six out of the seven special reorganization plans sent to the Congress by the President.

Through acceptance of these plans, we gave the President a go-ahead signal to streamline the Department of Labor, to reorganize the Post Office Department, to transfer the National Security Council and National Security Resources Board to the Executive Office of the President, to reorganize the Civil Service Commission, to reorganize the Maritime Commission, and to transfer the Public Roads Administration from the Federal Works Agency to the Department of Commerce.

I am strongly in favor of most of the recommendations made by the nonpartisan Commision headed by our former President. But I want you to be well aware of the fact that President Truman and this Democratic Congress have not been asleep at the switch on reorganization of the Government. Many people are apparently not informed on this subject. Many newspapers do not seem to realize that we have already acted in several fields to reorganize our Federal departments and save hundreds of millions for American taxpayers.

Remember that it will take time to obtain the savings we all desire. Remember that efficiency and economy cannot be achieved by swinging an ax wildly over the heads of Federal employees. Remember that savings which may amount to billions of dollars a year can be attained in the future by calm and scientific reforms carried through by able executives.

My friends and neighbors, Republicans and Democrats alike, who have gathered here to do me honor, I lift my voice to pay you a humble and sincere tribute. Your presence here is a recognition that you believe in me. I assure you that when I am reelected to the Senate, I shall devote my days and nights to the service of the people of Illinois and the

Nation in the years ahead as I have done in the years gone by.

I enter this campaign with only one obligation—my obligation to the people of my home State and America.

Here in Havana in 1944, when I opened my last campaign, I declared to you: "No individual or group of individuals, no organization, no newspaper, controls my vote in the United States Senate." That is true now, as it was in 1944, and it will always be true.

America has been good to a son of a tenant farmer, who has been given the opportunity to speak for the people of a great State from the highest post in the Senate.

I ask for your continued confidence and faith. I will strive to be worthy of your approval and your support.

This is an hour of great challenge in the affairs of the Nation and the world. We must rise to our responsibilities. There can be no question that we can go forward together to new victories for our beloved America.

Every indication in the Nation, from the Democratic victory in the New York senatorial election to our victories in the county elections recently held here in Illinois, points to another great triumph for our cause in 1950.

We are going to win because the voters in Illinois and the whole country know that the leaders of the Democratic Party are men of unimpeachable integrity and rugged honesty.

We are going to win because we have many splendid leaders in the State, such as our great Governor, Adlai Stevenson, our great mayor of Chicago, Martin Kennelly, and my great colleague in the Senate, PAUL DOUGLAS.

We are going to win because we have drawn to our banner millions of progressive Republicans and independent voters who want to advance with us along the road of peace, progress, and prosperity.

In the coming campaign, we shall elect men who will be faithful to their trust, who will keep Illinois in its rightful place—at the head of the American parade.

Here's to victory in 1950—victory for the principles of democracy—victory for the people.

Federal Power Policy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, January 5 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a pamphlet entitled "Federal Power Policy," distributed by the American Public Power Association. I found the recommendations of the APPA to be very cogent and certainly worthy of much consideration. The recommendations were adopted by the board of directors of the American Power Association on September 26, 1949.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

FEDERAL POWER POLICY

(Recommendations on the generation, transmission, and sale of Federal electric power by American Public Power Association)

INTRODUCTION

For almost 40 years, the power program of our Federal Government has grown like Topsy. It has been influenced, especially during the last 20 years, by major amendments to existing laws as well as new legislation, such as the TVA Act, designed to apply only to particular regions or to solve special problems, such as electrifying our farm areas. Until 1930 power was an incidental byproduct from dams designed primarily for flood control, navigation, irrigation, and providing water for domestic and municipal purposes. Up to that time the total installed kilowatts in Federal plants was only 226,000. Beginning with Hoover Dam, on the Colorado River, there developed the concept of huge dams, vast reservoirs for water storage, large blocks of low-cost hydro power, and the need for over-all control of a river basin, to attain maximum benefits from the investment. The impact of these large blocks of power on the economy of an area quickly became apparent.

Today, according to the Federal Power Commission, there are in operation, under construction, or authorized almost 17,000,000 kilowatts of federally owned generating capacity, and the Secretary of the Interior has stated that by 1960 some 30,000,000 additional kilowatts can reasonably be anticipated.

Since municipalities, cooperatives, and other public agencies now have preference under the law in the disposition of this power, their stake in the policy followed becomes readily evident.

Accordingly, to protect their present interests and to assure the economic feasibility and soundness of the program, the American Public Power Association has drafted these recommendations for a Federal power policy. Adoption of the statement reproduced below marks one of the most significant actions to be taken by APPA in its 9-year history. It is hoped that this statement will help guide the drafting of legislation in this sphere of governmental activity which is witnessing such a phenomenal growth.

STATEMENT OF RECOMMENDATIONS

In the construction of electric power facilities and in the generation, transmission and sale of electric power, the United States should adhere to the following principles, that is:

I. Development of hydroelectric power sites

1. In order to conserve irreplaceable fuel supplies, every site for the generation of hydroelectric power should be developed if and when such development is economically feasible. In the case of projects to be constructed primarily for some other purpose, such as navigation or flood control, maximum power production consistent with such primary purposes should be provided.

2. Hydroelectric power sites are natural resources of the people of the United States and in their development preference should be given to public agencies. Plans for developments should provide for maximum economic utilization of stream systems. Local public agencies should have preference in making developments that fit into such plans.

3. Recapture provisions should not apply in the case of grants and licenses given to any public agency. The only useful purpose of a recapture clause is to reserve a natural resource for the public benefit, and where the people themselves undertake the development the need for the provision disappears.

4. In every case in which the United States has, in effect, preempted a stream and/or precluded local development of hydroelectric power, or assumed the obligation to provide a power supply to an area, then it is the duty of the United States to develop power under an orderly program which will anticipate the potential power demands and meet those demands as they arise.

5. The construction of any Federal dam or power generation plant should be preceded by authorization by act of Congress.

II. Economic feasibility and financing of Federal power projects

1. Determination of feasibility:

(a) The Congress should prescribe standards of economic feasibility for Federal power projects and these standards should be applied to all projects.

(b) With respect to any administrative determination of feasibility pursuant to standards prescribed by Congress, review should be provided by an independent agency.

(c) In determining economic feasibility, each project should stand upon its own merits, but the interrelation of the proposed project with other projects (existing and potential) within the areas should be fully evaluated.

(d) Minimum standards of feasibility should be such that power revenues, after payment of power operation, including depreciation, and maintenance expenses, should be adequate to provide for the payment of interest upon the capital investment of the United States chargeable to power and reasonably to insure the United States against loss of any part of such capital investment.

2. Financing: In those cases in which the United States has precluded local development of a stream, or assumed the obligation to provide a power supply to an area, capital funds must be made available in such an orderly manner as to permit installation of economically justified generating facilities in anticipation of the potential power demands and in time to meet those demands as they arise.

III. Transmission lines and steam plants

1. Regional integration:

(a) The United States should construct and own fuel-burning plants, integrated with its hydroelectric plants whenever necessary for the efficient economical operation of its hydroelectric plants.

(b) The United States should construct and own any transmission lines economically necessary for the proper integration of Federal hydroelectric or fuel-burning plants.

(c) Integration policies should be directed toward benefiting the ultimate consumer and where integration of a Federal hydroelectric plant with the production facilities of a local publicly owned distributing system will better serve the ultimate consumer, such integration should be preferred to integration exclusively with other federally owned generating plants.

2. Transmission to load centers:

(a) The United States should construct and own transmission facilities (within the limits of economic feasibility) in every case where such construction and ownership is necessary to provide service, upon reasonable terms, to public agencies and cooperatives accorded preference by acts of Congress.

(b) Local public agencies and cooperatives should have a preferred right to construct transmission facilities to load centers in all cases where the local agencies are willing to provide transmission upon reasonable terms to customers within the area entitled to preference by acts of Congress.

IV. Power sales

1. Sales to ultimate consumers: The United States should not engage in the distribution of electric energy to ultimate consumers (other than agencies and instrumentalities of the United States) if such consumers can reasonably and adequately be served by any local public agency or cooperative.

2. Preferential rights:

(a) In the sale of power, public agencies and cooperatives should have preference.

(b) In the sale of power, public agencies and cooperatives taking power for direct distribution to ultimate consumers should be preferred to all others.

3. Contracts: Contracts of Federal agencies with privately owned utilities should be

limited in time and should contain provisions for modification upon reasonable terms to the extent necessary to protect the preference of public agencies and cooperatives within the area.

4. Rates: Power from Federal projects should be sold at the lowest possible rates consistent with sound business principles. Rates for power produced at multiple-purpose projects should be sufficient to meet all costs properly chargeable to power, but should not be burdened with any costs properly chargeable to any other purpose; provided, however, that when irrigation is one of the joint purposes, then power revenues may properly be used to pay that portion, if any, of the capital costs properly chargeable to irrigation which is beyond the ability of the irrigators to pay; provided the total capital costs paid from power revenues (those chargeable to power plus those chargeable to irrigation but paid from power revenues) shall never exceed the amount for which a comparable supply of power could have been developed had irrigation not been one of the purposes of the project.

V. Multiple-purpose projects

1. Allocation of capital:

(a) Congress should fix policies and practice with respect to the allocation of capital at Federal multiple-purpose projects and these policies and practices should be uniformly applied upon all projects.

(b) All administrative action with respect to capital allocations should be made subject to review.

VI. Recognition of local interest in Federal projects for the utilization or control of water

1. Investigation and reports respecting proposed water projects: The United States should at all times recognize the rights of the States in determining the development of the watersheds within their borders and their interests and rights in water utilization. To this end, investigations concerning any proposed project for the utilization and control of water should be conducted in such a manner as to make available currently to every affected State information developed by the investigation and opportunity for maximum consultation and cooperation. Similarly, reports concerning any such project should be submitted to every affected State for comment, criticism, or recommendation prior to the authorization of any construction work upon the proposed project, or, if the report be for submission to the Congress, before such submission.

2. Local participation in operation of Federal projects: The local interest in every Federal project for the utilization and control of water should receive recognition, and local participation should be invited to the greatest extent consistent with the responsibilities of the United States. Such local participation may be achieved through local public hearings, local representation on consulting and administrative boards and councils, and by other means.

VII. Rural electrification

1. It is in the public interest to electrify our rural areas as rapidly as possible. Sufficient funds—both for administrative and loan purposes—should be provided by the Congress as needed.

2. Present powers of REA to finance generating plants and transmission lines, and acquire properties, should be continued.

3. More extensive financing of research in rural utilization of electric power should be undertaken by appropriate agencies.

Adopted by the board of directors, American Public Power Association, September 26, 1949, at Washington, D. C.

One Job for 1950

EXTENSION OF REMARKS
OF
HON. ANDREW F. SCHOEPPEL
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Thursday, January 5 (legislative day of Wednesday, January 4), 1950

Mr. SCHOEPPEL. Mr. President, the President of the United States submitted to Congress yesterday his message on the state of the Union. Many things were covered in that speech. Many of us feel that we cannot be so optimistic about the outlook for the future of our country if we take an honest, practical look.

An interesting editorial appeared on January 1, 1950, in the Cleveland Plain Dealer entitled "One Job for 1950."

I ask unanimous consent to have this editorial printed in the Appendix of the CONGRESSIONAL RECORD. It is something worth thinking about.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONE JOB FOR 1950

Hello, 1950. This is a pretty bewildering world for such a young fellow to enter. It isn't like it used to be when your brothers dropped around to spend a year. Then life was simple. Two and two made four. If you worked you ate and if you loafed you didn't. Hardly anybody got paid for doing nothing, and nobody made a career of going on relief. And all the gold was not buried in the ground in Kentucky.

To say, 1950, that we are nuttier than a fruit cake is to understate the case. We haven't made up our minds what we are going to do about China; what we are going to do about a lot of other things. We drift from one expediency to another, yet manage to keep in mind the priceless precept that he who gives away the most to the greatest number remains longest in power.

To saddle all these problems on your poor little back seems brutal, but you might as well learn early that life is a pretty kettle of fish. No one expects you to be able to solve them all. But if you could concentrate on just one thing and get it straightened out, you would be remembered as a jewel among years.

We refer, 1950, to the Government's farm price-support program which prevents prices from going to their natural level.

Uncle Sam, it seems, has a $2,000,000,000 inventory right now, including some 5,000,000 bales of cotton, 400,000,000 bushels of wheat, 600,000,000 bushels of corn, 400,000,000 pounds of linseed oil, 16,000,000 bushels of flaxseed, over 70,000,000 pounds of dried eggs, more than 100,000,000 pounds of butter, $30,000,000 worth of dried milk, to say nothing of large stores of tobacco, tung oil, dried fruit, turpentine, rosin, sheep's and goat's wool, soybeans, turkeys, peanuts, and walnuts.

The Government is running out of storage space. Expense for storage currently runs to $250,000 a day, and at least $80,000,000 is being invested in additional space this fiscal year.

If you could straighten out this one matter, 1950, before it becomes compulsory for every homeowner to offer up his basement, garage, and spare bedroom for storage purposes, you would not have lived in vain.

But don't let us infect you with our somewhat pessimistic outlook. The fact that nothing has been done in recent years that made much sense, does not prove that we shall continue to live an Alice in Wonderland existence all the rest of our days. It is as certain as the noses on our faces that we must return to a solvent condition or go broke.

Perhaps, 1950, you may be able to give us a slight push in the direction of plain, old-fashioned horse sense.

Well, good luck, kid, and happy landings.

Capt. John D. Crommelin

EXTENSION OF REMARKS
OF
HON. JOSEPH R. McCARTHY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, January 5 (legislative day of Wednesday, January 4), 1950

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute to Capt. John D. Crommelin, by Walter Winchell.

There being no objection, the tribute was ordered to be printed in the RECORD, as follows:

THE CASE FOR A GALLANT SAILOR

(By Walter Winchell)

The Japs burned the uniform off Capt. John D. Crommelin, but it didn't stop him from rescuing his wounded men lying below in sick bay. The politicians are trying to keep the admiral's star off Captain Crommelin's shoulder this week, but unlike the Japs, they won't face him in open combat. In the best tradition of Hitler, they have denied him a court martial because he has a complete defense.

There is now an official public reprimand in his record, placed there by Admiral Forrest Sherman. The best constitutional lawyers tell me Admiral Sherman had no more right to do that than the cop on the corner has a right to electrocute you without trial.

This is how it was done: Admiral Sherman, without trial, placed this death sentence of promotion in Captain Crommelin's record: "To the degree that you deliberately ignored your responsibilities to your naval superiors and disregarded the well understood privacy of confidential and privileged communications, you brought into question your fitness to exercise a position of trust and confidence under those superiors or elsewhere in the naval service."

Admiral Sherman must have known when he wrote—as everyone in Washington does—that a large number of Senators, Congressmen, and senior officers of the United States Navy are almost fighting each other for the privilege of testifying for Crommelin. To the extent that he ignored the evidence, Admiral Sherman was stacking the cards. But to the extent that he ignored the law, he was breaking it himself.

Admiral Sherman wrote me a letter explaining his position. Examination of it reveals he used the exact words of naval legal authority but added to them words which suited his purpose, omitted those which restricted his authority and ignored those which questioned the legality of his act. The admiral relies for his authority on the inherent right of a commander-in-chief to express approval or disapproval of the official conduct of subordinate officers under his command.

He omitted to say that the very same book he quotes, the Naval Digest, 1916, specifically states on the very same pages, numbers 500 and 501, that "public reprimand, even as a part of a court martial, is not favored by the Navy."

To railroad Crommelin they had to go far back. That Naval Digest, published in 1916, was quoting naval law as far back as 1893 and 1864. I know Admiral Sherman will have the greatest difficulty trying to produce before the congressional investigation committee which will be formed a single instance where the chief of naval operations has acted in this manner in the last 50 years. The best research lawyers have been unable to produce a single case in the last 30 years, as this goes to press.

Admiral Sherman quoted to me the directive of the Secretary of the Navy, dated January 7, 1949. He neglected to state the directive of Secretary of Defense Johnson, dated June 8, 1949, 6 months after, in which the Navy Department, along with the other armed services, was directed to lift the gag on all officers except for material which was classified "for security reasons." Captain Crommelin was also prepared to prove that the confidential dispatch in answer to which Admiral Bogan's letter was written had been opened to the public by direction of the Secretary of the Navy some 10 days previous to Captain Crommelin's release of Admiral Bogan's letter. In short, Capt. Crommelin has been sentenced, without trial, for making public an answer to a letter which the Secretary of the Navy himself had made public 10 days before.

These are only a few of the legal points in the greatest outrage in the history of military justice since the framing of Captain Dreyfus. As a few more, the Naval Digest, upon which Admiral Sherman relies, isn't even naval law. It is a mere reference book and states so on its very first page. It is the opinion of able counsel that the authorities cited by Admiral Sherman are nullified by United States Code of 1935. Further, in order to bar Captain Crommelin without trial, it was necessary, according to legal experts, to hold that his superiors had sweeping rights over his conscience. Apparently Admiral Sherman has forgotten that we hanged the Nazi generals for blindly obeying Hitler's orders.

Saturday's headlines were misleading. They stated "the Navy was through with the Crommelin case." The Navy may be, but the Crommelin case is not through with Admiral Sherman; nor is the Congress of the United States. Unlike Captain Crommelin, who got no open trial, Admiral Sherman will have full opportunity to explain to the Senate just how the Navy's first airman got the illegal reprimand in his record, which under ordinary circumstances would forever stop his promotion, and he will be asked if, as the AP stated on November 8, he called Crommelin before him, without counsel, and told him if he would avoid "controversial subjects" he would be free to speak in Montgomery, Ala. (Free to speak.)

Crommelin refused. He was hit shortly thereafter with a reprimand. What happened to the Bill of Rights? Doesn't Admiral Sherman know the Constitution of the United States is specifically made a part of naval laws? The trees over Thomas Jefferson's grave at Monticello must be weeping.

As the historic case of Capt. John Crommelin moves to the floor of the United States Senate and the United States Supreme Court issues even greater than freedom of speech are presented. The Congress of the United States has been defied, according to leading Senators and Congressmen, in its efforts to obtain information so that it can perform its constitutional duties. Members of Congress have charged naval officers are being railroaded to naval Siberias for daring to answer the lawful questions of Congress.

To his defense have already come United States Senators of both parties. They are prepared, I am informed, to act not only as his counsel but to take the stand to testify to his public service for the very act for which he has been condemned. High-ranking officers of the Navy will testify that he is, contrary to Admiral Sherman's censure, entitled to hold positions of highest trust and honor. (The enemy Japs—and his two brothers killed in action—are the best testimony on that.) Literally thousands of Americans of very high standing in their community are clamoring to rebut Admiral Sherman's public reprimand.

There will be no admiral's star on Captain Crommelin's shoulder, according to Washington insiders. But that will mean one star has gone from the American flag.

Address by Hon. Scott W. Lucas, of Illinois, at Convention of National Association of Postmasters

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Illinois [Mr. LUCAS], the majority leader, at the convention of the National Association of Postmasters.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, fellow Democrats [applause], I want to take this opportunity of expressing to my old friend, Burris Jackson, my deep gratitude for the kind and tolerant remarks that he made about me in that very generous introduction. I found out in my political career that I always go best, as far as applause is concerned, when I speak to postmasters. [Applause.]

That is especially true with Illinois postmasters [applause], and I know there are a large number of them in attendance at this wonderful convention.

Your distinguished chairman has spoken somewhat briefly about the Senator from Illinois being the majority leader in the United States Senate, and I thank him for those kind things that he said about that position. Yet I come before this intelligent group of people to advise you that I doubt if there is another position in public life today that is so difficult as being the majority leader of the United States Senate. We have a majority in the United States Senate of Democrats. Sometimes I think in theory only. [Laughter.] That is, when I see some of my colleagues voting some other way.

You who have followed the history of the Eighty-first Congress well realize that upon a great number of the votes upon highly important and controversial matters, it was a question of touch and go as to whether or not we could win the day.

You who are not familiar with parliamentary procedure must remember that we of the United States Senate in this greatest legislative hall in all of the world have no rule of relevancy. We have no rule of germaneness. An individual Senator who is recognized by the Vice President can stand on his feet and talk as long as there is breath in his body. In fact, not long ago they provided a new device to carry on a filibuster in the United States Senate.

A SEATED FILIBUSTER

My good friend, Senator LANGER, from North Dakota, who is a friend of the postmasters, was carrying on a filibuster just at the close of the session. While the Senator from Illinois and other Senators were away from the Chamber for lunch, and only two or three Senators were on the floor, the Senator from North Dakota asked unanimous consent that he might be seated and read his speech instead of standing. [Laughter.] Nobody objected, and it was granted. Under the rules of the Senate, you can drive a donkey or an elephant down the aisle under unanimous consent and agreement if nobody objects. We do have privileges a lot of other folks do not.

I came in the Senate and learned what had happened, and I saw my friend, LANGER, sitting at the desk pounding it as usual in the great speeches he sometimes makes, and I took exception to what had happened, because, ladies and gentlemen, we must carry on and maintain the integrity and the dignity of the United States Senate. In the Senate of the United States is the last bulwark of free legislative and independent government, and under no circumstances can we as Members of that great body permit the Senate to deteriorate either in integrity or dignity because if that should happen, then government in the United States could well be on its way out.

In these perilous and difficult times through which this great Nation is passing, never was it so important for men and women who serve in that body or in the body on the other side of the Capitol to give the best that is in them to carry on in the great traditions of the founding fathers of the Constitution of the United States in order that America may continue to lead the rest of the world under a form of government which has never been equaled or surpassed in all of the annals of time. It is only because of that type of representative government that we have been able to do the things that are so necessary and so vital in this turbulent and topsy-turvy world today.

Your presence here indicates that you people here have a right to come and hold your convention in a free and open spot. This is one of the few places in the world where you could really do this. Those who oppose our way of life would not permit you to do what you are doing today unless you had permission from some top man in the Kremlin.

We believe, ladies and gentlemen, that what we have accomplished under a democracy has never been equaled, will never be equaled, irrespective of any other type or form of government. When we look about today and see what we have in this Nation, in the way of happiness and prosperity, what we are doing in the Congress of the United States in our efforts to bring about a universal peace for all mankind, every American should cherish from his boot tops up for the fact that he lives as an American under the Stars and Stripes. [Applause.]

INTERESTED IN POSTAL SERVICE

As you know, I have always been deeply interested in the progress of the postal service and the advancement of postmasters and the highly skilled men and women who serve in our post offices.

I presume other speakers have told you about the accomplishments of the Eighty-first Congress, but I shall repeat them. A

number of laws have been put into effect which will be of great benefit to postal employees; will improve our entire postal service system.

I take great satisfaction in the fact that the Eighty-first Congress has done more for the American postal service than any other Congress in our recent history, and facts will prove what I say. [Applause.]

We have authorized a research and development program in the Post Office Department which will be devoted to the modernization of equipment, the creation of new methods of handling mail, and the introduction of new devices to give the American people better postal service than they have ever received before. Experts of the Commission on Reorganization of the Government, headed by our former President Hoover, have estimated that the research and scientific development program could result in a savings of $80,000,000 a year.

While the various branches of the Post Office Department have been very progressive in the development of equipment and efficient methods, it became evident that much more could be accomplished by establishing a special office of research which would have the particular duty of making further improvements. The Hoover Commission, in its report on the post office, declared: "If the postal establishment is to be operated as a business enterprise, organized research will become increasingly important in order to remove guesswork from the formulation of service policies."

I know that plans are progressing for the development of mechanical mail sorting, and the use of other devices to expedite the movement of the enormous volume of mail passing through our magnificent postal system.

I might leave my manuscript for a moment to tell you good people that I presume every office in the United States Senate is like mine, and if that is true, there is more mail going through that office today than at any time in the history of the Nation. In other words, more people are writing about their problems and about legislation than at any time in the past. Believe it or not, the office of Senator LUCAS sends out on an average of 25,000 communications to his people in Illinois each month, a regular mail-order house, so to speak. [Laughter.]

We try to answer all of our mail. Sometimes you may get a form letter. If you do, it is only because of the lack of help and we cannot give you a personalized letter.

While the various branches of the Post Office Department have been very progressive in the development of equipment and efficient methods, much work can be accomplished by establishing a special office of research which I talked about a moment ago.

Another action which will improve the postal service available to the American people was the enactment by this Congress of a bill to give postal employees a salary increase of $120 a year. The post office has many thousands of workers who have been in the postal system for many years, and the Congress recognized the fact by placing a special provision in the pay-raise bill to give additional compensation to employees who have long records of service.

Longevity increases are given under the new law in three stages: $100 for those who have served 13 years; another $100 for those with 18 years of duty, and a third increase of $100 for those who have been on the job for a quarter of a century. Those who have served for 25 years or more will receive all three of the $100 longevity increases in addition to the flat pay increase of $120. That means that many postmasters who have made the postal service their life work will obtain a total increase of $420 a year.

SALARY ADJUSTMENTS FAVORED

While this increase is fairly substantial, I do not believe it is enough to bring the scale of compensation for postmasters, assistant postmasters' and postal supervisors to the level appropriate for their responsibilities. [Applause.] At this session of the Congress, I introduced a bill to adjust the pay of assistant postmasters and other executives in the postal field service. Hearings were held last May by the Senate Committee on Post Office and Civil Service and my bill was discussed along with the general postal pay raise bill and other measures affecting the postal system. The committee then prepared its own bill, S. 1978, which includes all the provisions of my bill with a few minor changes and a special section designed to reclassify the pay of postmasters.

I was informed by the Postmaster General, the Bureau of the Budget, and the chairman of the Post Office Committee that there should be further study before a bill for a complete reclassification of the salaries of postmasters could be recommended for final passage by the Congress. I understand that S. 1978 was based upon suggestions made by the National Association of Postmasters, the organization now meeting here today. Let me assure you that the bill to give postmasters the salary scale they should have certainly will receive early consideration at the next session of the Eighty-first Congress. [Applause.]

The laws passed by this Congress to modernize the postal system and to lift the level of postal pay rates are examples of the kind of progressive legislation which we have been able to achieve under the leadership of this administration.

Reorganization of the Post Office Department was one of the seven reorganization plans submitted to Congress by President Truman. It was one of the six plans which went into effect with the tacit approval of the Senate and the House of Representatives. The only plan which was not accepted by the Congress was the President's propcsal to establish a Department of Welfare to replace the Federal Security Agency. The six plans now in operation will streamline several important agencies of the Government and will make possible the eventual saving of hundreds of millions of dollars annually for the benefit of American taxpayers.

If I may diverge for a moment, the President of the United States, with whom I have the great honor of meeting every Monday morning when the Senate of the United States is in session, has advised me that when we return in January that a great number of other reorganization plans will be sent to the Congress for their approval, and when these reorganization plans finally get to work, with the elimination of useless employees and the overlapping and duplication of effort, we believe that we can save billions of dollars, presuming, of course, that the Hoover Commission is correct in their conclusion.

Leaving the postal bills for a moment, briefly discussing some of the other things that happened in the Congress of the United States, and since I received a rather generous applause when I said fellow Democrats a moment ago, I do not hesitate to make just a few political implications as I go along. [Laughter and applause.]

OTHER LEGISLATION DISCUSSED

One of the most important pieces of legislation that we passed during this session, and which is now a public law, signed by the President of the United States, was the housing bill. The result of the housing bill that was passed is that some 810,000 new units will be on their way in a short while, giving to those in the low-income groups a right to have a decent home where they can rear a family. In that same bill we appropriated money to eliminate the slums in some of the great cities of this Nation.

You know, a great number of people fought the housing bill, and have been fighting it for years, on the theory that it will invade the field of free enterprise. Others have the temerity to call it a socialistic movement. Well, a good many Republicans are on that socialistic line, if it is so.

What will happen in the slum areas is this, and what is happening today, you and I know: There is where poverty, diseases, and crime breed, and out of that sort of an environment comes the virus of communism, and that is the very reason, ladies and gentlemen, that I, for one, stood four square behind the housing bill that was passed in the United States Senate some time ago. [Applause.]

We passed a bill known as Federal aid to education, which costs money, but unless the youth of this Nation is properly educated, to meet the test of tomorrow, no one knows what will happen to this great Nation of ours.

We believe that we have passed in the Senate of the United States a bill which takes care of all religious faiths. That was stymied in the House of Representatives, but we have every reason to believe that that bill which has been a part of the Democratic platform for years will be enacted into law before we conclude the second half of the Eighty-first Congress. [Applause.]

Another important bill that you people who live in the rural areas will surely understand came about this time when we introduced a measure to amend the Commodity Credit Corporation charter. You will recall the Eightieth Congress, the Republicans, took from the Secretary of Agriculture the power to acquire and lease additional storage facilities about a year ago this time.

You will recall down through the Corn Belt section of Illinois, where I happen to live, and all through the Corn Belt section of the Midwest, farmers were selling their corn, at least the surplus that they could not sell, at a tremendous sacrifice that did as much, in my opinion, to elect Harry Truman President as any single thing, so far as the farmers are concerned. [Applause.]

So we recognized that evil. Under this Congress, we corrected it. All you have to do is to go into any section of Illinois now and hear the hum of the hammer and saw, building additional storage facilities to take care of the farmer who was denied that right under the previous Eightieth Republican controlled Congress.

We are going to take care of the farmer. We always have and if he is a smart fellow, and I believe he is, he is going to stay with us again when these campaigns come along. [Applause.]

Another thing we did was to increase the minimum wage from 40 to 75 cents an hour, long past due, ladies and gentlemen, to a group of individual white collar people in this country who have no one to represent them in the Congress of the United States, the white-collar crowd who have no leaders as do the other great labor organizations. They are here and they are there and they depend upon me and the others to see that they get their just due. We believe that we have done something worth while to give to that underpaid fellow at least the minimum of 75 cents an hour, so that he, too, can put shoes on the feet of his kids and buy the kind of food that they need in order to make them healthy children in this great land of ours. [Applause.]

FOREIGN AFFAIRS RECORD

In the field of foreign affairs, you know what we have done over the protests of a certain small group of isolationists in this country. They are in the Senate and they are in the House of Representatives. They are out here in the Midwest. We tried isolationism once in 1917. We tried it again just before we got into World War II. It has not worked. It never will work in this atomic age, irrespective of what any one man may say, and under the bipartisan foreign policy of the United States Congress, we have brought forth to this Nation and to

the world a sound, progressive, far-reaching foreign policy which we believe will bring to the peoples of this earth an everlasting and a durable peace. [Applause.]

My friends, I do not tell you that what we are doing is not a calculated risk. I do not know whether we will succeed or not. But what is the alternative if we do not go through with the continuation of aid to Turkey and aid to Greece, continuation of the Marshall plan, continuation of the Atlantic Pact and the implementation thereof with the assistance arms program? The alternative is to come back here in this isolated shell of the United States of America, build an iron wall around this great country of ours, and instead of appropriating $15,000,000,000 for national defense, you will appropriate three times that much, yes, five times that much, in short order, that we may prepare for the oncoming day when the Soviet crowd will challenge us in an aggressive way.

So long, ladies and gentlemen, as we can keep France and England and these other countries, keep their economic position strong, keep them from going to the communistic regime, we are doing just that much to keep communism away from the shores of this great country of ours.

You know, France and Italy had a pretty close call. A year ago this time I was in those countries. I visited Turkey, I visited Greece, Germany, Italy, France, and Spain. I heard the people on the streets talking. I heard them in high places discussing the question and they literally went for the things that America had done for them, regardless of what anyone says to the contrary. They are appreciative people. They are a grateful people and what we have done through the extension of the Marshall plan to those democracies of Europe has stopped the spread of communism from riding herd over all of those great countries. When President Truman not long ago announced to the world that Russia had acquired the atomic bomb, it became even more clear than ever as to the necessity for our carrying on a firm, rigid foreign policy against any aggressor who seeks to challenge the American way of life.

I want to say to you that in the opinion of the experts in Washington, the moment that we entered the Atlantic Pact, that was the beginning of the end of the cold war around Berlin. The blockade was lifted thereafter. They have been getting along pretty well with those fellows since that time.

NOT SEEKING TROUBLE

We are not looking for trouble. We are only looking for peace. We fought two wars. We have asked for nothing. We give and give and give. It is what we do in order to just be left alone, that we might continue on and develop our way of life in this country of ours.

There is no territory that we asked for, no reparations, no aggrandizement of property, nothing except the good will of other nations of the earth.

I have always believed that there was room enough in this world for Russia and the United States to live, notwithstanding the difference in the ideologies that are expressed in the two nations, and Russia may realiz that some day. At least we hope that she does.

This great bipartisan foreign policy being carried on at the present time under the leadership of the great Senator from Texas, the distinguished TOM CONNALLY, a Democrat, who is a close friend of Burris Jackson's [applause], and on the Republican side we go to Michigan and find the ranking minority member on the Committee on Foreign Affairs, that statesman, one of the greatest statesmen of all times, ARTHUR VANDENBERG, a Republican, ladies and gentlemen. [Applause.]

When you realize that VANDENBERG and CONNALLY and every other member of the Committee on Foreign Relations, whether they are Democrats or Republicans, have reported out on all of these bills this year unanimously, you understand the power that exists in that one committee as far as this country and the world is concerned, and it must continue to be that way. I will take VANDENBERG's ideas on foreign policy rather than some isolationist out here in the Midwest or any other place, ladies and gentlemen. [Applause.]

I think perhaps I have the score.

I do not believe I have. I thought I had the figures on the number of votes, but as I recall, on the Atlantic Pact, there were only 12 United States Senators who voted against the Atlantic Pact. There were only 6 in final analysis who voted against the continuation of the Marshall plan, although they were in there with crippling amendments attempting to defeat indirectly what they could not do directly, ladies and gentlemen.

This has been a Congress that stayed on the job, while the Eightieth Congress ran away, and we have accomplished a tremendous program of good. We have carried out many a point of the Democratic platform and we are only half through. We have another second half of the Eighty-first Congress session to go.

You know, when we go back, we do not have to go through the organization of committees, assignment of bills, hearings, and so forth. Everything that is on the calendar at the present time will be ready for consideration the moment we return. So consequently we will lose no time. We will move right in, a couple of days after the 3d of January, discussing and debating important legislation that affects the general welfare of all of the American people.

Ladies and gentlemen, I have been in the Senate of the United States for the last 13 years, that is, the last 11 years, I served as a Member of the House of Representatives for 4 years before that. All in all I have been in Congress some 15 years. I have seen a good many things happen during that time. But I repeat what I said a moment ago, that I do not believe that in the 15 years that I have been there, that I have seen more controversial, more important legislation that affects the welfare of the people of the world than exists at the present time. It is a difficult job for any Senator, a difficult job for any leader. All that the Senator from Illinois is attempting to do is to do what he believes is right.

I do not say that I am always right, but I pray God that I am right, and then vote accordingly.

TRIBUTE TO HADERLEIN

You have all been very kind to listen to me. Before I retire, I want to pay just a tribute to my friend, the postmaster of the city of Chicago, who has been your host. He has not been in the post office too long, but he is a wonderful fellow, and I predict for him one of the best careers of any postmaster in any big city in the United States. He has made friends by the thousands already. He is running an efficient office over there. I am glad to pay this tribute to my friend, John Haderlein. [Applause.]

If any of you folks are coming to Washington next year while we are in session, and if the Senator from Illinois can do anything for you, just call me. If you cannot come, write me. That is your privilege under the Constitution, to write your Senator. Present your grievances to him or to your Congressman.

You may not get the answer you want, but you will get an answer of some kind.

Thank you so much.

Essay on Liberty

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. HALE. Mr. Speaker, under leave to extend my remarks, I want to direct the attention of the House to certain passages in a book which I think may certainly be considered one of the English classics, but which, like other classics, is not as much read as it should be. I refer to the essay On Liberty written by the great British philosopher John Stuart Mill and published by him in the year 1859. In the closing chapter of the book in which he discusses practical applications of the limits to the authority of society over the individual, the writer gives a statement of objections to Government interference which I think we might all do well to keep in mind. So much am I impressed with the force of what the writer says that I should be glad to see it in the RECORD at the beginning of every session. Even the reference to Russia, although it is a reference to the Russia of the czars, is probably fairly apt when applied to the Russia of the Soviet Union.

The language to which I refer is as follows:

The objections to government interference, when it is not such as to involve infringement of liberty, may be of three kinds.

The first is, when the thing to be done is likely to be better done by individuals than by the government. Speaking generally, there is no one so fit to conduct any business, or to determine how or by whom it shall be conducted, as those who are personally interested in it. This principle condemns the interferences, once so common, of the legislature, or the officers of government, with the ordinary processes of industry. But this part of the subject has been sufficiently enlarged upon by political economists, and is not particularly related to the principles of this essay.

The second objection is more nearly allied to our subject. In many cases, though individuals may not do the particular thing so well, on the average, as the officers of government, it is nevertheless desirable that it should be done by them, rather than by the government, as a means to their own mental education—a mode of strengthening their active faculties, exercising their judgment, and giving them a familiar knowledge of the subjects with which they are thus left to deal. This is a principal, though not the sole, recommendation of jury trial (in cases not political); of free and popular local and municipal institutions; of the conduct of industrial and philanthropic enterprises by voluntary associations. These are not questions of liberty, and are connected with that subject only by remote tendencies; but they are questions of development. It belongs to a different occasion from the present to dwell on these things as parts of national education; as being, in truth, the peculiar training of a citizen, the practical part of the political education of a free people, taking them out of the narrow circle of personal and family selfishness, and accustoming them to the comprehension of joint interests, the management of joint concerns—habituating them to act from public or semi-public motives, and guide their conduct by aims

which unite instead of isolating them from one another. Without these habits and powers, a free constitution can neither be worked nor preserved; as is exemplified by the too-often transitory nature of political freedom in countries where it does not rest upon a sufficient basis of local liberties. The management of purely local business by the localities, and of the great enterprises of industry by the union of those who voluntarily supply the pecuniary means, is further recommended by all the advantages which have been set forth in this essay as belonging to individuality of development, and diversity of modes of action. Government operations tend to be everywhere alike. With individuals and voluntary associations, on the contrary, there are varied experiments, and endless diversity of experience. What the State can usefully do is to make itself a central depository and active circulator and diffuser, of the experience resulting from many trials. Its business is to enable each experimentalist to benefit by the experiments of others; instead of tolerating no experiments but its own.

The third and most cogent reason for restricting the interference of government is the great evil of adding unnecessarily to its power. Every function superadded to those already exercised by the government causes its influence over hopes and fears to be more widely diffused, and converts, more and more, the active and ambitious part of the public into hangers-on of the government, or of some party which aims at becoming the government. If the roads, the railways, the banks, the insurance offices, the great joint-stock companies, the universities, and the public charities, were all of them branches of the government; if, in addition, the municipal corporations and local boards, with all that now devolves on them, became departments of the central administration; if the employees of all these different enterprises were appointed and paid by the government, and looked to the government for every rise in life; not all the freedom of the press and popular constitution of the legislature would make this or any other country free otherwise than in name. And the evil would be greater, the more efficiently and scientifically the administrative machinery was constructed—the more skillful the arrangements for obtaining the best qualified hands and heads with which to work it. In England it has of late been proposed that all the members of the civil service of government should be selected by competitive examination, to obtain for these employments the most intelligent and instructed persons procurable; and much has been said and written for and against this proposal. One of the arguments most insisted on by its opponents is that the occupation of a permanent official servant of the state does not hold out sufficient prospects of emolument and importance to attract the highest talents, which will always be able to find a more inviting career in the professions, or in the service of companies and other public bodies. One would not have been surprised if this argument had been used by the friends of the proposition, as an answer to its principal difficulty. Coming from the opponents it is strange enough. What is urged as an objection is the safety valve of the proposed system. If indeed all the high talent of the country could be drawn into the service of the government, a proposal tending to bring about that result might well inspire uneasiness. If every part of the business of society which required organized concert, or large and comprehensive views, were in the hands of the government, and if government offices were universally filled by the ablest men, all the enlarged culture and practiced intelligence in the country, except the purely speculative, would be concentrated in a numerous bureaucracy, to whom alone the rest of the community would look for all things: The multitude for direction and dictation in all they had to do; the able and aspiring for personal advancement. To be admitted into the ranks of this bureaucracy, and when admitted, to rise therein, would be the sole objects of ambition. Under this regime, not only is the outside pubic ill-qualified, for want of practical experience, to criticize or check the mode of operation of the bureaucracy, but even if the accidents of despotic or the natural working of popular institutions occasionally raise to the summit a ruler or rulers of reforming inclinations, no reform can be effected which is contrary to the interest of the bureaucracy. Such is the melancholy condition of the Russian Empire, as shown in the accounts of those who have had sufficient opportunity of observation. The Czar himself is powerless against the bureaucratic body; he can send any one of them to Siberia, but he cannot govern without them, or against their will. On every decree of his they have a tacit veto, by merely refraining from carrying it into effect. In countries of more advanced civilization and of a more insurrectionary spirit, the public, accustomed to expect everything to be done for them by the state, or at least to do nothing for themselves without asking from the state not only leave to do it, but even how it is to be done, naturally hold the state responsible for all evil which befalls them, and when the evil exceeds their amount of patience, they rise against the government, and make what is called a revolution; whereupon somebody else, with or without legitimate authority from the nation, vaults into the seat, issues his orders to the bureaucracy, and everything goes on much as it did before; the bureaucracy being unchanged, and nobody else being capable of taking their place.

The Dogged Retreat of the Doctors

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. BIEMILLER. Mr. Speaker, at this time the country is being flooded with misleading literature put out by an advertising firm with more regard for sensationalism than accuracy, in opposition to Government health insurance. Millions of dollars, levied by a compulsory tax on doctors, are being spent to mislead people on the issue of paying their doctor and hospital bills through a national health-insurance fund raised by pay-roll taxes.

"The Dogged Retreat of the Doctors," an excellent article by Milton Mayer in Harper's Magazine for December, gives the history of the American Medical Association's position on health insurance over several decades and discusses the real facts on the need for improved medical economics in the United States. Everyone who seeks a real understanding of the struggle for a better system of distributing medical care will want to read this article. Under leave to extend my remarks, I include it in the RECORD, as follows:

THE DOGGED RETREAT OF THE DOCTORS
(By Milton Mayer)

I

The American Medical Association spent the best years of its life defending things as they were, and things as they were weren't good; too many people were getting too little medical care too late. The defender in chief of things as they were was Morris Fishbein. Fishbein, though his title was only editor of the Journal of the AMA, was the voice of medicine from 1924 to 1949, and there were those who suspected that he was medicine's master as well as its voice. The suspicion was unfounded; no man, not even Morris Fishbein, makes that much history all by himself.

He did the doctors' thinking for them, but that didn't mean they didn't like it. The problem of medical care was no business of the public, still less of the Government. The medical profession was competent to deal with it, and why did it need dealing with anyway? Wasn't American medicine the best in the world, just as Fishbein said? Why socialize it, in Fishbein's words, just because of what Fishbein called local inequalities? And even if it were true that a majority of the American people could not afford the cost of chronic or catastrophic illness, why didn't they, as Fishbein suggested, save their money for a rainy day?

The thinking was fine. What the doctors didn't like was the declining market for it, and they blamed the decline on Fishbein. England had fallen, the thirty-ninth nation to succumb to socialized medicine—that is, government medical insurance. The public demand that something be done was reflected by successive bills in Congress and by President Truman's call for legislation last spring. More and more medical-school professors were on the wrong side. More and more bona fide doctors were on the wrong side. Gosh—even Barney Baruch was on the wrong side. So last June the AMA performed an autolaryngectomy. The voice of medicine was removed.

The inference, perhaps even the implication, is that Fishbein had misrepresented the doctors' position. The fact is that he had represented it—right into the ground—and the fact is confirmed by the further fact that the association's last-ditch struggle against reform has continued, deeper in the ditch than ever. "You have got to understand," said one of the high holies of medicine, who would rather be found installing goat glands than have his name mentioned, "that Fishbein really represented what the doctors think are their interests. Mind you, I said 'think.'"

The trouble with the AMA is that there are too many doctors in it. A doctor is, by definition, a man who doesn't have time. One of the things the average doctor doesn't have time to do is catch up with the things he didn't learn in school, and one of the things he didn't learn in school is the nature of human society, its purposes, its history, and its needs. There are hundreds—many hundreds—of exceptions among them. But there are thousands—140,000—of doctors in the AMA.

If medicine is necessarily a mystery to the average layman, nearly everything else is necessarily a mystery to the average doctor. Medical education is uniquely narrow, intense, and protracted. The doctor is the specialist par excellence. And his specialization doesn't end with his entrance into practice. The developments in medicine come so fast that the conscientious practitioner has no time to interest himself in the common concerns of citizens.

All these circumstances are common knowledge, but commonly known circumstances have consequences, too. The doctor—the average doctor—is a nice fellow to have around the house or the hospital. His self-sacrifice for his patients is proverbial and proverbially true. But he sometimes breaks down in the larger areas of social intercourse because his training and his calling break down there. And the medical calling, like others that deal with bodies qua bodies,

has a peculiar attraction to the socially circumscribed personality. "Of course I dislike the AMA," said one of Chicago's most distinguished surgeons a few years ago, "but I'm not going to get mixed up in any row. I dislike politics, too. If I had liked politics, I wouldn't have gone into surgery."

Because he dislikes politics, this particular surgeon's office is a precinct headquarters today in the AMA's $2,000,000 campaign to terrify him into terrifying his patients into terrifying their Congressmen to vote against socialized medicine. His office wall is ornamented with a jumbo reproduction of the heartbreaking painting, The Doctor, emblazoned with the heartbreaking appeal, keep politics out of this picture. His reception room is stacked with with red-white-and-blue pamphlets titled, "The Voluntary Way Is the American Way," containing some truth, some distortions, and some outright misinformation. His bills are covered with stickers reading, "As your personal physician * * * please write your United States Senators and Representatives. For more information, ask me." It is all furnished free, in unlimited quantities, by the National Education Campaign of the American Medical Association, Whitaker & Baker, directors. "I wish we had Fishbein back," he says, "I don't like politics. That's why I went into surgery."

II

Back in 1901 the AMA, after a half-century of high-minded obscurity, was told by its committee on reorganization that "if the association would give sanction to its recommendations the profession throughout the country in 5 years would be welded into a compact organization whose power to influence medicine would be almost unlimited and whose requests for desirable legislation would everywhere be met with that respect which the politician has for organized votes." In those days organized medicine, more medical than organizational, was interested in raising the standards of medical education and hospital service and extending medical care. The streamlining was effective; in the next few years the AMA brought about licensure of medical schools and hospitals and obtained the adoption of the first Pure Food and Drug Act. The streamlining also relieved the membership of politics; in 1937 the association was able to report that "attempts were being made"—obviously in vain—"to cause the association to send a questionnaire to every physician in the United States in order to determine his point of view regarding the socialization of medicine."

The streamlining made AMA membership automatic through membership in the county or county-group medical societies, the constituent bodies which send delegates to the State societies, which in turn send delegates to the "legislative policy-making" body of 190, the AMA house of delegates. The delegates meet twice a year to ratify, in practice, the proposals of the board of trustees, which, in principle, is responsible to the house. When the board, which had in the past unanimously supported Fishbein, announced its unanimous recommendation of his dismissal last June, the house unanimously approved.

There are no dues in the AMA, but a subscription to the Journal makes a member a fellow—the Fishbein touch—entitled to hold office in the association. The various councils test pharmaceuticals, foods, cosmetics, and appliances; they also approve medical schools and hospitals. AMA approval is accepted by State licensing boards for medical-school graduates, and hospitals without AMA certification for intern training are almost impossible to staff. These life-and-death powers bind medical schools and the hospitals to the AMA chariot.

The drug manufacturers also have a natural community of interest with the AMA, but the AMA does not rely on naturopathy. Its seal of approval is the pearl beyond price of drug advertising, and the manufacturers and the retailers are ever ready to set their hand to the preservation of the fundamental American liberties of the men in white.

No government would lightly launch an attack upon such a Wehrmacht or fight the doctors frontally on the issue of insurance. If the doctors maintained a united front, the Government might get medical insurance but no medicine. "You can't mine coal"—or gallstones—"with flags." The adoption of Government insurance has encountered bitter resistance from the profession in most countries; in Germany in 1883 and in England in 1911 organized medicine actually called a strike, which failed in both cases for the same reason, namely, that a majority of the practitioners preferred the future contingency of slavery to the present certainty of starvation. But the AMA has spurned the strike proposal, currently advanced by a group called the Association of American Physicians and Surgeons, as "a strike against the sick public." Doctors are professional men.

Or so they think until they run up against the AMA lock-out. Expulsion from the association, invariably preceded or followed by expulsion from the county and State societies, is a doctor's death warrant. Once expulsion meant charlatanism; today it more often means political deviationism. In 1930 Dr. Louis Schmidt, the urologist, courted and won expulsion for advertising his VD clinic to the poor. The Journal addressed itself, not to the great Schmidt, but to the little Smiths: "The individual who violates the rules in a zealous search for an answer to the problem"—of extending medical care—"may overstep the bounds and thereby suffer loss of his relationships to the organized medical profession. When he does so, he is answerable to his own folly, since the organized medical profession has established means whereby an individual may assure himself that the system which he wishes to practice is for the public good and at the same time not a detriment to the practice of medicine." There, beneath the gauze of gobbledygook, was the party line; all who ran might read.

Last spring some 140 doctors who disapproved of Government insurance publicly protested the AMA's $25 assessment for its "national education campaign" against the Truman health program. They suggested that the fund be used to work out a better medical program than Truman's. One of the group, a prominent pediatrician, received a letter from the State health officer of Arkansas a few days after the protest was published: " * * * The Arkansas State Medical Society and the Pulaiski County Medical Society have been advised through authoritative sources that you were one of the 136 signers of certain papers and documents severely criticizing the American Medical Association. Through this action on your part, the Arkansas State Medical Society and the Pulaski County Medical Society request that you not appear on the postgraduate pediatric course to be conducted [at the University of Arkansas]. * * * This department sincerely regrets that this most embarrassing situation has arisen and further regrets that it is necessary to cancel your appointment as special consultant for the Arkansas State Board of Health."

The officers and the trustees of the AMA are almost invariably prosperous specialists. And the members of the house of delegates are almost invariably selected by committees appointed by the presidents of the State societies, who are almost invariably prosperous specialists. The association's leadership represents the members, but it may not be impossible that it represents them not as they are, but as they would like to be. It certainly does not represent the ill-fed one-third of the medical profession. In the monthly Medical Economics, we learn that "the delegates [to the December 1946 meeting] met in an atmosphere of high optimism over the national [Eightieth congressional] election results. Dr. Harrison Shoulders, AMA president, put into words: 'For the first time in many years, we're meeting in an atmosphere that approaches freedom.' "

The high optimism of the AMA was not always based on the national election results. Once upon a time its leaders were the leaders of advance in medical education and medical practice. Once upon a time its presidents—Billings, Gorgas, Blue, Bevan, Lambert, Harris—advocated Government medical insurance and its committee on social insurance prepared a model bill providing it. Once upon a time its house of delegates adopted its board of trustees' report that "the time has come when we can no longer resist the social movement, and it is better that we should initiate the social changes than have them forced on us," and its Journal demanded Government insurance and excoriated the British Medical Association for opposing it.

But that was once upon a time. The British Medical Association had opposed the National Health Insurance Act of 1911, which provided government medical insurance of low-income workers. Within a year after its adoption, more than half the doctors in England were voluntarily enrolled, and the BMA was forced to release its members from the association's refusal to work the act. "The important feature of the British Act," said the Journal of the American Medical Association in 1912, "is the recognition that it is the duty of society, as represented by the government, to furnish medical treatment for those who are unable to secure it for themselves. It also means the recognition of the modern physician as a health officer of the State, working for the general good, rather than a private or professional businessman."

In 1915, community sickness surveys by the Metropolitan Life Insurance Co., the New York State Board of Charities, and other agencies revealed an appalling inadequacy of medical care, and the AMA established its social-insurance committee. In its first report the committee asserted that after 25 years of experience with various forms of voluntary insurance several European countries realized that the "logical conclusion" was compulsory state insurance. This, in the committee's opinion, was the only solution to the problem of the poor and the problem, as well, of "the unfortunate physician facing starvation."

In its second report, a year later, the committee said that wherever compulsory insurance had been introduced, the result had been improvement in the general health and prolonged life to the workers. "The advantages of these systems are so great that the disadvantages, while it is necessary to combat them, cannot be mentioned in comparison * * *. Blind opposition, indignant repudiation, bitter denunciation of these laws is worse than useless; it leads nowhere and it leaves the profession in a position of helplessness if the rising tide of social development sweeps over them." After listening to an attack on the report by a representative of the Prudential Life Insurance Co., the association's section on public health rejected it by a 24–20 vote. It was a narrow squeak.

"It is interesting to think," says the History of the American Medical Association, "what might have happened to social insurance if the war had not intervened." Though innumerable county and State societies had endorsed Government insurance and the model bill had been introduced in 14 legislatures, war prosperity reduced the

pressure for legislation, and postwar normalcy turned the tide. In spite of the plea by its president-elect that the AMA resist the insurance companies, which were lobbying against the bill, the 1919 convention recognized the stupendous character of the problem and buried the committee's report, along with the committee. "It is not a question for the decision of the medical profession," said the committee, "whether or not these laws shall be put in force. * * * It is for the profession to decide whether or not it wishes to carry on its existence under some form of sickness insurance or under some method of state medicine. That choice must inevitably be made."

The 1920 convention declared its opposition to the institution of any plan embodying a system of compulsory contributory insurance against illness. The 1921 convention spent its time defining state medicine and listening to emphatic denunciations of health centers, group medicine, and diagnostic clinics, and the 1922 convention declared its opposition to all forms of state medicine. The discussion was closed. The pages of the Journal were closed, too. In 1924, Assistant Editor Fishbein became Editor Fishbein, and Government insurance became socialized medicine, political medicine, assembly-line medicine, and peasant medicine. Medical service reform of any kind was thereafter damned from hell to breakfast and from week to week.

In darkest 1932, the Committee on the Costs of Medical Care, headed by Dr. Ray Lyman Wilbur, president of Stanford University and a former president of the AMA, recommended voluntary medical insurance. The Journal called the recommendation socialism and communism. But there were doctors whose shrunken stomachs would no longer tolerate epithets, and group practices with insurance plans sprang up everywhere. The Journal called them medical soviets. The hard-hit hospitals accepted the Blue Cross insurance plan. The AMA wouldn't touch it. Medical ethics required the doctor to serve the sick—and forbade him to solicit patients. Thousands of doctors sat in their offices—and waited; millions of sick persons lay in their homes—and waited. Maybe the Wilbur report was socialism and communism, but it revealed that in the peak year of 1929 one-third of the doctors in America had had net incomes under $3,000, and one-half under $3,800.

Though the AMA succeeded in eliminating a medical insurance provision from the Social Security Act of 1935, the California Medical Society had already established an insurance plan. Other States followed. The AMA could not purge whole State societies. It had to backwater. It began forgetting all about the evil of contract medicine and ended by pointing with pride to the State society plans as the alternative to Government insurance. It was the same with hospital insurance. By the end of the 1930's the Blue Cross plans were so well entrenched (over AMA opposition) that the association had to recognize them (on the condition, of course, that the doctor's bill remain uncovered). Three years ago, the Blue Shield plans for limited medical care were started. Last June the AMA declared a "complete separation" from Blue Shield, but an amiable one. The association could no longer afford to condemn the plans; it was using them as its stick to beat Government insurance.

The medical soviets—group practices with insurance plans of their own—which were outside the control of the State societies were given the old cold pogrom treatment. The Civic Medical Center of Chicago could not even find out why its staff was excluded by the Chicago Medical Society. Testifying before a Senate committee in 1946, a representative of the Center told of the effects of the blacklist. Because the AMA required local medical society membership for staff members of hospitals accredited for intern training, the center's physicians had access only to two inconveniently located hospitals, and, denied staff membership even in these, found it almost impossible to get beds for patients. The center's staff members were refused membership on the staff of any teaching or research institution. They were excluded from carrying their share of care of the indigent in hospital wards and dispensaries. They were refused accreditation by specialty boards. No insurance company would issue them malpractice policies. The Navy automatically disqualified them as medical officers, and riciprocal licensure in neighboring States was automatically closed to them.

The procedure was the same all over the country, in Dallas, Los Angeles, Philadelphia, Milwaukee, New York, and in little Elk City, Okla., where Dr. Michael Shadid's famous cooperative community hospital was supported by the local chamber of commerce. The quality of medical treatment was not questioned; the principle of insurance was decisive, and even this principle had to be abandoned when the State societies started their programs.

What did the AMA want? The conservative Medical Economics quoted a State society executive as saying: "I don't believe the AMA liked voluntary health insurance in the first place. I think the higher-ups would be glad to see them all fail. The AMA has tremendous power. It has some good men. It has lots of brains and lots of money. But it isn't interested. And that's too bad."

It was too bad, and it was getting worse. In 1937 a group of Government employees in Washington organized the Group Health Association for full medical care on an insurance basis, and when the Journal announced that "physicians who sell their services to an organization like the Group Health Association for resale to patients are certain to lose their professional status," Assistant Attorney General Arnold lifted his ears. The Medical Association of the District of Columbia initiated the pogrom—even threatening that members who consulted with group health doctors would be expelled—and when a group doctor was expelled in 1938 the Government brought suit against the AMA and the District of Columbia Medical Society for conspiracy in restraint of trade. The Supreme Court unanimously upheld the decision against the defendants in 1943. The AMA was told to cease and desist from its interference with medical practice and was fined $2,500.

Frustrated by the Federals, the AMA, like so many associations before and since, turned to the States for aid and abetment. In 1939 the New Jersey Legislature enacted a health-insurance-plan law providing that all members of the governing body of any such plan be approved by the State medical society and permitting such a plan to operate only in counties in which not less than 51 percent of the doctors approved it. Some 25 legislatures have since passed remarkably similar laws—most of them in the war-distracted sessions of 1943 and 1945. The State societies not only sponsored the laws, but proudly claimed paternity. The voluntary way, which was once socialism and communism, is now the American way, providing that the AMA has a monopoly on volunteering.

Enlightened conservatives within the profession pressed the AMA to stave off Government insurance with a genuine program of medical service reform. The committee of physicians—including such formidable names as Peters of New Haven, Holt of Baltimore, Cabot of Rochester, Morgan of Nashville, Veeder of St. Louis, Frothingham and Osgood of Boston, and Cooley of Detroit—came before the board to plead for a program. The upshot was still another promise of still another survey. But the surveys all came to nothing, and the committee of physicians abandoned hope in the AMA and accepted the principle of Government insurance. When President Truman proposed legislation in 1945, the association came up with a program which began with improved living conditions and ended with postponement of consideration of revolutionary changes while 60,000 medical men are in the service voluntarily and 12,000,000 men and women are in uniform.

It was not only the unions that demanded Government insurance now, or the radicals, the reformers, and Mrs. Roosevelt; it was also conservatives like A. D. Lasker, David Sarnoff, Gerard Swope, and Lessing Rosenwald. "Too many doctors," Bernard Baruch told some of them, "have been fighting a rear-guard action for too long. Voluntary health insurance is not good enough. A sizable segment of society does not earn enough to pay for it. Nothing has been suggested so far which promises success other than some form of insurance covering those people in by law and financed by the Government, at least in part. * * * A form of compulsory insurance can be devised without the Government's taking over medicine, something I would fiercely oppose."

Those who opposed the status quo in medical care were driven, nolo volo, into the Government insurance camp, while those who favored the status quo in everything else found in organized medicine a new sounding board. In 1938 the Physicians Committee for Free Enterprise in Medicine appeared, under the auspices of Frank Gannett's Committee to Uphold the Constitution. This committee evaporated a year later, and its place was taken by the National Physicians Committee for the Extension of Medical Care. Both physicians' committees, oddly enough, were directed by the same man, who, oddly enough, wasn't a physician but a professional advertising man. But the board members of the national physicians committee were all officers or past officers of the AMA or its State societies, and Morris Fishbein sat in on the committee's organization. The representatives of the big drug houses sat in, too.

The NPC had AMA approval and plenty of money. Twelve thousand newspapers received its canned editorials weekly, and a Nation-wide network of speakers was made available to civic, social, and fraternal organizations. At least 23,000,000 copies of its basic pamphlet were distributed under 2 different covers—1 for the medical profession under the title "$4,000,000,000 of Political Medicine Yearly in the United States," the other for businessmen under the title "Abolishing Private Medical Practice—Prelude to Centralized Control of the Professions and of Industry." The pamphlet depicted doctors under the Murray-Wagner-Dingell bill as "political stooges and henchmen" and called upon them to "demand a continuance of medicine under the Christian concept of the sanctity of the human personality—the American way."

The arsenal was down to the dumdum bullet that the AMA had never fired. Morris Fishbein had never been accused of anti-Semitism. A year ago the NPC sent every doctor in the country "one of the few really vital pronouncements of the age," a statement by Dan Gilbert, an old "sidekick" of the notorious Gerald Winrod. The statement began, "Dear Christian American." In the ensuing uproar, the Journal condemned the statement and repudiated "allies of doubtful repute in its campaign for the maintenance of a high quality of medical care and for freedom in medicine in our country."

III

Out of the welter of words there emerge—rather, there can be mined—one grand fancy and a half dozen grand facts on the issue of medical insurance.

The fancy, or hallucination, seems to be almost universal in the medical profession. The doctor thanks God that he is as other

men are. He is not. He sees himself as a free agent, with duties, to be sure, but with duties that are private and are due to private persons, in particular those private persons who pay him for his services. He calls himself a private practitioner. He is wrong.

His practice has been public, and a public duty, since the time of Moses, when the law was promulgated "of him in whom is the plague of leprosy, whose hand is not able to get that which pertaineth to his cleansing." "Medicine," said Wendell Berge, with less authority but more recency, "may or may not be state medicine; it cannot escape being social medicine." The doctor has always been "clothed with a public interest"; he has been licensed for centuries. He is not a tradesman, and he does not enjoy a tradesman's prerogatives or immunities; he has never been allowed to refuse his services or plead caveat emptor. The sliding scale of fees, asserted in Leviticus, attests his servitude to public need.

Medicine's ace in the hole, or Sunday punch, is the sacred relationship between doctor and patient. We are told that this sacred relationship would be destroyed by Government intervention. Besides being an ace in the hole and a Sunday punch, the sacred relationship is a bag of bones. Common kindness is sacred, but it isn't medical; as medicine, it is sacred only to the psychosomatist, not to the prostatist or the proctologist. The doctor's only sacred relationship—like the priest's, the teacher's, and, incidentally, the lawyer's—is to his profession. What makes a profession a profession is that it professes something, namely, the obligation of its practice. The doctor's profession obligates him to heal the sick, at any cost, at all costs, or at none, though the heavens fall, the landlord evicts, the shoe store replevins, and the public service corporation shuts off the gas.

"Socialized medicine," says the AMA, "would abolish private practice." How would it abolish private practice? It would abolish private practice by putting an end to the doctor's—and the patient's—"freedom of choice." There is just enough truth in this charge to tangle the falsehood. Under Government insurance, the patient can go to any doctor he wants to and the doctor can take any patient he wants to, but insurance covers care only by those doctors (upward of 90 percent in most insurance countries, including England) who choose to enter the plan. Millions of Americans, geographically or economically isolated, now have access to one doctor or none. The AMA would preserve their present freedom of choice.

Though they have sacred relationships and freedom of choice, doctors are men, not gods, and men must eat. Morris Fishbein let them know that the AMA protected their earnings from the ravages of socialized medicine. This, too, was true—that is, 10 percent true. It was true of the top 10 percent of the profession, who, as in England, could remain outside the medical insurance program and continue anointing the top 10 percent of the populace. For the other 90 percent of the profession, the $12,000 maximum income allowed under the English system probably looks pretty good, and the English practitioner's $8,000 average doesn't look bad, especially since American earnings, like everything else American, would be higher. Raymond T. Rich, hired in 1946 to survey the AMA's public relations, came up with the conclusion that they were bad, and resigned with the statement that its policy had, unfortunately, identified the organization with the economic interest of the doctor.

IV

The half dozen hard facts about medical insurance argue persuasively—but not overwhelmingly—for compulsion.

The most persuasive fact is that, unlike the cost of food, clothing, shelter, recreation, and education, the cost of medical care to this man this year is wholly unpredictable and ought, therefore, like the cost of fire and death, to be spread over a lifetime. Insurance is the American, that is, the sensible way to do this. The second most persuasive fact bears on the question, voluntary or compulsory insurance? Those citizens who need medical insurance the most are, like those motorists who need personal liability insurance the most, precisely those who cannot afford it. And the poor man, like the poor jalopy, is out of order oftener and longer than the rich and, in his jalopic condition, more of a menace to the common weal than his dynaflown brother.

The third most central fact is that most voluntary medical insurance covers only surgery or catastrophic illness, and then only in part. General Manager Lull of the AMA says that, "given enough time, our plan will take care of anybody's catastrophic illness in the United States." There are three jokers in that promise. The incidental joker is our plan, the AMA having fought our plan—voluntary insurance—for 20 years. The minor joker is given enough time, the catastrophically ill being just cantankerous enough to want treatment now. The major joker is catastrophic illness.

There is a costlier kind of illness than the catastrophic: the chronic. No voluntary plan dares to cover the full cost of chronic illness, and few of them cover any part of it. In addition, the greatest need in health is not cure at all, but prevention. While regular medical examination is only one form of prevention and, like all medical attention, only a secondary form, it is established that the two great killers, heart disease and cancer, can, in a substantial proportion of instances, be checked upon early discovery. The Committee on the Costs of Medical Care—the Wilbur report—found that fewer than 7 percent of the American people had even partial medical examination in 1930. The voluntary plans are almost all limited to curative care.

The voluntary plans now cover an inadequate number of people inadequately, and always will. The reason is cost. The National Education Campaign of the American Medical Association, Whitaker & Baxter, directors, asserts, in red, white, and blue, that "an average, fully-approved plan, for full coverage—surgical, medical, and hospital protection—charges $2.50 a month for an individual and $5.50 for a family, irrespective of size." The truth is that the fullest-coverage Blue Shield—nonprofit—plan costs $5.50 a month for a couple and $8.10 for a three-child family, and it does not provide full coverage. It excludes optical care, mental care, industrial accidents, dental fillings, inlays and dentures, prophylaxis for noncommunicable diseases, medicines for nonhospital cases, chronic cases beyond one year, and, among other things, preexisting conditions. Full coverage isn't offered because the rate would price it out of the market.

The high cost of voluntary plans results in cream-skimming, and their history in Europe reveals a tapering-off after a high proportion of the middle classes have been reached. The Blue Shield plans—for limited medical and surgical care—are only 3 years old and are growing fast, with 12,500,000 current subscribers. But some large proportion of these must be included in the 34,500,000 subscribers to the Blue Cross plans for limited hospital care, and the Blue Cross rate of growth is now declining. The total of partial hospitalization coverage—not medical or surgical—is about one-third of the population, if the AMA is to be believed.

Not everybody believes that the AMA is to be believed. President Truman, in his medical insurance message to Congress last spring, said that "only 3,500,000 of our people have insurance which provides anything approaching adequate health protection." The chairman of the board of the AMA replied that 10 or 15 years ago this was true. Today 55,000,000 Americans are protected under the voluntary health insurance systems of this country against the cost of hospital care, and 37,000,000 policyholders are insured against surgical or medical bills."

In view of Morris Fishbein's statement 2 months earlier that more than 1,000,000 were covered by complete medical care programs by the end of 1947, Truman's figure is probably generous. But the new figure of 37,000,000 insured against surgical or medical bills stands in more than remarkable contrast to Truman's 3,500,000. How many of the 37,000,000 are covered for all (not just catastrophic) surgical and (not or) medical care? What does 37,000,000 policyholders mean? Does it mean persons, or does it mean policies? And what kinds of policies are included? Workmen's compensation? Veterans' care? Commercial insurance, at rates prohibitive even to the middle classes? Newspaper accident policies? How many of the 37,000,000 policyholders also have hospital coverage? Were there 61,000,000 persons with prepaid health care in September 1949, as the AMA said there were, when there were only 55,000,000 hospital policyholders in April 1949, and only 15,000,000, according to the AMA, in 1944?

No consideration is more essential to the resolution of the medical insurance issue than the figures on voluntary coverage; if the American people can insure themselves against the cost of sickness, they should resist Government intervention to the death. And the figures on voluntary coverage can be got. The Government could get them with the greatest difficulty. The American Medical Association could get them with the greatest ease. Why haven't they been got?

Either the disparity between 37,000,000 and 3,500,000 is attributable to honest differences in calculation—in which case a count is indicated—or the Government or the American Medical Association is an egregious enemy of public intelligence.

In the pre-inflation year of 1939, the AMA's bureau of medical economics published a chart showing that only families with incomes over $3,000 were medically self-sustaining. No lower-income group was self-sustaining even for minor illnesses, much less for catastrophic or chronic. Eight years later the Journal was still perspiring over the "misuse of American Medical Association data," but the chart simply cannot be read two ways.

Adjusting the 1939 figure for the 1947 price level, the Journal admitted that the $3,000 would be the equivalent of 1947's $4,800, an income then enjoyed by only 21 percent of the families of the country. (In 1939 only 8 percent had incomes of $3,000 or more.) Thus in 1939 nine-tenths (and in 1947 four-fifths) of all American families were unable, according to the AMA, to afford the cost of chronic or catastrophic illness or even of all minor illnesses.

In the face of this figure, organized medicine's remedy was "a little common sense economy" by "the average man," who is "quite efficient" in planning the cost of radio sets and baseball tickets. The United States Chamber of Commerce liked common sense economy, too, as the solution to a desperate national problem, and suggested, in a pamphlet called You and Socialized Medicine, that a nation which spent $10,000,000,000 a year for liquor could pay its doctor bills. The Chicago Tribune, an even more rapturous advocate of freedom, said that Government medical insurance meant that the "provident" would have to take care of the "improvident," and declared, with unbridled intuition, that "the really poor are already provided medical care by public and private charity." Another AMA ally, the National Economic Council, Inc., found that Government insurance was "explicitly Marxist," since "the basic principle of Marxism is

'from each according to his ability, to each according to his need.'" (This basic principle of Marxism was first asserted, as every national economic councilor knows, in verses 34 and 35 of chapter 4 of the Acts of the Apostles in that popular Marxist handbook, the Holy Bible.)

As the clamor for medical insurance rose ever higher, the AMA yielded ever faster, but always too little and too late. It was willing to have "State aid"—this on the assumption that the State had it to give—dispensed to the "indigent" by the medical profession. It came ultimately to its latest Maginot Line of defense, the provision of Federal funds for State aid, "where needed," to the "medically indigent." By the AMA's own reckoning, four-fifths of the families of America would be taking means tests to receive medical care.

This formula is embodied in a bill introduced by Senator TAFT in the current Congress. Senator SMITH of New Jersey, another AMA ally, reported a few months ago that every governor, with the exception of one, either is definitely opposed to the compulsory plan or says definitely they want the plan worked out by their States with Federal aid. The State-aid program has been uniformly branded by its opponents—and the history of child-labor and minimum-wage legislation by the States may be instructive on this point—as a device for killing action.

V

There are good arguments against Government medical insurance, but they do not touch the fact of the national need. There is the argument that free, that is, tax-paid, medical care would be abused by hypochrondriacs and malingerers. The British Minister of Health, Aneurin Bevan, said soberly, when the plan was established in England a year ago, that this is a very great test of the maturity of the British people, insofar as they have all the resources of the medical profession at their disposal without charge. Government insurance would test the maturity of the American people, too; but so, in some measure, do the voluntary plans. A check in Birmingham, England, after 4 months of the plan, showed that 97 percent of the persons tested for glasses actually needed them. Senator TAFT's unsupported assertion that the English experience has been that millions rush to doctors for every little ache or pain, just because it is free, is contradicted by the testimony of the esteemed London Lancet: "Practitioners, whether in town or country, agree that they are making hardly any more, and sometimes fewer, visits than they usually do at this time of year. Every account agrees that frivolous complaints are no more common than before.

The AMA maintains, though America has more doctors for its population than England, that there are not enough doctors to meet the national need. In the past 40 years, while the population of the United States has increased by more than two-thirds, the annual output of medical-school graduate has remained almost unchanged at 5,000, and the AMA's interest in extending medical training is, like all its new interests, little and late. But this condition, coupled with the national need, would seem to argue for the systematic extension of medical training correlated with the systematic extension of insurance. There is the contention that a physician with 2,000 patients, even though only a small minority of them would be sick at any one time, would have to treat them superficially. On these two deadly serious points, the medical profession, and the medical profession alone, is expert, and one of the major tragedies of the AMA is that its fanaticism has deprived it of expert status.

The question of cost—another consideration which does not nullify the need—is simply unanswerable on the basis of available information. Any estimate would be reckless, and the Government's is more reckless than any other—four to six billion dollars a year. (The Nation's medical bill is at least that high now.) The British underestimated the first year's cost by 100 percent, owing, says Minister of Health Bevan, "to the overwhelming volume of need which the service has revealed. There was a vast amount of silent suffering before." Serious guesses—not the AMA's, which is $18,000,000,000—range up to $8,000,000,000, with a rise for several years at least.

The power to tax is the power to destroy, and the present Senate bill, embodying the Truman program, establishes an open-end account, permitting the use of general funds in the Treasury in addition to the proposed tax of 4 percent (divided evenly between employer and employee) on wages up to $4,800. (The Brookings Institution says the average family spends 4 percent of its income on medical care.) It is clear that a tax subsidy of the "improvident" by the "provident" would be involved; how big it would be no one knows. With the social-security tax rising to 3 percent in 1950, medical insurance, at its cheapest, would mean a fixed 7-percent charge on the economy for social insurance. The choice between guns and butter—or medicine—is a hard one.

Employers are generally unenthusiastic—at least the organizations which speak for them are—about their 2-percent contribution to the medical fund, though individual employers have taken the Government's position that the improved health of their employees would increase productive efficiency that much. The cost of administering the present nonprofit voluntary plans is 12 percent, and bureaucratic profligacy, if it exists, would probably be offset by consolidation. The British sickness-insurance system, operated, like our military conscription system, with volunteer boards, held administrative costs to between 2½ and 3 percent of the first year's expenditures.

The argument against "political medicine" brings the discussion to a lower level more characteristic of the AMA's national education campaign. True, the British doctor complains today of being smothered by forms; true, too, there are nonfilterable, highly reproductive organisms that seem to have red tape in place of red corpuscles, and they turn up in Government service in disproportionate numbers. Doctors, like poets and plumbers, would rather ask silly questions than answer them. But the public business was ever thus, and the more democratic the more thus. "Bureaucracy," however, is not "politics." The AMA never accused the United States Surgeon General of "politics" until he endorsed Government insurance, nor has the Veterans' Administration been accused of dispensing "political medicine." There has not been a breath of "politics" in the English experiment not even according to Morris Fishbein. And in this country Republicans get their mail occasionally, even when Jim Farley was Postmaster General.

The weightiest argument of all against Government insurance is also the most nebulous of all, and it is wholly nonmedical. It involves the interpretation of the already rubberized "general welfare" clause of the Constitution. Medical insurance would certainly extend the economic scope of the Federal power. The Government has for decades been engaged not only in financing but also in performing medical services of particular kinds, and 24,000,000 persons are now so served. But the general power to maintain medical care seems to be, like unemployment compensation or old-age pensions, a categorical enlargement of the welfare function.

The issue is no clearer today than it was when Lincoln set Locke and Mill spinning in their graves by asserting that the function of government was anything its citizens could not do, or could not do as well, for themselves. Historically, there is no demonstrable connection between government medical insurance and despotism; the AMA's howl of "totalitarianism" is of a piece with all its howls. A nation's liberties seem to depend upon heavier and heartier attributes than the liberty to die without medical care. In the end, what the founding fathers called "the peculiar genius" of the people will probably preserve those liberties and its want will lose them, and there is no evidence that it is affronted by compulsory self-insurance for private medical care. It would be better—less risky, let us say—if the voluntary program would work. It would be better yet not to be compelled to do anything, and if (as Hamilton said) men were angels, this might be arranged.

There is a clear and present danger to the democratic process, and that is the unenlightened condition of the public after more than a decade of discussion of a great national issue. But it was the American Medical Association that reduced the issue to the false simplicity of a slugging match.

The character of the discussion has been shockingly low on both sides. What the advocates of Government medical insurance call "national health insurance" is neither health insurance nor insurance, but a tax to insure one, and only one, element of health, namely, medical care. What the AMA calls "socialized medicine," on the other hand, is not socialized medicine at all. But the AMA started it, throwing the whole weight of an honorable profession into a barnyard brawl. The association's first recorded charge of "socialized medicine" against the Government was made in connection with veterans' care. The year was 1928, and the President was Calvin Coolidge. The advocates of Government medical insurance have described it disingenuously as "no different from maintaining the fire department." They have talked about "325,000 preventable deaths every year" and have included 40,000 accidental deaths as, presumably, medically preventable. They cite the rejection—even Bernard Baruch fell for this one—of 5,000,000 draftees for medical causes when some 3,000,000 of these rejects suffered from such medically incurable and unpreventable afflictions as musculoskeletal defects and mental deficiency. They have pinned down cost figures, and pinned them down low, in the absence of adequate information, and even if we had the information the figures could not be pinned down precisely. (Discoveries in cancer or heart disease might cut the Nation's medical bill by 25 percent, and epidemic polio might double it.) They have said that Government insurance would raise the quality of medical care when, for many years at least, it would lower the quality to the total of those served by employing even the incompetent practitioners.

But the advocates are white as snow compared with the men in white. The AMA says that American medicine has made Americans the healthiest, strongest, best-cared-for people on earth, a claim which, even if it could be demonstrated (the Scandinavians, among others, might object), ignores the dominant role of other factors than medicine and the fact that, even medically, American health is traceable in large part to the discoveries of Europeans. It says that in every great nation which has tried government insurance, "the result has been second-rate medical care," when the British Medical Associa-

tion says that the contrary is true in England—and the AMA itself said 35 years ago that the contrary was true everywhere. It says that a vast bureaucracy of political administrators, clerks, bookkeepers, and lay committees would consume 8 to 10 percent of every pay check, and it says that government insurance would invade your privacy and put both of us under political control. Alfred Emanuel Smith had a word for it.

In a two-way effort to stem the tide, the AMA house of delegates met last December and voted a $3,500,000 war chest for a national education campaign, the money to be raised by a $25 assessment on every member. The session was secret, and the action was not admitted until after the news had leaked out. It was understood that Fishbein, under heavy fire within as well as outside the organization, would not be put in charge, but even so, the reaction was hostile. The assessment—billed by the local societies along with their dues notices—was widely attacked. It was even more widely ignored; it wasn't, apparently, the principle of the thing so much as it was the $25. Six months later the AMA books showed that $2,000,000 had been raised; more than 40 percent of the members had failed to kick in.

The next tack was the adoption of a brand-new 12-point program immediately following the Truman demand for legislation last spring. The program—another AMA declaration of no policy—called for voluntary plans and State aid. While the proponents of government insurance sat back and let the AMA do their work for them, such eminent opponents of government insurance as Minot, Graham, Keefer, Barr, Whipple, O'Leary, Cobb, Sabin, and Goodpasture called the new program a disservice to medicine.

VI

But the sick physicians of the AMA just didn't want to get well. They hired the team of California promoters that had beaten Governor Warren's medical program by the interesting device of buying a minimum of 100 inches of advertising in each of 700 newspapers. Self-advertising, the hoariest of medical heresies, was the order of the day, and the AMA had the word of Whitaker & Baxter that the response from editors in publicity has been far beyond anything we expected." It was good enough for the railroads and the brewers and the utilities, and it was good enough for the holy art of healing. Whitaker & Baxter, loaded with the assessment money, set out to do for America what they had done for California.

Instead of trying to deodorize the AMA, the new promoters took it out and buried it. One hundred forty thousand old family physicians arose in its place, all wearing beards, wing collars, high button shoes, and threadbare frock coats, all keping an all-night vigil at the beside of your curly-headed little child and mine. Keep politics out of this picture. "The Doctor" never was a good painting, even in the Tate Gallery tradition. You may have seen it on your doctor's wall when you were young; it used to be distributed as an advertisement for Petrolagar. It made the doctor feel good. If Whitaker & Baxter are right, it still does.

With Fishbein out of the way, the new campaign is a grass-roots affair reminiscent of the wonderful Willkie boom at the 1940 Republican Convention. The doctor is cautioned against entering too many debates on medical insurance. He is to apply the heat to his patients personally, and the principal physician of every Congressman and every United States Senator is to send his honorable patient a letter telling him of the danger of socialized medicine. The Whitaker & Baxter literature outfishbeins Fishbein; pick it up at your doctor's office and ask him how he likes it.

Whitaker & Baxter are "working with the great newspapers and national magazines to get them to do special jobs," and in one grand spread published in September 1949, Fishbein's dismissal in June 1949 is not even mentioned. But there is some evidence that the great newspapers and the national magazines are not rising to the opportunity of being worked with. M. S. Rukeyser, economic commentator of the great newspapers owned by W. R. Hearst, who hates socialized medicine and the devil, in that order, reported in September that a visiting caravan threw a luncheon party on behalf of the campaign at the Perroquet Room at the Waldorf-Astoria in New York. "They drew modestly," Mr. Rukeyser reported, "on the $2,000,000 which the doctors have made available to the American Medical Association to combat the Truman-sponsored health insurance bill. The representatives of newspapers, magazines, and radio," Mr. Rukeyser went on, "declined to trade their independence in exchange for a little hospitality."

The representatives, while they fished the olives out of their martinis, may have been pondering the reports, lately confirmed by the FBI, of current Department of Justice investigations of the practices of State and local medical societies in Portland, Oreg., New York City, Chicago, Houston, and other cities. The Department's Antitrust Division refuses to discuss the investigations, but its case against the Oregon State Medical Society, the Oregon Physicians' Service, and seven county societies and eight individuals in Oregon was scheduled to go to trial in late October, the Government charging that "the defendants have obstructed medical care organizations other than those sponsored by them * * * hindering competing organizations in their attempts to procure doctors and in obtaining hospital facilities for their members." It was just 10 years ago that the AMA and the District of Columbia Medical Society were convicted of conspiracy to do just that.

Doctors are not as venal as the AMA says they are vestal, but there is no reason for their being perpetual chumps. They should realize by this time—but, then, Louis XVI should have realized before the Champ de Mars—that not even an honorable campaign to hold on to all they have, or all they wish they had, will save them from the clamor of millions of people for a new equity in society, for (quite literally) a new lease on life. The medical-insurance bills made further progress in Congress each time they were buried under AMA pressure, furthest of all in the last session, when no fewer than 17 alternatives to the Truman program went into the hopper.

The members of the medical profession will either accept the fact that the twentieth century—the first half, if not the second—is here or lose their freedom fighting for their freebooting. If socialized medicine—not Government insurance, but socialized medicine—is ever fastened upon this country, the American Medical Association will call Government insurance the American way. But it will be, for the last time, too late.

Labor Must Put Wishes of Members Into Action

EXTENSION OF REMARKS

OF

HON. WALTER B. HUBER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. HUBER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Akron Beacon Journal:

LABOR MUST PUT WISHES OF MEMBERS INTO ACTION

(By L. S. Buckmaster, general president URWA-CIO)

In complex and changing times it is especially difficult to look into a crystal ball and foresee the future.

Rather than being crystal gazers, we have to take an approach more nearly like that of a pilot of a sailboat in a race.

Knowing that his ultimate objective is to win the race, he must chart his immediate course to round the next buoy, taking into account the trim of his ship, the strength and direction of the wind, the roughness of the water and the positions of other boats.

Similarly, while we in the labor movement recognize that our long-range goal is a free and prosperous society in a peaceful world, we must make our current plans in terms of current problems and the changing social, political and economic environment in which we find ourselves.

The activities we undertake in the coming years and the ways we select to carry them out will be to a great extent determined by the activities of other institutions like business and government and the way and extent to which they play a constructive part in developing a healthy, secure and satisfying life for all people.

American labor has its roots deep in the history of our Nation and we today are justly proud of such accomplishments of our fraternal predecessors as our system of free public schools.

The CIO is one of the newer branches in the long development of American labor and it is a fresh and spirited organization.

For many years our chief purpose was to organize the unorganized and to bring the basic benefits of collective bargaining to our members. We now have become a national institution and in order to serve our members well we have to take careful account of the social, political, and economic winds.

We reflect the needs and wishes of the people we represent through the democratic procedures and principles upon which we are organized.

In a sense, what we have to do is to translate the needs and wishes of our people into coordinated actions on the national scene and in the industries and communities in which we operate.

All factors of modern life are important to us. We in labor are charting our course with the idea that the people in this Nation are our real concern, and that our political and economic institutions must serve the people and not be their masters.

While we cannot tell exactly where we are going and how we shall get there, we do have some clear objectives and we can see the general circumstances which will govern our activities in the coming years.

In economic affairs, the measure to which we as a Nation are able to maintain a high and continuous level of prosperity is certainly one of the major conditions to which we will orient our actions. We are aiming for a reduction in the fluctuations of our economy which engender fear in the hearts of our people.

If American business continues to insist that the best way to adjust our economic affairs is by a return to practices which did not work or which caused suffering and hardship on the part of the American worker, then we in American labor will chart our course for strong regulation of those practices which seem to be responsible for the evils which we are trying to prevent.

On the other hand, should American business take an enlightened approach and endeavor to work out adequate protection for our people with fair and unselfish methods

to sustain high employment and production with just compensation, our approach also will be one of cooperation with fewer controls.

On the economic scene there are other equally important factors which must be integrated into our policies. The decisions of the Government in taxes and foreign trade are among other signs by which we in labor will chart our course. Always our interest will be in how those policies and decisions affect the well-being of the American people and our economy.

There are other national circumstances which will help to influence the future policies and programs of our labor unions. Laws and programs which are developed in the political arena will be of compelling concern to us.

But again we are somewhat less concerned with actual laws than with the development of democracy in this Nation so that the laws which are passed will be a true reflection of the attitudes of the American people.

We in the CIO, for instance, are interested in seeing that more and more people every year participate in local, State, and national elections.

We are interested in seeing that every voter has a full opportunity to hear every viewpoint about the questions on which he votes. Anything resembling monopoly control of the press or radio services in a community or nation is certainly not in the best interests of democracy.

Even though those who operate monopolies of press or radio might try to be impartial, they cannot escape from their personal environments and backgrounds, and their comments are something like the book, An Impartial History of the Civil War From the Northern Point of View.

Even with our deeper concern in the democratic processes of our Nation, specific laws which are passed will also guide our actions as labor unions.

Measures such as the Taft-Hartley law, designed to restrict operations of labor unions, will certainly tend to make the policies of labor unions more militant and directly concerned with political affairs.

Our political programs will, however, not be based on any one law. The whole political climate and the extent to which we are able to feel secure as an institution to express freely and work for the welfare of our members will be our guides.

Problems of a social nature are of increasing concern to American workers and to their unions. All the refrigerators, automobiles, and telephones which we can produce will not make for a strong and stable Nation if the people are plagued with fears of old age, dissatisfaction with their jobs, or inadequate educational opportunities for their children.

The recent drive by many CIO unions for adequate pensions, for example, is but part of developing a meaningful and secure role for older people. As we get deeper and deeper into this question, we see crucial problems arising in such areas as community recreation and adult education.

Health clinics and family counseling agencies will undoubtedly have to be expanded to meet increasing stresses of industrial city life. Labor will be more and more active in these social needs of our members and their communities, for we aim to have a population which is happy as well as prosperous and healthy.

We in labor must have the support and active cooperation of other groups to obtain these economic, political, and social objectives, not only for industrial workers but also for farmers, office workers, and others who are a part of our Nation.

The problem of how we can integrate our activities with those of other groups will be important in the coming years. Our success will be small unless we can achieve some unity of thinking about our basic national needs and objectives.

I believe that it is healthy to have as much of an exchange of information and direct contact among members of various groups as possible. In so doing we will be able better to orient our activities to the problems of all the people of our Nation.

The collective bargaining process is one of the best ways of achieving necessary social and economic improvements for the welfare of the working people. It is through collective bargaining that the needs and wishes of the working people are brought to the direct attention of management.

The bargaining table can be one of the bulwarks of freedom in our Nation, but if management regards collective bargaining as something distasteful and the needs of the workers as something which they would rather not bother with, then the unions will be forced to achieve social and economic objectives through legislation.

But it is not only in labor and management that joint efforts can be constructive. Labor and education, for example, can make important contributions to each other.

Labor unions and the medical profession also have a vast area in which cooperative action will be necessary. How we will integrate these and other aspects of our national activities is problematical, but that we shall do so I believe is certain.

We are living in a divided world with the awesome prospect of raising our children to be consumed by atomic explosions. One part of the world is being drawn closer together because the tentacles of the Kremlin are pulling it together.

Our part of the world is being pushed together by the existence of such external forces as the malignant growth of communism and fascism.

I have a faith, however, that our unity will emerge the stronger because we are free men joining together and integrating our institutions and our individual lives out of a common desire for freedom.

Our unity is becoming one of cooperation rather than compulsion. Compulsion is confinement. Cooperation is creation.

Panama Canal Tolls

EXTENSION OF REMARKS

OF

HON. CLARK W. THOMPSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. THOMPSON. Mr. Speaker, during the first session of the Eighty-first Congress a special subcommittee, of which I am chairman, and Representatives TOM B. FUGATE and E. T. MILLER are members, conducted an investigation into the financial operation of the Panama Canal and Panama Canal tolls, pursuant to House Resolution 44. An interim report of that investigation, submitted on August 23, 1949, is contained in House Report 1304, Eighty-first Congress. A final report will be submitted at an early date.

The studies of this subcommittee have clearly indicated that the Panama Canal presents issues of the gravest national and international importance, in which the toll question and the physical form of the future canal are definitely linked. These subjects are now being extensively discussed in the maritime industry of the United States as matters of vital concern to ship operation.

In this connection, I invite special attention to a selected bibliography in the Isthmian Canal Policy of the United States which I placed in an extension of my remarks in the CONGRESSIONAL RECORD of August 25, 1949.

As illustrative of the current Canal discussions in marine periodicals there appeared an instructive editorial in the September 1949 issue of Marine Progress, a magazine that is devoted to the interests of the American merchant marine and the improvement of our waterways.

The text of this editorial follows:

PANAMA CANAL TOLLS

The postponement until April 1, 1950, of the decision to increase the tolls for transiting the Panama Canal from 90 cents to a dollar a ton will give the industry more time to prepare for congressional study a complete presentation of its views concerning the manner of computing charges, of levying tolls, of the proportion which commercial shipping should pay, the portion that should be charged to national defense, and other facets of this question that need futher polishing to bring out their principal characteristics.

The decisions reached in respect to the Canal tolls may have a strong influence on the future physical changes to be made in the Canal—whether it will remain a lock canal, a sea-level canal, or a terminal lake canal. Since commercial shipping is to bear a large part of the cost, and possibly all of it, the final decision is bound to be most important to that group that habitually use the waterway on their normal voyages.

PRINCIPAL USERS

Operators under the American flag who are the greatest users of the Canal are those in the intercoastal trades. In addition to these, there is also a large group engaged in international trade between the east coast of the United States and the west coast of South America and other groups, although smaller, in the west coast of the United States to the east coast of South America trade. To a still lesser degree is the group using the waterway for trans-Pacific voyages and also the tanker companies operating on a number of routes, some of which do not touch at United States continental ports. All these operators have a stake in the toll controversy. While the principal interest in the Congress is for the American operators, any change made will also affect a large number of foreign-flag operators who pay the going toll.

The present toll increase reached the proclamation stage by the easiest of routes. While any such major change would normally call for hearings, the proposed toll increase came about first by a recommendation of the Washington office of the Panama Canal, which, seeing the need for additional revenue under its system of bookkeeping, recommended that the toll be raised by Presidential proclamation, as provided by law and without any action by the Congress, since the enabling legislation was already law. The recommendation that the toll be increased passed through the normal military channels, reaching first the Governor of the Panama Canal, who approved, then the Secretary of the Army, who also approved and thence to the President's desk. He, too, approved and set the date when the increase would become effective. The date was October 1, 1948, subsequently postponed until April 1, 1949 because of the storm of protests that came up over the shipping hori-

zon. Only within the last fortnight has the date again been postponed and it now stands at April 1, 1950.

Meanwhile the shipping industry got working on the problem and strong representations were made to the President and the Congress by the National Federation of American Shipping, the Association of American Ship Owners, the Pacific American Steamship Association and other groups. The result of this protest was the postponement of the effective date but not the cancellation of the move to increase the tolls.

FINANCIAL ASPECTS

The stirring up of the Panama Canal tolls kettle brought to the surface many things that had been buried for as long as the Canal has existed. Some of these things were relatively unimportant but others were vital insofar as American ship operation was concerned. It was learned, for instance, that in the basic law, passed in 1912, the Congress had reserved to the United States the right to discriminate in favor of the United States ships as far as the fixing of tolls were concerned. This power still lies with the Congress, ready to use if need be.

Another uncovering showed that the figuring of the Panama Canal financial officials resulted in commercial shipping bearing the brunt of the cost of Canal operation if not the cost of its construction. The line separating the commercial aspects of the Canal from the national-defense aspects has never been drawn and it is upon the sharp delineation of these two functions that the answer to the tolls question is said to depend.

Since the Canal government has been traditionally in the hands of the United States Army's Corps of Engineers, the emphasis has been on national defense. When the question arises as to the allocation of funds for the operation and maintenance of the Canal there has been a decided tendency to put the accent on the commercial value of the waterway and to minimize the national-defense aspects of it.

PACIFIC COAST REACTION

Naturally any attempt to switch the burden of support on commercial shipping, particularly in face of an increase in tolls, brought about some realistic talk concerning the Canal and for what and for whom it was built. The Pacific American Steamship Association published a question-and-answer brochure to show the direction its thinking goes in this controversy.

The PASA showed in its brochure that commercial shipping had paid for all the expenses of putting its vessels through the Canal, all the civil government expenses, and supplied a surplus of $274,000,000.

On the other hand, the Canal government has, each year, added a 3-percent interest charge on all capital improvements plus the actual construction cost of the waterway, money which is not paid by the Canal to the Treasury nor billed to the Canal by the Treasury. It is, PASA reports, merely a bookkeeping figure in use in the Canal Zone for the purpose of calculating the transit rate.

The American ship operators have not asked for free transits nor have they set a figure which they consider adequate as a toll for transiting the Canal. Since the cost of putting a C–3 vessel through the waterway is $14,000 for the round voyage, the interest in toll increase or decrease is vital to the operators.

What the operators want from the Government is a change in calculation methods for computing the toll. Since military or Government-owned vessels transit the Canal free, the commercial operators see no reason why they should have to have the expense of these transits prorated to the commercial users. Neither do they see any justification for adding to the costs of operation such expenses as maintaining hospitals, schools, recreational areas, policing, sanitary work and many other functions not connected to the work of putting a ship through. They feel that these are the duties of the Government and should be paid by the Government.

The operators also feel very strongly about the 3 percent interest charge which is arbitrarily tacked onto the Canal operating costs. Since it is not payable the continued use of the device to extract added revenue is seen as being unfair and unjust.

Since the Pacific coast ports of the United States bear the brunt of the Canal transit costs, since most of the transited cargo is discharged there and transportation costs are normally added to the cost of the merchandise, the interest of the Pacific American Steamship Association is a legitimate one requiring the support of the entire industry.

RECOMMENDATIONS

There has been enough discussion of the problem before the subcommittee of the House Committee on the Merchant Marine and Fisheries for it to make some recommendations before the hearings are completed.

The first recommendation is that the President be requested to cause a study to be made of the organizational aspects of all phases of the Panama Canal, including the Panama Railroad, and that his recommendations of suitable changes be furnished to the Congress. Inasmuch as the problem has recently been considered by the General Accounting Office and the Bureau of the Budget, it is believed that this study may be concluded within the present calendar year, and in any event not later than January 31, 1950.

The second recommendation was that in the meantime the pending proclamation No. 2775, be withheld until a decision is reached as to the final organization of the Panama Canal.

This latter recommendation has already been carried out and the proposed increase has been postponed until next April.

While no formal recommendation was made the subcommittee said that it would like to call attention to a possible improvement in the Canal itself at comparatively low cost. This is the completion of the third locks project, where much of the excavation work has been completed and which has been modified to include the terminal lake plan. This plan will include the elimination of the Pedro Miguel Locks, the concentration of the three western flights in a single structure at Miraflores and the creation of an artificial lake between Miraflores Locks and the entrance to Gaillard Cut. This lake would eliminate lock surges, now present at Pedro Miguel, provide anchorage for locked-through ships in case of fog in the cut, with a subsequent faster transit when the fog lifted, plus other benefits.

Nehru, Asia, and America

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by Mr. J. J. Singh.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

NEHRU, ASIA, AND AMERICA

(By J. J. Singh)

Pandit Jawaharlal Nehru, Prime Minister of India, arrived in the Nation's Capital on October 11 and left from New York on November 7. Nehru spent 27 days in the United States (3 were spent in Ottawa and Vancouver). During this period, he visited Washington, D. C., New York, Boston, Chicago, Knoxville, White Sulphur Springs, San Francisco, and Madison, Wis. In every city he visited, he spoke at innumerable public and semipublic gatherings. He also met and talked to scores of Americans who called upon him in every city.

Almost every minute of his time was taken up. Nehru willingly subjected himself to this gruelling schedule, which left him little time to sleep or rest, because he wanted to know and understand America and Americans. His thirst for discovery of America, as President Truman had called it, was overpowering and unquenchable. Title of one of Nehru's books is Discovery of India.

Let it be stated right here that America had a terrific impact upon Nehru. It is true that as a keen student of history, as an author, as a well read, well traveled and well-informed man, he knew America through its history, its literature, its modern skyscraper civilization, and through his personal contacts with scores of Americans in Europe, England and India. But nothing in the past had created such an impact upon him as did his 27-day stay in this country. Nehru felt drawn toward the people of America as the people of America felt drawn toward him. A new bond of "emotional awareness" of each other was created—a bond that did not exist before. Frankly, Nehru had a cynical approach toward America—an approach of a cultured intellectual who, perhaps, said to himself, "So America is the richest country in the world, it is the most powerful country in the world, and it has this and it has that. So what? Is this all that counts in life? Aren't there other values?"

This visit proved to Nehru that there were other values in America. He looked into the eyes of the average common Americans and found kindliness and friendliness. He found that Americans are not all hard-boiled, hard-headed, hard-hearted, and drunk with power. He found that Americans were, just like any other people, basically decent and good. He found that Americans were not robots, that they were human beings who loved their children, affectionately patted their dogs, and tended to flowers.

Nehru was also very much pleased to find that, by and large, Americans had great friendship for the people of India. In one of my talks with him, Nehru told me, "I cannot add anything to your knowledge of this country. (I have lived here for 23 years), but I do want to tell you that there is a great fund of good will here for India."

Anyone who watched Nehru on the day of his departure for England could not have helped but notice that he was almost sad that the time for bidding farewell had come. I was standing close to him when newspapermen asked him for a final word. Nehru said: "My final word is of deep gratitude to the people of America for their kindness and friendship. * * * I hope we shall meet again." When he said that his voice displayed emotion and his ever-expressive eyes seemed to be saying, "Will it be so?"

Such was America's impact upon Nehru. Did Nehru create any impact upon Americans? From what information I have been able to collect from varied sources the general consensus is that Nehru created a most profound effect upon Americans who saw

him, met him, and listened to him. One thing stands out in all the comments I have heard—Nehru's utter sincerity, straightforwardness, and fearlessness. Many were amazed that the head of a government, a leader of 350,000,000 people, could be so outspoken and truthful. There was nothing "off the record" with Nehru. What he told President Truman, Secretary of State Dean Acheson, or other high officials in private conferences, he repeated in public. It is quite possible that other world leaders may emulate Nehru and take the people into their confidence instead of presenting them with fait accompli.

However, it would be indulging in wishful thinking if we were to assume that all sections of American people and the American press were sold on Nehru. Many have remained critical. But I venture to suggest that his critcs are rather unjust and impatient. These critics, who mostly represent a small section of the American press and a much smaller section of the American people, and who are advocates of the theory, "Let's go and drop the atom bomb on the Russians before they drop it on us," had mistakenly expected that Nehru, upon his first contact with America, would hasten to declare that he had joined their ranks.

Anyone who had at all taken the trouble to study Nehru's background, his philosophy and thinking, should have known that he would not join the advocates of another war. Nehru abhors wars and is convinced, like so many other thinking men, that wars do not solve any problems. He, like most human beings, wants peace, even though he is not a "peace at all costs" man. Nehru repeatedly said that peace couldn't be preserved by surrendering to aggression or "by compromising with evil or injustice."

Almost 90 percent of the newspaper and radio stories and the comments before Nehru's arrival, and during his stay, and since Nehru's departure, have mentioned Nehru's "neutrality" in the cold war between Russia and the western democracies. I am sorry to see that, notwithstanding Nehru's forthright statement on the "neutrality" issue, which he made on the third day after his arrival in this country, his position remains misunderstood. Speaking before the United States Congress, Nehru said: "Where freedom is menaced or justice threatened, or where aggression takes place, we cannot be and shall not be neutral."

What could be more lucid and to the point? India has not been and is not "neutral" today. India, as Nehru said, is in a "pivotal" position and could not remain "neutral" even if she so desired. India and Nehru could not remain neutral between good and evil, or between democracy and totalitarianism. (Nehru, in his speech in Chicago on October 26, said that under the Soviet system "individual freedom ceases to exist.")

At this stage I am sure the question is likely to be asked that if that is so why doesn't India join America, a democracy, against Russia, a totalitarian state? That would be oversimplification of the problem.

In a most delightful and illuminating talk with Nehru on this subject, I thoroughly understood his position. Nehru said to me, "I am not a dictator * * * India is a democracy—I must carry my people with me." The last sentence, "I must carry my people with me," tells the whole story. It spells out the problem. And that problem is that the vast majority of the people of India are suspicious of America—not that America has done anything, but because of the 200 years of British rule in India. Let us not forget or overlook a simple, a very simple fact: The Americans speak the same language as the British do, the Americans look like the British, eat like the British, and dress like the British—and people of India have had such a bad taste of the British. Memories are still fresh. The same Nehru who is now the Prime Minister of India was rotting in a British jail until May 1945—4½ years ago. I know Nehru has no traces of bitterness left in him for his former jailers, but Nehru is a great man—and India, like all other countries, is full of plain and ordinary people. Thus the memories and suspicions of the foreign ruler still linger on. And thus, new alliances, even with good foreigners, cause raising of the eyebrows and create doubts and suspicions.

I would like to suggest to those Americans who believe in the adage, "If you are not with me, you are against me," to be a little patient. After all, India has been free only 27 months, not 27 years. And at the time of the coming of freedom, our country was torn into two, and for several months, in the very infancy of our independence, we had to go through veritable hell. Therefore, if we are a little preoccupied in putting our house in order, we should not be blamed too much. And if we are desirous to remain clear of alliances with a western nation or nations—then, in fairness, it must be recognized that it is due wholly and solely to a western nation's exploitation and ruthless rule of our country which has left a mark upon us, and which in its turn makes us hesitate and ponder. It will take more than 27 months to remove that mark and that hesitation.

Thinking people in India know that America has no intentions of taking over where European colonial powers have ended. They also know that no western power could ever rule the Asian peoples again, because the Asians are determined to die rather than be the slaves of a foreign power. But even with this new strength and vitality, the memories of foreign rule cannot be obliterated so quickly and so easily. Thus it is that Nehru, a democrat, not a dictator, must wait till he is sure of carrying his people with him in new alliances and alinements.

There is another important angle. I know that India is a large country with 350,000,000 people and thus is exceedingly important in its own right. But I also know that most Americans think of India's importance vis-à-vis the strategic position India holds in Asia. Suppose Nehru, while in America, and as demanded by some ultranationalist Americans had said, "All right, I am in the American corner." What effect such an announcement would have had in Asia. Would such a declaration from Nehru help the cause of freedom and democracy in Asia? No; most certainly not. To start with, Nehru would have received the lambasting of his life from the people of India. They would have accused him of having sold India down the river. They would have accused him of becoming a pawn of Wall Street monopolies. Instead of receiving a hero's welcome, which he did, upon his return from America, the people of India would have thrown shoes at him—a sign of great disfavor and insult. Nehru's influence in India would have begun to dwindle rapidly. His prime ministership might also have been jeopardized. Would that have served the cause of the democracies of the world? I am afraid not.

Another point. What do you think Communist China would have done if Nehru had joined the "American corner?" They would have unleashed a propaganda barrage of unprecedented magnitude to all the Asian peoples, telling them to be wary of Nehru—a man who had sold his soul for American dollars. The prestige of India in Asia would have gone down and the prestige of Communist China would have gone up. Would that have served the cause of democracies? No, such a step would not have served the cause of democracies. On the contrary, it would have played into the hands of Communist China and the Communist parties and the fellow travelers in every country in Asia.

India today is respected by all Asian countries. They look up to India as one looks up to a big brother. India today is the only country, because of its geographical position, population, and resources, that can halt the onward march of Communist China—not by guns or armed conflict, but by ideologies, by preaching and practicing dynamic, active, and alive democracy.

Americans should stop talking about India's "neutrality." India is a democracy and will always line up with democracies.

Does Luce's $12,700,000 Intake From Liquor Render Him Immune to Decency and Conscience?

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. BRYSON. Mr. Speaker, as evidence of the need for the enactment of H. R. 2428, I submit herewith an article from the Union Signal of December 10, 1949, and ask that it be printed in the Appendix of the RECORD.

The article follows:

DOES LUCE'S $12,700,000 INTAKE FROM LIQUOR RENDER HIM IMMUNE TO DECENCY AND CONSCIENCE?

(By Ernest Gordon)

Mr. Henry R. Luce, through Time, Inc., last year was paid $12,712,000 by the whisky, beer, wine, and associated manufacturers in the liquor field. It is an accepted assertion in financial circles that Mr. Luce controls financially and directly the policy of the three publications of Time, Inc., namely, Time, Life, Fortune.

During two pre-Christmas issues of Life and Time, 1948, Mr. Luce's intake for Time, Inc., was $1,270,000 for liquor advertising.

As is pointed out by R. H. Martin, chairman of the Committee Against Liquor Advertising of the National TPC, these liquor receipts for pre-Christmas issues were 2⅔ times the average sum received for these items during other months of the year.

"This possibly suggests," Mr. Martin adds, "Life, Time, Fortune, and their editor in chief's conception of the proper way to celebrate the birth of the Saviour of the World."

The circulation of Life, Time, and Fortune, according to Standard Rate and Data Service, in 1948 was 7,145,158, with an estimated readership of 36,000,000 for 1949.

"Here are three magazines, the unparalleled facilities of which Mr. Luce and his associates turn over to the big distillers and brewers of America, to carry their liquor propaganda to every corner of our land, to one quarter of the entire population of the country, into fifteen to eighteen million American homes."

That "simply means," says Mr. Martin, "this Luce trio" has become "the most powerful ally the liquor industry has in its gigantic advertising program to increase the sale and consumption of intoxicating liquors," by the most sinister and amazing invasion of free speech and a free press ever perpetrated by the vicious cabal of liquor makers and mongers in American annals.

It is for that reason that the following searching analysis and appraisal by Ernest Gordon of the Luce relationship to and policy toward the liquor interests in the United States calls for the most serious consideration of thoughtful men and women everywhere.

It is an appraisal which like everything else that Dr. Gordon has offered the public is

marked by the most thoroughly authenticated factual evidence that could be marshaled on this subject.

"Alcohol is recognized as the third great medical problem in America," declares Dr. Gordon. "It is indeed recognized as a carrier of disease. In its wake follow all kinds of bodily and mental sicknesses, toxic psychoses, cirrhoses, epilepsies, blastophthorias.

"As a carrier of this disease, through their advertising columns, Time and Life, netting their owner $9,400,000 from drink ads in 1947, appeal to the great public to which they minister week after week, to buy alcohol in numberless enticing forms."

ENTICEMENTS TO YOUTH

Budweiser: "Golden, bubbling, sparkling, foaming. It tells you with every sip why it is something more than beer, a tradition in hospitality."

Arrow Creme de Menthe: "The crowning touch to a perfect dinner."

California wines: "The custom is ages old to set a glass of bright, fragrant wine beside each plate on Thanksgiving. Try it and you find why a custom lives on."

Hiram Walker's Cordials: "Blackberry liqueur. You'd never believe the hard-to-catch flavor of luscious fresh blackberries could be captured in a bottle."

Sunnybrook: "Come over to Sunnybrook side. Enjoy the whisky that's cheerful as its name."

Corby's Whisky: "Thanks and the same to you." Father and son giving each other the same whisky Christmas present.

Roma Wine: "The first call to dinner."

Pabst Blue Ribbon: "Mrs. Winston Guest and friend drinking beer in her flame-vined Palm Beach patio, enjoying the tropical sunshine."

Four Roses: "Once again it's time to make a bowl of Merry Christmas."

Hunter's Scotch: "First over the bar," Courvoisier's Napoleon brandy, Johnny Walker, Heublein, Club Cocktails, Kinsey Whisky "that noble, noble flavor," Ballentine, Glenmore, Old Crow—every possible brand of every possible type of alcoholic type drink, spread out like flypaper, and not a suggestion that each and all contain what the greatest physiologist of all time, Claude Bernard, declared "the perfect type of a poison of the nervous system."

EDITORIAL HOCUS POCUS

But that is not all. The promotion of alcoholic drink and the defense of those who make, sell, and use it, goes on incessantly and more or less obviously in the text, as well as in the advertising columns of Life and Time. The reader lives in a rarefied alcohol atmosphere. He stumbles into little alcohol pools every now and then. Its use is made to appear normal, desirable, harmless, the proper accompaniment of social life, a note of good form. What a priceless thing this secondary advertising, which is not formal advertising, must be to brewer and distiller and distributor of alcoholic wares.

Typical was the great 13-page spread entitled "Liquor. Current studies in Medicine and Psychiatry," in the May 27, 1946, number of Life. Its contents were simply impossible. Thus we were told that "modern research gives alcohol a clean physiological bill of health. The drys (1) have taught that drinking may blast liver, kidneys, and gastrointestinal tract and make the drinker prone to cancer, heart disease, and tuberculosis. These claims have no foundation in fact.

"Taken for purposes of relaxation alcohol has never damaged anyone. Even when taken in fairly large amounts over a long period of time, the purely physical effects of alcohol by itself are almost negligible.

"Alcohol does not attack, or corrode, the brain cells. It does not lead to insanity."

A declaration of war, indeed, on all knowledge of the subject.

The greatness textbook on psychiatry, that of Professor Bleuler, of Zurich, devotes an entire chapter of 56 pages to alcohol poisoning, tells us that it is responsible for a quarter of male admissions to insane hospitals and to 10 percent of cases outside, that it complicates, codetermines, and aggravates other psychoses, especially epilepsy, traumatic neuroses, and paresis. Of the physical effects, described by Life, as "negligible," Bleuler says (p. 318), "We cannot determine why in one, drink ruins the liver, in another the heart, in the third the regulation of metabolism, in the fourth the brain, in the fifth all the organs."

It is impossible to quote any even small part of the scientific evidence which annihilates Life's science. One can but name the masters—Struempell and Weichselbaum in pathology, Kraepelin, and Bleuler in psychiatry, Kassovitz, Wlassak, Nicloux, Delbrueck, Widmark, Le Breton, Graf, and how many more. An outstanding pathologist of today, Dr. Roch of the Geneva Clinic, sums up his studies (L'Alcoolisme et son role en pathologie interne), with this concluding sentence: "In our country and apparently also in most lands of the temperate zone, alcoholism is the most important factor in morbidity and mortality."

For this masterpiece of misrepresentation, Mr. Luce should have the Pulitzer prize, in that he has given the world a perfect example of what a journalist should not do. He has every resource for getting at the truth about alcohol. The literature on the subject is prodigious in amount and brilliant in interest. In every other field he enters he seems to get the truth and to give the truth as far as truth is attainable. Only regarding alcohol does he deviate from truth and that as far as possible.

By thus concealing the results of alcohol study which are so terrifyingly unanimous in their condemnation of drink, as well as by popularizing its use on all occasions and stimulating its sale by every device known to advertising, Life and Time have become not only the typical, but the preeminent, carriers of the disease called alcoholism, and thus premier factors in the spread of morbidity and mortality. Beside alcoholism and its associated diseases of mind and body, typhus is but an occasional plague which we are now easily able to stamp out. But the conflagration for which the Welt narcoticum, the international narcotic, is responsible, endangers our entire European-American civilization.

Perhaps Mr. Luce also believes this, for, speaking at White Sulphur Springs, W. Va., some years ago, he said, "The fate of western civilization depends on the individual and collective behavior of the advertisers of the next 10 years." Does he refer to the whisky advertisers and does he imply that these great spreaders of the alcohol plague oblige editors to say things that are not true and suppress things that are true? If so, we can assent to his later Williamstown aphorism. "The true poison of our time is that press that gives the public what they want." So he calls for "facts, the significant facts, the difficult and complicated facts, the unpalatable facts."

What a reorientation, if adopted, that would mean for the alcohol policies of Life and Time.

TEXT AND HEADLINES SCOFF AT ABSTINENCE

The text of Life fairly crawls with these little carriers of alcoholism. I tested, for example, 24 weeks of Life's 1943 issue and found a nearly unvarying three allusions to drink in each number. Were they planted there to give drink prestige, and to gratify their advertisers? I do not know, of course, but it would not be surprising.

At the premiere of the White Sulphur Springs season, those partaking in this social event consumed, we are told, $3,000 worth of champagne but drank little purgative water. Derby Day at Yale makes straw hats and beer cans obligatory equipment. In a later number Cornell's beer picnics are described. "Doug raises his fraternity stein to toast a friend." However, "this year's event was a partial flop since some of the beer was left over in spite of the fact that the price was set low, namely, all the beer a couple could drink for a dollar." On a preceding page, the guests at an Atlanta home "moved inside to listen to a fine collection of records and drank long glasses of bourbon and water." The less aristocratic Packers' Union of the A. F. of L. "indulged in grape juice au rhum and ice cream soaked in cognac."

In the May 31 number, a pleasant gibe is inserted in a life sketch of Shirley Temple. "When the news leaked out that Shirley was to take her first drink, the WCTU was up in arms" at the enormity. Cocktail parties are the common mise en scène for important events. "After meeting her at cocktails on board his yacht, Howard Hughes decided that Miss Doumergue was a movie natural. * * * At a cocktail party given by Mrs. R. Clapper, Cord Meyer answered arguments. * * * Mrs. Henderson threw a night-club crawl to help John Alden Talbot, Jr., celebrate his divorce and offers to drink champagne from her guest's moccasin."

July 19, page 71, there is a full-page picture of young people drinking spiked watermelon. In the August 9 number, the recipe was given: "The Californians pictured added half bottles of champagne, brandy, gin, and rum and whisky to the melon's inside."

We go abroad and discover that in the Crown Colony, Hong Kong, "British, on hot afternoons, sip gimlets." At a Zegreb fair "the fun is largely beer drinking." When an Indian prince is married, whisky, gin, beer are served "not at a butler's whim but as required. Third-class guests had only wine."

In the August 2 number we return to the United States of America where in a quarter page we are treated to the picture of a beer-drinking contest. Men hold nipple bottles for each other. The winner of the prize struggled through his battle in 4½ minutes." The next number, August 9, has a full-page picture of a man up to his shoulders in a pool drinking a bottle of beer, an event of major importance. We were told in the old days that Connie Mack reprobated drink for athletes. Life would correct this scandalous mistake. "Connie gave up his own modest drinking when he was 76. Brother Mike, on the other hand, lived to be 90 by sticking to a glass of whisky."

PHOTOGRAPHS AND ART WORK RIDICULE TEMPERANCE

In its January 24, 1949, number, Life carried a feature article on Williams College and its problems. Williams always brings to mind the able and venerable president, Mark Hopkins, who led it from 1836 to 1872, 35 long years. Life does indeed here print a picture of him, a thumbnail photograph. But the full-page illustration is reserved for Mr. Grimm, a French professor, drinking cocktails in a student dormitory room that is fully equipped with a bar behind which students are mixing drinks.

Mark Hopkins and William E. Dodge were the great figures in the National Temperance Society and made it a power in the land. This picture is a measure of the alcohol barbarism into which the United States has fallen—in no little degree because of the advertisements in Luce publications.

So it goes. I may be mistaken in thinking that these little alcohol luces are purposely allowed to crawl into their pages. If others doubt, let them scrutinize Life's columns from week to week or, better, study Life's files in recent years, here and there, in text soundings.

All this goes along very well with the extensive photographing of near nudity, high

kicking, and strip-teasing with which Life, by stirring up the little underworld in men's hearts, seeks to raise its circulation figure. It recalls the pink pages of the old Police Gazette, which in railway camps in the old days we used to call the great American educator, and adds piquancy to Mr. Luce's religious addresses as, for example, that before the National Conference of Church Women in Milwaukee, 1948. The face of Janus—Henry Loose * * * Henry Luce.

Time is less risque than Life, yet here, too, one hears little alcoholic obligatos played to the main themes. Its heraldic emblazonment might well be two vipers tangled into one, namely, high finance and the liquor powre. Its editor is a trustee of the American Heritage Foundation which sponsors the Freedom Train. There is no copy of the eighteenth amendment on the Freedom Train, yet it might have been exhibited there as representative of what promised to be one of the greatest emancipations of all times. It was Wall Street in the persons of Mellon, the Du Ponts, bootlegging Percy A. and backsliding John D. Rockefeller, who destroyed that great document. Garrison and Phillips and Abraham Lincoln would have defended it in the teeth of all comers had they been living.

Time insidiously supports the repealers in their continuing efforts to prevent any relief, legal or educational, from the evermounting, devastating alcohol flood. It has ever the appropriate gibe, the distorted report. In its October 4, 1948, number it described the WCTU convention in so many words as a collection of septuagenarian hens clucking lamentations over the spread of alcoholism. This is just the impression the drink interests would wish made on the general public.

When Kansas prohibition was repealed last November, their comment was the following moronic simplification, "Kansas boys, raised on lemonade, went away to war, learned there was something more exhilarating, came home demanding more of the same" (Nov. 15, 1948.) It follows the stereotyped Tap and Tavern line, "To Kansas, their bone-dry law has long been a laugh. Good whisky is easier to get in Topeka than in wet Kansas City. * * * Millions of quarts of bootleg stuff from across the border," etc. (September 9, 1946). When a prohibition hearing is held in Washington, bony, pious Joseph R. Bryson and perky Mrs. Ida Wise-Smith are picked for ridicule, the latter representing organized mother-love, and much is made of a tract being circulated, Use Your Bible To Battle the Bottle (January 24, 1944). In another passage, to enforce its antiprohibition clack, it quotes, believe it or not, old St. John Chrysostom, "I hear many cry when deplorable excesses happen 'Would there were no wine.' Oh folly. Oh madness. * * * If you would say, 'Would there were no wine because of drunkards,' then you must say, 'Would there were no steel because of murderers, no women because of adulterers' (January 25, 1945).

When an alcohol-trapped Wisconsin editor made known editorially his despair, Time with exquisite courtesy announced that an elderly reader had put him on her prayer list, that a minister had read the editorial in his Sunday-school class and that two ladies from the WCTU welcomed him to their side (January 21, 1946).

TIME REVELS IN PSEUDO SCIENCE

Time revels in current alcohol pseudoscience, contrasting the Yale modern school of alcohol studies with the old blue-nose, dry crusade. Alcohol seldom damages the body permanently. * * * Drinking is the result, not the cause of, the drunkard's neurosis. * * * Alcoholics get that way in childhood, etc. (July 8, 1946).

I can hardly imagine that Mr. Luce believes these paradoxes, any more than any other person of sense. If he does, let me make this suggestion. On November 14, 1937, at the French Embassy at Washington, Mr. Luce, because of his publishing successes, was presented with the Order of Chevalier of the Legion of Honor. In the year 1948, among those who received the same distinction were, grand officer, Dr. Georges Duhamel; commandeurs, Dr. Armand-Delille, Professor Carnot; officers, Dr. Barthelemey, Professor Boulet, Dr. le Couteur, Professor Mouquin, Professor Portes; chevaliers (Mr. Luce's grade), Dr. Bernou, Dr. Trivas.

Why do I quote these names in this connection? Because every one of these savants is also a member of the Groupement Medical d'Etudes Antialcoholiques, the new radical mobilization of French medicine against alcoholism. My suggestion is this. Let Mr. Luce get in touch with Prof. Dr. Paul Perrin, the secretary of this distinguished group—it has deans of 10 medical schools and 30 professors of medicine on its roster—and let him give an objective report on their program and literature in one of his publications. Then we will believe that he is not what he appears to be.

Time mentioned in its December 6, 1948, number a new drug for the cure of alcohol habit. A letter from the publisher of January 31, 1949, told us that its discoverer was overwhelmed with orders by cable, air mail, telephone, as well as by letters in seven languages. The contents were always the same, cries from the depths, "My husband, my father, my son, my brother, my nephew, my friend * * * is a good man but an habitual alcoholic. Send the drug whatever it costs."

And what did the editorial hard-hearts of Time say of it? They expressed gratification at this impressive evidence of the readership of their medical section, right round the world.

They talk as a vivisector would over a successful experiment, undisturbed, and least of all conscience smitten, at this evidence of the international effectiveness of Time's advertising.

I suppose that Time will be satisfied with whatever happens to our land so long as it is well paid for running its whisky advertisements. In a book review regarding the 3,750,000 excessive drinkers who now burden themselves and American society, it opens with the nonchalant words, "The United States may as well get used to the idea of more and more alcoholics," adding later, "It may as well be admitted that it is a drinking society and make provision for those among us too ill to cope with it."

When Mr. Luce was divorce-sued by his first wife for cruelty, it took the court only 15 minutes to grant her relief. That cruelty was a slight thing, indeed, compared with the vast, mean cruelty of his alcohol promotion.

The Luce fortune from drink advertisement comes indirectly from millions of heads, alcoholic addicts, actual and potential.

AVIDLY APPEALS FOR MORE LIQUOR ADVERTISING

Still he is unsatisfied. Mr. Luce is doing something which no other publisher before or after him ever did, so far as is known. He actually appeals to the distillers' organ, Spirits, for additional advertising. In a great 2-page advertising spread, exhibited by Life in this trade paper, July 1949, one reads: "Five million, two hundred thousand selling messages. That's what liquor advertisers put behind their brands when they're shown in any issue of Life. Life sells 5,200,000 copies every week, read by 26,000,000 people week after week."

In the April 1949 number of Spirits, the Life advertisement has a large picture of the crowded Rose Bowl in Pasadena. We are informed that its subscribers are 260 times as numerous. In no other than liquor publications does Mr. Luce advertise for advertising, as far as observed.

ARDENTLY SEEKS MINISTERS AND EDUCATORS

And while Mr. Luce is making this frenzied appeal for whisky advertising, he is at the same time offering clergymen and educators reduced subscriptions to Life, knocking off $1.75 on a 2-year subscription and $1 on a 3-year one. So does he play both ends against middle.

And it is to this man, to such a man that Protestant officialdom is kowtowing.

Proposed Repeal of Wartime Excise Taxes

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, I have repeatedly called attention to the necessity for the immediate repeal of the wartime excise taxes which we promised to repeal when peace came. I have placed in the CONGRESSIONAL RECORD dozens of letters from Wisconsin, newspaper editorials, and magazine articles, pleading for the Congress to act.

Already there are in the hopper excise tax repeal amendments which my colleagues and I intend to offer, if necessary, to the oleo measure. We firmly believe that repeal of these taxes, rather than contributing to a loss of revenue, would bolster national income and thereby increase tax revenue. At this time I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a straight-shooting editorial on this subject which appeared in the January 7, 1950, issue of Collier's magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COLLIER'S DEMANDS CONGRESS REPEAL WARTIME EXCISE TAXES AT ONCE

The wartime excise taxes were put on in wartime.

They were put on to reduce employment, penalize consumption, discourage business in lines that were competing with the war effort.

The rates were set very, very high. They were wartime rates. They were made very, very high to reduce employment, penalize consumption, discourage business in lines that were competing with the war effort.

Have you been to the movies lately? Have you bought a lipstick? Or sent a telegram? Or gone on train or plane to visit Aunt Mary? Or to shop, or to sell what you make? Did you have to buy some luggage? Did you buy or not buy a scarfpin? Or a watch? Or baby oil and powder? Did you buy or not buy a fur coat? Or did you buy a cheaper one? These are only some of the ways the consumer and the producer are whipsawed by consumption-reduction taxes. No wonder unemployment is up and national income is down.

Congress promised that when the war was over, the wartime excise tax rates would be repealed.

Nobody wanted peacetime taxes that would reduce employment, penalize consumption, discourage business after the war was over.

The war is over. The wartime excise taxes have not been repealed. They are operating

today in the specific industries affected to reduce employment, penalize consumption, discourage business just as they did in wartime.

We don't want discriminatory taxes in peacetime. We don't want to reduce employment in specific industries; we don't want to penalize consumption of specific products; we don't want to discourage business just because it used scarce materials and labor in wartime.

Let's repeal the wartime excise tax rates on American business, on American employment, on American consumer demand. The war is over. Let's stop wartime discrimination.

Somebody may say we need the wartime excises because of the revenue. No tax that is bad for business and employment was ever any good for revenue.

By reducing consumption we reduce tax receipts on manufacturing profits, on retail profits, on the income of workers; and in addition we increase outpayments for unemployment benefits. And the citizen whose circumstances force him to buy has to pay more than the goods are worth by as much as 20 percent. The Administration policy of keeping the wartime excise taxes on this long is incredible. It's crazy. It's worse than crazy, it's nuts.

Congress knew that the wartime excise tax rates were no good for peacetime. Congress said that when the war was over, the wartime excise taxes would be repealed. Congress would have repealed these wartime taxes last summer if the executive branch had given the slightest signal.

But the executive branch was confused. It couldn't see the difference between gross revenue and net revenue. It couldn't see the difference between a tax to reduce employment and a tax for revenue. It couldn't see that wartime excise tax rates discriminated between one kind of peacetime employment and another. It couldn't see.

Let's get rid of this wartime hang-over. Let's let people go back to work making things people want. Let's stop these penalty prices. Let's use the common sense that Congress is prepared to use.

Mr. President, give Congress a free hand. Congress will meet its wartime pledge, and restore peacetime employment to American citizens and American communities. It will remove the blight of wartime controls from American enterprise. It will permit reasonable prices on peacetime products that are wanted by Mr. and Mrs. American Consumer.

Repeal of the wartime excise taxes is the first order of legislative business for 1950.

THE EDITORS.

To Unite Federalists

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Freedom and Union for December 1949:

TO UNITE FEDERALISTS
(By Clarence K. Streit)

As the author of a book whose readers have become divided, I find myself in a peculiar position. Many of the readers of Union Now favor the Atlantic Union resolution (Senate Concurrent Resolution 57, House Concurrent Resolutions 107, 111). Others of its readers favor the world federation resolution (Senate Concurrent Resolution 5, House Concurrent Resolution 64). Still others favor both.

I myself support the Atlantic Union resolution, but I have always worked for Atlantic Union as a step toward an eventual free world government. And so—speaking only for myself, though I hope results will show that I am speaking for many of my friends who are now divided—I would suggest that a second paragraph be added to the enacting clause of the Atlantic Union resolution, so that it would read as follows:

"Resolved by the Senate (the House of Representatives concurring):

"1. That the President is requested to invite the democracies which sponsored the North Atlantic Treaty to name delegates, representing their principal political parties, to meet this year with delegates of the United States in a federal convention to explore how far their peoples, and the peoples of such other democracies as the convention may invite to send delegates, can apply among them, within the framework of the United Nations, the principles of free federal union.

"2. That this Atlantic Federal Convention be called as the next step in strengthening the United Nations and in attaining a more distant goal which, in the sense of Congress, should be a fundamental objective of the foreign policy of the United States—namely, the development of a free world federation open to all nations willing and able to maintain its principles of free, representative government, and capable of effectively safeguarding individual liberty, preventing aggression and preserving peace by its defined and limited powers to enact, interpret, amend and enforce world law."

This amendment would incorporate in the Atlantic Union resolution much of the language and all the major provisions of the world federation resolution,[1] while adding certain necessary safeguards, particularly as regards freedom and the United Nations.

As that resolution now stands, it makes no provision that the world government it seeks shall preserve individual liberty. This omission is no doubt due to oversight on the part of its sponsors, resulting from the present widespread American habit of taking freedom for granted. I trust that on second thought they will agree that it is wiser to return to the habits of our forefathers. They based our government on the principle that eternal vigilance is the price of liberty and devised a remarkable set of checks and balances to secure that vigilance.

The fact that the world federation resolution now contains no reference to individual freedom should make it much more acceptable to Stalin than to us. "A world federation open to all nations, with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law," is quite compatible with dictatorship, slavery, and terror. It fits the kind of world government we would suffer if the present Soviet Communist Federation achieved its dream of bringing all the world under its law. That law has proved more than adequate to preserve peace and prevent aggression with its present jurisdiction.

[1] *Resolved by the House of Representatives (the Senate concurring)*, That it is the sense of the Congress that it should be a fundamental objective of the foreign policy of the United States to support and strengthen the UN and to seek its development into a world federation open to all nations with defined and limited powers adequate to preserve peace and prevent aggression through the enactment, interpretation, and enforcement of world law.

I know that this kind of world government and law is far from the one the backers of the world federation resolution have in mind, and so I trust they will welcome its being made clear that they aim at a free government. We Americans, and a number of other Atlantic peoples, have long insisted on something more than peace and law—a something called freedom. To secure this freedom we, and these other peoples, have sacrificed peace more than once.

True, our forefathers sought to insert no safeguards for individual freedom in the alliance they made with the French Bourbon autocracy during the war for independence. But when they turned to the task of constituting a federation—a government, instead of a mere association of governments—they did not attempt the impossible feat of making it with their autocratic French ally, or with their allies among the Indian nations who had little notion of free, respresentative government. They were careful to limit the enterprise of constituting government to those peoples who were willing and able to build it on a free basis. And they climaxed the Preamble of their, and our, Constitution with a declaration that its aim was to "secure the blessings of liberty to ourselves and our posterity."

Experience proves that it can be practicable and wise for free governments to cooperate to some degree with dictatorial governments not only in alliance, but in leagues such as the United Nations. Such associations by their nature must be formed without individual liberty being effectively safeguarded in the treaty establishing them.

To constitute a federation, a government, is—it cannot be emphasized too much—quite a different thing from forming an alliance, league or other association of governments.

Since Americans began constituting government—as early as 1639 in federating the three towns that formed the colony of Connecticut—they have always been careful to make sure that the government was not only of the people, operating directly on them as citizens, but was by and for the people—for their individual freedom. Surely every American would want this precedent maintained now when freedom is so threatened, and would not, on second thought seek the formation of a world government that gave no safeguard for human liberty as the fundamental objective of United States policy. Perhaps I should add that union now, though it popularized the ideal of world government as far back as 1939, insisted that freedom must be the basis and the aim of any such government.

The only other important changes that my amendment makes in the world federation resolution—apart from safeguarding individual freedom—may be thus clarified:

The world federation resolution, as it now stands, permits its objective to be achieved only through the development of the UN and risks having the objective interpreted as an immediate one. My amendment, while calling for the strengthening of the UN and permitting us to make the most of every opportunity to develop it into a world government, does not restrict us to achieving a free world federation only by amendment of the Charter or other action by the UN. It leaves all possibilities open, and there should be no objection to that.

While keeping the strengthening of the UN as an immediate goal, my amendment, moreover, makes clear that world federation is a more distant goal. It thus guards against the resolution, once adopted, being interpreted as authorizing immediate or premature attempts by the United States to change the UN into a world federation. Such attempts could only result, in my judgment, in wrecking the sole world political organization mankind now possesses, and leaving the nations not only sharply divided into two

camps but lacking even the common meeting place that Lake Success now provides.

The Kremlin would veto any attempt to develop the UN into a free world federation, and the United States would veto any move to convert it into an autocratic world government. Consequently, there would seem to be no possibility of changing it into either so long as dictatorship rules the U. S. S. R., and freedom rules the U. S. A.

Some argue that the United States should, nonetheless, make immediately an attempt to amend the Charter, either to make it a world government or at least to abolish the veto—which is also certain to be vetoed by the Kremlin. They contend this would improve our moral position and fix the responsibility for failure on Soviet Russia. They assume the United Nations would continue thereafter as before, and believe it would then be safe for the United States to form within the United Nations a federation of all the nations that had proved willing to make one when the offer was made to Moscow.

My 10 years of experience covering the League of Nations for the New Times helps convince me that all this, though it seems quite plausible, is very unsound speculation.

Unless one is aiming to go to war, and ready for war, it is wiser not to try to pin down certain responsibilities, or to attempt to maneuver a great power into too openly humiliating a hole. A careful jockeying for moral position is too often the immediate prelude to war. It is very likely to be, if one of the disputants is more concerned with fixing blame on the other than with facing him with power too effective and overwhelming to be challenged.

NUMBERS DO NOT MEAN POWER

A federation formed by the above process (that is, of combining those nations, excluding Russia, which do accept the offer), would not only tauten present tension to the breaking point but it would invite attack. Those who assume it would be stronger than the proposed Atlantic Union repeat a time-honored error, the one that brought the Persians to grief at Marathon and Salamis. They confuse mere numbers with power. They reckon the loosely organized horde to be stronger than the smaller but closely knit phalanx.

Above all, they overlook the basic fact that the great bulk of non-Communist armed, industrial, and developed raw-material power in the world today is in the hands of the few North Atlantic democracies with which the Atlantic Union resolution would begin the formation of a world federal union. These democracies because of their greater community of interest and stronger natural bonds can be much more closely knit together than they can be federated now with a large number of divergent, inexperienced democracies or dictatorships.

To try to federate all the non-Communist world does not change the facts of power; it can result only in shifting away from the experienced Atlantic democracies more or less of the control they now possess over their power. If they should consent to enough shift of control to make the federation a real federation—which is highly unlikely—they would merely be placing their power in less experienced hands. What could encourage the Kremlin more? If they refused thus to shift control of their power, the result would be another loose league instead of a federation. Would another, smaller United Nations overawe the Kremlin?

By taking either course we would not only sacrifice the overwhelmingly powerful federal union we could make with the other Atlantic democracies, but we would sacrifice precious time. The Kremlin could string out the discussion of any Charter amendment as it did the vain proposal for a world atomic authority. While the negotiations for the latter went on, the Kremlin succeeded in learning how to make an atomic explosion. Shall we waste more time now on attempts to strengthen the UN and achieve world federation that require us to begin by asking the Kremlin's consent?

Before we consider further so dangerous a course, let us rid ourselves of the notion that such a proposal to change the Charter would, when it failed, leave the UN still functioning as before. True, if an amendment to the United States Constitution fails of adoption, the Government goes on unchanged, and so it is not surprising that many assume the same would be the case in the UN.

But suppose a powerful group of our 48 States proposed to change our Constitution fundamentally—to make it, for example, a dictatorship, or to change it from a federal union into a league of States from which any State could secede. If they failed to get their way, would the United States still continue as before, or would it be wrecked, and probably plunged into civil war by the bitter controversy this attempt inflamed?

Certainly, if the United States could not survive peacefully such an attempt to change its basic character despite a powerful minority, the much weaker and younger UN would be destroyed, for all practical purposes, by any American move to abolish the veto or change the Charter into a world government—while dictatorship rules the Kremlin and the Atlantic democracies remain unfederated.

Why embark on a policy that so gravely endangers our best remaining bridge to Soviet Russia, while giving the Kremlin time to stock pile atomic bombs before we even attempt to federate with our closest and strongest friends?

The Atlantic Union resolution avoids these perils. There is nothing in the UN Charter preventing any members from going the limit toward achieving its ideals by mutually, peacefully uniting in an organic federal union. Such union requires no action by the UN. The Atlantic Union resolution takes advantage of this fact. We can call the federal convention it proposes without having first to ask the Kremlin's consent. We thus avoid waste of precious time. We also avoid the kind of debate that would ruin the UN.

We preserve it, too, by not attempting to federate all its non-Communist members, but only a few Atlantic democracies at the start. We do not split it into two clear-cut camps; we leave the greatest number of its members where they are today, in between us and the Kremlin, but with us in an emergency, since the Atlantic Union would be no threat to them but a protection—and the only place where they could sell their products and get the manufactured goods they need.

By the Atlantic Union resolution we preserve, too, the charter's bridge to the Russian people, and all the possibilities the charter gives of lining up a coalition of all the non-Communist world behind the Union, in the improbable event the Kremlin should threaten it. Even though the UN is not strong enough to insure peace, and even though it cannot be seriously strengthened by charter amendment, it still can perform so many valuable services to peace that we should seek to preserve it.

The Atlantic Union resolution, in short, would avoid the dangers other policies involve, would preserve the UN and strengthen it in substance, and, by my amendment, would commit us to the goal of ultimate free world federation. And yet it would let us begin at once to explore whether we can now form the nucleus of such a free federal union with the other sponsors of the North Atlantic pact. If we cannot federate with them, how can we hope to federate effectively with the rest of the world now? And if we can join with them in a federal union of the free—as I am confident we can, difficult though even such federation is—we can confront the Kremlin in good time with far more power than we can otherwise put behind freedom and peace, and at far less cost. We can thus block its scheme to win the world through economic disaster and further monetary depreciation in the Atlantic area. We can confront the Kremlin with such immense armed, industrial, financial, raw material and moral power that Soviet Russia dare not challenge it.

Thus we can stabilize the world situation long enough for the slow evolution needed to attain without world war our ultimate objective—a free federation of all the world. By this policy we wed the practical to the ideal. And we do more.

We promptly begin to carry out the pledges in the Atlantic Pact that commit us and our allies "to safeguard the freedom * * * of their peoples, founded on the principles of * * * individual liberty," and "to contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded."

Our American freedom is based on our Federal Constitution, and nothing could contribute more to a better understanding of its principles than to explore in a Federal Constitutional Convention the possibility of our unity through these principles with the other sponsors of the Atlantic Pact. By this policy we keep freedom first. We recognize and act on it for what freedom truly is—the key to peace.

Civic Problems, Civic Bodies

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Civic Problems, Civic Bodies," written by Jesse C. Suter, and published in the Washington (D. C.) Star of December 18, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CIVIC PROBLEMS, CIVIC BODIES—SUPERINTENDENT AND BOARD PRESIDENT; WOMEN'S GENERAL FEDERATION CAMPAIGN

(By Jesse C. Suter)

GENERAL FEDERATION OF WOMEN'S CLUBS AND NEELY'S CHALLENGE

The national legislative chairman of the General Federation of Women's Clubs, Mrs. Leslie B. Wright, reports that their Nationwide campaign in support of national representation for the District of Columbia is getting under way. Legislative chairmen of the various State federations are expected to begin intensive work immediately on Senators and Representatives from the respective States to obtain their pledge of support to the Neely joint resolution—Senate Joint Resolution 132.

The immediate need in this campaign is to provide these State legislative committees and the constituent groups of the State federations with succinct printed statements of

the District's case. It is essential that the question should be well understood by these public-spirited and patriotic women throughout the Nation in order that they may arouse the required interest and enthusiastic activity.

The Neely joint resolution proposes an amendment to the Constitution of the United States which would empower the Congress to provide "that there shall be in the Congress and among the electors of President and Vice President members elected by the people of the District constituting the seat of the Government of the United States, in such numbers and with such power as the Congress shall determine, but such representation and powers shall be no greater than those of a State. All legislation hereunder shall be subject to amendment and repeal."

Such an amendment to the Constitution is necessary for the reason that the Constitution makes no provision whatever for representation in the Congress other than by States. It is believed that such provision was omitted unintentionally from the Constitution at the time of its being drafted, as matters of far greater importance were at stake.

At a "civic clinic" held by Senator MATTHEW M. NEELY, Democrat, of West Virginia, chairman of the Senate Committee on the District of Columbia, in September, Mrs. Wright stated that the first thing to get for Washington is representation in Congress and the electoral college. She stated that she was speaking as chairman of the legislative committee of the General Federation of Women's Clubs, for 5,000,000 women, whereupon Senator NEELY said: "If you have 5,000,000 women all agreed on that, you can get it before the end of the next session." He urged her to get active on the subject and get these women busy with their Senators and Representatives.

State chairman visits headquarters

The State legislative chairman for the Federation of Women's Clubs of Michigan, Mrs. Wade Van Valkenburg, called at the headquarters of the Citizens' Joint Committee on National Representation for the District during the past week for the purpose of obtaining required information for use in their campaign. Some literature was supplied, and the lack of fundamental American rights for District residents, the necessity for constitutional amendment, and the required procedure were explained.

Mrs. Van Valkenburg was surprised and shocked to learn, from one of the victims, that these American citizens resident in the District of Columbia and owing allegiance to no particular State are deprived of all participation in the National Government which taxes them and sends them to war, and in the local government which performs the administrative functions usually performed by States, counties, and municipalities. She was much impressed with the opportunity offered in this campaign to render practical service to these voteless and unrepresented fellow Americans of the Nation's Capital.

The late Theodore W. Noyes, long editor of the Star and for many years chairman of the Citizen's Joint Committee on National Representation for the District, always held that there was special appeal in this campaign for national representation to the women of the country. Through the long years of the campaign for woman suffrage, District women occupied a conspicuous place with the women of the States for an amendment to the Constitution which would put women on an equal footing with men at the national ballot box. All the while these District women were engaged in this self-sacrificing service they knew full well that without another amendment to the Constitution they would not acquire through the woman suffrage amendment the privileges of voting in the national elections. Now, it surely is up to the women throughout the United States, particularly in the ranks of the well-informed clubwomen of America, to put their shoulders to the wheel and work earnestly to give these women of the District of Columbia, and likewise the men, the right which they helped acquire for the women of the States.

American Oil

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. HILL. Mr. President, this morning the Washington Post carries an interesting editorial captioned "American oil." The editorial is inspired by a statement by the attorney general of the State of Alabama, the Honorable A. A. Carmichael, the statement by Mr. Carmichael being on the question of tidelands oil. The editorial deals at some length with Mr. Carmichael's statement, and I ask unanimous consent that the editorial, together with the full text of the statement by Mr. Carmichael, may be printed in the Appendix of the RECORD.

There being no objection, the editorial and statement were ordered to be printed in the RECORD, as follows:

[From the Washington Post of January 6, 1950]

AMERICAN OIL

It is heartening to find a State attorney general who talks about the marginal sea like an American. A. A. Carmichael, attorney general of the State of Alabama, has made a public answer to the National Association of Attorneys General, which has constituted itself a lobby for the purpose of persuading Congress to quitclaim the valuable mineral resources submerged off the costs of the United States. "If the Congress makes such a gift to the States," says Mr. Carmichael, "it will be tragically derelict in its duty as the highest legislative body in the United States."

In 1947, the Supreme Court held, in *United States* v. *California*, that California had no title to the submerged lands lying outside its inland waters and beyond the low-tide mark and that the United States Government had paramount rights in and power over these lands. Since that decision, the National Association of Attorneys General has emitted a great deal of expensive propaganda intended (1) to show that the Court was wrong, and (2) to induce Congress to donate to the States what Congress would have power to donate only if the Court was right. Mr. Carmichael said about all there is to say on this subject:

"Title to land, under our system of law, is determined by the courts. A determination of ownership, or nonownership, is binding. It is, therefore, ridiculous for the advocates of State ownership of the marginal lands to declare that the States are being deprived of land, rightfully theirs, by the Federal Government. The highest court in the United States has held that the States do not own, and never have owned, the subsoil beneath the marginal sea. The concept of States' rights is totally irrelevant. A State cannot be stripped of lands in deprivation of its rights, when that State has never had any legal right to the lands. The States' rights concept is again being used, as it has been used so often in the past, to obscure the real issues in the controversy."

Mr. Carmichael has also pointed out what most State attorneys general have apparently ignored, that by quitclaiming the marginal sea Congress would be making an outright gift not to all the States but to a very few—California, Texas, and Louisiana principally, with Alabama itself a possible beneficiary—of incalculably rich mineral resources, the income and use of which should rightfully benefit all citizens of this country. These resources should be conserved and managed in the national interest and as a bulwark of the national security. To give them away would be to give away, fraudulently, an inheritance of the American people.

STATEMENT BY A. A. CARMICHAEL, ATTORNEY GENERAL OF ALABAMA

The statement of Walter Johnson, special counsel for the National Association of Attorneys General, that Congress will donate the marginal submerged lands (commonly called tidelands) and the oil reserves therein to the States deserves an answer from one who is himself an attorney general. If the Congress makes such a gift to the States, it will be tragically derelict in its duty as the highest legislative body in the United States.

In 1947 the Supreme Court of the United States, in the case of United States against California, held that California, and undoubtedly other States in similar circumstances, had no ownership whatsoever in the submerged marginal lands called tidelands, and that the United States Government had paramount rights in and power over those lands.

After this opinion was rendered by the United States Supreme Court, a weird assortment of State attorneys general and oil magnates have called the opinion wrong. According to these critics, the Supreme Court of the United States (all eight of its members since Mr. Justice Jackson was not sitting at the time) is ignorant as to the meaning of prior decisions of that court.

Title to land, under our system of law, is determined by the courts. A determination of ownership, or nonownership, is binding. It is, therefore, ridiculous for the advocates of State ownership of the marginal lands to declare that the States are being deprived of land, rightfully theirs, by the Federal Government. The highest court in the United States has held that the States do not own, and never have owned, the subsoil beneath the marginal sea. The concept of States' rights is totally irrelevant. A State cannot be stripped of lands in deprivation of its rights, when that State has never had any legal right to the lands. The States' rights concept is again being used, as it has been used so often in the past, to obscure the real issues in the controversy. Since the States severally never possessed or owned the subsoil beneath the marginal sea, such subsoil could not possibly have been taken from the States.

The Congress would be well advised to consider precisely what it would be doing if it should decide to quitclaim the lands beneath the marginal sea to the States. The Congress, in such a case, would be making an outright donation to a few States (Texas, California, and Louisiana, in the main) tremendously wealthy lands whose income and resources should redound to the benefit of all citizens of this country. The Congress would most definitely not be returning to certain States that which is rightfully theirs. For the highest court in this country has decided that the lands in question do not rightfully belong to the States. One need not resort to speculation to determine the magnitude of the oil wealth which Mr. Johnson would have the Congress donate to Texas, California, and Louisiana. The total

area of the continental shelf contiguous to the United States is estimated at 262,500 square miles or about five times the area of the State of Wisconsin.

Geologists have estimated that the continental shelves of the earth contain 1,000,000,000,000 barrels of oil. The shelf contiguous to the United States and Alaska, about one-tenth of the total area of all continental shelves, is estimated to contain approximately 100,000,000,000 barrels of oil. Thus, the potential oil resources in the submerged lands which Mr. Johnson proposes that the Congress donate to three or four States, containes five times as much potential oil as there now is in the whole of the United States.

In terms of dollars—taxpayers' dollars—the figures concerning Mr. Johnson's gift to the States are even more astounding. At the present prices, the estimated 100,000,000,000 barrels contained in the continental shelves contiguous to the United States and Alaska would sell for $268,000,000,000.

There are considerations of conservation, national defense, and public welfare involved in Mr. Johnson's proposal. If the Congress gives the oil-rich submerged lands to the States, Congress will lose irrevocably any chance to control these lands and the oil produced from these lands. The resources will be exploited without consideration of questions involving defense and conservation and welfare.

There must be some reason why oil magnates unanimously desire State ownership. The proponents of State ownership have never explained why they would not be willing to have Congress quitclaim the lands to the States, with the reservation that the United States Government could control the exploitation of oil. Mr. Johnson and his cohorts have argued ardently that their only wish is to protect the States against Federal usurpation. They have stated that oil is not of controlling importance to them. But they do not want the Federal Government to have the power to direct oil leasing, even though the Federal Government might be willing to quitclaim the submerged lands with such a reservation. It is difficult to believe that Mr. Johnson and the oil magnates are not thinking primarily about oil.

The cost of public education, public health, aid to Europe, national defense, social security, and other of the more extensive Government programs does not, in the aggregate, even approach the potential money which Mr. Johnson would so generously give to Texas, Louisiana, and California.

It is apparent that Mr. Johnson's proposal represents an outright donation of immensely wealthy Federal resources to a few coastal States. Mr. Johnson's proposal completely ignores defense, welfare, and conservation considerations. If the Congress of the United States gives these tidelands to the few coastal States involved, the Congress of the United States will be perpetrating a fraud on the people of this country.

Upswing in Rents Is Found Where Controls Are Ended

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, January 6 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by Lee E. Cooper which appeared in the New York Times of January 2, 1950.

There being no objection, the article was ordered to be printed in the RECORD as follows:

UPSWING IN RENTS IS FOUND WHERE CONTROLS ARE ENDED

(By Lee E. Cooper)

A general upswing in the level of residential rents in decontrolled areas throughout the country was indicated yesterday in a survey made by The New York Times. With Federal controls lifted from more than 2,600,000 family rental units during the past 9 months, it was apparent from reports received from all regions that the prices being paid for shelter had broken out of the narrow range in which they had been held by law for about 6 years.

Although about 12,000,000 families, including those in New York City, and nearly all other major population centers, still are under rent-ceiling protection, many of these families have been affected recently by the growing number of approvals by rent authorities of landlord petitions for increases.

From April 1, 1949, the date the present Federal legislation became effective, to December 9 the Office of the Housing Expediter in Washington reported that 631 decontrol actions had been completed, taking 2,587,000 family rental units from its control. In the past 3 weeks several communities have been added to the list.

STATES WITHOUT CONTROLS

Four States, Nebraska, Texas, Arizona, and Utah, are now without controls and Alabama has voted to end controls in May. Wisconsin is under a State law which replaced the Federal statute and has permitted substantial rises in rents.

Details on the present situation in the housing market as reported by New York Times correspondents in key cities and obtained from other sources were in most instances at variance with the assertions of realty interests that the lifting of the ceilings had caused no appreciable changes in rental conditions. Unprecedented building activity in some centers, however, has helped to ease the problem of transition.

The general level of rents in Houston was found to have risen 11 percent in 3 months and nearly as much in Milwaukee. "Substantial" increases were reported in Omaha and Lincoln in Nebraska. Rises put into effect in Spokane, Wash., were said to average 14.3 percent.

There was evidence of isolated increases of 100 percent or more in some cities now operating under a "free" market. In communities such as Tampa and Miami families occupying the cheaper apartments were found to have been hit hardest, while tenants of some of the more expensive apartments had slightly lower monthly charges.

THE NORTHEAST

In New York State and the New England region all major population centers still are under the Federal ceilings extending to June 30, 1950, and fairly stable conditions are noted despite occasional protests against approval of rent rises based on the "hardship" clause or other sections of the law. No large city has been decontrolled. Actions seeking decontrol have thus far affected only a few sparsely populated communities.

Thus far the Metropolitan Fair Rent Committee, representing property owners here, has failed in its efforts to get a blanket increase of 15 percent. Last week it suggested an increase of 25 percent under the revived rule requiring repainting of apartments every 2 years.

In Boston, although exact figures were not available, a large percentage of rent-increase petitions was being granted under the fair-net-operating-income provision of the law, according to Edgar Driscoll, area rent-control director for New England. This was in line with a general policy reflecting increased costs of operation, Mr. Driscoll said.

In the five-county Philadelphia area containing 420,000 registered units under the jurisdiction of the Housing Expediter, the borough of Swarthmore voted for local option in October, but otherwise there has been no movement for the removal of rent controls.

A spokesman for the Philadelphia Real Estate Board reported that his organization always would be moving in the direction of decontrol and also would like to see some provision allowing for the increasing cost of operation and maintenance.

The Philadelphia area rent office processed 749 petitions from landlords in November and approved 490. The approvals grant rent increases on 1,725 units with an average rise of $10.45 monthly. In the first 11 months of 1949 increases approved on 7,389 rental units increased aggregate monthly payments by the tenants from $348,445 to $421,593.

THE SOUTH

In the South attention has been centered on Florida, where Miami, Tampa, and Jacksonville were freed of ceilings recently after Gov. Fuller Warren had vetoed a bill which would have removed controls on a Statewide basis except for areas around military installations.

In Miami a typical small apartment or house which brought $50 monthly now is renting for about $65, but those which had been leased at $200 can be had for about $150.

With more than 100,000 new family units built in Miami in the past 3 years and many seasonal units offered on an all-year basis following decontrol, the supply now exceeds the demand in some types of housing and there are quite a few vacancies. The net effect is to force down the rent for higher-priced living space.

Higher-priced all-year apartments in Tampa which had been bringing $90 to $120 a month have been reduced by about 10 percent. In the medium-price bracket, from $50 to $90, there have been rent increases of about the same percentage. In the cheaper housing, notably housing for Negroes, there have been instances of rent increases of more than 100 percent, with rents formerly at $4 a week going to as much as $10. Owners of this type of housing assert that they went for years without any return on their investment while rents were frozen.

A high level of house building in Tampa has helped to keep rentals down. Motor court building on the outskirts also has been very active recently, with the result that a price war has developed in some areas. This has forced down the daily cost of a kitchenette unit in some courts to about $1.25 per person from $3.50 to $7.

Not much change in Tampa

Officials of the Tampa Board of Realtors, on the basis of a recent survey, reported "not much change" in the general level of rents.

By action of the Alabama Legislature, rent ceilings will end in the State May 25. Rent-control officials in Montgomery predicted that the result probably would be a number of upward rent adjustments ranging to 50 percent.

An increase in the number of rental units was reported in Knoxville, Chattanooga, and some smaller communities in Tennessee, but spot surveys indicated an over-all rise of 6 to 8 percent in monthly rentals. One leading realtor in Chattanooga estimated the rent rise in that city at 12 to 15 percent. There has been a marked increase in the amount of repair work on rental properties recently. High-priced units have been offered at lower prices.

Landlords and tenants in Atlanta are bracing for a fight over decontrol this month when a new city council takes office. The prospects seem to favor the tenants. Mayor William B. Hartsfield has been opposing all attempts to lift ceilings in the city.

Atlanta has had a continued shortage of low-rent units. There has been no let-up in the demand for housing at $60 a month or less, but the situation has eased for houses and apartments at $80 or more, with slight declines noted last month in the rents on new higher-priced suites. The level of rents in the city rose about 4 percent in the year ended November 15.

Columbus, Ga., moved into the rent-decontrol bracket last week when Gov. Herman Talmadge approved action of that city's rent commission. Savannah has taken similar action to go into effect early this year. Decontrol also has been voted in Charlotte and Asheville, N. C., and Columbia, S. C.

Local action to lift ceilings in Savannah and Charlotte, however, received at least a temporary set-back by an adverse ruling just made by Ed Dupree, Acting House Expediter, because deferred dates were fixed for decontrol in those cities. The resolution adopted by the governing body of Savannah had set February 1 as the decontrol date, and Charlotte had specified May 1.

Mr. Dupree said the Housing and Rent Act of 1949 failed to make any provision for decontrol by local option at a specified future date, but contemplated only immediate actions.

It is expected that amended resolutions omitting the dates will be approved in the two cities.

THE MIDDLE WEST

A considerable number of decontrol actions taken on the initiative of the Office of Housing Expediter and increasing numbers of rent rises granted on petitions of landlords characterized the past year in the nine-State area administered as region VI.

Region VI comprises Colorado, Illinois, Iowa, Kansas, Minnesota, Missouri, North Dakota, South Dakota, and Wyoming, and covers about 2,500,000 rental dwelling units. Nebraska and Wisconsin were in region VI, but Nebraska dropped controls by legislative action over the veto of Gov. Val Peterson, and Wisconsin substituted a State law last September.

The decontrol actions in region VI indicated an improvement in the rental situation in smaller communities, but conditions still are tight in the metropolitan districts, particularly with respect to medium rentals available to families with incomes of $50 a week or slightly higher, where the bulk of the demand is concentrated.

Rents were officially increased in the region for various reasons on 25,000 apartments during October, the rises ranging from $6.94 to $3.83 a month. The final figures are expected to show 35,000 or more December increases. The Chicago Fair Rent Committee has an action pending in the Emergency Court of Appeals for a blanket increase.

Farm areas not affected

Conditions were found to be fairly quiet in the agricultural areas of the Midwest, which never felt the full force of the housing shortage. Few instances of use of the local option clause in the Federal statute have come up. In Ohio, ceilings still are in effect in Cleveland, Cincinnati and Dayton.

In Des Moines, the city council recently rejected a decontrol resolution. In St. Louis a movement has been started to put a decontrol resolution before the city council. In Laramie, Wyo., such a petition recently was withdrawn.

Wichita, Kans., and Blytheville, Ark., were freed of ceilings last week, but the full effect has not yet been apparent in either place.

Continued unprecedented apartment building has eased the housing situation in most Indiana communities and there have been no general complaints of rent increases. Some Federal officials, however, insist that the situation demands more Government-sponsored projects.

Bloomington, Ind., took local decontrol action but formal ratification in Washington was held up because the Bloomington petition had set a deferred date, April 1.

Wisconsin law debated

Controversy has arisen over the merits of the Wisconsin law which replaced Federal ceilings. The State statute authorized rent increases of 15 percent for all tenants who had agreed to a 15 percent voluntary rise previously under the Federal regulations and permitted increases of 30 percent for families which had not signed such agreements.

Most landlords requested and received the authorized increases. Some held the line voluntarily, however, and others decided to charge less than the maximum permitted under the law. The State CIO challenged the constitutionality of the State law, but lost the case in the Federal district court.

Conflicting reports were heard in Topeka, Kans., following decontrol. Officials of a property owners' group which sponsored the decontrol movement insisted that increases had been slight, but a labor union representative declared that in some instances rents had doubled. One instance was cited of a monthly rate increased to $75 from $40.

A disturbed situation was noted in Nebraska, where decontrol was completed on November 2 with the lifting of ceilings in Omaha and Lincoln. Mayor Glenn Cunningham, of Omaha, said tenants' complaints recently had declined to a "trickle" and court records there showed a slight drop in evictions.

The fair-rent committee set up by the Omaha Real Estate Board asserted that these factors indicated "a surprisingly easy adjustment" to decontrol, but Mayor Cunningham and spokesmen for labor countered that they merely indicated that "there is nothing the people can do about it."

"I think that maybe in the spring the situation will begin to adjust itself, but certainly November was too early for decontrol," Mayor Cunningham commented.

He guessed that rent increases had averaged 45 percent.

Al Witzling, president of the Omaha Central Labor Union, said that the increases would average 50 percent. He declared that one reason for the dearth of complaints is the fear of eviction.

Dr. Wesley Jones, who represents the Urban League on the Omaha fair-rent committee, stated that the rent situation as a whole was fair, with increases averaging 30 percent. Peter Marchetti, lawyer representing the Small Property Owners Association, reported many large houses made available for rent after having been held off the market while controls existed. Jack Evahn, representing the Omaha Building Owners and Managers Association, estimated the average rent increase at 20 percent.

In Lincoln, Joseph T. Wishart, lawyer and chairman of the Nebraska Small Property Owners Committee, estimated the average rise at 18 percent.

THE WEST COAST

On the west coast conditions generally were reported stabilized, with controls continuing virtually intact.

A considerable number of higher rents was noted in Spokane, Wash., after 5 months of decontrol. James P. Dillard, chairman of the Spokane Rent Advisory Board, which recommended the decontrol, noted in a report last month to Housing Expediter Tighe Woods that the average increase was 14.3 percent, or about $5.25 monthly. He added that a few rental housing operators had taken advantage of the situation to put unreasonable increases into effect.

He stated that there had been a large increase in the number of properties offered for rent recently, and estimated the number of Spokane vacant units at 1,200 to 1,500. One reason is the heavy postwar construction of fairly low-priced houses.

On the other side of the picture, Fred Simmons, who managed the Spokane area rent office before decontrol closed it, announced that he had received complaints from 100 tenants that their rent had been increased 38 to 53 percent.

In the Los Angeles district rents were reported still "extremely tight." Decontrol was authorized on December 7 in Beverly Hills and Ben C. Koepke, area rent director, said that complaints by Beverly Hills tenants of rent increases of as much as 275 percent and averaging nearly 60 percent had reached his office. Bitter controversy preceded decontrol in Beverly Hills, west end neighborhood of Los Angeles.

Complaints also were received from Pasadena, Alhambra, Elmonte, and Pomona. The average increase cited in the complaints, according to Mr. Koekpe, was slightly more than $52, indicating that some owners were attempting "rent gouges" and that others were taking this method of trying to get rid of unwanted tenants.

General Los Angeles picture

Many modern apartments are available in the Los Angeles district at $75 or more a month, unfurnished, but hundreds of families are looking in vain for places at $35 to $70 and new arrivals are complicating the situation.

A growing sentiment for decontrol was noted in Long Beach and some other populous communities near Los Angeles, where the housing situation has improved lately.

Controlled rental units in the San Francisco area show an average rate of $44.42 a month, compared with an average of $82.50 for suites in new houses not under control, according to the Federal rent office there. Rent adjustments were granted in the year to landlords of more than 7,000 units, with an average increase of $8.25 a month. The total annual income of landlords was increased by about $695,000. All of the populous centers near San Francisco still are under the rent regulations.

THE SOUTHWEST

In the Southwest interest has been centered on the results of decontrol in the large cities of Texas. The Federal Bureau of Labor Statistics reported that the index of rents in Houston rose 11 percent in the 3 months which ended November 15. There was said to be a comparable situation in Dallas, Fort Worth and San Antonio, all of which have been free of ceiling since September 1.

Rents for some houses in the four cities have been increased 10 to 15 percent, with isolated increases of perhaps as much as 100 percent, according to the Houston Property Owners Association. The association asserted, however, that these increases had been largely offset by lower rents for many apartments.

There have been recurrent warnings lately that Houston may be "overbuilding" so far as multi-family housing is concerned. A renter's market appears to be returning. There also has been a broad expansion in construction of houses. A further competitive factor has been the return of many houses to the rental market following decontrol.

Woodrow Wilson: Man of Half Century

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. BRYSON. Mr. Speaker, it has been interesting to read the list of names chosen as the most outstanding men of the last half century. Rightly appearing among the great is the name of Woodrow Wilson.

David Lawrence, in the current issue of United States News, presents the name of President Woodrow Wilson as the most outstanding man of the past 50 years.

As a part of my remarks, I beg leave to insert said article in the Appendix of the RECORD:

WOODROW WILSON: MAN OF HALF CENTURY
(By David Lawrence)

If decisive influence upon the course of world affairs is the criterion in determining what man during the first half of this century did most for mankind, then the fateful heroism of Woodrow Wilson transcends the claims that may be offered in behalf of anyone else.

For it was Woodrow Wilson who turned America away from more than a century of aloofness and traditional isolation and placed her mighty industrial and military power at the disposal of the free democracies of Europe and thus tipped the scales on the side of victory in World War I. This affected the whole destiny of our modern civilization and kept aloft the torch of democracy which had burned so brightly since our own War for Independence and the French Revolution.

It was Woodrow Wilson who in his war message of April 1917 unhesitatingly recommended to Congress the conscription of our manpower, the extension of unlimited financial aid to our allies, and the prompt dispatch of an American expeditionary force to battlefields more than 3,000 miles away.

It was Woodrow Wilson who in 1918, at the critical moment of the war, insisted on a unified command among the Allied armies and not only recommended Marshal Foch as supreme commander but stood staunchly behind him in the great decisions of World War I.

It was Woodrow Wilson who promulgated the doctrine of the "self-determination of peoples from which has since come a recognition of independence movements in Ireland, the Philippines, India, Burma, Israel, Indonesia, to say nothing of the struggles for democracy in central Europe unhappily thwarted now by another autocracy.

BIRTH OF AN INTERNATIONAL CONSCIENCE

It was Woodrow Wilson who gave the world an international conscience. He sought to secure for the world through the League of Nations not only a system of collective security but the maintenance of the territorial integrity and independence of all nations, large and small.

It is no disparagement of his record that America switched back to isolationism in 1920 and forsook the League by refusing to accept its obligations. It is no disparagement, either, that the Charter of the United Nations corrected some of the mistakes experienced with the Covenant of the League. It is no disparagement of Woodrow Wilson's record that a Hitler arose to threaten democracy again and based his aggressive action on the mistaken assumption that the turn to isolationism in America in the twenties was an assurance against our participation in a second world war.

It is natural that the great eloquence and extraordinary pen of Winston Churchill should command attention for him in choosing the Man of the Half Century. But while Churchill saved his own country by his courage in 1940, the die had already been cast for American cooperation in World War II by the decisive steps "short of war" taken by President Franklin D. Roosevelt when Holland and Belgium were invaded in May 1940.

If decisive influence on the course of world history is the yardstick of measurement, then Franklin Roosevelt would appear to stand higher than Winston Churchill, not by reason of any invidious comparisons of ability or personality but solely because of the immense power which Mr. Roosevelt wielded and the decisions he made to use that power in the best interests of mankind.

GOALS OF HUMAN HAPPINESS

Franklin Roosevelt ultimately carried forward what was left undone when Woodrow Wilson's principles were abandoned in 1920 by an isolationism which was to hold fast in both our political parties for nearly two decades afterwards. Even Mr. Roosevelt in the spring of 1932, as he camaigned for the Democratic nomination for the Presidency, wrote that he considered the League of Nations as dead. He displayed no fervor about reviving it until 1945 when he exacted from Stalin at Yalta a pledge to help build the United Nations.

If the course of history is to be influenced in the future by some form of world government or world discipline or by some formula of collective security, the ideals for which Woodrow Wilson gave his life must be viewed as the ideals of the century. They represent still the stirring manifestation of a conscience among the peoples of the world. They are still the aspirations of men and women, whether oppressed behind the iron curtain or elsewhere.

We have not yet come close to those goals of human happiness for which Woodrow Wilson strove so valiantly. But Woodrow Wilson's passion for human freedom in an international sense and his recognition of the ever-increasing need for liberalism in a national sense are today the very essence of such progress as we have made in recent years not only in America but throughout the world.

Resolution of the Common Council of the City of Buffalo

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution of the Common Council of the City of Buffalo:

CITY OF BUFFALO,
OFFICE OF THE CITY CLERK,
January 4, 1950.

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: Pursuant to the directions of the Common Council of the City of Buffalo, I enclose to you herewith copy of Resolution 160, passed by that body at a meeting held December 27, 1949, in relation to funds for the development of water-front facilities.

Very truly yours,
Dr. J. J. TRONOLONE,
City Clerk.

Resolution 160
(By Mr. Rybka)
Funds—Water-front development

Whereas the capital expenditures committee, created by the council, is presently considering the development of the water-front facilities of the city of Buffalo and has appropriated a sum of money for the purpose of initiating such development; and

Whereas such appropriation is but a small fraction of the amount of money needed to defray the expense of the development of our water front; and

Whereas the citizens of Buffalo are entitled to and should have a modern water front complete with park and recreational facilities, bathing beach, boat harbors, etc., without the necessity of traveling great distances to enjoy such facilities outside the city of Buffalo; and

Whereas there is presently, before the common council and the capital expenditures committee, a proposed skyway in addition to water-front development which would facilitate traffic conditions along the water-front area and that such plans represent a large expenditure of money; and

Whereas such development would enhance the value of our city by attracting tourists and new industry: Therefore be it

Resolved, That the common council go on record memorializing the New York State Legislature, Congress, and Senate of the United States for State and Federal financial aid to the city of Buffalo to be considered at the next session of both bodies beginning January 1950; be it further

Resolved, That the area members of the New York State Senate, Assembly, and United States Senators HERBERT H. LEHMAN and IRVING IVES and area Congressman CHESTER GORSKI, ANTHONY TAURIELLO, and WILLIAM PFEIFFER be advised of the common council's action and to take the necessary appropriate measures to secure the requested financial assistance for the city of Buffalo.

Passed: Ayes, 15; noes, none.

Taxes Big Issue Faced by Congress

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Courier-Times of New Castle, Ind., for December 28, 1949:

TAXES BIG ISSUE FACED BY CONGRESS

The question of taxes promises to be the most important that will face Congress which starts its session next week. No one knows for sure what the President will recommend, but he is certainly facing a public which is more and more becoming tax conscious. Mr. Truman has stated that he prefers higher taxes in order to avoid deficit financing and has been met by demands that deficits be eliminated through the spending of less money.

One of the larger of the tax issues concerns the so-called excise taxes. These are the

left-overs from the war and include many items, automobiles, railroad fares, telephone and telegraph tolls, furs, cosmetics and a lot of other things originally classified as luxuries. Many Republicans, headed by JOE MARTIN, GOP leader in the House, believe the time is here to repeal these excise levies and they are being joined by many Democrats.

Of course, if the excise levies are repealed, revenue to make up the deficit must come from other sources. The argument of those favoring repeal is that it would prove a healthy stimulus to business generally and this would make possible a greater normal tax return to the Treasury. If, for instance, the $550 or $600 Federal tax involved in the sale of an automobile be repealed, thus bringing the price down to where sales would boom, the income tax of the manufacturers might be increased to the extent that the return to the Treasury would balance the loss in excises. The same reasoning could be applied to dozens of now taxed articles and the whole thing might be the making of an unprecedented business expansion.

One thing is sure, the whole field is worthy of exploring and Congress is likely to do that very thing.

Mr. Truman on Formosa

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times for January 6, 1950:

MR. TRUMAN ON FORMOSA

President Truman's statement on Formosa is a direct reply to the recommendation of former President Hoover and Senator TAFT that United States armed forces be used to aid in the defense of the island. They will not so be used, the President states. We feel that a majority of Americans will agree that this decision is well taken and that the risks of a possibly unsuccessful military commitment outweigh the advantages that might be gained.

Beyond that point, however, the President's declaration compounds the confusion in which the problem of Far East policy is already wrapped. The United States, the President says, has no desire "to establish military bases on Formosa at this time." If not "at this time," then at what time? Why the gratuitous introduction of this qualification?

The United States, says Mr. Truman, will not pursue a course that would lead to "involvement" in a civil conflict in China. But the President has repeatedly pledged the "involvement" of the United States in the cause of the survival of free states against the depredations of aggressive communism. The President's statement means that the United States does not propose to be involved in the support of a Government which, whatever its faults of leadership, we still recognize and presumably expect to continue to recognize against precisely those forces that the President has identified as aggressive.

In addition, the President says that we will not provide "military aid or advice" to Chinese forces on Formosa. That needs explaining. Does it mean an embargo on arms shipments? Apparently not, since the President says that the forces on Formosa have resources adequate to obtain items for defense. Obtain them from where? From the United States? The President says we will not provide "advice" to the Chinese. Is this merely a disavowal of the plan to send some sort of military mission or does it mean that the Americans who are now on Formosa, actually not only advising but training Chinese, will be returned to the United States?

The President says that the present authorized ECA program will be continued. For what purposes and in what amounts? If it is used to strengthen the island's industries, and thus indirectly advance its military potential, will this not constitute military aid? Do the resources of Formosa include any part of the $75,000,000 that the President was authorized by Congress to spend in the China area? If not, why not?

The President has said, in effect, that we wash our hands of Formosa. On the same day, the President's Ambassador Extraordinary, Dr. Jessup, declares in Tokyo that we have no intention of abandoning China. What China? Does Dr. Jessup mean that we have no intention of abandoning Communist China? That seems unlikely. Then he must mean the lawful government of China which President Truman indicates that we are, in effect, abandoning.

It is small wonder that the British, on the eve of their own recognition of the Chinese Communists, regard our policy as vacillating and unpredictable. If it had been otherwise the British might have been considerably less precipitate in recognizing the Mao Tzetung regime, and we would have had one less element of confusion in the picture.

The President's statement has many of the earmarks of a political impromptu designed to meet opposition criticism and to give a line to those Members of Congress who are always ready to support the administration. But it is more than time, now, that the entire matter have a complete airing, with all of the hitherto withheld reports about China brought out into the open. The only place in which that airing can take place is the elected Congress.

New Declaration of Independence

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. COLE of New York. Mr. Speaker, one of the outstanding farm journals of the country, the American Agriculturist, whose editor is E. R. Eastman, has inaugurated a movement to arouse its readers and the country to the dangers of current trends in Government. It has published a new Declaration of Independence and is soliciting the support of all citizens who are ready to subscribe to the declaration and actively participate in steps to forestall the continuance of these socialistic trends.

Feeling that this declaration should be of general public interest, I am taking the liberty of including it as an extension of my remarks:

WILL YOU PLEDGE YOURSELF TO THIS NEW DECLARATION OF INDEPENDENCE?

The following new Declaration of Independence was written by and represents the joint thinking of a group of responsible citizens concerned with the gradual loss of our liberties. They and we are determined to do something about it.

We believe that no American citizen would vote at any one time for the amount of socialism we now have. And we are sure that most people do not realize how fully this country has gone socialistic, or that socialism is the half-brother of communism. Socialism has crept up on us a step at a time. And, because of our indifference, our selfishness in getting our own little handouts from government, or because of our concern for our private affairs, creeping socialism has now reached the walking stage, and unless we can stop it, it will soon be galloping.

The consequence is that the Nation has gone a long way down the road toward centralization of government and the philosophy that the state is more important than the individual. We have more and more government employees, government control, deficit spending, and ever-higher taxes, all of which is resulting and will continue to result in the loss of our most precious possession, individual liberty.

Because of this alarming situation, more and more citizens believe that America is on the downward road and that we must immediately retrace our steps back to the crossroads and start again on the right road to our true destiny of free opportunity for everyone. This can only be done if the people themselves realize what is going on and do something about it. The welfare of every citizen of the United States, and the welfare of the world, depends on what course America follows in the immediate future. It is a grave responsibility.

So, read the statement that follows. If you agree with its principles, pledge yourself to stand by and fight for these principles, and get your friends to do the same.

E. R. EASTMAN.

We, loyal citizens of the United States, determined to maintain and preserve the blessings of liberty and of personal opportunity for ourselves and for our posterity, hold it to be the truth that our American Government and our American system of free enterprise have for generation after generation given our people more opportunity to develop their own natural talents and ability to achieve success and a higher standard of living than has any other government or social system of the past or present. Competition and incentive provided by the free market—in other words, individual enterprise—are absolutely necessary to progress resulting in an ever higher standard of living for everybody.

We emphasize the tremendous sacrifices that have been made since the days of King John and the Magna Carta to the present to achieve our present degree of political, religious, and economic liberty. We submit that one cannot exist without the other.

We are agreed that these liberties are rapidly being lost, and that in many respects there is less liberty in the world today, even in America, than there was before the Declaration of Independence. These losses of our liberties nullify the untold sacrifices of our fathers and sons and are largely due to a false belief on the part of a large number of people that some other social or government ideology, some other "ism" of the Old World, is better than our own Americanism.

We hold it to be self-evident that true liberty of all kind is based upon the welfare and the importance of the individual, that government exists for the individual and never the individual for government. It follows, therefore, that if his importance is to be maintained, more emphasis must be placed on the individual and his organizations, more emphasis on volunteer work for the public good, and less upon force or compulsion by law and government regulations. The powers of government should never be used except to provide the rules that make maximum freedom possible, to protect the citizen from abuses within, to

provide safety from outside aggression. When the powers of government are used they should be based on law, not on bureaucratic regulations.

In view, therefore, of maintaining these basic and vital principles we solemnly pledge ourselves to work with our representatives in the State and Federal Governments, with our associates, with our organizations, with the general public, and with our friends:

I. For less Government in business, agriculture, and labor.

To this end we support the Hoover Report, which calls for fewer Government services and consolidation of departments and bureaus resulting in a lesser number of public employee's, lower taxes, and more efficiency.

II. We will regularly and constantly call attention to the growing army of government employees, Federal, State, and local.

As of July 1949, there was a total of approximately 6,500,000 employees on the State and Federal pay rolls, about two-thirds of whom were State and local employees and one-third Federal. These figures compare with the figures for 1940, when the total number was approximately 4,500,000, with almost 1,500,000 of them on the Federal pay rolls. It is plain that America cannot continue to exist on this spendthrift basis.

We are certain that this army of employees, with their total voting power and their natural and normal inclination to keep themselves in office, are a dangerous factor in our Republic. We are convinced that there is confusion and duplication of services, and that many of the jobs done by Government employees can be better done by the individual and his organizations on a volunteer basis.

III. We are determined to emphasize at every opportunity the growing public debt, the constantly increasing current expenses of Government, the ruinous effects of these, and the resulting taxes upon every business and individual in America.

We are convinced that the huge strain of ruinous taxes is increasingly retarding the investment by individuals and industry of capital in constructive enterprises. Such investments are essential to continued expansion of employment and continued growth of the country. Before the war, in 1940, the total State and local tax bill was $8,500,000,000, and that of the Federal Government was $5,500,000,000. Now, in 1949, the State and local tax bill is $14,500,000,000, and the Federal is $42,000,000,000. Even excluding Federal expenses due to war, costs of the Federal Government have doubled. In the last 4 years the Government has spent more money than in all the preceding 169 years since the founding of the country. The power to tax is the power to destroy.

IV. We believe that unrestricted Government subsidies and price-support schemes will destroy liberty and lead to national bankruptcy. Therefore, we will urge the greatest possible use of the free market, competitive system in every segment of our economy.

We submit that an ever increasing standard of living can come only from an ever increasing production of industrial and agricultural products. We believe that free market prices with a stable price level are the best possible guides to production of agricultural and industrial products. Government subsidies and price supports must always lead to controls and restriction of production. Whenever production is restricted, unemployment increases and the national standard of living falls.

The most important factor in maintaining a stable price level is the fiscal policy of government. We believe that government attempts to inflate and deflate the currency bring about instability rather than stability of the price level. We believe that thrift in government, a pay-as-you-go fiscal policy, is conducive to a stable price level and we will work to that end.

V. We believe that every American should have the unrestricted right to work and earn.

VI. We pledge ourselves to work for a better understanding of the principles on which this Government was founded, between and among agricultural, industrial and labor groups and individuals in general, with a liberal and tolerant attitude toward all constructive groups and organizations in our political and social economy, realizing that peace among the nations must first start with understanding and friendship among ourselves.

Now, Mr. President, Just Who Pays Our Tax Bill?

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. JENSEN. Mr. Speaker, on this opening of the second session of the Eighty-first Congress, we, the elected Representatives of the American people, must, as never before, take into consideration the financial condition of our United States Treasury. We must take a good, square look down the road we are traveling before it is too late to save our people from utter destruction.

All of you, my colleagues in this House of Congress, have just returned from your respective districts, as have I, and I am sure you will admit, if you want to be honest with yourself and the people, that your people, like mine of the Seventh Iowa District, are more deeply worried and nearer to losing heart when looking into the future, seeing what is in store for them and their children, than ever before in peacetime. Surely you must all agree that they have good and sufficient reason to be worried. From the lips and hearts of thinking people, in all walks of life, whether it be the laborer, the farmer, or businessman, all without exception, asked me why, oh why, does Congress spend our money as if it grew on trees? Then, when the news hit that the President contemplated a $5,500,000,000 deficit for the fiscal year 1950, which ends next June 30, without promising a greatly reduced spending program for the fiscal year 1951, their hope for the future looked still darker. And, to add insult to injury, President Truman demanded an increase in taxes. That was the last straw.

Of course, the President said only the tax on corporations will be increased, but what he forgets is that most of the American people have fully awakened to the fact that to impose more taxes on any business, large or small, is just another concealed tax on the consumer, who is the wage earner, the farmer, the retired elderly folks, and all the rest of the consumers. They must pay in tax dollars in the final analysis every penny Congress spends, either with cash, withholding tax, or by the hidden tax on everything they buy. The hidden tax now amounts to about 30 cents on every dollar's worth of goods they buy to eat or use. Surely the President knows that the ultimate consumer has no place; nor any way to shift his taxes; he must pay the bill which the President is trying to hoodwink him into believing is paid by the corporations, or the "big bugs" as the administration likes to call American industry and business. Business must add taxes onto the price of all the goods they manufacture or sell every day to the consumers of America. If they did not do that, they would very soon go bankrupt, and the President knows that too.

Let us see just who the folks really are who are being soaked by the vote-buying and reckless-spending proposals which are demanded by the President, and have been demanded ever since he took over a few months before our fighting Americans, with their brains and brawn and blood, defeated the gang across the seas, whose dictators had promised their subjects security and Utopia at the end of the same road down which the President seems determined to lead us.

Who are the folks who must pay this bill? Well, that is an easy one to answer when we get right down to brass tacks. It is the consumer who pays the fiddler, being the laboring people of America, both blue-denim and white-collar workers, plus the retired elderly people, who altogether constitute about 60 percent of the consumers dollarwise; and our farmers who now number about 20 percent of our total population, but who buy and consume one and one-half times more per capita than do the average of the rest of us, making 30 percent total consumption by our farmers dollarwise. Therefore, that leaves only 10 percent for the owners of business and industry of every kind to pay. But mind you, it is this small 10 percent of our consumers dollarwise who our President and his socialistic palace politicians are trying to trick and doubletalk us into thinking they want to soak. Then the truth is, as I have just shown, it is Mr. Farmer, Mr. Wage Earner, and the retired elderly folks, who are getting the real soaking and will get a worse soaking if this vote-buying outfit in power is not stopped.

An editorial in a recent issue of one of our leading farm magazines, stated:

A rising complaint about taxes is evident over the country. People are beginning to realize that the direct taxes, such as property, income, and school levies, are by no means all they are paying. Back of these is a jungle of hidden taxes. They are a part of the cost of every business and are passed along in the price of everything a person buys. An ordinary good suit of clothes is calculated to carry more than 100 different taxes, an automobile more than 200.

Because the tax collectors' fingers reach into one's pockets at almost every turn, they now take a large part of all income. The Northeast Farm Foundation estimates that they absorb, in visible or invisible ways, over 30 cents of every dollar the farmer earns.

The rate at which the tax bill is growing raises a question of critical importance to everybody. It is simply: How much of the national income can be taken by taxes without leaving too little for the Nation's economy to operate at full capacity? * * *

What should be done is plain. It is to call a halt to unproductive tax spending and to examine every new proposal along that

line solely from the standpoint of whether it adds to or takes away from the funds in the common purse. Upon their conservation depends the ability of industry to make and sell goods, of labor to have steady employment, and of agriculture to enjoy a stable market.

The tax question is now a matter of saving a good standard of living in America.

Maybe you personally have not felt the soaking yet, but you will sooner or later regardless of who you are or what you do, unless this Congress makes up its mind to ignore the sweet mouthings of our President and his power-mad, wasteful spenders, and take the bull by the horns and bring all requests and demands for Federal expenditures in line with what the American people can afford to pay for the running of their Government in Washington.

The first session of the Eighty-first Congress spent over $1,200 for each family in America to pay. Does that mean anything to you, Mr. President, or don't you care? Don't forget, Germany's Hitler, Russia's Stalin, and England's Attlee also promised their people security and utopia in exchange for their votes. Their people got neither, but to the contrary they lost their God-given liberties. You know the sad, sad story. Look at England today.

As a member of the Appropriations Committee of this House of Representatives, I plead with you my colleagues for your help in saving our country from committing national suicide through the bankruptcy route as has been the fate of every nation on earth which traveled the full road we are now traveling at breakneck speed.

Regardless of party, I pray that every Member of this Congress will recognize the duty to be performed and rise to that duty. The signposts on the road ahead are now crystal clear.

Martin Gorski

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. MADDEN. Mr. Speaker, it was indeed a great shock for me to learn of the sudden passing of our colleague MARTIN GORSKI. Martin and I were sworn in as new Members of the Congress on the same day.

As my district adjoins the city of Chicago, I soon found that the problems, legislative and otherwise, existing in his district were identical on a great many important matters of legislation to those of mine. On many occasions we consulted and exchanged ideas, and I always found his good judgment and common sense very helpful.

MARTIN GORSKI came to this country from his native Poland with his parents when a mere child. He was in every sense of the word a self-made man. I do not know of any Member of Congress who regarded his congressional duties and responsibilities more seriously than MARTIN GORSKI. Everyone who knew him respected his opinion, and he enjoyed the confidence of many Members of this House. He will be sorrowfully missed by his friends in this body, as well as throughout the Chicago area.

I wish to extend to his family my sincere sympathy in their bereavement.

The Late Sir Willmott Lewis

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. MONRONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an editorial from today's issue of the Washington Post and call the attention of the Members to the death of a great friend of America and one of the world's finest and most noted newspaper men.

Bill Lewis' understanding of America, our traditions, our personality, and our history did much during his many years of service in Washington to cement relationships with the British Empire by giving both the United States and his native country a better understanding of one another.

His anecdotes and salty humor will be greatly missed on the Washington scene, but will long live in the memories of his many friends here and throughout the world. The fourth estate has lost one of its most honored and respected members.

SIR WILLMOTT LEWIS

Few deaths, we suspect, have occasioned such an intimate sadness among so many persons as that of Sir Willmott Lewis, who was for 28 years the Washington correspondent of the Times of London. There is probably no other man in Washington who has enjoyed so much admiration and affection among the members of his own trade. Among them his wit, intelligence, kindliness, and companionability had won him a special status, secure from all jealousy or malice.

It was one of Sir Willmott's peculiarities that with all his long residence here he never shed any of his British mannerisms. But it was also true that he understood the American psychology and the workings of American politics far better than most Americans. Among the many things for which he was famous were his informal lectures in American history to his American colleagues at the bar of the National Press Club. He was an incomparable raconteur, and his fund of anecdotes, accumulated partly from personal experiences in many corners of the world, partly from his omnivorous and incessant reading, was well-nigh exhaustless. He had encountered at one time or another in his career nearly all the great historical figures of the twentieth century, and he had an intimate imaginative acquaintance with most of those who had died before his time.

His dispatches were models of essay prose. It is safe to say that those who followed them in the Times were far better informed about what was happening in Washington than most American newspaper readers. For that matter many eminent American Washington correspondents acquired the habit of reading them for enlightenment.

It was a commonplace observation in Washington that Sir Willmott Lewis had won more good will for his country than a whole succession of British diplomats, and indeed both by his colleagues and by the British Embassy he was recognized as a sort of unofficial ambassador. He was Welsh by origin, and part of the secret of his charm for Americans of all types and trades was a kind of wild Celtic exuberance that broke continually through his affectation of languor.

The legends that have accumulated around Sir Willmott Lewis are innumerable, and will probably be repeated and elaborated as long as all those who knew him survive. Now that he has gone, Washington will seem a sadder and drearier place.

Cotton-Acreage Allotments

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. DEANE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I insert a resolution adopted by the Richmond County, N. C., Board of County Commissioners, and a letter from Mr. N. L. Hendrix, county agent for Richmond County, involving the cotton-acreage allotment.

These representations and many, many others that have come to me clearly indicate that the Congress must with haste make changes in the legislation so as to prevent widespread unemployment and so spell out the law that the acreage allotments will be fair and equitable.

The cotton growers in my district strongly favor control but the severe cuts if carried out in this first year will develop economic tragedy. Even now many honest and faithful tenants are making their way to county welfare offices for actual necessities of life.

The resolution and letter follow:

RESOLUTION ADOPTED BY THE RICHMOND COUNTY BOARD OF COMMISSIONERS, ROCKINGHAM, N. C., JANUARY 5, 1950

Whereas pursuant to Public Law 272 the North Carolina cotton growers in the cotton referendum of December 15, 1949, voted for marketing quotas and cotton allotments; and

Whereas there was much dissatisfaction with the formula for establishing acreage allotments under the provisions of the Public Law 272 and, despite the dissatisfaction, the cotton producers voted for the referendum, clearly indicating that a control program was desired in some form; and

Whereas the formula and acreage allotment which have been adopted and will be used under the marketing and allotment program will impose an undue hardship on many people who have depended on cotton production for many years, and in many cases individuals will be left destitute, dependent entirely on welfare agencies: Now, therefore, be it

Resolved, That the Honorable C. B. DEANE, United States Representative, Eighth Congressional District, State of North Carolina,

be and he is hereby, requested to use his influence in an effort to support some legislation, by way of amendment, or otherwise, which will more nearly equalize the quotas or allotments for the cotton producers in Richmond County, N. C.

COOPERATIVE EXTENSION WORK IN AGRICULTURE AND HOME ECONOMICS,
STATE OF NORTH CAROLINA,
Rockingham, N. C., January 4, 1950.

Hon. CHARLES B. DEANE,
Old House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: The 1950 cotton-acreage allotment in Richmond County is not adequately distributed to the farmers who have been growing cotton in this county. Figures show that 391 farmers have an allotment of less than 5 acres, and 341 farmers have allotments of exactly 5 acres. These 732 farmers have a total allotment of approximately 3,600 acres. Many of this number of farmers grew cotton only 1 year out of the 3-year period of 1946, 1947, 1948.

To illustrate, Farmer No. 1 grew 5 acres of cotton in 1946; Farmer No. 2 grew 5 acres in 1947; and Farmer No. 3 grew 5 acres in 1948. Thus, the average cotton planted by these three farmers would be 5 acres. Under the existing allotment laws, these three farmers have a total allotment of 15 acres. This may be overstressed, but I feel that this type farmer in Richmond County certainly has not averaged more than 50 percent of this allotment in the years discussed. Thus, the farmers who have been growing cotton as the principal crop are being severely penalized for 1950.

There is a total of 1,132 cotton allotments in this county. Therefore, the 400 farmers who have been growing the greater percent of the cotton are only getting a little more than 5,000 acres.

As it is now worked out, the 732 farmers who have an allotment of 5 acres or less are getting more allotment (and a large percent of these farmers do not depend on farming for a living) than the average planted acres of the base period; whereas, the 400 farmers who depend on farming for their main income have an allotment of approximately 51 percent of their normal planted acreage. A few farmers have slightly above this figure, because of their war crops planted and open land factor.

I am not writing this in behalf of the big landowners, but for the tenants on these farms. For instance, one farmer in this county who has been planting approximately 500 acres of cotton each year had his allotment cut almost 50 percent. There are approximately 75 people on the farms operated by this farmer that depend principally upon cotton for a living. Some of these tenants have lived with this farmer for 20 years or more, but this farmer cannot keep these tenants on this small acreage allotment. Now, just what is going to happen to these tenants?

If farmers of this size were allowed 70 percent of their normal acreage, they could probably take care of their tenants.

Eighty-nine farmers in Richmond County who did not plant cotton in 1946, 1947, or 1948 received cotton allotments. This was received by the past farm cotton history and the production of war crops. Most of these farmers were surprised at getting a cotton allotment, and normally would not plant cotton in 1950. However, most of these farmers will be reluctant to give up this allotment and I don't blame them, for it would be an asset in case the farm should be for sale.

The total cotton allotment in Richmond County is approximately 9,500 acres, and this allotment is close to the acreage that has been planted in the past, but it is just not on the farms that have been growing cotton.

The additional acreage which would be required to give each farmer an allotment equal to 70 percent of the average 1946, 1947, 1948 actual planted acreage is 1,909 acres.

Anything that you can do to help adjust this situation would be greatly appreciated by the farmers of Richmond County.

Very truly yours,
N. L. HENDRIX, *County Agent.*

The Big Job for 1950

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert this editorial from the January 1 edition of the Milwaukee Journal:

THE BIG JOB FOR 1950

The Nation's big job for 1950 is the reorganization of Federal agencies—to bring costs within the ability of taxpayers to pay, and to bring about the efficiency by which we can meet our problems, at home and abroad.

The groundwork has been done. The Hoover Commission took 2 years to find out what happened to our sprawling, improvised Government under the impact of two world wars and a depression. Today we are wasting—actually wasting—not millions but billions. We are setting forth democracy as the most desirable form of government, but the best we can show is only a low percentage of efficiency.

The Hoover Commission laid down the outlines for improvement. It made in all 318 recommendations. The President then took leadership and the first session of the Eighty-first Congress responded by enacting 20 percent of the program. The hard pull will come on the 80 percent remaining, and that points up the job for the second session.

There are two possible road blocks. One is political partisanship and the other is the vested interest of bureaucracy.

The Hoover Commission itself kept partisanship outside the door. Congressman CLARENCE J. BROWN, who wrote the legislation that created the bipartisan set-up, could say before the recent reorganization conference in Washington that never once did the Commission in formulating its recommendations divide on partisan lines. There were differences but they were personal differences. Partisanship can be kept out.

The greater obstacle is bureaucratic obstinacy. People are becoming aroused, however. The Citizens' Committee for the Hoover Report is becoming a mighty force. But it is still possible that bureaucracy may stymie reorganization by using vast numbers of people—the citizens themselves—to do it. Here is an example:

One of the most amazing disclosures of inefficiency was that made by the task force which surveyed the Veterans' Administration. This sprawling, overstaffed set-up is of vital importance to 18,000,000 veterans, and of scarcely less importance to all taxpayers because of the billions involved in its budget to meet the Nation's obligations to the men who served America well. Yet the VA uses 10 times the amount of labor to handle an insurance policy that a private company uses. It takes many more days, even weeks, to settle a death claim than private companies take. By actual survey it was shown that the average employee in the VA insurance department does only one-fourth as much work as the equivalent employee in a private company.

One might think that the Veterans' Administration, under such a showing, would leap to reorganization. It has not. The Hoover task force has reported an almost total lack of responsiveness. The chances are that the VA will fight reorganization.

Enough has been said to indicate what line the opponents will take. They will try to make veterans believe that their interests are being assailed. This is not true. The Hoover Commission has not challenged a single benefit to former service men and women. It is asking only that the VA be efficient enough to serve the veterans without wasting the money that the people give. But if the veterans can be aroused to a fancied danger, that will be a formidable attack, indeed.

Another obstacle will come on reorganization that deals with western resources. There the interests of the Army engineers, the Bureau of Land Management of the Interior Department, and the Forest Service of the Department of Agriculture will clash. There will be an opportunity to promote a mighty upheaval in the West in which the real interests of the Nation could be sunk.

Nothing is more important than that our natural resources—our forests, our grazing lands, our topsoils, our minerals, and our water supply—be conserved. But they are being wasted, and dollars along with them, in the present chaos of agencies. If reorganization can best be done by shifting and combining bureaus, as the Hoover Commission recommended, fine. Or if it would be better to create a new Department of Natural Resources, as the Commission's own task force recommended, then it can be done that way. This is for Congress to decide. The unforgivable thing would be for Congress to let pressure groups push it off the track.

This whole reorganization job is tremendously important. Every adult American ought to insist that it be done in 1950.

Truman Promises All Things to All Men

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. SHAFER. Mr. Speaker, the first few days of the second session of the Eighty-first Congress indicate conclusively that President Truman and his henchmen are going to attempt to be all things to all men. Since this cynical political strategy has succeeded in the past, President Truman and his followers believe it will continue to succeed politically. They may be right.

In his message to Congress, Truman alined himself with the "I'm-for-economy, but—" group. In other words, he is for economy in speeches to gullible groups of our citizens, but he is not going to do anything about bringing economy to pass in government. He wants to spend you out of all your income.

The President came out in favor of free enterprise. But the kind of "free enterprise" he talked about is the kind the slaves used to enjoy on southern plantations before the Civil War. The slaves were free to come and go as long as they

did not leave the plantations. They were free to mix and mingle in the slave quarters as long as they did not come up around the big white house and try to obtain a better deal on the amount of time they worked each day for the "old marster." They were free to accept hand-outs from their benevolent "old marster," but not to kick against the welfare measures he suggested—such as long rows of cabins, ill lighted, broken down, and filled with vermin.

Oh, yes, there was freedom on the old plantations—just as there is freedom in the "poorhouse state" for which Truman is plugging away. The people in the big White House can throw parties, get away with tax-free expense allowances of $50,000 a year, have a private yacht out on the river, and lord it over the foremen, subforemen, and vassals.

Remember, when Truman talks about free enterprise, he is talking about the freedom which he, Harry Vaughan, and all the rest of the freebooters exercise in the big White House while the rest of us are supposed to be out in the backhouses singing hymns. Occasionally, we might be allowed to come around for the lighting of a Christmas tree, to sing folk songs, or to hear the "old marster" expound the virtues of freedom, but by and large, our task is merely to work and sweat and pay.

The "old marster" in the big White House, like those on the southern plantations of long ago, can afford, as long as world conditions allow it, to overlook what is happening outside his "plantation." Thus, Truman overlooked talking about the steady, ever-onward aggressive march of communism. He dodged the issue of whether we shall recognize Spain, whether we shall withdraw recognition from Soviet Russia, whether we shall defend Formosa against the Communist hordes, or whether he is going to clean out the dilettantes, the Hiss-lovers, the knaves, and the fools around him. He can afford to be the "old marster" a little longer.

One of these days, the slaves in the backhouses are going to awaken to what is happening to them and to their beloved "plantation"—this great land of ours. When they do, and when they understand fully what the "old marster" and his crowd are doing to them and to their land and to their chances for survival, there is going to be a whoop and a holler that will make those emitted by slaves freed by Lincoln seem like the tinkling of a cowbell compared to the explosion of an atom bomb.

If the people—and by the people, I mean every Tom, Dick, and Harry, every laboring man and farmer and the rich and the poor—ever wake up to what "Marse" Harry has in store for them, and already is practicing upon them in subtle ways, they will vote so heavily for the Republicans it will be nothing short of a revolution.

The Republicans have a job to do. That job is to expose, expose, and expose, domestically and internationally. If the people see clearly the miasma in which they are wading, they will begin to look for firmer ground. And "old marster" will be gone—where the good darkies go.

A Congressman Views the Welfare State

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. ALLEN of California. Mr. Speaker, I desire to insert in the RECORD, under leave to extend my remarks, a speech which the Honorable HUGH D. SCOTT, JR., a Member of Congress, made before the San Francisco Lions' Club on December 6, 1949. Representative SCOTT is a member of the Lions' Club of Germantown, Pa. Before delivering the address he had recently returned from a visit to Great Britain and Europe as a member of the House Subcommittee on Medicine. He is a member of the House minority policy committee. A great many members of the San Francisco Lions' Club requested copies of the address, and I believe it merits being brought to the attention of all Members of Congress. Mr. SCOTT's speech was as follows:

I think it quite possible that I have received during the past 12 months more letters and oral suggestions regarding the development of a truly American program than any other person in this country, since, as chairman fer much of that time of the opposition party I was the focal point for such suggestions. Now at last I am free to talk simply as a citizen and as one member of the minority policy committee of the House of Representatives. I welcome such an opportunity and I am going to talk to you about the development of an American program leading away from the deep-freeze state.

What is the deep freeze state (usually called the Socialist state in Britain and the social welfare state here)? They're moving away from it in Britain because they've tried it in its more extreme form; we're moving toward it, because too many people are still deluded by the ballyhoo of the give-away program and the concealed cost hasn't yet pinched the pocketbook nerve of enough of its gullible beneficiaries.

What's it like to live in the deep-freeze state? (Everything's for free—buttered on both sides—with room service at no extra charge.) Well, let's pass by the German experience from Bismarck's social security (through three wars to make good on more abundant life promises) to the ultimate degradation of the national socialistic experiment.

Let's see what happened in Britain when the deep freeze set in. Was it good for the workers? Did they get the welfare? They did not. Their average wage in Great Britain is $29.80 a week. Here it's $55. In Great Britain income tax begins at 40 percent after the first $672, and the cost of living goes higher every month. Bread has just taken another leap away from the worker's mouths and rents are going higher.

The Government in Britain has taken over much of industry. Government is now an employer and anxious to show a profit. So when British workers struck last summer on the docks, the welfare state used troops to break the strike.

Who gets the welfare in the deep-freeze state? Why, the officeholders, of course. There is a story in point. An American auto worker visited a plant in Russia and asked, "Who owns the plant?" "The people own it" said the Russian. "Who owns all of these automobiles?" asked the American worker. "Oh," said the Russian, "they belong to the officials." Later, so the story goes, the Russian visited the American worker at a Detroit plant. "Who owns all of these buildings?" asked the Russian. "Oh, they belong to the company," was the reply. "Well, then who owns all of those automobiles out on the lot?" "Oh," said the American worker, "they belong to us."

In Britain there are far more bureaucrats than were necessary before or even during the war and the workers' wages are frozen and he is frozen in his job, while his real wages go down because the Government steadily takes back more and more in taxes of what it pays out in wages.

What happens to the hope to do better for yourself and the kids next year? That's laid away in the deep freeze, too. Since there is no incentive to the employer or employee from hope of profit, people produce less and costs and prices go higher.

That government which freezes initiative and destroys incentive cannot excuse itself by argument that its motives are good because it would like all of its people to be guaranteed free food, clothing, and medical care by the state. But, of course, at the same time, remember that food and clothing and medical care are produced by work and work only. Therefore in the nature of things they cannot be free, but can only be had by paying for them, either directly by the worker or indirectly through taxes to the government. And it always costs more when government is the middleman because government puts on a lot more nonproducers (government employees) to distribute the product.

The deep-freeze state is a state of ultimate misery because its plan is to strengthen the weak by weakening the strong. It tries to legislate unproductive people into prosperity by legislating productive people out of it. As Mr. Churchill put it: "Capitalism is the unequal distribution of plenty, while socialism is the equal distribution of misery." Socialism will work only in heaven, where they don't want it, or in hell where they've got it already.

The America we know didn't come out of a deep freeze, but out of a burning desire for new frontiers of the land, of the mind, of the spirit. We didn't come out of a deep freeze and we aren't going into one, be it Wallace's or Truman's—or even General Vaughan's.

In England you can't change jobs without permission of the Government. You can't take your money out of the country, you can't get many of the things we regard as necessities in this country. You can't work your farm except as the Government tells you, you can't build your business in certain areas where you run afoul of the decentralization program, you can't even buy a drink of the country's Scotch, and you'll go broke trying to keep up a moderate little vice like the smoking habit. I'm sure you wouldn't like the deep-freeze state, even though part of your taxes help to make up the billion dollars a year we send over to shore up the weakening timbers of this shaky structure.

So you wouldn't like it. But back in Washington the men in power, from Mr. Truman up, say they have a mandate to bring the welfare state to the United States.

If you agree that here is a European import that we don't want, how do we go about keeping ourselves out of the deep freeze? Well, let's talk plain. Let's fight back. Let's get mad. I firmly believe that freedom is best nourished by a lively sense of outrage. The Boston "Indians" felt it when they showed King George III where he could put his tea. Your ancestors and mine got plenty mad at Ticonderoga, at bitter cold Valley Forge, at Antietam, and up San Juan Hill. And the last two times somebody went after our liberties we were pretty sore, too.

Well, the price of liberty is eternal vigilance. In Washington at Valley Forge, the author has General Washington saying,

"This liberty will not seem so dear when men no longer die to keep it." And Benjamin Franklin's comment bears remembering. "They that would give up a little liberty in turn for temporary safety, will soon have neither liberty nor safety."

I said: "Let's talk plain." I'll begin with this statement: "What this country needs is an American program, a program of enlightened conservatism. To conserve means to save, and what's wrong with that? Millions of Americans are trying in spite of the best efforts of High Tax Harry and the wastrels of Washington to save something, to put a little something by for a rainy day."

The Missouri minstrel strums away: "It ain't gonna rain no more." Not all of us believe it. That's what the boys in the back room told Noah. Noah built his ark anyway. And a good thing, too.

HOW TO STOP RUSH OF MODERN FORTY-NINERS TO THE GOLD FIELDS OF FORT KNOX?

Your modern conservative knows that the Greeks had a word for it. Their wise man, Solon, said: "The state can do no more good than the state can bear."

He will ask himself, then, several questions in testing any proposal to further obligate the Government. (1) Is it good? (2) Is it in the public interest? (3) Will it work? (4) Can it be done best by the Federal, State, or local government? (5) Can we afford it? (6) How shall it be paid for?

The modern conservative would do well to avoid the maudlin hypocrisy of the radical left or the selfish greed of the reactionary right. Let him remember that there are dangerous ruts into which one may sink on either side of progress road. Let him profit too from the signposts along the road we have traveled. If some say that he is not mindful of the public good, let him remember that the Eightieth Congress of 1947–48 was led by modern conservatives; that Congress did not heed reactionary clamor to limit existing social services, nor did it heed the radical demands that the Federal Treasury be ravished.

What did those modern conservatives do? They conserved, in the public interest, the existing social services, they heard and heeded the just claims for greater irrigation and reclamation programs, they cared generously for the veterans of the country's wars. But taking note of their obligation to guard the average man's right to better himself and his natural desire to retain more and more of the fruits of his labor, these modern conservatives said to the citizen: "We will help you to keep more of what you earn." This they did, by reducing his income taxes and by holding steady the cost of the things he had to buy, by making Uncle Sam live within his income and even pay off some of the mortgage on the United States homestead.

The discouraged guy says: "Them days are gone forever." Uncle Sam is on a spree again. He's borrowing more this year, over and above the forty-odd billions he's taking out of our pockets, than it used to cost to run the Government for a whole year. He will go in the red five or six billion this year. That single red-ink item used to be enough to run the country in the black for 12 months. Uncle Sam's binge makes the selfish interests on the Potomac very happy. More jobs for the selfish interests. "Don't worry," they say, "everything will be all right. We're going to inflate your money until production figures hit $300,000,000,000 a year. Then we will be able to stop borrowing to spend. After that we'll just spend what we take in, because we'll be taking in more."

I don't agree that the days of living within our income are gone forever. I believe there will come a time when the once-bedazzled voter will look at the Truman crazy quilt and demand something better. It will be up to those of us who think that slap-happy government is all wrong to be able to say to such a person not merely "We told you so" but "We've been telling you what to do about it. Now, let's all get together and put our house in order."

What to do about it? What's an American program? Here are some suggestions: Retain social security, unemployment insurance, old-age benefits, care of the needy and disabled veterans and their dependents, and those social-security services which courts and Congress have declared to be within the sphere of the Federal Government, reserving the right to provide for administration through home rule by the States and local communities of such responsibilities as can best be assumed by them for reasons of economy, administrative efficiency, or constitutional function. Provide, preserve, and improve legislative square treatment for employee, public, and employer. Protect the public domain from private exploitation (by presidential favorites, for example), and continue its steady development in the public interest.

Balance the budget by cutting extraordinarily wasteful Government expenditures. Although Congress has passed all but one of the Hoover Commission legislative proposals, the President has not yet put into effect most of the Executive proposals which could save this country as much money as this year's multi-billion-dollar deficit. Reduce unfair wartime excise taxes on transportation and certain other items.

Give us, not doles, not insurance that is only a caricature of real insurance, or other types of economic fakery that pass for business statesmanship. End the adventures of Government into the attempted suspension of natural economic law. Inflation is not prosperity. Take the shackles off business. Make it possible for business to function at its productive and job creative best. Give us a bill that will reduce taxes so that business and industry may distribute profits and have enough left for replacement and venture into new enterprises. Give us, as soon as possible, lower individual taxes so that people can save for old age instead of being dependent upon Government which impoverishes them during their productive years and then gives them a small and inadequate part back as a "benefit." Give us a sound currency, upon which we can rely. Give us a full production plan. Pass it and see what happens.

By offering constructive American alternatives which are not socialistic; for example, to provide for grants-in-aid for the training of doctors, dentists, nurses, and technicians; to set up local health departments, for medical research, for expanded aid in hospital construction, for school health service, for special aids to bring doctors to sparsely settled areas, and for expanded maternal and child welfare services and research; extension of the Blue Cross and Blue Shield services; and the improvement of medical service in local areas such as has been done in Alameda County, Calif., and notably as developed in Kansas by Dean Murphy of Kansas University.

Where States and local communities cannot provide some services unaided, let the Federal assistance be in the form of grants-in-aid, without domination by overseers from Washington and regulations drafted in remote Washington bureaus.

Expose the sham promises of hypocritical demagogues, by battling unceasingly for absolutely fair and equal economic treatment of every American regardless of the color of his skin or the way he worships his God. Unequal treatment is indecent and unworthy. Apply to all legislation the tests of workability in the public interest.

The times cry out for men and women with a sense of what it is right to do, a program for action—with good will toward their neighbors and the courage and the determination to establish certain principles as veritics and to fight for them, everlastingly—with tolerance, intelligence and a high spirit.

There is the voice of Lincoln to guide us: "With courage to do the right as God gives us to see the right."

Yes, you can change the world, you can do these things, for there are millions ready, waiting. But remember: "You gotta stay mad."

The Ultimate End of the Truman Program

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. REED of New York. Mr. Speaker, it is a matter of recorded history that—

The passing of innumerable legislative measures, all of them in a general way of a restrictive order, conduces necessarily to augment the number, the power, and the influence of the functionaries charged with their application. These functionaries tend in this way to become the veritable master of civilized countries. * * *

This incessant creation of restriction laws and regulations, surrounding the pettiest action of existence with the worst complicated formalities, inevitably has for its result the confining within narrower and narrower limits of the sphere in which the citizen may move freely. Victims of the delusion that equality and liberty are the better assured by the multiplication of laws, nations daily consent to put up with trammels increasingly burdensome. * * *

Accustomed to put up with every yoke, they soon end by desiring servitude, and lose all spontaneousness and energy. They are then no more than vain shadows, passive, unresisting and powerless automata.

Thus is bureaucracy with its infiltration of communism sapping the vitality of our people.

What does the experience of other bureaucratic Marxist governments demonstrate? Here is the recorded answer:

Arrived at this point, the individual is bound to seek outside himself the force he no longer finds within him. The functions of governments necessarily increase in proportion as the indifference and helplessness of the citizens grow. They it is—

The Fabian socialistic bureaucratic New Deal planners—

who must necessarily exhibit the initiative, enterprising, and guiding spirit in which private persons are lacking. It falls on them to undertake everything, direct everything, and take everything under their protection. The state becomes an all-powerful god.

Under leave to extend I am inserting in the Appendix of the RECORD, an article of Frank R. Kent which article appeared in the Wall Street Journal, Tuesday, January 3, 1950:

TRUMAN STRATEGY THIS YEAR IS TO PLAY BOTH ENDS AGAINST THE MIDDLE

(By Frank R. Kent)

WASHINGTON.—Sometimes the ardent praise of a President's friends constitutes a more deadly indictment than any his enemies can frame. An interesting instance of this is afforded in the explanation of the legislative strategy, fashioned by his intimate advisers, which Mr. Truman brought back with him from Key West and which is expected to be-

come the party line in the session of Congress about to open.

According to those who reliably reflect the views of the White House insiders, this strategy proves that, though he may not always seem so, Mr. Truman really is an extremely clever man and is just about to tie the "rigidly stupid" Republicans in a knot they will be unable to untie in time to put up even a respectable fight in 1950. In this advisory group there is considerable self-adulation and congratulation over the smartness of the presidential program.

Here is the strategy as they somewhat shamelessly present it.

The purpose of the President at this session is to present himself as the fighting champion of the three great voting groups—organized labor, the farmers, and the Negroes. At the same time the "stupid" Republicans are to be made to seem the enemies of these groups, which then are expected to show their gratitude to the Democrats at the polls. But all this is to be accomplished without the passage of any helpful legislation whatever for these groups before the election. True, in his soon-to-be-delivered State of the Union message the President will strongly insist again upon repeal of the Taft-Hartley Act, the enactment of his so-called civil-rights program, and the passage of the Brannan farm bill, the cost of which even its author has not been able to estimate.

These are the three pieces of legislation which Mr. Truman will demand in his message. But, say those who framed this strategy and are, curiously enough, proud of it, not one of these measures will be passed. "Nothing," wrote one of the more outspoken of the Fair Deal commentators, "could more upset the White House than for the lawmakers to bow to the President's expressed will in this session."

In brief, the demand will be wholly insincere. The message will be a phony. The presidential recommendations will be frauds. The whole idea is to beat the drums for these three pieces of legislation, to put up a grand show in their favor but in all three cases refrain from putting enough administration weight behind any one of them to permit its passage. Success of this scheme, it is pointed out, will not only preserve all three as live issues for the 1950 campaign but will enable the Truman administration to blame failure of its phony program upon the Republicans and Dixiecrats, whom they will indict as enemies of organized labor, the farmers, and the Negroes.

There are several things to be said about this strategy. One, of course, is that, accepting the printed explanations of those who favor and framed it, it is a brazen piece of political skulduggery. Another is that it is entirely typical of the political advisers by whom Mr. Truman is surrounded. Most of these are decent men in their personal lives but in politics appear to have no sense of right or wrong and are willing to form any combination, make any alliance, to win an election.

The thought of how their political plans will affect the country is so completely secondary as not to be considered at all. Every legislative proposal, every White House recommendation, is rooted in politics. Every move is made with the view of holding organized labor, the farmer, and the Negroes—the three bought groups upon whose support Mr. Roosevelt was three times elected and which the Truman effort is to see stay bought.

The question is, Can they get away with it this time?

The strategy, of course, is based on the belief that the great mass of the people are credulous dupes. It's an insult to the intelligence of every decent citizen and certainly ought to be resented by the three groups with whom they are playing. But the Fair Deal has immensely superior propaganda agencies. It also has a tremendous bureaucratic political machine. Also it has a great deal of money. And, it is true, the split Republicans help.

Nevertheless, it is a revolting piece of hocus-pocus and not the least offensive phase of it will be the extreme smugness of its advocates.

CVA Foes May Have Overplayed Their Hand

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. MITCHELL. Mr. Speaker, the following article by Joe Miller, Seattle newspaperman, published in the CIO News December 26, 1949, points out why the people of the Northwest demand a Columbia Valley Administration. Titled "CVA Foes May Have Overplayed Their Hand," the story indicates northwesterners' recognition of the propaganda being circulated by Columbia Valley Unauthorities:

(By Joe Miller)

Is it the people versus the special interests?

In the Pacific Northwest, where mighty rivers run with the speed of the fabled Mercury, the people have reason to say with fervor:

"And how it is."

For Harry Truman's favorite phrase aptly describes the bitter struggle that is currently being fought out in America's farthest corner over the President's proposal to create a Columbia Valley Administration.

Fighting the CVA with every weapon it has is the power trust and its big business allies, the great timber barons and companies. With CVA legislation getting closer to final congressional action, these groups have redoubled their relentless campaign of misrepresentation in a desperate attempt to influence public opinion against CVA.

The power trust has set up front organizations to lead the fight against CVA. These outfits are flooding the sprawling Northwest with tons of expensive propaganda.

Carpetbaggers brought in to preach the anti-CVA line are attempting to burrow into every community. The region's newspapers, most of them notoriously reactionary, give the widest currency to all anti-CVA broadsides and play down favorable stories.

Recently, two conservative national magazines—Saturday Evening Post and Reader's Digest—have contributed their bit by printing editorials that damn the CVA.

The Post editorial was written by a former private power propagandist who wrote in the same magazine a few years ago that Grand Coulee Dam would overshadow for the first time in 5,000 years the stupendous folly of the Pharaohs."

(Grand Coulee, world's mightest power producer, has been responsible for the creation of many thousands of new jobs in the Pacific Northwest; its power produced aluminum for one-third of America's airplanes and helped develop the A-bomb.)

So utterly untruthful has this concerted barrage been that a great conservative newspaper, the Portland Oregonian, has coined a new term to describe these spokesmen: "CVU's—Columbia Valley Unauthorities."

Where do the CVU's get the money to circulate their propaganda?

Part of the answer is provided by the first financial statement of 1949 from the Power Trust's chief lobbying outfit, the National Association of Electrical Companies.

In the first 6 months of the year the NAEC spent $224,222 against CVA and other power and resource developments. Only other lobby to spend more than this sum was the American Medical Association.

The rest of the answer will be given when the Northwest's private utilities file statements of their 1949 expenditures, as they are required to do by Oregon and Washington law. In past years, before the CVA fight became hot, these concerns had contributed more than $50,000 to anti-CVA outfits.

When President Truman first announced he was going to seek a CVA, private power's top dog lobbyist, $65,000-a-year Purcell Smith, declared: "We're going to do everything in our power to stop CVA."

By inundating the Northwest and the rest of the Nation with their propaganda, Purcell and his well-paid "wrecking crew" have kept their word. Yet it is beginning to look as if they overplayed their hand.

They persist in the amazing claim that "CVA is being foisted upon the people of the Northwest by the Washington, D. C., bureaucrats."

Yet for 4 years every farm-labor organization in the region but one has been on record for CVA and has been contributing to the grass-roots campaign for its enactment. These 11 organizations include the CIO, AFL, Grange, farmers' unions, and railway brotherhoods—and they represent approximately 1,500,000 of the region's 4,500,000 residents.

In contrast, the few major groups that oppose CVA represent less than 50,000 of the region's inhabitants.

It was this solid base of CVA support in the grass roots and the obvious need for more efficient management of the area's resources that induced President Truman to make CVA the leading plank of his resource development program last year.

And he received large majorities in five of the six CVA States and came awfully close in traditionally Republican Oregon, where Dewey had campaigned steadily for more than a month.

Another reason for the groundswell of support for CVA has been the conspicuous refusal of the opposition to accept the many challenges of the League for CVA to debate the issues, in the tradition of Lincoln and Douglas.

The most conspicuous rebuffs have come from the Governors of Washington, Oregon, and Idaho, who have been spearheading the opposition to CVA. These men, who announced opposition to CVA 2 months before the bill was actually drafted, seldom miss an opportunity to attack CVA, but want no part of a debate.

Twice challenged to debate by Representative HUGH B. MITCHELL, Democrat, of Washington, president of the League for CVA and a sponsor of the bill, Gov. Arthur Langlie said he was too busy.

Yet the Governor has found time to make more than 50 anti-CVA speeches and twice travel to Washington, D. C., at State expense to testify against CVA. Langlie's favorite charge is that CVA is fascism.

Mussolini and Hitler had efficient resource programs, therefore an agency which will efficiently develop the Northwest's unmatched natural resources, must b fascistic.

Obviously the arguments of Governor Langlie and his cohorts could easily be disproved in open debate. When he testified at House committee hearings in Washington, D. C., he was asked to name the "dangerous" powers he had said CVA would create. His answer:

"I am not prepared at this moment to give you the details of it."

Under further questioning, Langlie said he could not even remember whether the

Bureau of Reclamation or the Army engineers ran Grand Coulee Dam—the biggest thing in his State, in fact the biggest structure in the world.

Gov. C. A. Robins, of Idaho, was frank. Asked if he understood the CVA legislation, he answered:

"As a matter of fact, I do not."

The position of these men in opposing CVA is made all the more ridiculous by two major facts:

1. The Hoover Commission report which establishes beyond shadow of reasonable doubt that the present system—which the power trust and its allies want to perpetuate—is fouled up beyond recognition.

This impartial report tells of bureaucratic jealousies, hopeless tugs of war, and inefficiencies, which have slowed the West's development to a virtual standstill, and wasted the taxpayers' money.

2. The obvious need for CVA, which is highlighted by four items:

(a) Power shortage: With 42 percent of the Nation's hydroelectric potential, the Northwest is the only region in America with a power shortage.

(b) This lack of power, when it is potentially here to burn, has helped to create an unemployment three times the national average in the region.

(c) Flood control: Every year raging floods destroy lives and property throughout the Northwest. Yet no adequate system of flood control exists, nor has one been proposed by the existing Federal agencies.

(d) Erosion: With 100,000,000 tons of topsoil going down the Columbia every year, the Pacific Northwest is the second most critical area in the Nation for erosion, according to the United States Soil Conservation Service. Yet scarcely anything is being done about it.

These facts point the way to CVA, and the people of the Pacific Northwest—through the educational program of their farm and labor groups—are realizing it.

So, too, may the opponents of CVA, when the people of the Northwest go to the polls next November.

Mr. Hauser's Parallel Makes the Distinction

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Battle Creek (Mich.) Enquirer-News which I believe should be read by the greedy, vote-hunting Raw Dealers. It might do some good:

MR. HAUSER'S PARALLEL MAKES THE DISTINCTION

The bald admission that 150,000 census-taking jobs are being used for political patronage is no less shocking because the census chief has been so candid about the whole affair.

In fact, the cynicism which attaches itself to such an admission is a moral measure of an administration which has apparently lost all political perspective.

Even the most hard-shelled political boss usually attempts to cover his operations with a public dressing of gentility. Not so Acting Census Director Phillip M. Hauser. He bluntly admitted that census jobs are used as political hand-outs with the flimsy excuse that it's always been done that way by both parties, "in keeping with the American democratic process."

There have been plenty of shenanigans in American political history. But the democratic process has survived in spite of chicanery and petty politics. It will continue to survive because the American people as a whole draw a distinction between the democratic process and ward-heel politics.

Mr. Hauser may not have realized it, but he is helping the American voter to draw the distinction as regards the national political scene.

The Christmas Spirit

EXTENSION OF REMARKS

OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. CROOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following forthright article by Michael Joseph, editor, Labor Beacon, Michigan City, Ind. He proclaims that the Yuletide spirit should be practiced throughout the New Year and "peace on earth, good will to men" should be uppermost in our minds. Nothing could be more appropriate to practice in this session of Congress.

CHRISTMAS SPIRIT

(By Michael Joseph)

This Christmas, men of all races, creeds, and nations look to each other for hope and a way toward better living, mutual faith, and peace. They look into the hearts of each other, too, for they have learned that words are treacherous—invisible, malicious things with sound an no meaning. This year, 1949, is drawing to an end—even as this paper reaches you—is the turning point of life of the world.

We either adopt the standards set for us by the man whose birthday we celebrate this week, or we bring destruction upon ourselves. We either learn to rely more upon the spiritual values of living in our homes, our offices, and in our plants or we plunge ourselves into economic and physical slavery and sudden death.

No man has a right to exploit his neighbor—whether he be the man next to him on the job, the man who hires him, or a man of another color or race, or another nation. The man who does, the man who looks upon his fellow beings as only means of satisfying his own ego, who uses them as stepping stones in his ever-striving for material gain, is going against the laws of all that is decent and human. He is treading on the divinity of mankind; for all men, no matter who they are, are sons of God.

There are no such things as differences between one group of people and another. They all spring from the same source. They all have the same functions, the same fears, the same hopes, and the same yearnings for happiness. Those are things of the heart, the things that make men men and not stones. They are not ruled by color or speech. They are the things that connect mankind to that mysterious, ever-present thing from which they sprang.

Today we are in the midst of labor upheavals in this country. At times they make little sense. And there are moments when the upheavals show little of labor and much of the sinister influences at work in this country today—influences that are absolutely opposed to the idea that all men are great and fundamentally good. The men of labor who are keeping their heads, keeping their love of country and self-respect must unite to fight these enemies of the people.

These enemies of the people and of the event and the Man which Christmas memorializes have no respect for the decency of men. They use men as tools for their own greed and selfishness. They play race against race, they break up homes, they foment false concepts of capitalism and labor. They ridicule the idea of Christianity. They scoff at the idea that men can, if they will, live and work in peace with each other. Their warped ideology of communism has become a real and terrible evil which is stalking through our land today.

Surely, people who celebrate Christmas must have some sincerity in their observance of this day? Surely, they must realize that the men who have been dying the last few bloody years for decency, brotherhood, and peace, have some right to their respect? Blood and suffering cannot be wiped out by mugs of beer, flag waving, and radical ranting. You cannot forget the debt of life you owe those youngsters. You cannot sell them out, by passiveness and don't-give-a-whoopness. You will pay for it if you try it. What then can we do this Christmastime to realize the things they were forced to die for?

In the first place we can start making ourselves over. Right there is the answer to the whole business. Everybody thinks the other fellow ought to change, but never considers that he himself is probably in need of extensive overhauling. That's the place to begin—to learn tolerance, understanding, and humbleness.

At this Christmas, the home will be the center of activities—in many for the only time during the year. That, too, is a darned good place to do some fighting for a better world, instead of with the members of the family. To be forced to observe the products of some of America's homes these days is enough to bring on the shudders. The home has broken down. Parents, either by necessity or greed, took advantage of the war boom to make money and turned their kids loose all too often to shift for themselves. In consequence we have a lost generation right here in this country and the effects of the unfortunate thoughtlessness and neglect and indifference of the parents will be felt for years to come.

America must have strong homes, homes based on teamwork, trust, and love. Not a single person in this country has a right to shed a tear for the waifs and war wreckage in other countries until he has done something to clean up the wreckage and damage of war in this country. The place to begin on that job is in his own home, if it needs it, and then try to let others see the course to take. Parents are directly responsible for their children and if the parents fall down, then they are indeed criminals and should be treated as enemies of the people. A parent who buys his youngster a lot of toys and gifts at Christmastime and lets him run wild during the rest of the year makes a mockery of Christmas and parenthood. Parenthood is an all-year job, as the heads of all good homes realize. Homes, no more than life itself, can be successful if they are based on selfishness, cowardice, and desire only for worldly gain.

Most American homes need more of a fear of God and less of a fear of what the Joneses are doing.

At Christmastime we see and hear the age-old quotation of "Peace on earth, good will to men." It doesn't mean a thing, unless we have it in our hearts. It doesn't mean a thing, even if we dressed ourselves in white robes and proclaimed it from the roof tops, if we do not remember it the rest of the year. Alas! How quickly we do forget it. As soon as Christmas is gone and the wrappings

burned up we go right out and wallow in intolerance and bigotry, and worry and scrap and grouch and gripe.

Well, someone says, that's human nature. It may be human nature, but it's only human nature on the wrong track. Human beings are naturally happy, lovely people. They have gotten off the right track and hit too many tunnels and switches and dead ends.

What we all need, and want, is the nerve to practice the Christmas spirit in our daily lives and occupations. If we all did that, then we would find a world full of smiles, and people who were startlingly likeable. We would find a world where even the Communists cut out their hell raising and snarling and slithering. We would have a world full of happy homes. We would find labor and management working together instead of being at loggerheads. And we ourselves would find a greatness and a power in us that would make us soar to new heights.

It can be done. We can have a world of peace if we want it. We can have happy homes if we work for them. We can raise decent children if we remember our duty. We can have industrial peace if we demand it and work for it. We can have all those things if we make up our minds to.

Tito and Spain: A Study in Contrasts

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. SHAFER. Mr. Speaker, in connection with the controversy as to whether the United States should recognize Spain, few people realize that the late President Franklin D. Roosevelt not only went out of his way, not merely to recognize the Spanish Government, but also to court and win favor of the head of the Spanish state.

This revelation is contained in an address delivered by Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, at the Belvedere-Sheraton Hotel, Baltimore, Md., October 12, 1949.

Dr. Thorning's address is, in my opinion, an historical document which should be available to everyone interested in this important subject. Therefore, under leave to extend my remarks, I include this address in the CONGRESSIONAL RECORD at this point:

TITO AND SPAIN: A STUDY IN CONTRASTS

(By Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs)

Mr. Dean Acheson calls his flirtation with Tito a Marxist totalitarian, a calculated risk. It is a risk, as everybody can see, to loan $20,000,000 to a military dicator who owes his power to the Soviet hierarchy as well as to the criminal folly of those Western leaders who betrayed their one-time ally, Drazha Mihailovitch. For the details of this treachery one has only to study a book entitled "The War We Lost," by Dr. Constantin Fotich, former Ambassador of Yugoslavia to the United States. Totalitarian Tito is a creature of Soviet intrigue and Anglo-Saxon dishonor. Consequently, anything that is attempted in the current crisis to support Josip Broz, who fought on the leftist side in the Spanish civil war, can be characterized as a deliberate gamble. Mr. Acheson's maneuver in power politics is undertaken with open eyes because Tito's record of Red fascism has been writ large on the pages of history. Mr. James F. Byrnes, himself a dupe of Soviet diplomacy, in his amazing bit of self-revelation, Speaking Frankly (pp. 144–145) relates his distress at Tito's murderous actions with respect to American airmen. The whole passage, which may be recommended reading for Mr. Acheson at this time, reads as follows:

"During this * * * period a crisis in our relations with Yugoslavia * * * occurred. There, Marshal Tito, who had fought in the Russian Revolution and was a thoroughly trained Communist leader, had worked his way into control. * * * The Army's Air Transport Service operating between Rome and Vienna passed through Udine in northern Italy to Klagenfurt in Austria. It was impossible for our planes to travel the 65 miles between these two points in a straight line because the northwest tip of Yugoslavia jutted out between them and, because of Yugloslav protests, our planes had been ordered to stay away from that territory. The order was often difficult to obey as the territory is rugged and many navigational hazards exist. Pilots must fly through a pass where mountains are 9,000 feet high and surrounding peaks reach as high as 18,000 feet. * * *

"On August 9, an army transport, carrying 7 Americans, a Turk, and a Swiss, lost its way, strayed over Yugoslav territory, was attacked by two Yugoslav fighter planes, and forced to make a hazardous landing in a wheat field. * * * On August 19, another transport en route to Rome radioed Udine that it was over Klagenfurt. It was never heard from again, but Klagenfurt reported it had been attacked and sent down in flames by Yugoslav fighters. The bodies of the five Americans were found 5 days later. * * *

"The State Department asked for information and Marshal Tito made a belligerent speech. * * *

" 'Yugoslav claims to be a friendly government and your planes can fly over our territory at any time,' I told him. 'But even if you were not friendly and one of your planes, flying over Canada, got lost and happened to fly over the United States and was grounded, the officials of the United States would feel it their duty to do everything in their power for the safety and comfort of the Yugoslav crew and its passengers. Any official who failed to do so would be reprimanded by our Government. The idea of a United States Army plane, under such circumstances, firing upon a plane of Yugoslavia, killing its crew and passengers, is something the American Government would never be guilty of and is something for which the American people will not forgive Yugoslavia.' "

In contrast to this Marxist savagery, Spain, motivated by Christian charity, saved 1,200 American aviators from the rigors of internment during World War II. Although these flyers made forced landings in the Iberian Peninsula, they were received hospitably and returned to their homes and families, not in rude, wooden coffins as happened to the innocent boys who, because of bad weather, took a short cut over the territory of a despot they helped to preserve. Tito had far greater reason to show us gratitude than the present head of the Spanish State. And yet the latter, despite pin-pricks and provocations, has never retaliated in kind. Indeed, he has returned good for evil, authorizing the members of his cabinet in Madrid to sign the first international air agreement between the United States and any European country.

With sincerity and truth, the head of the Spanish Government can declare to the people of the United States:

"Spain claims to be a friendly government and your planes can fly over our territory at any time. But even if you were not friendly and one of your planes, flying over the Iberian Peninsula, got lost and happened to fly over Spain and was grounded, the officials of Spain would feel it their duty to do everything in their power for the safety and comfort of the American crew and its passengers."

Furthermore, in the air agreement, which Spain concluded with us, we were enabled to obtain landing rights for military as well as civilian planes. This is a valuable concession when you recall, as Senator MILLARD E. TYDINGS, chairman of the Senate Armed Forces has pointed out, "that some 14 or 15 of the most important air fields in the world, from the standpoint of United States defense, are located in or around Madrid, the capital of Spain."

The United States Navy knows the strategic importance of the Iberian Peninsula. Consequently, Admiral Richard E. Connolly led his warships into the harbor of El Ferrol del Caudillo. Moreover, this gallant naval officer had a most cordial visit with the head of the Spanish state. Like the Hon. James A. Farley, formerly chairman of the Democratic National Committee, the admiral found that the head of the Spanish state could give pertinent, intelligent and interesting answers to all questions under discussion. This is the same report we receive from all Senators and Reperesentatives who visit Madrid. The Navy remembers the loyal attitude of Spain at the time of the North African invasion. And even before that critical hour, the Spanish Government displayed its deepest sympathies, not in words which were utilized to distract Hitler, but in deeds of humanity, as Rear Admiral P. P. Powell has testified. The latter, in the New York Times, September 16, 1949, wrote as follows:

"In 1940, just after the Battle of Dunkerque, I was associated in the evacuation of neutral refugees from Europe through the port of Lisbon. The Spaniards, in many instances, facilitated the escape of British, French, and Polish troops, as well as citizens, and allowed the establishment of three underground routes through Spain to France, over which many of our secret agents were passed without any betrayal so far as known." The admiral, concluding his eloquent, truthful testimony, suggests that "it well behooves the Washington Government to take some intelligent steps to try to improve our relations with that country rather than, through neglect, to allow such a diplomatic catastrophe as has occurred in China to be duplicated in Europe."

It is interesting to compare this advice of Admiral Powell with the text of a question and answer given by Mrs. Eleanor Roosevelt in the October 1949 number of McCall's.

The question reads as follows:

"How in the name of intellectual honesty and fair play can you explain your stand on the Spanish question? To be consistent you should apply the same yardstick to Russia, Rumania, Hungary, Bulgaria, Czechoslovakia, etc."

The reply of Mrs. Roosevelt has this phraseology:

"I cannot see that not wanting to bring, at the present time, more recognition and power to Franco is inconsistent at all with my stand on any other country. Franco is the only living dictator who was an ally of Hitler and Mussolini, against whom we fought the war. It is true that for a short time Russia was an ally of Germany under Hitler, but she afterward fought Hitler. It is true also that today Russia and her satellites are dictatorships, and one has to speak out against dictatorships. Certainly no one has been more outspoken than I have.

"But Russia is a member of the United Nations already and is also one of the powerful nations of the world. While we can be quite honest about what we disapprove of in communism, we must recognize the fact that by becoming our ally the U. S. S. R. helped us to win the war, and we can only

hope, because of her power and strength, that the U. S. S. R. will eventually learn to live side by side with the democracies without trying to change them. To go out of our way at the present time to recognize a dictator who upheld Mussolini and Hitler would seem to me to make little sense."

Analyzing these words, what points may be considered worthy of attention?

In the first place, it is good to see that our relationships with Spain are to be set in a framework of intellectual honesty and fair play. These are precisely the virtues that are at stake in this discussion. And they are qualities highly prized in American life throughout the Western Hemisphere.

"It is true," Mrs. Roosevelt admits, that the Soviet Union, under the domination of Generalissimo Josef Stalin, as well as the Soviet satellites, are "dictatorships." Why does not the wife of the former President add that Josef Stalin and his Soviet gauleiters are at the head of slave states which, in word and deed, are waging war upon the United States of America and upon every free man, woman, and child in the world. To be sure, it is a limited war. But it is a war which is bringing torture, imprisonment, civil and religious persecution, and sudden death to thousands of Christians and Jews in Sovietized Czechoslovakia, Soviet Hungary, where Joseph Cardinal Mindszenty is unjustly kept in durance vile, Soviet Bulgaria, Soviet Rumania, Soviet Albania, and the Far East now in process of Sovietization, while Mrs. Roosevelt contents herself with describing both Spain and the Soviet Union as "dictatorships."

Can Mrs. Roosevelt allege that Spain is destroying one country after another? Does Mrs. Roosevelt claim that a combination of Soviet dictatorships, backed by bombing planes, atomic weapons, tommy guns and torture chambers, is on the same level as authoritarian Spain, where tourists are free to come and go, where minority groups, such as monarchists and republicans live side by side with Government supporters, and where there is not a single Protestant or Jewish clergyman under trial, much less in prison or in cemeteries? Why does not the writer for McCall's magazine point out that there is some difference between a dictatorship which is waging war upon every continent and a Spanish Government which has given and continues to give unmistakable signs of friendship and good will?

During the current year, Mr. Dean Acheson recommended the appointment of Ambassadors to the Soviet Union and to Soviet satellite states. Furthermore, Mr. Acheson freely gave "recognition and power" to the butcher, Josip Broz-Tito, without any guaranties from the latter as to the establishment of civil and religious liberties. Why did not Mrs. Roosevelt protest this grant of "recognition and power" and, we may add, money from American taxpayers to a totalitarian Marxist tyrant who is every whit as evil as Hitler or Mussolini? Tito is a Red Fascist dictator. He is very much alive. He was elevated to his position of dictatorship in Marxist Yugoslavia by Generalissimo Josef Stalin and some deluded allied leaders, who failed to take into account the realities of international life.

In order to justify full diplomatic relations with the butcher, Stalin, Mrs. Roosevelt points to the fact that "Russia (she means the Soviet Union, White Russia, and the Soviet Ukraine) is a member of the United Nations already and is also one of the powerful nations of the world."

Why does not Mrs. Roosevelt explain that the Soviet Union, White Russia, and the Soviet Ukraine were admitted to the UN as peace-loving nations. Does she believe that this status, the Soviets' sole title-deed to membership, is clean? Does Eleanor Roosevelt think she can gloss over the essential, criminal role of the Soviet generalissimo, Josef Stalin, in unleashing World War II, by his share in the partition of Poland, 1939, with the easy, disarming description of "Russia (she does not say 'Stalin') as an ally of Germany under Hitler * * * for a short time." Was not this short time crucial? Was not this alliance the partnership, however temporary, that led to the slaughter of millions?

The second part of Mrs. Roosevelt's apology for Stalin's career of murder merits similar analysis. The Soviet Union, she asserts, "is also one of the powerful nations of the world." Does the lady wish to imply that might makes right. This sounds like Napoleon's dictum that "God is on the side of the big battalions." Or like Bismarck's appeal to iron and blood. Indeed, this type of apology on the part of Mrs. Roosevelt seems to be an echo of the war cry of the late Paul Joseph Goebbels: "What matters is not who is right, but who wins." Or are we to decide questions of right and wrong, issues of international law and practice, by putting the infamous question Generalissimo Stalin proposed with reference to His Holiness, Pius XII: "How many divisions has the Pope?"

The real question is one of right and wrong, of good and evil, of fairness or hypocrisy. The issue is not whether the Soviet Army, because it boasts 5,000,000 men under arms, is more important than the 28,000,000 people of Spain. In 1946, the year of Potsdam, the Soviets began to spread the propaganda story that the Spanish Government should be boycotted, economically, and, if possible, eliminated altogether, because experiments with nuclear energy were being carried on behind the Pyrenees. In fact, this was the specious argument of a renegade American citizen, Mr. Oscar Lange, when he, under the whip of his Soviet dictators, attempted to exploit the machinery of the United Nations in order to starve and subdue the Spanish Government and the Spanish people. Mr. Lange, double-dyed turncoat, failed in 1947. And in 1949 a majority vote in the General Assembly favored an end to the diplomatic boycott of Spain, while a vote of 40 to 6 repudiated the principal accusation brought against that administration.

Try as she will, Mrs. Eleanor Roosevelt cannot establish a parity between the iron-curtain countries and the countries of the Iberian Peninsula, Portugal and Spain. Within a few hours, any respectable United States citizen can secure a visa to visit Spain. He can talk with the people, hear their criticism of the administration, as he would hear complaints voiced in the United States, in cafes, hotels, private homes, or public buildings. Without a police permit, this same United States citizen could travel from Barcelona to Madrid, from Madrid to Sevilla, and from Sevilla to Valencia. Nowhere would he find the apparatus of a police state, as he would find it in the Soviet states and in Tito's Yugoslavia: (1) A work card; (2) a ration card; (3) a travel document; (4) a lodgings permit.

These are the badges of slavery; they do not exist in the Iberian Peninsula, although there are limitations on freedom of the press, public assembly, and political organization. It is one thing to restrict political liberties, as is the case in Spain; it is something quite different to suppress both political and personal freedoms, as is the iron rule in all Marxist totalitarian states, whether they work in collaboration as do Sovietized Czechoslovakia, Hungary, Rumania, Albania, and Bulgaria, or one of them is reduced to isolation, as is Tito's Yugoslavia.

In Spain there is progress toward representative government and greater political as well as personal liberty; with regard to the iron-curtain countries, the supreme tragedy prevails in that not even hope of change remains without outside help. Nevertheless, Mrs. Roosevelt, who does not want to accredit an ambassador of the United States in a Madrid that, in the light of this comparison of facts, is relatively free, acquiesces gladly in the appointment of United States ambassadors to European capitals where Soviet gauleiters, á la Hitler, lord it over the people we promised to liberate.

Mrs. Roosevelt can agree to accord prestige, recognition, and power to Red Nazis who make a mockery of the Atlantic Pact and God-given rights. All that the former First Lady asks is that "the U. S. S. R. will eventually learn to live side by side with the democracies without trying to change them." How agonizing such words must be to the noble Polish people, to the Czechs, the Slovaks, Ruthenians, Hungarians, Chinese, Serbs, Croats, and Slovenians. What a message of grief and sadness this must bring to the Russian people themselves, to say nothing of Germans and Austrians in the Soviet zones of Europe. Mrs. Roosevelt's final comment in McCall's may now be subjected to analysis. This conclusion reads:

"To go out of our way at the present time to recognize a dictator who upheld Mussolini and Hitler would seem to me to make little sense."

Is this a correct statement of the issue? In the first place, it should be recorded that, of the some 2,000,000 men who took part in the Spanish civil war, 95 percent were Spaniards. Then, when Mrs. Roosevelt speaks of a dictator "who upheld Mussolini and Hitler," she distorts the picture. It was rather Italy and Germany that accorded help to Nationalist Spain at a time when Soviet international brigades were organized by Stalin to do the job in the whole Iberian Peninsula that they subsequently did in eastern and central Europe, including Czechoslovakia. Paradoxical as it may seem, it was a good thing for free peoples everywhere that Stalin failed in Spain when he took sides against Mussolini and Hitler. If anybody in the course of history upheld Hitler and Mussolini, it was Stalin when he joined his fellow dictators to start the war.

Perhaps Mrs. Roosevelt should be reminded about the identity of the United States President who, subsequent to the abovementioned help from Germany and Italy to Spain, recognized the government, headed by the same Spaniard who has guided the destinies of his country since 1939. It was the Honorable Franklin Delano Roosevelt who, on March 31, 1939, "went out of his way" to recognize the present Government of Spain as the "de facto" and "de jure" government of that country. It made good sense then to President Roosevelt, because the establishment of full diplomatic relations simply means that we regard a given administration as firmly installed in authority and ready to respect its international obligations.

On another occasion our late President F. D. Roosevelt "went out of his way" not merely to "recognize" the Spanish Government, but also to court and win the favor of the head of the Spanish state. At a time when we needed every friend we could muster, and that hour will strike again, President Roosevelt chose as his wartime Ambassador to Spain a gentleman who had special titles to command the respect and sympathy of the Spanish people. He knew well what it was when he sent his signed promises to the Spanish chief of state in November 1942, "I hope you will accept my full assurance," he wrote, "that these moves in our north African operation are in no shape, manner, or form directed against the Government or people of Spain. * * * Spain has nothing to fear from the United Nations. I am, my dear general, your sincere friend, Franklin D. Roosevelt."

"In the intercourse of honorable men," comments an intellectually honest, fair-minded scholar, Father Edgar R. Smothers, S. J., of West Baden College, West Baden,

Ind., "such words are not to be tendered as a booby trap. They are tendered to be kept, unless the other party rejects them or breaks faith with their author, who was in this case the President of the United States."

"So long as an immediate advantage accrued," Father Smothers continues, "we kept our promises to Spain. Once the main hazards of war were over, and President Roosevelt had come back from Yalta, he wrote his letter (March 10, 1943), unpublished at the time, to the Honorable Norman Armour, his Ambassador to Spain, cutting the ground from under his assurances to the head of the Spanish state. He specified no breach of faith committed by the Government of Spain against the Government of the United States. Our authorities have never done that."

That was after Yalta. At Potsdam, the new President, the Honorable Harry S. Truman, made the public announcement that none of us likes Franco. The following September, Mr. Dean Acheson, then Acting Secretary of State, published President Roosevelt's letter to Ambassador Armour. Our policy of unfriendliness toward the Government of Spain was now an official fact of public record. To that policy we have been faithful; but every step of the way is stained with the moral stain of an international breach of faith.

The recognition accorded by the Honorable F. D. Roosevelt to Spain has never been withdrawn. The act of recognition and the flattering gesture of friendship at the time of the north African invasion were both the decisions of the departed husband of Mrs. Eleanor Roosevelt. By her inadequate, misleading answer in McCall's, Mrs. Roosevelt must share the responsibility with Mr. Dean Acheson for what Father Smothers rightly describes as "an international breach of faith."

Our State Department has admitted that the iniquitous, Soviet-inspired move of the so-called Polish delegation in the General Assembly of the UN has strengthened, rather than weakened, the present Government of Spain. Consequently, Mr. Acheson must be the first to acknowledge that his policy, from the standpoint of international law, or attempted domestic interference in Spain, or in the sphere of the good-neighbor policy, where the other American Republics are taking the lead in sending ambassadors and other chiefs of diplomatic mission to Madrid, has been a failure. And by Mr. Acheson's policy of economic discrimination against the country that sent Christoper Columbus to discover America, we are successful only in this: We compel the Spanish people to suffer for Mr. Acheson's default of statesmanship and of honor.

Cotton-Acreage Allotments

EXTENSION OF REMARKS
OF

HON. JOHN E. LYLE, JR.

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. LYLE. Mr. Speaker, during the past few weeks many statements have been made regarding cotton acreage allotments for 1950. Members of Congress from all cotton-growing States have been in meetings with their farmers, discussing the problems that arise out of the restrictive acreage provisions of Public Law 272 of this Congress and Public Law 12 of the Seventy-ninth Congress. Not only have Congressmen made statements, but the press has been abundantly supplied with statements by elements of the Department of Agriculture, statements attempting to dodge responsibility of bad administration by placing the blame on the law. That may be the easy way out, but it certainly is not the honorable answer in the present crisis.

It is my judgment, after much investigation, that the difficulty that most of the farmers are experiencing with the present acreage allotments resulted from the deliberate and arbitrary misinterpretation by the Department of Agriculture of both the intent of Congress and the express language of Public Law 272. The Department may not like the law, but assuredly it has no right to deliberately disregard the wishes of Congress and the obvious meaning of the law in order to suit its own purposes.

All of the people of the United States have a stake in the economic security of the farmer. As the farm income goes, so goes the national income, and the prosperity of the American people is in direct proportion to the income of the American farmer. The farm problem is not a sentimental one, nor a political one, but it is one of cold economic facts. This Nation cannot prosper without a prosperous farm income. For every $3,000,000,000 the farm income drops; a million nonfarm workers go on relief rolls.

The Congress of the United States is conscious of this, and has made a sincere effort to devise laws that will benefit the Nation while benefiting the farmers. The arbitrary action of the Department of Agriculture in misinterpreting Public Law 272 imperils the stability of a large segment of our agricultural population and, consequently, the Nation.

It is difficult enough for the farmer and his prosperity to be subject to the will of a legislative body without having the peril of administrative decree and interpretation hanging over his head.

In addressing this body in February of last year, I called your attention to the difficulties we were to encounter in writing legislation of this character. I did not then question, nor do I now question, the necessity of a national plan for the influencing of, if not the control of, a product such as cotton. At that time I was concerned with the legislation, but I did not anticipate the difficulty of having to write legislation, and then having to fight the Department for a fair interpretation.

The 19 counties in south Texas, which I have the honor to represent, are historically large producers of cotton. They have the know-how, the soil and the equipment suitable for cotton farming. During the past few years, at the suggestion of the United States Government, and in their own interest, cotton farmers have attempted to diversify their activities and, particularly during the war, they gave heed to the requirements of their country and went strong for war crops. Whatever may have been their purpose, they had the right to depend upon the integrity of an agency which said, and I quote the regulations promulgated in 1945 pursuant to enactment of Public Law 12:

War crop determination for the protection of cotton allotments: That in establishing cotton-acreage allotments under title III of the Agricultural Adjustment Act of 1938, as amended, or under the Soil Conservation and Domestic Allotment Act, as amended, for any farm for which a cotton-acreage allotment was established for the 1942 crop, if the total acreage of war crops grown on the farm during 1945 or any subsequent year during the present emergency is in excess of the total acreage of war crops grown on the farm in 1941, the cotton-production history for the farm for any such year will not be considered as representative of the normal history of the farm and the farm will be considered as one on which cotton was planted in such year. For the purpose of this determination, the following are designated as war crops: Soybeans for beans, peanuts picked and threshed, flax for seed, Irish potatoes, sweetpotatoes, dry edible beans, grain sorghums, sugar beets, sugar cane, rice, tomatoes for processing, oats, barley, sweet sorghums, Sudan grass, biennial and perennial legumes, and mixtures containing biennial and perennial legumes.

And Public Law 272, which said:

Notwithstanding any other provision of law, the Secretary, in administering the provisions of Public Law 12, Seventy-ninth Congress, as it relates to war crops, shall carry out the provisions of such act in the following manner:

"The total of the war-crop credits due the individual farms in each county shall be credited to the county and the total of the war-crop credits due all of the counties in a State shall be credited to the State.

"The acreage credited to States, counties, and farms for the years 1945, 1946, or 1947, because of war crops, shall be taken into full account in the determination and distribution of cotton-acreage allotments on a National, State, county, and farm basis."

However, the Department of Agriculture, in interpreting Public Law 272, disregarded the intent of Congress and what I believe to be the plain and express language of the act.

Let me give you, as an example, the effect of the law as interpreted upon Texas:

The national acreage allotment base, as you know, is 22,500,000 acres, and the national acreage allotment is 21,000,000 acres. Texas' share under provisions of section 344 (C) (1), which includes war crops plus the estimated additional acreage for each State required for small-farm allotments under subsection (F) (1) is 8,302,194 acres. The Department found that under provisions of section 344 (C) (2), the actual acreage planted to cotton in Texas, including small farms and adjustments under (B), amounted to 8,182,540. It will be noted that the war crops figure is the larger by 119,654 acres, and to all intents and purposes it would appear that Texas should be considered a State which would come under the war crops formula in the law.

This, however, was not the case. The Department held as follows:

Since, they said, the national acreage total is 22,775,480, which includes an acreage base of 22,308,486 plus 289,994 for small farm adjustments, plus adjustments under section 344 (B) amounting to 177,000 acres, it was necessary, under the law, to reduce that figure to the 22,500,000 acreage allotment base.

It was never contemplated, apparently, that the national acreage total should exceed the allotment base, and the law was written on the premise that the acreage

total would fall below the allotment base. Conseqently, under section 344 (c) (1) (C), which reads:

The additional acreage required to determine a national allotment base of 22,500,000 acres, which additional acreage shall be distributed among States receiving no adjustment under paragraph (2) of this subsection.

Texas, which fell under section (C) (1) would not have received adjustment under paragraph (C) (2), and therefore would have received the additional acreage had it been necessary to add acreage to "determine a total national allotment base of 22,500,000 acres." Their reasoning was that since it was necessary, instead, to reduce acreage to accomplish this purpose, the reduction was applied to only those States which would have received the additional acreage had the situation been as was contemplated at the time the law was written.

By this converse reasoning by the Department of Agriculture, Texas lost approximately half of the total national reduction of 275,480, the difference between the actual national acreage and the national acreage allotment base. There is no provision in the law for making this reduction apply to those States which receive no adjustment under paragraph 2. There is provision only to give additional acreage to those States if the national acreage should be less than the national acreage allotment, and it is a matter of interpretation only to apply the converse when the acreage proved greater than the allotment. It appears to me that what the Department has done is to fill in a gap in the law by an administrative ruling, since there was no provision for making the reduction, in the event the national acreage be greater than the national allotment.

We were told by the Department representatives that having applied this reduction, it was found that the Texas acreage, figured on the basis of the war-crop formula, was less than the total figured on the basis of 95 percent of the 1947–48 acreage actually planted to cotton, by a difference of 93 acres. Since the law states that the State allotment base shall not be less than 95 percent of the 1947–48 acreage actually planted to cotton, the Department contended that it was compelled to place Texas in the category of those States whose allotment was figured on the basis of 95 percent of the actual 1947–48 cotton acreage.

I note, however, that in the Federal Register of Tuesday, December 13, 1949, the Department has this to say in that connection:

On first trial, it was determined that a straight pro rata deduction based on the initial State acreage allotment bases would cause the State acreage allotment base for Texas to be less than 95 percent of the 1947–48 average acreage actually planted to cotton. Consequently, the deduction was limited to 119,654 acres for that State, thereby causing the State acreage allotment base to equal 95 percent of such 1947–48 average acreage.

Apparently it was the trial run that did us in.

The Department's decision which cost Texas 119,654 acres, was, in my judgment, an unwarranted and arbitrary one.

Of course, the Department did issue orders to the State committee to give the individual farmer credit for his war crops, but they should have known, and did know, that giving the farm credit for war crops, without giving war-crop credit to the counties, would do far more harm than it would do good.

Perhaps some of you who do not think in terms of farming, and cotton farming in particular, would like to know the practical effect of Public Law 272 as interpreted by the Department. Atascosa County, one of the fine farming counties in my district, in 1942 had a cotton-acreage allotment of 31,583 acres. The 1950 allotment is 5,677. Bee County in 1942 had 33,951 acres but for 1950 the allotment is 8,887. Nueces County, my home county, the county whose rich soil a few years ago enabled it to lead the State, if not the Nation, in cotton production received an allotment of only 92,081 acres in 1950. Comal County in 1942 had 6,054 acres, but in 1950 its allotment is only 670 acres.

Since the emergency ended, war crops, without strong support of the Government, are no longer practical farming crops in large degree. Great economic suffering will inevitably result unless this Congress, during the next few weeks, enacts legislation so plain and so strong that it is not subject to misinterpretation by the Department of Agriculture, and legislation which will equalize and fairly distribute the acreage to be planted under allotments.

Here is an individual case, so that you may understand the problem right down to the soil. A young man of my district, a veteran of World War II, a young man of 29 years of age, purchased 300 acres of fine farm land. He has been farming the land to cotton for the past 3 years. It was excellently adapted to cotton and the equipment which he purchased is that designed for cotton farming. Under the 1950 allotment he may plant 67 acres of cotton. He still owes $100 an acre on the land and is very much concerned as to how he shall meet the payments with so small an allotment.

A war widow called me last week. She was left 600 acres of brush land which at an expense of $600 an acre, she put into cultivation in cotton in 1949. She got no allotment at all under Public Law 272.

These are but typical examples of thousands of farmers. We have not been treated fairly by the Department of Agriculture in its interpretation. It seems to us that with the acreage allotment for the Nation reduced by so small a percentage, any fair interpretation of the law would not leave us with such a critical economic problem and such a disastrous situation as confronts our farmers.

We have been to the Department of Agriculture and have received no relief. We have but one place to go, and that is the Congress of the United States. We believe in legislative government and not administrative decree, and we have every confidence that you will come to our aid and assist us in a fair share of what we believe we are entitled to receive, historically and legally.

Several bills have been introduced. I introduced one this week, which calls for full credit to the counties for war crops. I also favor the proposal agreed upon during the first part of December by several of us, meeting with members of the House Committee on Agriculture, and which is being introduced by Mr. COOLEY.

For those of us living in the southern part of Texas, early action is imperative, for planting will begin within the next few weeks.

Chairman Gaston, of the Export-Import Bank, in Illuminating Broadcast Discusses Point 4

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. O'HARA of Illinois. Mr. Speaker, because of the large public interest in point 4 of President Truman's plan, and the work being accomplished in the development of that plan by the Export-Import Bank and the International Bank, I am sure my distinguished colleagues will be interested in the memorable and illuminating presentment of that subject by Mr. Herbert E. Gaston, Chairman of the Board of the Export-Import Bank, in a recent radio broadcast over Station WCFL in Chicago. Therefore, under the unanimous consent granted I am extending my remarks to include the full text of this broadcast, which follows:

Sound of quorum call: R-r-r-r. R-r-r-r. R-r-r-r.

ANNOUNCER. Quorum call—the three bells that send the Members of the House of Representatives hurrying from their offices to the floor of the House.

Sound of quorum call: R-r-r-r. R-r-r-r. R-r-r-r.

ANNOUNCER. Quorum call—these three bells are again calling the Illinois Members of the House to report to the people of Illinois. This station presents, as a public service, another in a series of programs transcribed on Capitol Hill in the radio studios of Congress. These programs bring to you a personal report from your delegation in the House of Representatives. Your moderator is Congressman BARRATT O'HARA, of the second district. Now here is Speaker RAYBURN calling the House to order.

Speaker RAYBURN. The Clerk will call the roll.

CLERK. Buckley of Illinois, present; Chesney, present; Dawson, present; Gordon, present; Gorski of Illinois, present; Linehan, present; Mack of Illinois, present; O'Brien of Illinois, present; O'Hara of Illinois, present; Price, present; Sabath, present; Yates, present.

Representative O'HARA. My friends, the 12 Democratic Congressmen from Illinois today salute the Chicago Press Veterans' Association which this week is holding its eleventh annual dinner.

It's the most famous and exclusive dinner event in the Chicago calendar. You can't

get in even as a guest unless a couple of decades ago you were a real honest-to-goodness reporter, copyreader, or editor on a big Chicago daily newspaper or are presently so employed. The newspaper greats and the celebrities of the Fourth Estate past and present, will be flying from all parts of the world to attend. They always do. These annual dinners have become the great national event—the one big must date—among veteran newspapermen and are looked forward to by newspapermen in Illinois and all other Middle West States regardless of where they live.

Richard J. Finnegan will be there, and Charley Wheeler, and John Delaney, and Jim Doherty, and Oscar Hewitt, and Bill Stuart, and Warren Brown, and Jim Cleary—that's just the beginning—not forgetting the peer of the best, our own James Spike Hennessey, statesman and journalist, to whom the 12 Democratic Congressmen from Illinois doff their hats in a special salute in recognition of his outstanding service in the campaign of 1948 and in the cause of government of, for, and by the common people of our country.

Some of those grayheads at the dinner of the Chicago Press Veterans' Association will be getting up to introduce themselves ex-"I.-O."—meaning they did their stuff on the old Inter-Ocean on Monroe Street.

Won't you tell them, Mr. Gaston—I am speaking, my friends, to the distinguished guest of the 12 Democratic Congressmen from Illinois, the Honorable Herbert E. Gaston, Chairman of the Board of Directors of the Export-Import Bank—tell them, Mr. Gaston, how come you qualify as an ex-"I.-O."

Mr. GASTON. I should say first, Mr. O'HARA, that I feel honored and am happy to be a guest, even though at a long distance, of the press veterans' association. I have been for some years a member of what is possibly a more ancient—although I won't say more honored—organization called the Silurians, which consists of old-timers in the newspaper fraternity in New York.

But answering your question, Mr. O'HARA. Truly, I am afraid I cannot qualify as an ex-"I.-O." It wasn't the Inter-Ocean but the Record-Herald for which I worked in 1904–6, and I achieved no dignity there as a journalist. I worked as a night ad compositor 2 or 3 nights a week in a back corner of the composing room overlooking Daily News Alley. I understand that Frank B. Noyes, who achieved some newspaper fame, was the publisher of the paper then, but I didn't meet any such eminent persons. I worked, however, under a fine old gentleman named Eddie English, the ad foreman, whose kindness I shall always remember.

At the same time I attended an institution out on the Midway and Jackson Park, since made famous by Mr. Hutchins. But when I arrived on the scene it was marked by the presence of such men as William Rainey Harper, Amos Alonzo Stagg, Walter Eckersall, and some others whose names you may remember. This, Mr. O'HARA, is how I qualify—if not as an ex-"I.-O.," at least as something or other in connection with the newspaper business in Chicago.

May I add—if I can without tears—that when I came to Chicago the English-language morning papers included the Tribune, Record-Herald, the Chronicle, the Examiner, and the morning Inter-Ocean. Among the evening papers were the Daily News, the Post, the Journal, the American, and the Evening Inter-Ocean.

As an echo of my printing days, let me say that I'm glad to see the Chicago papers again printing today's news today.

Representative O'HARA. I am sure, Mr. Gaston, that the veteran newspapermen of Chicago and the Middle West are well acquainted with your brilliant record on the editorial side after those early years in Chicago, but it probably will be news, and most heartening news, to the members of the Chicago Typographical Union, that the head of what is probably the most powerful bank in the world once worked in the composing room of a Chicago newspaper and carried a card in the Chicago Typographical Union.

Mr. Gaston, would you mind telling us briefly just how the Export-Import Bank fits into the picture of what we are trying to do in rehabilitating a world pretty well wrecked by war?

Mr. GASTON. Briefly and simply, Mr. O'HARA, the Export-Import Bank lends dollars to promote the prosperity of the United States through helping to develop the productive resources of foreign countries. This is exactly what President Truman's famous point 4 is designed to do. It is to add force and new direction to something the Export-Import Bank has been doing for some years—fifteen, to be precise. We do this, not with tax money, but with money borrowed by the United States Treasury and lent to the bank. We have a total lending power of three and a half billions, and it is revolving—that is, the money paid back we can lend again. Our directions are to lend in such a way as to promote the export and import trade of the United States. It is plain that to do this in any effective and lasting way we must consider both the ability of the borrower to pay and the adequacy of the dollar income of the country where the loan is made. That means we must make loans which will earn money and which will earn or save dollars, for we are directed to lend with reasonable assurance of repayment. Of course, this means loans that in the long run really do most for the building up of any country. Loans for useless and unproductive things would mean a future burden or a future default. But we had a special postwar role to play. Before the creation of ECA (the Marshall plan) we made emergency loans to most of the western European countries so that they could go on buying from the United States. The amount of these reconstruction and pipe-line loans (as some of them were called) was close to $,000,000,000.

Representative O'HARA. I think our friends in the radio audience may have read recently of the loan by your bank of $16,000,000 to Bolivia for a highway that will open up some 300 miles of rich territory, heretofore neglected, unsurveyed and unreachable. Where does this money come from and what security do you demand? In other words, is this like Marshall plan money or will it come back to us?

Mr. GASTON. We make loans, as I remarked a moment ago, Mr. O'HARA, with reasonable assurance of repayment—and we are confident we have that reassurance in this case. We think the dollars will come back to us and that we will be further rewarded by increased trade and increased stability—political and economic—in the heart of South America. The security we have demanded is nothing but the public credit of the people of Bolivia, our faith that they have accepted this loan with the intention of paying it back and that they will pay it back. Contrary to some popular impressions about Latin-American credits our experience is that good loans—productive loans well made—will be repaid. The road is from many standpoints a fascinating project. It takes off at Cochabamba in the heart of the Andes and makes its way across mountain ranges and through fertile valleys for 300 miles to Santa Cruz, on the low-lying eastern plain of Bolivia. It is part of a plan proposed by a United States mission in 1942 to promote food and forest production. But it is to do more than that. It is to tie disunited parts of a country together for political and social as well as economic benefits, just as the railroads and the highways and now the airplane have knit together the United States into the economic and political unit that it is today. The engineering problems faced by the United States Public Roads Administration in designing the road have been great and it will not be a simple construction project—but the object to be attained is great, too—in effect, building a new country by a sound economic engineering method.

Representative O'HARA. Then, Mr. Gaston, as I understand it, taking the case of the Bolivian loan, in the first place the loan was made as a sound investment, after passing the test of conservative banking judgment, and there is every reasonable assurance that the money with interest will return. Then, in the second place, the road to be built will open up 300 miles of new territory with tremendous possibility for developments which will furnish a new world of profitable employment for thousands of Bolivians, and while improving their economic condition and raising their standard of living will put them in financial position to buy the products of our factories. And meanwhile when the highway is being constructed much of the money loaned by your bank to Bolivia will be spent in the United States for machinery to do the work and in payment of salaries and wages to American engineers and skilled workmen employed on the project. Thus all we are doing is increasing the wealth of the world and thus benefiting everyone, including ourselves. It seems to me just as simple as that. How many such loans have we made already, Mr. Gaston? Won't you give us a bird's-eye picture of the accomplishments to date of the Export-Import Bank?

Mr. GASTON. Well, that's a pretty fast-flying bird you are ordering, Mr. O'HARA. What the Bank has done is to put out or obligate something over two and a half billion dollars of the funds of the United States. These are borrowed funds and not tax funds. The Bank earns money. After paying its expenses and interest to the Treasury, it earned almost an even $50,000,000 last year. Its losses have been extremely light, but it is reserving on the books all its profits—around $150,000,000—as a safeguard against any future losses. It has loans or commitments in some 40 countries in practically all parts of the world. We announced this week a commitment of $21,000,000 to build irrigation projects and associated works to develop the agricultural potentialities of Afghanistan, which are great. We have made irrigation and water conservation loans also in Colombia and Haiti. We have helped with mine, harbor, railroad, and industrial projects in Turkey. Our commitments to develop and rehabilitate specific industries in Italy amount to $100,000,000. We have financed great integrated iron and steel plants in Brazil and Chile. We are helping to build a chemical fertilizer plant in Mexico and another in Egypt. Our engineers are working with Mexican engineers and railroad officials in modernizing the trackage, rolling stock, motive power, and management of the Mexican railways and we are helping a privately owned American-owned railroad, the Southern Pacific of Mexico, to modernize its system. We are undertaking to assist American public utilities in Latin America to expand their systems to meet the rapidly growing industrial and domestic demands for electric current. We have lent money for roads and water supply in Ecuador and are now considering what we can do to help them in repairing their recent earthquake damage. We have furnished capital for textile mills and packing plants and we are in course of acting on a cement plant financing deal in Saudi Arabia. We lent money to promote the chemical industry of China, which we expect will ride through the present storm and convulsion. And we are right now studying the situation in Indonesia, where a new nation is to arise on January 1, with the expectation that we can be safely helpful there in what has been done and, we are sure, will be again, one of

the great productive regions of the world. Maybe these high spots will give you an idea, Mr. O'HARA.

Representative O'HARA. I recall you said to our committee, Mr. Gaston, that there was a duplication of the work being done by the Export-Import Bank and the International Bank in this so-big and so-promising field. Would you mind explaining that to our radio audience?

Mr. GASTON. It is quite true, Mr. O'HARA, that many of the loans made by one of the two banks could be made by the other. But we try not to compete or to duplicate. We met today, for instance, with officers of the International Bank and we meet regularly with them to lay our cards on the table and to discuss what is proper for one bank to do and what the other. The main differences between the two are that our Bank is an agency of the United States, while the other, as its name reveals, is an international institution; that the International Bank can make loans only to its members, while we are not so limited; and that the International Bank must have the guaranty of the government in whose country it makes the loan on any loan it makes. We often do obtain Government guaranties, but not if there are other adequate endorsements available. Thus, besides making loans to forward definitely the interests of the United States, we have greater freedom to help private industry and American business in preference to competitors.

Representative O'HARA. Mr. Gaston, am I correct in summarizing it this way? American money is being loaned in foreign countries to develop neglected areas, thus increasing the wealth of the world and making potential purchasers for our products. This American money comes from: (1) Our contribution with other participating nations to the World Bank; (2) proceeds of the sale to American investors of bonds issued by the world bank; and (3) the loans of your Export-Import Bank to an amount authorized by the Congress. All of this is investment capital, loaned on good security, and expected to be paid back with interest. The Marshall plan, of course, was never intended to be anything more than a stopgap. Do you think, Mr. Gaston, that by the time the Marshall plan gift-money has run out the countries we are helping will be on their own feet, economically through the investment capital, technical knowledge and American know-how we are pouring into them on sound, conservative business reckoning through your Export-Import Bank and the World Bank? What is the prospect as you see it from the driver's seat?

Mr. GASTON. I'll have to renege, Mr. O'HARA, on the driver's seat. There's too much good competition. But you are correct in general summary, and here are my ideas for what evaluation you and our audience choose to put on them. This country has for many years looked happily on what is called a favorable balance of trade; which means simply that we are used to selling more than we buy. We have made this possible by individual gifts—by foreign travel, by foreign investments that didn't always pay out, and in a variety of other ways. But in the last few years because of war devastation and—more importantly—because of political and economic disorganization which have made the United States the only market in which to buy so much of what the world wants and needs, the trade discrepancy has become tremendous. Believe me, it's our problem as well as a foreign-dollar problem, because we've got a business set-up gaited, first by the war and then by postwar lending and giving, to shipping out a huge production surplus. If we were to stop doing it suddenly, unpleasant things would happen here. I can't claim to know the answer, but these things I fully believe: We need to continue and to accelerate investments and to do that we need to make the way safe for them. This would otherwise be menacing. It is advisable to do this because we have, I am sure, a great deal to contribute in meeting challenging opportunities for development and new productiveness. It is advisable also because commerce in the broad sense of trade, building and exchange of ideas will be the greatest civilizer and offers the best hope of leading the world away from the idiocy of periodical wars, which can only lead back to barbarism. As a part of encouraging commerce we shall have to invite more imports, even though this means keener competition for some. Finally, I think we shall have to find new ways to make surplus labor and surplus production available for increasing the well-being of our own people. But I don't think anybody in the world can give a definite answer to your question of what will happen when the Marshall plan money runs out. There will certainly be readjustments that may be painful and even menacing. It is well to plan, but the world's problems cannot all be met by planning.

Representative O'HARA. As a banker then, Mr. Gaston, you think point 4 of President Truman's inaugural plan is thoroughly sound? There is so much interest in point 4 among our people that I know our listeners would appreciate knowing just what you think of it.

Mr. GASTON. I may already have indicated what I think. Of course, I believe it is thoroughly and unquestionably sound and the most important item on the agenda of the world. It is the first order of business if we want to survive. Either we do our best to spread civilization or somebody else spreads chaos. Point 4 or perish is a slogan for you that is packed with truth. We have an interest in substituting knowledge for ignorance, abundance for starvation, comforts for misery. Even to those to whom doing good has a namby-pamby connotation, self-preservation may not have. That is my opinion in a nutshell of point 4, the essence of which is the application of modern science and knowledge to developing the resources of lands that are not being fully or properly utilized. Somebody in your committee, Mr. O'HARA—or maybe it was the Senate committee—asked how about a point 4 for the United States. Well, I believe in that, too.

Representative O'HARA. Mr. Gaston, would you care to say anything about H. R. 5594, known as the Export-Import Bank loan guaranty bill, which our Banking and Currency Committee reported out and which will be one of the very important measures to be considered by the Congress when we reconvene in January?

Mr. GASTON. I'm glad of the opportunity. The bill as it stands would enable the Export-Import Bank to guarantee investments in foreign countries against loss through inability to convert promptly a foreign currency received as profits or return of capital into dollars; and to guarantee against governmental seizure of property representing a dollar investment without prompt compensation. Note that I say it would enable the Export-Import Bank to do these things. This is a discretionary bill and not, as some people have thought, an automatic guaranty bill to give all investors this limited degree of protection as a matter of right. It would be merely one more of a formidable catalog of powers given to the Export-Import Bank to enable it to discharge its function of promoting the foreign trade of the United States. It would be exercised just as we exercise our other powers, on a case by case basis, and we wouldn't think of giving any sort of investment guaranty to any investment unless we were convinced it was sound from the business point of view and would help to develop the economy of the foreign country concerned. There is absolutely nothing to the fears of those who think we might swamp the foreign-exchange authorities and central banks with obligations far beyond their ability to pay or prevent the conversion into dollars of earnings on money now invested in foreign countries. What would prevent us from doing these things is simply the exercise of ordinary business judgment. We could today guarantee a bond issue of any foreign country or foreign business—with an unqualified guaranty against any risk whatever—within the limits of our lending authority. What prevents us from doing it is simply a grain or two of horse sense. The proposed new guaranties differ from our present powers only in that they could be issued to cover equity investments or proprietorships in addition to the power to guarantee fixed obligations which we now have; but they would not cover any ordinary business risks at all, but only the two contingencies specified in the bill. We think it would be a useful power, because it might enable us to induce private capital to take the place of public loans.

Representative O'HARA. As a member of the Banking and Currency Committee, Mr. Gaston, I was greatly impressed by your testimony and that of Mr. Snyder, the Secretary of the Treasury, and Mr. Webb, the Undersecretary of State, but, as you will remember, I was afraid unless we made the contrary clear our proposed guaranty would be construed in some quarter as a guaranty of the stability of existing governments and thus provocative of meddling on our part in the domestic affairs of foreign nations. I think the statement which, Under Secretary Webb, on my suggestion, and I believe after conference with you and Secretary Snyder, put in the record thoroughly cleared up that phase so that there would be no possible misunderstanding.

Mr. GASTON. I hope sincerely that it did, Mr. O'HARA. We believe in promoting both political and economic stability and in doing everything we can to encourage democratic government, but we don't believe in meddling nor in attempting to establish a protectorate over any country or political regime. I think the limited guaranties we propose will not invoke that danger, any more than do our present loans. I think, in that connection, you will be greatly interested in the fact that obligations to the Export-Import Bank have continued to be respected in spite of political coups d'états and other governmental changes. I hope I have said enough to indicate that our aim has been and will be to promote orderly development, both economic and political; to be as helpful as we can but not to give the slightest ground for the charge that America or Americans have any aggressive or imperialistic aims.

Representative O'HARA. Thank you, Chairman Herbert Gaston, of the Board of Directors of the Export-Import Bank. We have been honored having you with us, and I know the folks back home in the invisible circle of homes in the Middle West to which we are speaking deeply appreciate your fine contribution to making clear and simple just how we in the United States are proceeding in our plan to make this a better world for ourselves by making it a better and a richer world for all men and women everywhere than any we or they have known.

And now, my friends, we have reached the end of another Quorum Call. For the 12 Democratic Congressmen from Illinois, and to all of you everywhere, until next week good-by and happy hours.

Sound of quorum bell: R-r-r-r. R-r-r-r-r. R-r-r-r-r-r.

ANNOUNCER. You have been listening to Quorum Call, another in a series of weekly reports to the people of Illinois by the Members of the Illinois delegation in the House of Representatives. Won't you join our listening audience next week for another factual report from your Representatives in Congress in the National's Capital. This program is presented as a public service. This is Washington; I return you to your announcer.

Iowa Speaks

EXTENSION OF REMARKS
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. DOLLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following essay written by Stanley Wenck, of Glidden, Iowa, in the sixth district. This essay won first place in a State-wide contest sponsored by the Iowa Development Commission. I heartily concur in its sentiments:

IOWA SPEAKS

IOWA, U. S. A., *April 1846–1949.*

DEAR UNCLE SAM: This is Iowa speaking, 103 years after my admission to the Union. Would you be interested in hearing from your leading agricultural State? I am a land of rolling hills, golden grains, and majestic industrial sights; efficient self-sustaining, and justly proud of my varied activities. Where else are greater advantages to be found than within my borders? Why should anyone seek his fortune elsewhere when my boundaries overflow with opportunities? Rainbow's end is here at home.

The finest of cattle graze contentedly on my pastures, where great quantities of fine quality hogs are found, second to none in your United States. Livestock, whose total value ranks first in the Nation, consumes generous amounts of my famous corn crop. My corn is king over one-third of my land area, ranking first among your States in production. Its sister crop, popcorn, and oats, add more firsts to my honors.

I wouldn't trade places with any other State as our geographic position provides a healthful climate for my inhabitants and an adequate growing season for my abundant crops.

A hawk's-eye view of my graceful countryside would reveal the splendor of my endless rows of stately corn swaying in the gentle breeze and glistening in the morning sun. Seas of gold, in reality acres of ripening oats, thrive upon lush prairies and limitless valleys. How could we maintain such a healthy population without the fruits and vegetables, the poultry and eggs we produce?

No wonder I am called the garden spot of the Mississippi Valley; America's breadbasket. My soil is called black gold since it is estimated to be worth more than all the silver and gold mines in the world. It yields to my native sons and daughters their wealth and health. Just listen to their joyful song: "We're from Iowa, that's where the tall corn grows."

The happy laughter of vacationists at my lake resorts and park areas is music to my ears. I provide recreation for every season of the year.

Nothing exceeds the joyous expectancy of springtime. Now you may see the robins return and hear the goldfinch, our State bird, trill his merry song. Among other events, let me picture for you the Easter egg hunt for tiny tots, the elementary schools' spelling bee, and high school music festivals. How entrancing is the gorgeous tulip festival at Pella.

During the brilliant sunshine of midsummer, my busy people find relaxation in golf and tennis tournaments, the rodeo at Sidney, the State fair at Des Moines. Swimming, fishing, and boating on the rippling blue waters of Lake Okoboji and many other lakes provide delightful pastimes. You should see the crowds at our numerous baseball games.

Autumn arrives with its mild haze and soft fleecy clouds, then, when my forests are aglow with brightly colored foliage; my people may attend such events as intercollegiate football games or the Dairy Cattle Congress at Waterloo.

Winter comes. Snow covers the landscape with a sparkling white blanket. Now which do you choose: Hockey games at Dubuque, the Corn Festival in Des Moines, or hiking and skiing in our "Little Switzerland"? This is the season when thousands of basketball fans crowd into gymnasiums to watch this spectacular sport. Have you heard of our annual winter carnival, where colored lights play upon a palatial ice palace at Black Hawk Lake and ice skaters give wonderful entertainments?

High overhead transcontinental airplanes roar on their way, above the network of sweeping, smoothly-curved highways; broad ribbons which lace every county in Iowa and comprise the crossroads of your Nation. Did you know that no part of my State is over 12 miles from a railroad? Motorists travel over 6,000 miles of superior pavements, on the side of which my State flower, the wild rose, grows abundantly.

The Mississippi and Missouri Rivers, to my right and left, respectively, keep on rolling along, carrying heavy freight barges. These assist in the distribution of surplus raw materials.

Most of my farm crops are processed in huge factories. Here busy workmen turn out plastics, corn products, canned goods, etc. The world's largest cereal plant is at Cedar Rapids.

How would you like a fountain pen from one of the largest pen factories in the world, Fort Madison? Could I interest you in some of our millwork; or in the wool products from Amana? My tractor and farm equipment factories buzz with activity. The famous Maytag Co., largest washing machine factory in existence, is said to wash the clothes of the world.

There are creameries in abundance. Fresh butter and other dairy products delight our growing children. Surely, you have noticed, Uncle Sam, how hungrily the Nation views our meat-packing industry? Look. How many miners are busy supplying the humming industrial factories with fuel. Coal underlies about one-third of our area. Iowa ranks second among the States in the production of gypsum, limestone, and clay. Do you wonder at all our brick and plaster concerns?

Not everyone realizes that my State's industrial income is approximately equal to its agricultural income. Immense fortunes are invested in manufacturing establishments in Iowa, land of industrial opportunity. We paid you a half-billion dollars in taxes last year, Uncle Sam.

Do you hear school bells ringing? One-fourth of my 2,600,000 inhabitants eagerly attend elementary, secondary, or college courses. Observe the State university, where culture and art are developed under excellent facilities. Notice the aspiring faces of the students at Drake University. What a mighty cheer goes up from the crowds at the annual Drake relays. Capable, thoroughly trained graduates of Iowa State College at Ames develop modern ideas for the advancement of agriculture, industry, and soil conservation.

What other State boasts a higher educational standard? Iowans are keenly interested in learning. Could you show me a more excellent school system, or better equipped buildings? I point with pride to our 97.7 percent of literacy. The Hawkeye State ranks first in intelligence.

The cultural achievements of my talented sons and daughters are indeed noteworthy. My gallery of greats include: Grant Wood, inspired painter of Iowa's beauty; Phil Stong, whose book and movie, State Fair, make one decide, "That's for me"; MacKinlay Kantor, author, who depicts the joys of our Happy Land. How one thrills to the musical strains of Largo, composed at Spillville. Perhaps the most famous of my sons is Herbert Hoover, thirty-first President of the United States.

Songs, which endure wherever voices are raised, found their origin in Iowa. How quaintly is Pale Moon, by F. K. Logan, how equally entrancing his Missouri Waltz.

Newspapers, magazines, and radio stations also add cultural advantages. Libraries, State hospitals, and welfare institutions attest to the abiding interest in our mutual happiness and well-being.

Finally, Uncle Sam, I conclude this proud panorama. The vast resources of this State have scarcely been tapped. We have almost limitless possibilities for the future. How can we evaluate my potentialities?

The green and gold of my fertile fields nestling among sparkling streams, give promise of continuing productiveness for many generations to come. The future is bright as our agricultural prospects continue to unfold.

Our outstanding educational system attracts students the world over who wish to study the Iowa way.

We cannot sing loud enough praises for our expanding industries. We glory in our superb manufacturing sites, which are surpassed by few other States. This is proved by our progressive factories and million-dollar institutions. Success begins with an interest, and where there's interest there's Iowa.

Occupation never grows monotonous here with the four seasons providing opportunity for many varieties of recreation.

Now it is twilight—the sun sinks in the west and its sparkling rays set the golden dome of the capitol aglow. See? It is reflecting the enormous pride and gratitude we Iowans feel because of the many privileges and freedoms guaranteed to us by our systematic and efficient form of government.

Night falls. Stars twinkle above a peaceful and tranquil landscape. May they ever portray the Christian atmosphere of Iowa which continues to be known as the Bible State. Church spires beckon all to worship the Good Shepherd, Who has guided our destiny in the past, guards our welfare in the present, and who, we pray, will continue to grant success to our efforts in the future.

The stars and stripes above me, and the flag of Iowa beside me, I affix herewith the great seal of my State, and sign myself,

Your favorite nephew,

IOWA.

What Health Insurance Would Mean to You

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. BIEMILLER. Mr. Speaker, a great many people in this country are seriously concerned about the need for some better method of meeting medical costs. They know, from all-too-bitter experience, that one serious illness, or a number of minor ones in a short period, can bankrupt the average family. They know that it is quite beyond the possibility of the average family to provide adequately for the cost of the medical care they need.

The American Medical Association is trying to make people believe, first, that there is no serious need of any change

at all in the present hit-or-miss system of medical economics, and second, that voluntary plans are completely adequate to meet the need which they deny exists.

A speech by Hon. Oscar Ewing, Federal Security Administrator, What Health Insurance Would Mean to You, discusses these points very thoroughly. It shows the need for health insurance, and the impossibility of meeting that need by any voluntary plans. I include this speech in the RECORD:

WHAT HEALTH INSURANCE WOULD MEAN TO YOU

(By Oscar R. Ewing, Federal Security Administrator)

Good evening. I want to talk to you tonight, not about the Nation's health, but about your own health. Suppose that tomorrow morning, you should become suddenly ill—seriously ill. Suppose you found that you needed an operation, with special medical care, and all kinds of X-rays and drugs. Suppose you had to stop working for some months while you went through your operation and your convalescence. Suppose the doctor's bill, the hospital bill, the bills for special laboratory services and medicines, added up to hundreds of dollars—maybe even thousands. Would you be able to afford it?

If you are like most other people in this country, I can tell you the answer just as quickly as you would tell it to me if I were sitting there in the room beside you. The answer, for most of us, is one word: "No."

Most of us are neither very rich nor very poor. People who are very rich don't need to worry about their medical bills, any more than they need to worry about whatever other bills they run up. On the other hand, people who are very poor do generally get medical treatment in the United States, because we have charity care which does make doctors and hospitals available to the real needy. But, if you are like the majority of Americans, you are somewhere between those two extremes. You've got a job. You've got your self-respect. And you like to stand on your own two feet. But you're not made of money; and when sickness strikes, when you wake up one morning with acute appendicitis, or when your old folks get sick, or when your child comes home from school restless and feverish, you have two worries—your first worry is that they should get the best treatment in town; and your second worry is how you're going to pay for it.

If you have ever been lying in a hospital bed after an operation, worrying about where the money to pay the bills would come from, you know what I mean. If you have had to go to a loan company and borrow money to pay a hospital bill, you know what I mean. If you have ever received a note from your child's school, telling you that your little boy or your little girl needs adenoids or tonsils out, and wondered how you'd pay for it, you know what I mean. If your wife has noticed a lump in her breast, but puts off going to the doctor because of the cost, you'll know—and she'll know—what I mean.

We have a problem in this country, and we're grown-up enough to face it squarely. Here we have some of the finest doctors and hospitals in the world, and we have the benefit of the magnificent research laboratories of America. True, we should be spending more money on medical research, but just with what we've done, we have already made such huge progress in medical research that we could call our times the age of giant advances in medicine. Yet, right now, thousands of sick people are not receiving the benefit of these giant advances because they cannot afford it. Every physician knows the torment he must go through when a patient comes in with a disease that could be cured if only that patient had the money to pay for X-ray treatments, or expensive specialists, or costly new drugs or equipment, that would make him healthy again.

In America today there is a barrier between the doctor and the patient. That barrier is the dollar bill.

This is our problem—to remove the barrier of dollars, to bring the patient and the doctor together, and in this way to make medical care available to all our people, not just the very rich and the very poor, but all our people.

Now, we could simply say, "Oh, we've gotten along O. K. so far, why change things? If people worry, why, they've always worried, haven't they? If people have died for lack of medical care, why, they've always died, haven't they? So what?" Or we might take another line and say: "Anyway, there are systems of voluntary health insurance to take care of those who want to provide for themselves." Yes, we could say these things—if we had the heart to do so. But we aren't the kind of people who can say, "So what?" when we hear that one out of every three mothers who died in childbirth in this country this very day, November 14, died unnecessarily, and that her life could have been saved if known medical measures had been fully applied. It might have been your wife. We can't say "So what?" when we know that one out of every three babies who died in this country today, November 14, could have been saved if known medical measures had been fully applied. It might have been your baby.

The voluntary plans for health insurance are fine as far as they go. But how far do they go? In the first place, most of them stop short of giving the amount of medical care you need. For example, most of them won't pay the bill if you have to call the doctor to your home or even if you go to his office. And if you have a serious chronic ailment at the time you enroll, then they will make a particular point of not giving you protection for that ailment. There are varous other limitations in voluntary insurance policies which I won't take time to recite because these two examples illustrate what I mean.

Another reason why the voluntary health insurance may be impracticable for you is that the premiums for this type of insurance are not adjusted to your income. Whether you earn $50 a week or $200 a week, you pay the same amount.

But most important, in voluntary health insurance you generally get a poor return for your money because overhead and profits of the insurance company eat up huge chunks of the premiums you pay. Many commercial companies are in the hospital, surgical, and medical insurance business sell only group policies. Generally speaking, this means that there must be a group of 25 or more employees of a concern who want the insurance. By dealing with a group, the cost of selling the insurance is reduced and bookkeeping costs are largely eliminated, since the employer keeps all the wage records. However, companies selling group insurance pay out on the average 30 percent of their group insurance premium receipts for overhead and profits, leaving only 70 percent for payment of benefits. But you can't get group insurance if you are a clerk in a small store or if you are a farmer or if you are a small-business man. Unless you work for some large business, you must probably buy insurance from a company which sells individual policies. Now, here's the catch. On individual policies these companies spend for overhead and profits an average of about 60 percent of what you pay them and only about 40 cents of your premium dollar goes for benefits to policyholders. Obviously, such insurance is a mighty poor buy.

Under voluntary non-profit insurance plans, Blue Cross hospitalization plan paid back 85 cents of the premium dollar in hospital benefits last year, and Blue Shield surgical-medical plans paid back in benefits 77 cents on the premium dollar paid.

We ought to be able to do better than that. We can do better than that. That is why we are proposing a plan for national health insurance. There has been a lot of loose talk about this proposal. I think you will want to have the straight facts on how this plan would work for you personally.

Under national health insurance, if you get sick, or anyone in your family gets sick, you would call your family doctor, just as you do now. He would examine you in order to decide the treatment he should prescribe. Your doctor would know that he can freely use X-ray and any kind of laboratory tests he thinks desirable. He may decide you should see a specialist or go to the hospital. Possibly you need eye glasses or a hearing aid or maybe you need an expensive medicine like streptomycin. Under national health insurance, your doctor is free to give you the best that medical science has to offer without giving a thought to what it will cost because this cost is met, not by you personally, but by the insurance fund.

But, you naturally wonder, Where does this insurance fund come from? Well, if you are employed, your employer will pay into the fund an amount equal to 1½ percent of your salary, and another 1½ percent will be deducted from your pay check. This deduction is only taken from what you earn up to $4,800 a year. If you earn $50 a week, you would pay a premium of 75 cents. The maximum premium for any employee, no matter how high his salary, would be $1.40 a week. If you are self-employed, your premium would similarly be worked out on the basis of how much your income was. These payments cover home and office calls by the doctor, treatment by specialists, hospital and nursing care for at least 60 days, eyeglasses, hearing aids, cost of expensive medicines, X-ray, laboratory tests, and dental services to the extent available—for yourself and your family.

You can see from this that national health insurance would affect you and your family in three ways: First, all the bills for medical services will be paid by the insurance fund and not by you; second, you will get more and better medical care; and, third, your contributions to the insurance fund would be in the form of small regular deductions from income when you are well and working, and best able to pay. No longer would you have to pay large doctor and hospital bills when you are sick or convalescing and least able to pay. And you would be getting the most for your money. Remember the figures I gave you before—group policies that pay out in benefits about 70 cents on the dollar, individual policies that pay out only about 40 cents on the dollar, nonprofit hospital plans that pay out about 85 cents on the dollar, nonprofit surgical- and medical-care plans that pay out about 77 cents on the dollar. Overhead under national health insurance would cost no more than 5 to 7½ percent—which means that from 92½ to 95 cents of every dollar in premiums would go to pay for the medical care you need.

The reason estimated overhead costs for national health insurance are so much lower than those of the voluntary companies is that under national health insurance (a) there would be no selling costs; (b) the Federal Security Agency is already keeping the wage records of some 90,000,000 workers and health insurance records would add comparatively little to this cost; and (c) the Treasury Department already is collecting social security pay-roll deductions, and deductions for health insurance could be collected with comparatively little added cost.

Now, what about the doctor under national health insurance? You hear a lot of talk about regimenting doctors, about doctors

spending long hours making out reports, socialization of medicine, etc., etc. You can put all that talk down as just plain "baloney." The proof of this is very simple. Today, the doctors are almost all plugging for voluntary health insurance. But under voluntary health insurance, doctors have the same problems regarding the making of reports, arrangements for payment of their services, handling of hypochondriacs, etc., as they would have under national health insurance. The only difference between national health insurance and voluntary health insurance, so far as the doctor is concerned, is that his bill would be paid by a check from a national insurance fund instead of from a private insurance fund.

Maybe you're worrying about red tape. Maybe you are asking yourself, "Who's going to run this thing?" Well, here's the answer: It would be run right in your own home town, right in your own State, by your local doctors, and by local people representing you as partners in national health insurance. There would be no more red tape than you find today in the voluntary plans for health insurance, and probably less. The day-to-day administration of the program would be in the hands of local doctors and laymen—not here in Washington.

You may have heard some criticism of health insurance. Most of it comes from people who may mean well but who just haven't taken the trouble to find out what the plan involves. Many doctors, I'm sorry to say, have been misled by people who tell them all kinds of horrible stories about what it would do to their profession. When someone tells you one of these wild stories, ask him just to find out what we are really proposing. The plain fact is that this program, when it comes into force, will be the greatest boon to the medical profession since the discovery of anesthesia; for it will help the doctors to practice better medicine for more people. It is just an honest-to-goodness attempt to remove the dollar barrier that separates you from your doctor and prevents you and your family from having the best medical care that money can buy. It is pretty much like social security and not much different, in theory, from life insurance, or fire insurance, or accident insurance.

What would national health insurance mean to you? It would mean that, when someone asks you, as I ask you, "Can you get all the medical care you and your family really need?" you could answer with confidence and relief, "Yes, under national health insurance I can."

WHERE THE HEALTH INSURANCE DOLLAR GOES

Commercial health insurance plans:[1] Under group insurance policies, on the average about 30 percent of premium receipts goes for overhead and profits, leaving only about 70 percent for payment of cash indemnity benefits.

Under individual insurance policies, on the average about 60 percent of premium receipts goes for overhead and profits, leaving only about 40 percent for payment of cash indemnity benefits.

Non-profit health insurance plans:[2] The Blue Cross hospitalization plans showed about 85 percent of premium receipts paid as benefits in 1948, and in the same year the Blue Shield surgical-medical plans paid about 77 percent of the premium dollar as benefits.

National health insurance (proposed):[3] Administrative costs under national health insurance would amount to no more than 5 to 7½ percent, leaving 92½ to 95 cents of every dollar paid by employers, employees, and Government to pay physicians, dentists, hospitals, and others for medical services.

British national health service:[4] Mr. Aneurin Bevan on October 6, 1949, at a press conference in London, placed their actual cost of administration at 2½ to 3 percent of the total expenditures, leaving approximately 97 cents of each dollar to pay for medical, hospital, dental, and other services. He pointed out that it had been possible to achieve the low administrative cost because of the nonpaid volunteers who were entrusted with important parts of its administration.

[1] Spectator Pocket Register of Accident Insurance, 1949, p. 49, "Adjustment expenses" for claims administration (estimated at 2.8 to 5.5 percent), included in "losses paid" in this reference, were reassigned to overhead and profits.

Patriotism an Eternal Virtue

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. CASE of South Dakota. Mr. Speaker, during the interim between the first and second session of the Eighty-first Congress, it was my privilege on behalf of Rapid City Lodge, No. 1187, of the Benevolent and Protective Order of Elks, to invite a colleague, the Honorable JAMES I. DOLLIVER, of Iowa, to deliver the address at the annual Elks memorial services on the first Sunday in December. Our colleague's address was so universal in its appeal and so well pointed in its tribute to the virtues of patriotism, courage, and fidelity that, with the permission of the House, I am placing it in the RECORD at this point:

More than usual, I am grateful to you of Rapid City for this invitation. This city is the gateway to an area very close to my heart. Not only because this is the richest 100 square miles on earth; not only because it has become the playground of the west for all the people of America; not only because here are the customs, the atmosphere, and the traditions of the old West with all its adventure and excitement. But the Black Hills is dear to me because of my own father was one of its pioneers. He came to these hills when Deadwood was the heart of the roaring gold rush of the last century. He was a pioneer preacher in the days when life was cheap and sin was unabashed and flourishing.

He must have loved this land in western Dakota, because he came back here to spend the last years of his life among the pine trees and the people of this truly golden west. He lies buried on a hillside in the Black Hills not too far from here, beside my mother, who followed him here in life and death, too.

So you see, there is a poignancy and meaning to this occasion far beyond the ordinary. I deeply appreciate your courtesy and kind hospitality in making me your guest today.

As in the days gone by, and in years to come, on the first Sunday in December, the Benevolent and Protective Order of Elks observe Memorial Day.

The occasion here has been so significant and so long observed that it has become an important day in the calendar of this organization and the entire community. On this Memorial Day, first of all, we invoke the memory of those who have passed on during the last year. We remember them fondly. We recall the smile of their faces, the touch of their hands and the warmth of their friendship. In our mind's eye, today we can see them again, in the fellowship of the lodge, radiating that cheer which is one of the characteristics of an Elk. As we think of them, we give them a sort of immortality, the immortality of memory. They live on with us in our mind's eye.

It is as if they had gone on a journey, a long journey, to be sure, which we, too, some day must take in order to rejoin them.

"Strange is it not, that the myriads who
Before us passed the door of darkness through,
Not one returns to tell us of the road
Which to discover, we must travel, too."

On an occasion like this, the age-old question always presents itself, the question asked by the prophet. "If a man die shall he live again?" On the first Sunday in December every year, the Benevolent and Protective Order of Elks gives a resounding affirmative to that question. If a man die he shall live again, we assure ourselves, again and again.

Whence comes this assurance and what is the rational basis for our belief? Is it merely a superstitution handed down to us from age-old ignorance or does this faith have some semblance of rationality? Is this confidence, as said by the Communists, an opiate of the people, or is it the inspiration to better living and finer ideals?

I suggest to you that our belief in immortality stems from our inescapable belief in God. Most rational human beings have a belief in the Supreme Being. Indeed, that concept of the Deity has been taught by philosophers and thinkers of all generations as the highest expression of human intellect. And indeed how could anybody doubt the existence of God, looking out upon the Black Hills of South Dakota? Clothed in the verdure of summer or covered with the white mantel of winter, whose soul has not been stirred by the infinite beauty of these mountains? And what man is there who has not responded to such grandeur, with the humble affirmation that this is the handiwork of an architect whose power is without limit and whose concepts of beauty far transcend those of any human artist?

The very fact that the human brain can appreciate such a stupendous work as these Black Hills or, indeed, any of the manifestations of nature, gives that human being a kinship with the Almighty. It suffices to make him a part of the plan of the Deity and thus gives him a spark of immortality, one of the attributes of God.

Several years ago, I had the opportunity to look through the eyepiece of the great telescope at Mount Wilson in southern California. Up to the time of the erection of the 200-inch glass at Mount Palomar, the Mount Wilson telescope was the largest in the world. A huge instrument of optical glass and metal, it brought within range of the human eye the satellites, the planets, the stars and the galaxies far beyond the reach of naked vision. In that eyepiece we saw the craters of the moon, the rings of Saturn, the nearest fixed star, and the vistas of the Milky Way.

For centuries, of course, the astronomers have been studying the heavens. For centuries they have sought to find an outer limit to the infinity of space. And yet, with the 100-inch telescope on Mount Wilson and now with the 200-inch reflector on Mount Palomar, no outer limits have yet been found or even approached. The astronomers tell us that space is limitless, endless, without dimension.

Some doubter may ask why a power which created such infinity would give any time or thought to so finite a creature as man. Or as the Psalmist says, "What is man that thou art mindful of him?" And the answer is as clear as the question itself. A human being whose brain can project itself to the planets, the Pleiades and beyond the galaxies, has some of the attributes of infinity. The human brain that can encompass the precession of the equinoxes, whose study of the sciences has led him from the infinity of space to the infinitesimal concept of the atom, whose power over nature has been gained by constant research and study—such a being has the attribute of infinity and has at least a scintilla of immortality.

The great and merciful God who endowed his creatures on earth with ability to peer into the vast open spaces of the heavens and to refine the smallest particles of matter to serve the ends of man, such a God does not deny the boon of eternal life to his human creation.

But perhaps these men whom we memorialize today were not astronomers or bacteriologists or atomic scientists. Perhaps it can be fairly said that most of them were ordinary men such as you and I. They had no specially outstanding attributes of intellect. Perchance, however, there was another field in which they excelled.

Some of them were men of courage. I can think, for example, that they showed a fortitude and bravery, perhaps in war, perhaps in peace, perhaps in their daily lives, which transcended that ordinary courage with which most of us face our daily tasks.

Or perhaps among them was a man who under great stress and difficulties displayed the virtue of kindness; when he might have been harsh and vindictive he was loving and forgiving. Where he might have shown his anger he showed mercy.

Or doubtless there were among these who sometime during their earthly life displayed that monumental virtue of loyalty: faithfulness to a cause, faithfulness to some other person, faithfulness in the face of superabundant difficulties, loyalty transcending the usual or ordinary call.

Another human virtue which all Elks exemplify is love of freedom and loyalty to our country. No organization has more fully carried out the precepts of patriotism than has our organization through the manifold activities of its members, both in peace and in war. This is a free organization of free men, devoted to constitutional liberty, foe of every form of tyranny. No doubt in this gathering today there are those who served in the armed forces of this country during the recent war with totalitarianism.

During those years from 1941–45 we all entertained the hope that when the fighting was over the war for liberty would be won. Not so. We discover that serious attempts are still being made both at home and abroad to destroy our republic. Insidious plotters bore from within, and abroad our motives are misrepresented and maligned.

Some well-meaning people in this country by espousing doubtful causes or crackpot theories would make Americans the victims of an all-powerful state. They forget that maxim of a free government—that the state is not the master of the people, but its servant. By unsound and destructive financial policies, by promising "everything to everybody," they will drag this beloved land of ours to something closely resembling pseudo-security—freedom gone.

It behooves all Americans to scrutinize closely this trend, and by use of our representative self-government direct our political leaders to follow the trail of freedom and opportunity.

Of course, abroad, even more than at home, we have to face the scourge of communism. A godless, atheistic doctrine and philosophy, it has become a dominant enemy of freedom everywhere. Without the slightest regard for honesty and integrity, this modern devilish concept has damaged and nearly destroyed any semblance of honor in its international relationships. To millions of people communism has meant loss of human freedom and national independence. The number of freedom-loving people behind the iron curtain who are actual slaves is estimated by some authorities as high as 15,000,000.

Without any hesitation, we are told that this foul thing is to sweep the world, and engulf us in free America. I tell you, western civilization has not been confronted with so great a threat since the Moslems knocked at the gates of Vienna half a millennium ago.

Thus on this Memorial Day our bounden duty becomes the more clear. To honor those whom we remember today, we ought to take unswerving and undying allegiance to the land they loved.

These virtues, all virtues, partake of the nature of immortality. They are everlasting. They are as permanent as the granite of these hills. In them we recognize the eternal value of the moral law; the everlastingness of a human spirit embodying courage or kindness or patriotism or loyalty. These virtues have the attribute of eternity in the moral world, just as outer space has the attribute of infinity in the phyiscal world.

Need I remind you that these men whom we remember today, possessing as they did, these virtues of constancy, courage and kindness, portrayed in their own earthly existence virtues as eternal as God himself? Thus the beings who portrayed these virtues and exemplified them in life, can no more pass on and into oblivion, than the everlasting stars of heaven. It is hard to define a moral virtue in abstract terms. But it is not hard to recognize a man whose life embodied in his daily living morality.

May I give you an illustration of patriotism, courage, and fidelity? During the recent war, a young man from my home town, Capt. Darrel Lindsay, was piloting a bomber with its crew over Paris. Their objective was a bridge across the Seine. The Germans were in occupation of the French capital. His was the lead plane in the formation. They ran into serious antiaircraft fire, so serious that one of the engines was ablaze. The captain ordered the crew to parachute to safety, which they did. He stayed at his post. He accomplished his mission. He saved his crew. He died in the flames of the doomed ship. He was awarded the Congressional Medal of Honor for his constancy, courage, and self-sacrifice.

Can such a human spirit die? I tell you—

"There is no death. The stars go down
To rise upon some other shore,
And bright in heaven's jeweled crown
They shine forevermore.

"There is no death. The dust we tread
Shall change beneath the summer showers
To golden grain or mellow fruit
Or rainbow-tinted flowers."

What is the lesson of this Memorial Day to us, the living? Of course, the answer is obvious. It is that we continue striving to live according to our own best conscience; that we be aware of our own dignity as human beings with an eternal destiny.

The FEPC Proposal

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include an article by my friend, Walter Johnson, of Heathsville, Va., who writes a weekly column, Country Lawyer, regularly appearing in the Orange Review and some 20 other live Virginia weeklies.

As Commonwealth's attorney of Northumberland County Mr. Johnson has the unique distinction of being the only elected Republican officeholder in eastern Virginia. Last year he was nominated for Governor in the first Republican primary ever held in Virginia and polled a most encouraging vote in the general election.

In his column Mr. Johnson presents a question that deserves the most careful consideration of all thoughtful citizens who believe in the freedom and dignity of human beings.

The article follows:

COUNTRY LAWYER

(By Walter Johnson)

The chosen representatives of the people are again assembled in Congress in Washington. They will be urged to take further substantial steps along the reactionary road backward in accord with the Fabian plan to lessen the freedom and dignity of the people of this fair land we so proudly call the United States of America.

This Fabian plan derives its name from a Roman general named Quintus Fabius, who argued that the only way to defeat Hannibal was to avoid a general engagement and instead to lure him into a series of small battles and destroy him little by little. It is the plan that worked in England to eat into freedom and to establish socialism and it is the plan that is working here to the same end.

Several large bites into our freedom are on the agenda of Congress. These include the Brannan plan to enslave the farmers and the Taft-Hartley repeal and the FEPC measure to further lessen the freedom of the workers.

Under the Taft-Hartley Act the workers as well as all the people have a measure of protection against arrogant and dictatoral labor bosses. Its repeal would work sharp injury to all.

The FEPC proposal is one of the most far-reaching so far advanced under the Fabian movement. It would destroy a larger chunk of freedom than any previous bite. This monstrosity is advanced under the usual high-sounding name.

It would create the Fair Employment Practices Commission with power to stand between job applicants and the employer and determine who may, in fairness, be given the job in question. Everybody believes in fairness though there is seldom agreement on what constitutes fairness. A Federal agent would decide.

This is proposed as something that would help colored people and force them in jobs not now normally open to them. Most colored people accept that argument and support the FEPC. Actually the FEPC would be a blow of magnitude to all workers and employers both white and colored.

It would mean loosening of another great host of Federal agents to roam the highways and byways to interpose themselves and their ideas between workers and employers. These agents would have power to decide who shall be employed.

Having the power to decide which job applicant shall be hired Government would also have to the power to determine where a man or woman must work. Instead of helping the colored people it would set them back toward a new condition of servitude, and whites as well.

There can be no substitute for the proposition of every man standing on his own individual worth and merit. It is true that many jobs are now closed to colored but it is also true that for some time these jobs have been steadily opening to them as they, in turn, develop and command greater and greater respect from their white friends by merit and individual worth.

On the national scene the Democrat Party has become captive of this Fabian plan. A bewildered Republican Party goes along though it does drag its feet a little. In the national picture the Republican Party seems lacking in the courage necessary for it to stand as an effective minority party.

The Republican Party needs a complete and thorough renovation. It should reconsider and embrace the only formula ever devised by which men can be free and enjoy self-government. That formula was written for us right here in Virginia in 1776 by such truly great men as Patrick Henry, George Mason, Thomas Jefferson, and others.

If the Republican Party is unable or unwilling to embrace and take the affirmative for the freedom and dignity of mankind then we need a new party for that purpose. There must be some way by which the people can rally around the cause of freedom.

Excise Tax on Admission Tickets to Amusements

EXTENSION OF REMARKS

OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution of the Common Council of the City of Buffalo:

CITY OF BUFFALO,
January 4, 1950.

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: Pursuant to directions of the common council, I enclose to you herewith copy of a resolution adopted by that body relative to excise tax on admission tickets to amusements.

Very truly yours,
JOSEPH J. TRONOLONE,
City Clerk.

Excise tax on admission tickets to amusements

Whereas the Federal excise tax on amusements is commonly referred to as a luxury tax; and

Whereas movies rank with newspapers and radio as a means of news, entertainment, and education; and

Whereas the movies are the greatest form of entertainment serving approximately 90,000,000 persons weekly, the greatest number of whom are in the low- and middle-income brackets; and

Whereas the 20-percent tax on admissions was patriotically paid during the war and the boom period later, but now is severely felt by the moviegoers and is one of the causes of the serious drop in attendance; and

Whereas the slowing down of the movie business in all its branches jeopardizes the jobs and wage scales of tens of thousands of workers in studios, distribution exchanges, and theaters; and

Whereas other forms of entertainment and sports are similarly affected by this tax; and

Whereas elimination or reduction of this discriminatory tax would undoubtedly cause an upturn in attendance thereby resulting in a lesser actual loss of revenue to the United States Government by reason of increased attendance and thereby increased profit taxes, income taxes, etc.; and

Whereas the welfare and well being of the residents of the city as well as all the industries located therein is a matter of vital concern to the members of the common council: Now, therefore, be it

Resolved, That the Common Council of the City of Buffalo memorialize the Congress of the United States to immediately repeal or substantially reduce the 20-percent excise tax on admission tickets to amusements; and be it further

Resolved, That copies of this resolution be transmitted by the city clerk to the President of the United States, the Clerks of the Senate and House of Representatives, Senators IRVING M. IVES and HERBERT H. LEHMAN and Congressmen CHESTER C. GORSKI, ANTHONY F. TAURIELLO, WILLIAM L. PFEIFFER, and DANIEL A. REED.

The Privileged Few

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Gazette and Bulletin, Williamsport, Pa., for November 3, 1949:

THE PRIVILEGED FEW

The DeMille Foundation, of Los Angeles, has issued a bulletin that puts in a clear style one of the major problems facing the United States today. Rather than try to rewrite or summarize the bulletin, we give it to you complete.

"Denouncing the selfish interests is one of the oldest tricks in every politician's bag.

"Everyone will agree that selfishness is wicked.

"Everyone will agree that, as President Truman has said, the strength of our Nation must continue to be used in the interest of all our people rather than a privileged few.

"But let's bring it down to cases.

"Who are these few?

"And what are their privileges?

"The very rich—with their privilege of paying upward of 90 percent of their income to the Government?

"The capitalists? They can't qualify because they are not few. There are more stockholders in the country than there are union members. If Joe Smith owns a corner grocery, that makes him a capitalist. And there are lots of Joe Smiths in the United States.

"Who are the real twentieth-century barons of privilege?

"Well, it's quite a privilege to be able to shut down the coal mines of the country. One man can do that.

"Then there is the privilege of being able to reach across the Pacific and throw a blockade around the Hawaiian Islands. One man did that.

"Not many feudal lords in the Middle Ages had as many serfs as there are, say, teamsters or musicians in the United States today—and we do not hear of any successful efforts to separate Mr. Tobin or Mr. Petrillo from their privileged positions.

"In the Middle Ages a runaway serf could stay in a city for a year and a day and become a freeman.

"In the United States, in this enlightened age, a union can say to a man: 'You may get a job if you go to another State and change your name, but there's no work for you in this State.'

"How does that line up with another of President Truman's admirable generalities: 'No * * * artificial distinction should bar any American * * * from a job that he is capable of performing?'

"The most potent privilege any man can hold is power over another man's right to work.

"If we mean business about not running the country for the benefit of a privileged few, let's strike privilege where it is strongest."

Coal Crisis Demands Action

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. VURSELL. Mr. Speaker, I received a telegram this morning from the Mount Vernon (Ill.) Chamber of Commerce which reads as follows:

Only 50 tons of stoker coal and 800 tons of other types available at Mount Vernon. Not more than 1 day's supply is left. The weather is near zero. We urge immediate and drastic action be taken by the Government to make coal available to homes and industry.

I received another telegram from the coal distributors of Mount Vernon, Ill., which reads as follows:

Coal situation in Mount Vernon is extremely critical. Only low-grade stoker coal is available, and by rationing will only last one more day. It is urgent that mines resume full production.

Signed by all Mount Vernon retail coal dealers as follows: Anchor Coal Co.; Browning Coal Co.; Bigham Coal Co.; Jax Coal Co.

Mr. Speaker, certainly the public health and safety of these citizens are seriously threatened. This city of 20,000 people with its hospitals, schools, churches, manufacturing industries and homes, is almost solely dependent upon coal for heat. The weather is around zero there at the present time.

It is to be hoped that the highest power of this Government will be immediately invoked to settle the coal dispute to bring about full production in the mines of the Nation. The situation is extremely critical, and it is time for quick and bold action.

The President's Message

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. LEFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an editorial taken from yesterday's New York Herald Tribune.

Mr. Speaker, I believe this editorial sums up briefly President Truman's message to the Congress on January 4. After all, it was pretty much of a dream, and Mr. Truman failed to provide the ways and means of reaching this utopia—50 years hence.

The editorial follows:

PROSE POEM

The more things are the same, as the French aphorist did not say, the more they change. The President's message on the state of the Union is in its fundamentals what it was last year and the year before. The major recommendations, from completion of the Marshall plan to the repeal of Taft-Hartley, follow a familiar pattern, and the well-meaning, if somewhat elusive, philosophy behind them appears to be what it always was. But this year there is a difference.

No longer is there an effort to grapple with the mechanics of inflation or deflation. No longer is there an attempt to deal precisely (as in last year's proposal of Government investment in steel capacity) with the controversial problems of productivity. No longer are any exact figures provided on budget and taxation policy; the President's proposals on taxation, coming late in a long message—"some changes in our tax system which will reduce present inequities, stimulate business activity, and yield a moderate amount of additional revenue"—are indeed a masterpiece of understatement, if not of self-contradiction.

All such hard and practical problems the President has preferred to leave to his budget message and succeeding recommendations. Here he has chosen to present, instead, what might almost be called a prose poem—a vision of America, advancing down the sunlit dairy field of the future, in peace and automatically multiplying prosperity, to quadruple the national product and treble the average family income by the end of the present century. Only one serpent—communism—lingers in the grass, and that is already being scotched by the Marshall plan and the bipartisan policy in Europe (the one surprise of the message is its omission of any references to foreign policy in the Far East); and but a single spook—monopoly—can be observed on the domestic scene.

All that is necessary is to recognize the principle that "the Government has a special responsibility to help create and maintain the conditions which will permit the growth we know is possible." This dictum would certainly have astonished Grover Cleveland and would have surprised most of those who actually did create the extraordinary growth over the past 50 years on which Mr. Truman bases his optimistic prognosis. But it simplifies the policy. It requires only that one offer, as the President here does, something to everybody—a competitive system for large business, a protected system for small business, a guaranteed income for farmers, a repeal of Taft-Hartley for the labor magnates, bigger Federal old-age pensions for those whose unions cannot extract the pensions from industry, wider social security, more Government housing, Government medical care beyond the large amounts already provided, Government education, together of course with undiminished provision for those responsibilities of national defense and foreign policy which are historically the major reason for existence of the Federal Government. The cost-accounting for all this is a minor question which will be taken up later.

California Veteran Hospital Situation Critical

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. McDONOUGH. Mr. Speaker, California veterans are unable to obtain the medical and hospital care to which they are entitled because of inadequate facilities for veteran care in our State.

New veteran hospitals and increased bed capacity has not solved the problem especially in the case of tubercular and mentally ill veterans and overcrowding has continued.

It is therefore necessary that every available hospital facility be utilized at this time in California to provide efficient effective medical care for our veterans. The Naval Hospital at Corona, Calif., which was built by the Navy at a cost of $19,000,000 has been abandoned by the Navy and is now idle. This hospital could be converted for use as a veterans' hospital.

The California State Legislature has adopted the following resolution requesting that the Corona Naval Hospital be transferred to the Veterans' Administration for the benefit of California veterans who are in critical need of hospitalization, and I am in full accord with this resolution:

Senate Joint Resolution 5

Joint resolution relative to hospital facilities for veterans in California

Whereas there are insufficient beds in Government hospitals for veterans in California as evidenced by waiting lists and by the large number of tubercular and mentally ill veterans now adding to the overcrowded conditions of California State and county hospitals; and

Whereas the Veterans' Administration has announced plans for a future building program for hospitals to meet this need; and

Whereas the United States naval hospital at Corona, built by the Navy since 1941 at an expenditure of $19,000,000, has been abandoned by the Navy and is now idle but in every way suitable and desirable for the care of veterans by the Veterans' Administration; and

Whereas the American Legion, the Veterans of Foreign Wars, the Disabled American Veterans, and other ex-service organizations have recommended the Corona Naval Hospital for transfer to the Veterans' Administration: Now, therefore, be it

Resolved by the Senate and the Assembly of the State of California (jointly), That the Veterans' Administration be, and hereby is, requested to take over at once the Corona Naval Hospital as a major veterans' facility for the care of sick and disabled veterans in California; and be it further

Resolved, That the Congress of the United States is memorialized to bring about the transfer of the Corona Naval Hospital to the Veterans' Administration and to enact any legislation which may be needed for this purpose; and be it further

Resolved, That copies of this resolution shall immediately be dispatched by the secretary of the senate to the President of the United States, to the Vice President of the United States, to the Speaker of the House of Representatives of the United States, to each Senator and Representative from the State of California, and to the Veterans' Administrator.

Frankness Preferred

EXTENSION OF REMARKS
OF
HON. TOM STEED
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. STEED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post edition of January 4, 1950, on the subject Frankness Preferred which I feel should be of particular interest to Members of the Congress:

FRANKNESS PREFERRED

As the new Assistant Secretary of State for Public Affairs, Edward W. Barrett will have a job as broad in scope and as significant as any in the State Department. He will be an adviser on public opinion to the Secretary of State; he will be responsible for the foreign information and education programs; he will be in charge of keeping the American public informed on foreign policy; and he will direct American participation in the United Nations Educational, Scientific, and Cultural Organization. These are all fields in which frankness and a minimum of pretense will pay dividends.

In all respects but one the Barrett appointment is admirable. It is fallacious to think that the only good men come from outside the Government, and the President could have helped boost the morale of the career service by making his choice within the State Department. This, however, is no reflection on Mr. Barrett. As editorial director of Newsweek, as a participant in UNESCO and with previous service in War Information and psychological warfare, he has an amazingly good background for his job. He is known as an extremely competent administrator. More important, he is devoid of any razzle-dazzle or big-shot complex.

Among Mr. Barrett's many responsibilities, foreign broadcasts are perhaps the most spectacular, though by no means the most important. Here he has an opportunity to place more emphasis on quality and less on physical facilities and technique. What is needed most in the Voice of America is a consistent philosophy, and this entails recognizing the Voice for what it is: an instrument of warfare dealing with men's minds. If the purpose of psychological warfare is to cause other peoples to reject communism, then the Voice ought to be aggressively exploiting every chance to place the Communists on the defensive. This would not mean any departure from truthfulness, but it would mean using the truth as a weapon of propaganda. As Ladislas

Farago pointed out in a recent issue of The Reporter, the Voice ought to be the most authoritative source of information on the Tito-Stalin rift. For it to exploit the full potential of this split, the cooperation of American intelligence agencies will be necessary.

But it is easy to overstress the importance of the Voice of America as compared with other media and contacts. What the people of India think of the United States, for example, is of infinitely greater immediate significance than the at-best-hopeful efforts to win friends behind the iron curtain. Ties with Latin America have never received the serious attention they deserve. There is room for a good deal of fence-mending in the State Department's relations with the American people. Mr. Barrett could seek no better goal than to end the atmosphere of double-talk that too often surrounds State Department proclamations and insist on the rugged honesty that ought to characterize our foreign policy.

Dodging Facts Again

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona (Pa.) Tribune for January 5, 1950:

DODGING FACTS AGAIN

Perhaps some day we shall have a President who will not regard the American people as a bunch of temperamental children or nincompoops.

Mr. Truman's message Wednesday on the State of the Union was in every sense, a political speech. It dealt not so much with realities, and with common-sense problems before us, as a Nation, as it did with fantasies.

It was on the order of a fairy story, told to hold the attention of children.

There was nothing new in his message. It was the same Fair Deal, all over again. Washington observers say Mr. Truman is impatient these days with anyone who mentions New Deal to him. He is convinced that his Fair Deal is far superior to anything Mr. Roosevelt and Harry Hopkins ever cooked up.

His thinking, of course, is along political lines. He obviously judges a Presidential program solely by its vote-getting power.

His far-fetched thinking is demonstrated by his statement that by the year 2000 the Nation's production will total a trillion dollars a year—nearly four times what it is now.

If we are to deal in facts, however, it is inescapable that we ask Mr. Truman whether his trillion-dollar-production figures are based upon his own vastly inflated dollar, or upon the steadier dollar value of the prewar days.

That makes a lot of difference.

The average salary these days is put at $3,600 a year. Ten years ago, it was half that. Ten years ago, you could buy a car or a home for half what you must pay now. The same is true of almost every other commodity.

Thus, it is plain enough that the standard of living has not risen perceptibly in the last decade, even though the amount of dollars earned has risen steadily.

If Mr. Truman's tax program goes into effect, if local and State taxes keep their present pace, if Government regulation and discouragement of investment capital continues, a trillion-dollar production in the year 2000 may not be sufficient to give this country the poverty-stricken standard of today's Soviet Russia.

The President asks for another increase in taxes. It requires a certain quality of effrontery to ask the American people for more taxes, and then to go on spending billions to help support much of the world in which socialistic doctrines of lassitude and general decay are growing.

Almost every time the President speaks to the American people, it is to demand more of them * * * until even their way of life will be demanded.

Senator MARTIN said, "It is difficult to reconcile his program for vastly increased spending and greater centralization of power in Washington with his references to the need for a balanced budget and economy in government, which his administration consistently has opposed."

Said Representative SIMPSON, of Huntingdon, "He finds satisfaction in results to date of our spending $38,000,000,000 in the cold war. He overlooks the fact that more human beings are dominated today by the Communists in Europe and Asia than ever before."

Mr. Truman's record will not bear close inspection by the American people.

Mr. Truman's spending of the public tax money from the 1946 fiscal year to the end of September 1949, adds up to over $191,000,000,000 * * * nearly $12,000,000,000 more than all his 32 predecessors spent * * * except for the 1941–45 war period * * * and Mr. Roosevelt was no slouch at tapping the Treasury.

This kind of spending is without precedent in the world. The American people are financing it. We shall be held accountable for it.

It is our Nation * * * not alone Mr. Truman's. There are more custodians of America than those found in the White House, and environs.

But, these other custodians have fallen down on the job when we let a President spend us along the road to ruin as Mr. Truman is doing, and as he proposes blithely to keep on doing * * * unless the American people by their protests, tell him plainly that he has been given no mandate to destroy our Nation. Protests to Congressmen, to Senators, and to the White House are the only methods the people have * * * until election time, of registering their opinions.

More Needless Bloodshed

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. PRICE. Mr. Speaker, I invite the attention of the House membership to the article included herewith and which appeared in the December 31 issue of Labor, official weekly newspaper of 15 recognized standard railroad labor organizations. I do so because I am hopeful that early in this present session of the Eighty-first Congress we will have the opportunity to vote on adoption of railway safety legislation that will help to bring an end to such tragic accidents. This accident could have been avoided. Through the years hundreds of lives have been lost in other accidents which could have been avoided.

Will it take another major accident on our American railroads to awaken Congress to the urgency of improving our national rail safety laws? I hope not.

The article follows:

MORE NEEDLESS BLOODSHED—THREE TRACK WORKERS KILLED IN MOTORCAR CRASH; ICC MAKES USUAL RECOMMENDATION

Three more track workers have been slaughtered in a smashup of a rail motorcar and a train.

The tragedy occurred on the St. Johnsbury & Lamoille County Railroad near Cambridge, Vt., October 10.

The Interstate Commerce Commission made the usual investigation and found the carrier could have prevented the crash by providing an adequate block system or train order protection for the motorcar.

The ICC recommended the carrier provide "adequate protection" for motorcars. Nothing was done to compel the railroad to do this.

The Commission has contended that it lacks the authority to order such safety measures and for several years has suggested legislation to remedy this unfortunate situation.

However, not many months ago when congressional committees held hearings on safety bills, which had the backing of the standard railroad labor organizations, the Commission's legislative committee did a startling about-face and lined up against the proposal and on the side of the railroad lobby.

Meanwhile, the blood of rail employees continues to be spilled unnecessarily. At least 51 workers have been killed and 86 injured in track car smash-ups alone during the last 6 years.

Government Spending

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. WILSON of Indiana. Mr. Speaker, the House has been favored since this new session was called to order with reports from all parts of the country brought to us by the men who represent those parts in this Congress. The people of my district, the ninth of Indiana, have something to say to you, too. My people would like to know when Harry Truman and the Democrats who go along with the Truman Fair Deal are going to learn the economic facts of life that you cannot spend more than you earn and put off bankruptcy forever. I heard the Vice President when he called us "tree-sitters" and "hitching post" thinkers because we were wondering how long this state of unreality could last. The Veep, beaming bridegroom of the year and story-teller to the court of Sir Harry, may have been bred in Old Kentucky but that kind of talk indicates "crumby" thinking in my part of Indiana.

The political flight of fancy in which Harry Truman indulged in this Chamber last Wednesday proves again that he cannot keep his feet on the ground or his

hand out of our pockets when he thinks he hears any loose change jingling. If you will recall, there was almost no mention made of how much it would cost us to bring to life all those political dreams of which Mr. Truman's ambitions are made.

He plays a perpetual game of "let's pretend" with himself, and his advisers help his delusions by keeping from him the rumbling resentment of the common people who are beginning to ask "how much did this Government hand-out cost me?" and "when will things be back to normal in Washington?" Some day the realization will overcome them that normalcy in Washington is that one shade short of insanity that keeps the whole blooming town out of a mental institution. I am ready to join my friend, Mr. RICH, of Pennsylvania, whose new slogan, "Be thrifty in '50" may guarantee him a place in history when the history of this period is honestly written.

End of Tragicomedy

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial that appeared in the Washington Post of January 6, 1950:

END OF TRAGICOMEDY

Those who have been pleading with the administration for a decisive statement on Formosa will be gratified by the President's declaration yesterday. The statement is pithy, full of point, and compact with common sense; and it should clear the air all over the world about American intentions. Mr. Truman is to be complimented upon meeting head-on the challenge from a lunatic coterie of the Republican Party. The members of it are less significant in numbers than in noise and intimidation. Their policy is simple: they would commit the puissant United States to the role of playing second fiddle to the bankrupt Chiang Kai-shek.

Think of what such a policy, if that is the word, would entail. It has been obvious from the comment of recent days that the interventionist policy would undermine American influence everywhere in non-Communist Asia. Our only allies would be busted politicians. The whole Atlantic community, now joined together in an alliance, would be riven asunder. For none of the other allies intends to scramble aboard the sinking ship of Nationalist China before it collapses out of sight. In the United Nations, with the United States the lone friend of Chiang, there would be so much chaos that the institution would become a laughingstock All this would be the evil fruit of the policy of military action that the interventionists want to impose upon the United States. Like Lot's wife, the United States would become a pillar of salt, though the categorical imperative of our situation as leader of the free world compels us to move forward with what William James would have called the blunt and stubborn facts.

Canutelike intervention in behalf of Chiang had already been declared to be beyond the stomaching of many Republicans. Senator LODGE boggled at it, and would doubtless echo Secretary Acheson's "once is enough." On the House side, Representative JOHN KEE, chairman of the Foreign Affairs Committee, saw the situation as clearly as his opposite number in the Senate, Senator CONNALLY, saw it through a glass darkly. Mr. KEE said the choice was simple: either cut the painter or take Formosa away from Chiang, and hold it. The President has decided on the former course—at least he has taken the first step in a thoroughgoing disembarrassment in our relations with Chiang.

The main thing is that involvement in civil conflict in China is disavowed unequivocally. To be sure, there is one hedge in the declaration. That is that "at this time" there is no desire on the part of the United States "to obtain special rights or privileges or to establish military bases on Formosa." This, in the light of Mr. Acheson's statement, should, more properly, have read, "In present circumstances." For the qualification, he says, was inserted as self-protection in case the Russians take leave of their senses and attack American forces in the Far East. A casus belli of any such description would thrust upon this country the obligation of developing and even extending its defenses.

Assuredly Formosa in Communist hands would break the chain in America's offshore military posture in the Far East. So, for that matter, does Formosa in Chinese Nationalist hands. But neither Communist China nor Nationalist China is an air power or a sea power with any potential likely to affect the defense equation. Eighteen months ago, while civil war was going on, there was some reason to take temporary possession of Formosa. Now that the civil war is over, with Chiang Kai-shek holed up in Formosa, there is no sense in it. De facto, Formosa is Chinese, and the need of the moment is to reaffirm the territorial integrity of China.

This Secretary Acheson has done with an unmistakable accent which will be heard all over Asia. He is to be congratulated on the boldness with which he has seconded the President's initiative. Plain speaking was called for equally with a reassertion of Presidential leadership because of the activity of GOP diehards in holding up the United States to universal derision. The air for the last week has been cluttered with the dead cats of amateur Secretaries of State on the Hill whose purpose seemed to be only to second Chiang's aim of getting America into conflict with Russia.

Now the Executive has disengaged itself decisively from this interventionist maneuver. It is on the way to an orderly and correct American in place of a Chinese policy in the Far East. It would make its position absolutely clear in this respect if it now wound up the muddle about the blockade and started to protect the American flag in China seas.

Stating Republican Policy

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, under permission to extend my remarks, I want to insert the following editorial comment from the Wisconsin State Journal of Madison, Wis., one of the largest and most influential newspapers in our State:

DISCARDING "ME-TOOISM"

Republicans, within the next few weeks, will put a committee to work drafting a definite statement of party policy. That is all to the good, and we recall supporting, many months ago, a proposal for a national grassroots GOP convention where party members could air their views and furnish such a committee with a sample of rank-and-file sentiment.

A good deal of publicity has been given to the statement by National Republican Chairman Gabrielson that the party would discard "me-tooism."

Various interpretations have been placed upon this, and in some quarters—both Republican and Democratic—there has been a tendency to suggest that the Republican party is ready to go on record as flatly opposed to all welfare legislation enacted since 1932.

An eastern newspaper of high repute made this comment recently on this rather dubious strategy:

"Obviously the Republicans cannot be against whatever the Democrats have done or plan to do. It would be a complete abandonment of reason and principle if the party were to let the fear of 'me-tooism' lead it to a denunciation of everything the last decade has brought about. Gov. Driscoll of New Jersey has spoken wisely in this regard, saying that the Republicans are not going to advocate repeal of the Ten Commandments and the Constitution merely because the Democrats have affirmed their support of these things.

"The problem, in a word, is to decide what is good and what is bad, what is desirable and what is dangerous. And the standard of judgment is to be derived less from what the Democrats happen to have done or said than from large considerations of the public need."

With that view we agree completely.

It has been a mistake for the GOP to accept many New and Fair Deal plans with the promise that "we can do it better." It would be an even greater mistake for the GOP to discard all Democratic programs as utterly worthless. Neither political party, made up of good and sincere Americans, has a monopoly on wisdom.

DECLINE OF PARTY PLATFORMS

We believe there are several issues on which the Republican and Democratic parties have similar objectives in mind; the great difference lies only in method.

Both parties are in favor of civil-rights legislation, although there is disagreement on the extent that Federal police authority should be allowed to overshadow State and local government powers.

Both parties are on record in favor of using a certain amount of Federal money to support education. Republicans insist there is a limit to the money available; they also insist that the right of local communities to run their own schools remain undisputed.

Both parties are in favor of expansion of the national social security program. Again, the Republicans insist on a certain amount of home rule, and insist on realistic financing.

Both parties are on record in favor of protection for the Nation's farmers. The Democrats further are committed to the Brannan plan, with costs that appear astronomical and controls that are unquestionable. The record shows that the GOP favors flexible price supports.

There is nothing the matter with the two major political parties having similar objectives or even, when necessary, favoring the same methods. But these differences in method must be spelled out.

If both parties wrote honest and definite political platforms, they would be taken more seriously than they have the past few elections.

In the last couple of decades, there has been a tendency by both Republicans and Democrats to attempt to outpromise the other.

That has led to a ridiculous situation where voters are thoroughly confused and where platforms have come to mean but little.

THERE ARE REAL DIFFERENCES

There are many instances where the Republican Party must and will disagree with its Fair Deal opponents.

There is the question of Government reorganization. It is becoming more apparent each day that the Democratic Party is willing to sidetrack and forget the Hoover Commission's reforms. We believe that the Republican Party should accept the Hoover Commission recommendations 100 percent, and give them a fair trial.

There is a difference of opinion between the two parties on what constitutes a fair labor law. Democrats want to repeal Taft-Hartley and replace it with something resembling the Wagner Act. Republicans favor retention of Taft-Hartley, with addition of the amendments rejected by the Fair Deal during the last session of Congress.

The greatest difference between the two political parties lies in the field of taxation and Government spending. The coming Republican policy declaration should be explicit on this point, and reveal bluntly and honestly where economies can be made. The GOP statement also should call for tax reduction but with enough leeway to provide for some national debt retirement. If the Democrats wish to campaign in 1950 on a program of high taxes and high Government spending, that should be their privilege.

Republicans and Democrats are miles apart on the matter of improving the Nation's health. Democrats, led by Oscar Ewing, seem willing to go whole-hog for socialized medicine. Republicans should make it plain that they are not. There are some in the GOP, led by Senator TAFT, who believe the party should support extended Federal aid for health programs and individual health insurance. The GOP policy statement must state clearly how far the party is willing to go in this direction.

We believe that the parties do, and should, differ on public housing. Democrats have indicated they favor Government housing not only for low-income families, but for middle income groups as well. We believe Republicans must and will define the extent to which they believe Uncle Sam should become a landlord.

There is a difference between the two parties on the matter of socialized electric power. The Democratic Party under Mr. Truman is committed to the extension of the authority plan. Republicans have and probably should continue to support publicly owned power and irrigation projects in some sections of the country. But Republicans should make it clear that they do not favor the pouring of public money into Government-owned and operated projects in areas where private business firms already own and operate satisfactory utility plants.

WHY NOT THE TRUTH?

The basic difference between the Republican and Democratic Parties today involves money—how much should be spent by the taxpayer and how much should be taken from him to be spent by government.

It is here that the Republican Party must draw a line, because it is painfully obvious that the opposition will not do so.

There are a good many things it would be pleasant to have government do for us.

It would be nice to have government pay us all a pension of $500 a month, and let us retire at age 45. We could play a lot of golf, and do some fishing.

It would be pleasant to have Uncle Sam provide us with maids and motor cars. Wonder what it would be like to saunter down to the grocery store and order what we want, without bothering to pay for it? Send the bill to Washington!

But there are limits—financial limits—to which we can go under our present form of government. Those limits should be defined, precisely.

We believe that the Republican Party could be perfectly honest, and could strike a blow for freedom by taking the position that, except in times of crisis, the Federal Government cannot and should not take more than a given share of a wage earner's salary. Its policy statement should make it clear that government cannot afford to do those things for Americans that they can best do for themselves.

Americans are not quite so stupid as many politicians seem to believe.

All of us—regardless of our political affiliation or economic status—know that there is a limit to government spending and thus a limit to the things that we can expect from government.

Let the Democrats do the promising—with a billion here for this little group and a billion there for that little faction.

If the Republican policy statement is honest, it must be realistic.

Americans have a high regard for the truth.

Intervention in Formosa Would Mean Grave Risks for United States

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Russell Barnes that appeared in the Detroit News of January 4, 1950:

INTERVENTION IN FORMOSA WOULD MEAN GRAVE RISKS FOR UNITED STATES

(By Russell Barnes)

The question whether the United States should in effect take over Formosa and fight Chiang Kai-shek's battle to recover China from the Communists has been appealed over the heads of the administration to the American people.

The attempt to overrule the White House and the State Department, by employing American forces to save Formosa and aid Chiang, as part of our world stop-communism campaign, has been launched by a group of Senators, mostly Republican, led by HOMER FERGUSON, of Michigan, and WILLIAM M. KNOWLAND, of California.

The proposal to use American armed forces to protect the island of Formosa, and to prevent complete destruction of Chinese Nationalists, has now received the powerful support of former President Hoover.

The demand, of course, is not new—it has been hammered long by Americans who hate communism and love China, and who have been dismayed by the spectacle of powerful Communist armies crumpling Nationalist forces and driving them to a last refuge on Formosa.

A DEMOCRATIC PROCESS

The effort to reverse the administration's Asiatic policy of staying clear of the Chinese civil war is obviously a democratic process. All power basically rests with the people.

But it is just as obvious that if the American people decide to force the administration to switch its Chinese and Asiatic policies, they should act with a clear knowledge of the fundamental facts, and with a realization of what American intervention to save Formosa might mean.

To clear his mind before arriving at a decision, it might be well for the American to seek answers to these questions:

Should the United States risk war in Asia?

Should the United States put itself in the position of occupying Chinese territory?

WHO WOULD COMMAND?

Would American intervention at Formosa strengthen or weaken far-eastern communism?

Should American generals assume command of Chinese Nationalist forces?

If we should decide to intervene to save Chiang, are we prepared as a Nation to spend the lives and money that would be required to reconquer China for the Nationalists?

Do the Chinese people favor return of Chiang and his Nationalist regime?

What would 7,000,000 Formosans and 450,000,000 Chinese think about American intervention?

What would be the attitude of our Asiatic and European allies in the world conflict with Russian communism?

Would Moscow welcome our involvement in the Chinese civil war, because it might further sap American economic strength, and thus speed the day when world revolution might be possible?

WHAT IS RISK OF WAR?

Those are all questions which must be answered cold-bloodedly before the American people decide to try to help Chiang hold Formosa.

As for whether we should risk war to stop expansion of communism in Asia, that is easily answered—we have all along been risking war by trying to stop communism in Europe.

The real question is whether we would stand to win or lose a Chinese war, without enormous expenditure of life and capital.

Factors to bear in mind are that in Europe we have had the support of the governments and peoples involved. It is at least questionable whether the mass of Chinese people favor a return of Chiang Kai-shek and his Nationalist regime.

The record shows that they deserted wholesale to the Communists, because of the failure of Chiang and his government to do a job for the people, and to stamp out governmental corruption and inefficiencies.

Formosa is essentially a Chinese island, whose inhabitants dislike both the mainland Chinese and former Japanese occupiers.

American intervention could certainly be achieved without formal seizure of Chinese territory—the obvious example would be Greece—but our action would certainly be plugged by the Reds as another example of American imperialism.

Most far-eastern authorities seem to think that Asiatic peoples at present are in an anti-imperialistic, antiforeign, nationalistic temper. They argue, rightly or wrongly, that if the United States starts throwing its weight around in Asia, the reaction might be to strengthen the Reds.

American military experts sent to aid the Nationalists have reported that Chinese generalship is so inept and irresponsible that the only hope for success would be to put Americans in command.

If we went that far, obviously we would have to fight the Chinese war through to a

successful conclusion, possibly against an enormous hostile population, or take an awful blow to the national prestige.

We would also be running counter to the convictions of our European and Asiatic allies that Chinese Communists have established a government which probably should be recognized, because it conforms to the yardsticks of international law.

If it is true that the Russians hope we will break ourselves economically, by spreading ourselves too thin internationally, Moscow might welcome American intervention in China, where American prospects of winning would be, to say the least, less than in Europe.

China poses big problems for the American people. The problems are too big to be solved by snap judgments.

The Kind of Democrat I Am

EXTENSION OF REMARKS

OF

HON. HOWARD W. SMITH

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. SMITH of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith an address which I delivered at the New York Herald Tribune Forum on October 24, at the Waldorf Astoria Hotel in New York City, as a participant in a panel discussion of the subject The Kind of Democrat I Am:

I am what may be termed a conservative Democrat. It is one whose normal habitat is south of the Mason and Dixon's line. I represent that congressional district of Virginia that was the home of George Washington, who conceived the idea of a Constitution; of George Mason, the great exponent of Democratic government who wrote the Bill of Rights; Thomas Jefferson, who wrote the Declaration of Independence and founded the Democratic Party; James Madison, the Father of the Constitution; James Monroe, author of the Monroe Doctrine; and John Marshall, Chief Justice of the Supreme Court who, by his decisions, breathed life and vitality into the Constitution.

We conservative Democrats adhere to the underlying and fundamental principles of government that guided the thinking of these and other statesmen who wrote our Constitution.

We conservative Democrats believe in certain fundamental principles embedded in the Bill of Rights.

We are unwilling to surrender our convictions to meet every real or fancied emergency that may arise in a modern world, distressed and torn by the swarms of strange ideologies sweeping over the earth.

These conservative Democrats refuse to either marry, betroth, court, or flirt with any of these foreign innovations in government.

Our convictions can be tersely stated by quoting the language of the Tenth Amendment to the Constitution. "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

We therefore hold with the long-accepted theory that Congress has no power to enact legislation or expend the people's money on any subject that it is not given authority to deal with under the Constitution. These limitations of the constitutional powers are not mere academic theories. In practice, they are vital to the welfare, the personal liberties, the rights of private property, and even to the social freedom to select one's associates and business affiliates.

I shall cite with necessary brevity some instances and some consequences of the failure of Congress to confine its functions to the power granted it under the Constitution.

In the field of social welfare, we have enacted the minimum wage law, forbidding the private citizen from working for a lesser wage or for longer hours than the Congress, in its wisdom, deems appropriate to his welfare; ignoring the obvious sequel that if Congress can fix a minimum wage, it can with equal power fix the maximum compensation that our supposedly free citizens may be permitted to earn.

The House of Representatives has repeatedly passed the antilynching bill, under which the Federal Government proposes to inject itself into the enforcement of the criminal laws and the police powers of the sovereign States.

The House of Representatives has, in each recent Congress, passed an anti-poll-tax bill, which undertakes to fix the qualifications of voters in the States in the face of the Constitutional provision reserving to the respective States exclusive authority to fix the qualifications of their voters.

For several terms past, we have had pending in both houses of Congress, and enthusiastically endorsed by the platforms of both major parties, the so-called Fair Employment Practices Act, under which the Federal Government proposes, through the establishment of a horde of national investigators and enforcement officers, to dictate to the free American citizen whom he shall employ and to compel him to engage as his business associates persons with whom he prefers not to associate.

Time does not permit a detailed discussion of all the altruistic activities of the Federal Government that account in a large measure for the nearly bankrupt condition of the Federal Treasury.

Constantly rising over the past two decades, the Government debt has reached the appalling figure of $250,000,000,000—more money than any country has ever owed in all history.

The bulk of this debt comes from the necessary large expenditures of the recent war. While sound policy requires large expenditures and mounting debt during wartime, equally sound policy requires in peacetime rigid economy and reduction of the debt.

Today, in time of peace and unprecedented prosperity, our national budget is unbalanced, our debt is increasing.

In the first years following the war, our revenues were increasing and our expenditures decreasing so that in the fiscal year 1947 there was a surplus of approximately $2,000,000,000, and in the year of 1948, a surplus of $8,000,000,000.

But the year 1949 showed an alarming trend. There was a reduction in receipts and an increase in expenditures over the previous year, resulting in a deficit of around $2,000,000,000, and in the present fiscal year, the most optimistic predictions forecast a deficit of $5,000,000,000.

This presents a picture that should alarm even the most unwary.

Our revenues are on the decrease, while our expenditures increase. No private business could long survive the fiscal policies of the Federal Government.

I do not believe we can continue these policies of irresponsible and reckless expenditures without ultimate disastrous results.

A few examples must suffice to indicate the trend of Congressional thinking. The Congress recently passed a Federal housing bill, which authorized appropriations to the extent of $18,000,000,000, the bulk of which is to help pay house rent for one element of the people so that they may live in the kind of houses to which they would like to become accustomed. Thus, Congress takes the money of one tax-paying citizen to pay the house rent of another.

The Senate has passed, and the House almost passed, a bill to pay subsidies to those miners of certain minerals whose cost of production does not permit the profits to which they would like to be accustomed.

Last year we paid $225,000,000 to subsidize the potato growers who, with a tempting subsidy in sight, raised more potatoes than the market could consume.

Housing subsidies, agricultural subsidies, shipping subsidies, mining subsidies, mail subsidies, and a score of other subsidies that drain the substance of our taxpayers to meet the demands of minority groups of all types.

We rob taxpayer Peter to pay supplicant Paul, if he can marshal a sufficiently potent amount of political pressure.

These briefly present some of the tendencies in Federal Government that go far beyond the functions delegated to Congress.

This Nation has been hewed out of the initiative, the ambition, sweat, and toil of our citizens, seeking by their own efforts to better their social and economic status. When we whittle away, bit by bit, the initiative and the fundamental freedoms of the people; when we teach them more and more, day by day, to depend upon hand-outs from the Federal Treasury to meet every actual or artificial emergency, we take away that initiative, that ambition, and the self-reliance that has made our country great.

This is the insidious way of the welfare state.

The hand that passes out the grants from the taxpayers' money becomes, in the natural course of events, the mailed fist of dictatorship. As more and more largess is distributed, so more and more restrictions and limitations are being imposed upon the liberties of the people.

Such has been the history of the growth of dictatorship.

I deeply resent these tendencies and policies, by whatever political party they are advocated. They are undermining too rapidly the freedom, the initiative, and the independence of our citizens.

Unless there is a swing back to the normal American way of life, I have grave fears for the future of our country.

I have been in Congress nearly 20 years, and watched with increasing alarm the growth of demands from pressure groups of all kinds that Congress enact legislation so foreign to the constitutional concepts of our legitimate functions that there seems no limit to the encroachment on personal liberties or the rights of the sovereign States.

What is the remedy?

There is only one.

Congress reflects the will of the people. The will of the people is transmitted to Congress by those who make the loudest noise and the most convincing threats of political reprisal.

Until and unless the great mass and majority of our thinking people awaken to their responsibility and assert their demands for sound business in Government and a return to the constitutional limits upon the functions of Congress, we shall continue the present policy until some time, some sad day, we find that we have gone too far to retrace our steps.

In a democracy a people get the kind of government that they deserve.

If they think little, they deserve little. If they do little about it, they get little results.

If the present trend of Government is wrong, as I believe it is, it will continue wrong as long as a slothful and indifferent people remain impervious to, and neglectful of, the danger signals flying all about them.

Fair, With Scattered Clouds—Down the Middle of the Road

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 3, 1950

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Erwin D. Canham, that appeared in the Christian Science Monitor of January 4, 1950:

FAIR, WITH SCATTERED CLOUDS—DOWN THE MIDDLE OF THE ROAD

(By Erwin D. Canham)

The tone of the economic experts as they look into 1950 is essentially cheerful. Most of them think 1950 will be more normal than any year since 1940. While they recognize the dangers of communism in Asia, and the still uncertain economy of western Europe, they see a better year ahead.

In France, the cost of living has gone down a little, for the first time since the end of the war. In England, the drain on gold and dollar reserves has been reversed. The reserve fund is slowly increasing. In Italy, Premier de Gasperi says his nation has made a complete return in every field of world activity. And when Speaker RAYBURN left the White House after going over the President's message on the state of the Union, he said: "It looks like the country is in pretty good shape—I never saw it in better shape."

The big problem of the new year is immediately Formosa, and on a longer view, all Asia. There is a sharp division of opinion on Formosa.

Former President Hoover, Senator TAFT, and many other critics of administration policies say we should take military and naval action if necessary to enable Chiang Kai-shek to cling to Formosa and Hainan, another island off Indo-China. They want us to withhold recognition of the Communist regime indefinitely, and to keep on supporting the Nationalists even in exile. They say this will build a wall against communism in Asia, that to lose Formosa would drive a breach into our line of defense, that to hold it would mean a foothold and a symbol for eventual return of a free government to China. They point to the dangers of having Chinese Communist missions in the United States and the United Nations. Behind these and other influential Republicans, stands General MacArthur.

On the other hand are those who think that United States military intervention to save Formosa might provoke a third world war. That is the view of Chairman KEE of the House Foreign Affairs Committee. Senator LODGE, although a Republican, said he had grave doubts of taking any military action toward Formosa. Others said that the Communist regime's conquest of China was already an established fact, and recognition of the government was inevitable sooner or later. They said that to continue hostility toward the Communist regime would be to drive it further into the arms of Moscow.

The main thing, they said, was not the regime but the people of China. New American contacts with the people must be opened, and they thought that indefinite failure to recognize an established government would widen the breach between us and the Chinese people.

If we fought the regime with arms and navies, they said, we might indeed induce Russian intervention. Moreover, our friends and allies in Asia have decided to recognize the Communist government, and we cannot indefinitely widen the gulf between ourselves and them. Already it is with American arms that the Nationalists are bombing open Chinese cities. Indeed, it was with American arms that the Communists made themselves the best equipped army in Chinese history—with arms they took from the largely unresisting Nationalists. So American prestige in China is at its lowest ebb. Unless we begin to work ourselves back, by achieving some contacts with the Chinese people, we are in a hopeless position.

Those who hold this view say that private individuals—missionaries, teachers, doctors, engineers, and other technicians—will offer the best way of proving ourselves to the Chinese. President Truman's point-4 program ultimately offers the best hope of reestablishing a right concept of America in China. But none of this can ensue unless sooner rather than too much later we have regular relationships. And if there is any hope at all of inducing Titoism in China, say these people, we certainly cannot do it by aloofness.

There are the two arguments. It is unlikely that either of them will win President Truman and the Congress outright. The President is likely to be timorous of the political consequences of either extreme. We are likely to try sitting on two stools again, and that is a very difficult feat indeed.

Meantime, it is dubious that the Communists will be able to assault Formosa directly against the effective Nationalist air forces. If the Nationalists are brought down by civil defection within Formosa, their extreme weakness and ineptitude will be evidenced again. We can hardly be expected to intervene to suppress civil strife.

We are therefore likely to do something, at least, for the Nationalists—military and civilian advice, perhaps, which would be a gesture of support and perhaps of some practical value. Such a step, however, would prolong the problem of opening up new channels to the mainland. It would be a concession to a powerful faction of opinion in the United States. It might be the price of continuation of the bipartisan foreign policy. And it might delay a real solution in Asia.

The Late Honorable George J. Bates

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. GOODWIN. Mr. Speaker, the tragic death of GEORGE J. BATES was a great shock to all his colleagues but especially to those of us who were privileged to be associated with him more intimately.

I first came to know him well 30 years ago when he was chairman of the Committee on Municipal Finance of the Massachusetts House of Representatives and I was mayor of my home city of Melrose. I then had occasion to confer with him frequently at the statehouse on Beacon Hill in Boston for he was well known as an authority on fiscal matters relative to municipalities. All Massachusetts cities were then operating under the provisions of a new Municipal Finance Act and Representative BATES was most constant in urging sound financial policies and most helpful in demonstrating their value to city officials who, while eager to keep in step with changing rules of administration, were inclined to consider the new law revolutionary and restrictive.

Five years later he became mayor of Salem, and during the 14 years he held that office I was in the legislature and continued to see him frequently in connection with pending legislation affecting municipal government.

When I came to Congress in 1943, he had been here for 6 years, and so it was only natural that I should follow the habit of seeking his counsel, and I constantly profited thereby.

So long as I shall live I shall never cease to be grateful for the inspiration and genuine helpfulness which has come to me in public life over these 30 years by reason of constant consultations and conferences with GEORGE J. BATES. Many besides myself have learned how fully was he always willing to share with others the knowledge he had acquired by experience and industrious attention to the problems of government.

The Nation has lost one of its ablest and most devoted officials.

I join my colleagues in extending warmest sympathy to his splendid wife and family in their great loss.

Making Democracy Work

EXTENSION OF REMARKS
OF
HON. OREN HARRIS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. HARRIS. Mr. Speaker, the greatest encouragement we have as to the future of our democracy is the reaction and attitude of our young high-school students. Though in their teen-ages now, it will only be a short time when we will look to them to assume the responsibility of our democracy.

Recently when I was back in the district and visited the Lions Club at Stephens, Ark., I, together with the others present, was inspired by two of the most interesting discussions on the subject of Making Democracy Work. These talks were given by two fine high-school students from the local Stephens public school—Miss Sally Jo Wade and Miss Nona Dalton.

They had been studying how our democracy works in their social science classes. Out of this study these two fine young ladies participated in a radio broadcast originating in Camden, Ark., which received a tremendous response. The Stephens High School, the teachers and all interested in the studies and programs, are to be highly congratulated in teaching the young people of that community the basic understanding of our democratic form of government.

I was so much impressed with these interesting discussions that I wanted to share them with others, that they too might be inspired with this living example from our young people. I therefore ask unanimous consent that under

this subject I might include the statement of Sally Jo Wade on Democracy In Social Science, followed by the statement of Nona Dalton on the subject of democracy in the student council. I am sure not only the Members of Congress but people throughout the country who have an opportunity to read these fine statements will be tremendously impressed:

DEMOCRACY IN SOCIAL SCIENCE

In keeping with our theme, Making Democracy Work, I am to tell you how democracy is taught in the social science department at Stephens High School. This department consists of two courses in American history, one in world history, and a civics course. All are prerequisites for graduation.

Democracy must be lived rather than learned. Yet without learning the truths which inspired the founders of our Nation, the facts about our Government, and our relationship to it, living becomes a thing of chance. We may act rightly by accident, but we are far more likely to do so if we are equipped with the information that will help us to make the right choices. Each of us has a place in the life of his community. Our community will reach its possibilities only as each member of it reaches up to his own opportunities for service and achievement.

Social science teaches that no citizen has the right to shift the responsibility for his own thinking and conduct from himself to any organization. We must form our own opinions. It is our duty to get all the information that we can, then stand on our own feet in dealing with those questions that come before us. The fundamental information that the citizen gets comes from the schoolroom.

Upon us, as citizens of our community, State, and Nation, rest certain obligations; social science stresses these: We must have a clear understanding of our rights, and a real appreciation of the duties that go along with those rights. We should learn as much as we possibly can about the world we live in. We should make right use of all the talents and powers we have. We should be loyal to those who have rightful authority over us. We should actively support those causes which we believe to be right. We must believe in the American's creed, which I quote:

"I believe in the United States of America as a Government of the people, by the people, for the people; whose just powers are derived from the consent of the governed; a democracy in a Republic, a sovereign Nation of many sovereign States; a perfect union, one and inseparable; established upon those principles of freedom, equality, justice, and humanity for which American patriots sacrificed their lives and fortunes.

"I therefore believe it is my duty to my country to love it, to support its Constitution, to obey its laws, to respect its flag, and to defend it against all enemies."

DEMOCRACY IN THE STUDENT COUNCIL

I realize that in a democracy I have a much greater chance of happiness than under any other form of government. Sometimes when I read about conditions in other parts of the world I become afraid. What would happen if we lost our democracy? I become more frightened when I read how some foreigners are working against our form of government. Still more alarming is the indifference of our citizens. Too many stand back and criticize rather than work to improve conditions. We need leaders. There are 4,000,000 boys and girls of school age who are not attending school. These are enough to swing any election. Whose responsibility are they?

I want to do my part and I think working on the student council is one way now and also excellent training for future years. Our student council has 14 members. We have charge of a number of school activities. We spent one day in Sheridan learning how their live student council works. We have undertaken to raise $108 to repair our gym floor. Already we have earned $156 of this money by sponsoring school programs. The other students cooperated with us. We have become better acquainted and more cooperative as we worked together. We are realizing that friendliness is a greater asset sometimes than higher grades. We are using our influence for better school work, a courteous, friendly student body, good deportment, and a good record in attendance and punctuality. We have a well behaved student body. The pupils are busy and happy in the classroom, the study hall, and on the playground. We want each student to realize that this is his school and it will be what he and other students make it. If we practice these things in school life, and help in student government, I think that when we have finished school we will want to take part in the affairs of our community and Nation.

We should all—both young and old—devote ourselves to keeping alive the freedom we have won at so great a price. Let us all strive to make democracy work.

The War Claims Commission and Alien Property

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include in the CONGRESSIONAL RECORD a letter I have received from Mr. Peter Campbill Brown, Acting Assistant to the Attorney General, and other letters pertaining to war claims.

The letters follow:

DEPARTMENT OF JUSTICE,
Washington, November 29, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: This is in reply to your note of November 7, 1949, to Mr. David L. Bazelon, requesting an estimate of the future status of the fund which will be covered into the Treasury of the United States under section 39 of the Trading With the Enemy Act, as amended.

The net value of the Attorney General's interest in all vested property as of October 1, 1949, is approximately $336,000,000. It is estimated that debt and title claims in the amount of $50,000,000 may be allowed out of this amount. In addition, approximately $125,000,000 of this property is subject to suits for return under section 9 (a) of the Trading With the Enemy Act, as amended. After deducting debt and title claims and property subject to section 9 (a) suits, a balance of $161,000,000 remains which may ultimately be available for transfer for the payment of claims in accordance with the War Claims Act of 1948.

However, while it is presently estimated that this amount will eventually be made available, the amounts actually available for transfer at present or in the near future cannot be determined until it is possible to process the individual vesting accounts in which the former German and Japanese property is held in order to ascertain which items of property are no longer subject to claim or suit. This processing cannot be undertaken until the time has expired for filing new claims or suits with respect to the property. The time fixed by statute (50 U. S. C. App., sec. 33) for filing claims and suits has expired with respect only to a portion of the property held, and two bills are pending in the Congress (S. 603 and S. 729), either of which would extend the filing period even in those cases. Since both bills passed the Senate in the last session and were pending before the House Committee on Interstate and Foreign Commerce, this office withheld processing the accounts involved because of the difficult problem raised if the filing period should be extended after a portion of these accounts had already been cleared.

The recent payment of $25,000,000 was made in advance of this processing on the basis of estimates that this amount was the maximum safe amount which could presently be advanced against those accounts which, on the basis of present information, probably will not be claimed. While this office will proceed to clear out unclaimable accounts as rapidly as possible when it is feasible to do so, in view of the uncertainty as to the limitation date on claims and suits, it is not possible at the present time to estimate what funds will be available in the near future.

The above information was transmitted on November, 3, 1949, to Mr. Daniel F. Cleary, chairman, War Claims Commission, in response to his request of October 19, 1949.

I regret that it is impossible to give you more definite information at this time. As requested in your note, we are returning a copy of Mr. Cleary's letter of November 2, 1949, to you which was forwarded to the Office of Alien Property.

Sincerely,

PETER CAMPBILL BROWN,
Acting Assistant to the Attorney General.

WAR CLAIMS COMMISSION,
Washington, November 10, 1949.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN BECKWORTH: In response to your inquiry of October 24 with reference to the study that is being made by the War Claims Commission, we are not able to say at this point exactly the amount of time necessary to complete our work. You recall perhaps that we requested an extension of time through Senator CHAVEZ. I feel that it will take all of that to adequately make the survey necessary.

I am indeed concerned over the handling of alien property. I trust that sufficient investigation is being made before any property is restored to its original owner, but I am not at all sure that enough care has been taken in such investigations. I have talked the matter over with the Senators of the Appropriation Committee and trust they will ask for reports at least, if not further investigation, when Congress convenes.

We are told by the custodian that approximately $35,000,000 more is under contemplation now for the return to original owners. It has been stated by this authority that this will be the extent of action to be taken along this line. There will be left approximately $350,000,000 after this last deduction. I hope that we will be able to maintain the $350,000,000 balance for our use. If so, we will be able to do a fairly creditable job in settling war claims but the other members of the Commission and certain of the legal staff feel as I do that the matter should be carefully watched.

As soon as Congress convenes, it is my plan to ask your committee to look into the matter further. I believe you have the authority to ask for reports, or to investigate

further if you care to take the time. Knowing your interest in the matter, I feel that you will concede to our wishes.

May I add this statement. We are making noticeable headway in our work, organization, and preparation for the handling of claims. Considering that we have been in office only 6 weeks, I believe we can claim some approval of our effort.

I am looking forward to seeing you again in Washington for further discussion of these problems.

Very sincerely,

GEORGIA L. LUSK,
Commissioner.

DECEMBER 27, 1949.

Hon. LINDLEY BECKWORTH,
Member of Congress,
Gladewater, Tex.

MY DEAR MR. CONGRESSMAN: This is in reply to your notes of November 26 and December 6, 1949, addressed to the Attorney General requesting information regarding certain specific aspects of the fund which will be covered into the Treasury of the United States under section 39 of the Trading With the Enemy Act, as amended.

Your note of November 26, 1949, transmitted a copy of Commissioner Georgia L. Lusk's letter to you of November 10 in which it is stated that the Office of Alien Property has under contemplation the return of $35,000,000 of vested properties to their former owners. Commissioner Lusk states further that after these returns have been made, there will remain approximately $350,000,000 of vested properties which may be used by the War Claims Commissioners pursuant to Public Law 396, Eightieth Congress, second session (62 Stat. 1240). You ask verification of these data. In reply reference is made to the Department's letter to you of November 29, 1949, in which it was stated that as of October 1, 1949, the net value of the Attorney General's interest in vested properties was $336,000,000. Further, it was pointed out that this sum was subject to deductions which might reach $175,000,000. Hence, it was estimated that approximately $161,000,000 remain which may ultimately be used by the War Claims Commissioners.

In your note of December 6, 1949, written on a copy of the Department's letter of November 29 referred to above, you request information as to the value of the Attorney General's interest in vested properties if no returns had been made. From March 1943 to October 1949 approximately $19,500,000 of vested properties have been returned. Since the Attorney General's interest in vested properties as of October 1, 1949, was $336,000,000 and since approximately $19,500,000 of vested properties had been returned as of the same date, it would appear that if no returns had been made the total would have been $355,500,000.

As requested, there are returned herewith your notes of November 26 and December 6, 1949.

Yours sincerely,

PEYTON FORD,
The Assistant to the Attorney General.

Is This the Time To Spend Billions More?

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Williamsport (Pa.) Sun:

IS THIS THE TIME TO SPEND BILLIONS MORE?

Here are two columns of figures. One gives the amount spent by each of our 32 Presidents from George Washington to the end of Franklin D. Roosevelt's second administration. The other gives the amount spent by President Truman since his inauguration up to September 30, 1949.

The figures have been compiled by John T. Flynn, from Historical Statistics of the United States (Census Bureau) and United States Treasury Reports, as published in the Reader's Digest.

Spent by 32 Presidents from Washington to Roosevelt (through second term)

Washington	$34,033,486
Adams	34,262,668
Jefferson	72,424,289
Madison	176,473,864
Monroe	147,237,899
Adams	65,427,017
Jackson	152,969,968
Van Buren	122,325,242
Harrison and Tyler	108,904,678
Polk	173,477,220
Taylor and Fillmore	179,631,529
Pierce	255,154,244
Buchanan	272,933,490
Lincoln	3,252,380,410
Johnson	1,578,557,645
Grant	2,253,386,743
Hayes	1,032,268,037
Garfield and Arthur	1,027,742,757
Cleveland	1,077,629,089
Harrison	1,412,315,899
Cleveland	1,441,674,174
McKinley	2,093,918,514
T. Roosevelt	4,655,450,505
Taft	2,799,211,854
Wilson	46,938,260,143
Harding	6,667,235,429
Coolidge	18,585,549,119
Hoover	15,490,476,636
Roosevelt (8 years)	67,518,746,001
Total	179,620,113,645

Spent by President Truman from fiscal year 1946 to Sept. 30, 1949

Truman	$191,081,394,191

Think this over:

Thirty-two Presidents in 156 years spent $179,620,113,645.

One President in less than 5 years has spent $191,081,394,191.

(The extraordinary expenditures of the war years from 1941 to 1945 have been excluded.)

Hon. Martin Gorski, a Great American

EXTENSION OF REMARKS
OF
HON. NEIL J. LINEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. LINEHAN. Mr. Speaker, on Sunday in St. Matthew's Cathedral here in the Nation's Capital, memorial mass will be sung for Hon. MARTIN GORSKI, our beloved colleague from Illinois who passed to the Great Beyond only a few weeks after our adjournment in October.

It seemed fitting to the members of his own party and from his city of Chicago that on the first Sunday following our convening for the second session that we should meet, with his many friends from the delegations from the other States of the Union, in the sanctified atmosphere of religion to pay honor to the memory of a stout friend and a great public servant.

In every meaning of the phrase, MARTIN GORSKI was a great American. He never forgot when large opportunity came to him in the broadening of his influence that the greatest use which can be made of influence is to employ it in behalf of those who are most in need of the services of friendship. He was the champion of the oppressed and his hand was always extended to help to their feet those whom unfortunate circumstances had buffeted about.

As a lawyer of the highest standing in Chicago, as a learned and universally respected master-in-chancery, and as an influential Member of the Congress of the United States, he made a reputation for industry, integrity, and brilliant achievement which for generations will be an inspiration to the youth of Chicago. He was brought to this land, a lad of 3, an immigrant boy. Behind him was no influence. To help him were not available the means of wealthy parents. Yet when he passed to his eternal reward the flags at half mast over the Capitol and over the House Office Buildings reflected the grief of the Nation to the service of which, and its ideals, he had given the fruitful years of his life.

Mr. Speaker, we have lost a great American. To me, with all the other Members from Illinois, has come the loss of a close and beloved friend.

The Problem of Unification of the Armed Forces

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. COLE of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered to the American Veterans' Committee, at Newport, R. I., on November 17, 1949, by Admiral H. E. Yarnell, United States Navy, retired, on the problem of unification of the armed forces:

Three years ago, there were in existence two armed forces: the Army and the Navy. The Air Force was a part of the Army, and the Navy was composed of a powerful, highly integrated organization of ships, marines, and aviation.

Today, there are three organizations as a result of the National Security Act of 1947. There is also a degree of bitterness and unrest on the part of the Navy, justified or otherwise, which will take much time to eradicate.

It is my opinion that the passage of the National Security Act was a serious blunder. It has imposed on the Government a great monolithic structure in an attempt to solve problems which required evolution, not revolution, to arrive at a proper solution. Like the prohibition amendment, it was a

"noble experiment," and of the same dubious value.

No reasonable person denies the necessity of coordination in the organization and operation of the armed forces. Their development and training in time of peace must be to the end of united effort under a common plan in time of war.

This was realized to a very considerable extent in the past war. There were the Joint Chiefs of Staff who decided the general plan of campaign. There was unified command in the European area and, with the exception of the southwestern Pacific, in the campaign against Japan.

For many years before the war joint maneuvers were an annual event, and the service colleges were composed of officers of the Army, Navy, Marine Corps, and Air Force. There was every reason to believe that as a result of the lessons of the war and the realization among the officers of all services for the necessity of united action coordination would have proceeded at a more rapid pace than before the war. The procedure could have been covered by Executive orders instead of by an elaborate act of Congress, and the uproar and bitterness that exists today could have been avoided.

Let us discuss briefly some of the factors that enter into the coordination of the armed forces:

First is that of education. Officers, especially those destined for high command, must have an understanding of the capabilities and limitations of the other services besides their own if they are to be placed in charge of combined operations in time of war. This process of education is being carried out in the staff and war colleges today. This is a matter of time. Since war is a continuation of policy by other than peaceful means, officers of the Foreign Service of the State Department should be included in the student body of the higher colleges.

It is interesting to note that in the Security Act there is no mention of education—one of the most important factors in intelligent and effective coordination of the services.

Another important factor is that of appropriations for the several services and involves the question whether the authority to allot funds and to decide how much each service should receive should rest in the hands of the Secretary of Defense. This is great power to place in the hands of one man, and experience to date shows that it has not been overly successful. There have been accusations that limitation of funds to one service have been with the idea of reducing the effectiveness of that service and increasing that of others.

Since the establishment of the armed forces, the allotment of funds for the Army and Navy has been the prerogative of Congress and its committees. There is where it belongs under the Constitution and there is where it should remain.

There is now one Armed Forces Appropriations Committee, many of whose members have a thorough knowledge of the services through years of committee hearings. They constitute a jury who hear the requests for funds and the arguments for their necessity. Their decision is final; there can be no appeal. There is where the question of the amount and allotment of funds should remain. No service can question the decision of Congress as to their needs or requests.

The Security Act provides for a number of councils, agencies, and boards, some new, and one which was in existenoe under another name for many years—the Munitions Board. These boards have a certain value but there is an apparent overlapping of functions which may be confusing. There are in addition to the military departments a National Security Council, an Armed Forces Policy Council, a Central Agency, a National Security Resources Board, a War Council, Joint Chiefs of Staff, Joint Staff, Munitions Board, a Research and Development Board, and advisory committees when deemed necessary.

Surely there will not be any lack of information or advice. The problem will be to coordinate it, and I think that is a feature for which the act makes no provision.

The results of all their labors should be centralized in the strategic plans for war, yet the responsibility for such plans rests with the Joint Chiefs of Staff, a purely military body.

The whole object of the Security Act was to increase the efficiency and economy of the armed forces in peace and war, and the heart of the whole complex organization was the "preparation of strategic plans and provision for the strategic direction of the military forces."

This strategic plan must consider many factors:

1. Is it to be a total war, or a limited war, or a preventive war?

2. How does the war plan comply with our present and future national policies?

3. Has the Nation adequate raw materials to conduct the type of warfare decided upon?

4. Can the Nation stand the expense of total war if the military decide such is necessary?

5. What will be the consequence on the national economy of a total war, or a limited war?

6. Are we going to use atomic bombs, and gas, and bacteriological weapons? All are equally effective, and equally barbarous.

These and others that might be asked, are momentous questions, and the answers to them may decide our national security or destruction.

When war takes place, the task assumed by the military forces is the defeat or destruction of the enemy. Cost or subsequent consequences are not considered. Those are matters for civilians. Yet there is not a civilian on the Joint Staff which prepare the plans on which the fate of the Nation depends.

This seems to me to be the fatal defect in the present law. It is fairly certain that, if left to the military with no regard to the object of war, its cost, or its postwar results, we will be embarked on a campaign that will require the drafting of many millions of men, the practical exhaustion of our natural resources, and a debt of trillions, not billions, of dollars.

Nowhere is the presence of our ablest civilians more necessary than on the Joint Staff. The chairman of the Staff should be a civilian, and the chairman of the Central Intelligence Agency, the National Security Resources Board, and the Munitions Board should be members as well as personnel from the State Department. The chairmen of the Senate and House Foreign Relations and Armed Forces Appropriation Committees should be members ex-officio, and to be kept in closest touch with the work of the Staff.

The object of war is to secure a more perfect peace. It is not to destroy the enemy nation. It should be directed against the enemy military forces and not against the enemy people. It should be conducted as humanely as possible, with full observance of the rules of war that were in effect before 1914. It should stop when the enemy is willing to treat for a negotiated peace. The peace terms should be generous. Our enemies of today may be our allies of tomorrow.

After the war between Prussia and Austria in 1866, Bismarck, the German chancelor, insisted on liberal terms of peace with the result that some years later Austria was a member of the Triple Alliance. Had Bismarck shown equal forbearance to France after the Franco-Prussian War of 1870, it might have changed the subsequent history of Europe.

In 1917, Lord Lansdowne in England proposed a negotiated peace with Germany, the latter country then being willing to consider the offer. Landsdowne was denounced as a pacifist, a defeatist, and even as a traitor. The Premier, Lloyd George, declared that the war must go on until the power of the German royal regime was destroyed. Hitler and World War II was the eventual result.

In this war we had "unconditional surrender" decided upon at Casablanca. The taxpayers of America are now footing the bill.

There is no doubt but that the Security Act provided enough boards, staffs, and agencies to collect the information necessary on which to base an adequate war plan. It is another matter to see that this data is evaluated and utilized. In 1941, the War and Navy Departments had information from intercepted Japanese dispatches of the imminence of war and also that an attack on Pearl Harbor was likely. The failure to evaluate this information and to pass it on to the commanders in Pearl Harbor resulted in tragedy.

The act provides for a Munitions Board which has very important duties. Yet much of the information and the plans for which this Board is charged was carried out by the War and Navy Departments between 1919 and 1939 and embodied in an Industrial Mobilization Plan which, had it been placed in effect in December 1941, would have saved months of confusion and wasted effort before a fairly satisfactory scheme of operation was devised. Why that plan was never utilized remains a secret.

All in all, I believe the National Security Act as amended provides for a set-up which is ponderous, over-organized, with too much power in the hands of one individual, yet which misses what should be the heart of the whole problem: civilian control and adequate civilian as well as military staffs on the War Plans Division—a staff that will ensure that if we are so unfortunate as to be involved in another war, it will be one that insures a more perfect peace.

Now a few words on the effect of the act on the Navy. Before and during the war, the Navy developed the most efficient, and united, force of naval vessels, marines, and aviation, that ever carried out military operations.

The plan of campaign was to move direct across the Pacific to the heart of Japan. Bases were seized at Kwajalein and Eniwetok in the Marshall Islands, then the long hop to Saipan and Guam and finally Okinawa. Working together like a Notre Dame football team, the submarines, surface vessels, and aircraft sank the enemy merchant marine, destroyed its surface navy, and practically all of its air force. Japan was helpless with no fuel oil for the few warships still left, no gasoline for planes, and no imports of food for her population. Her official surrender was only a matter of weeks. No invasion of her home-land was necessary, nor were the atomic bombs on Hiroshima and Nagasaki. It was the most brilliant naval campaign in history. Also it was a magnificent example of a coordinated force—surface ships, submarines, the military represented by the marines, and the air force working together under a single command to a common end—the destruction of the naval and air power of Japan.

All of the many thousands of lives lost through disease and battle in the swamps of New Guinea and in the Philippines were sacrificed to no purpose since the enemy forces in those islands would have been forced to surrender when the homeland collapsed, as did those in China, Malaya, and Indonesia.

The success of the Navy in the Pacific was due to years of training and maneuvers following the First World War. The submarine force was a corps d'elite whose remarkable work was responsible for the de-

struction of the bulk of the enemy merchant marine.

Naval aviators were trained as naval officers first and aviators second. Their work was with the fleet in combined operations. They knew ships and how to operate with them in scouting and combat duties. During the years of peace they developed dive bombing, scouting tactics, and carrier operations to a high degree of perfection. It takes a skilled flyer to find his way back to his ship in thick weather at sea and land safely on a field 150 feet long, which in rough weather may be rising and falling 15 or 20 feet. Here are a few aviation statistics of the Pacific naval campaign:

1. Naval and Marine Corps planes destroyed 15,400 enemy planes.

2. Of the Navy's total score, 80 percent were destroyed by carrier-based planes.

3. Fourteen Japanese planes were shot down for one carrier-based plane lost.

4. United States carrier planes destroyed 5,619 Japanese aircraft on the ground.

The United States Marine Corps probably represents more fighting value per dollar expended than any other military force in the world. Their battles in the Pacific—the Solomons, Tarawa, Kwajalein, Saipan, Guam, Iwo, and Okinawa—prove that statement. The Corps has been in existence for 174 years. Prior to 1941 the Corps developed the landing craft and tactics for amphibious operations which were a major feature in the Pacific campaign.

The corps has an Air Force of highly trained aviators whose specialty is tactical operation during landings and afterward. They are also trained in carrier landings and fly from these vessels to the support of the marines when landing.

The Navy during the war and today have the most efficient body of officers and men manning its surface vessels of any time in its long and honorable history. Officers at an early age are placed in charge of intricate machinery and in command of submarines and destroyers costing millions of dollars. The greater part of the present officer corps has had war service to their credit, and this fact plus their acceptance of the responsibilities of command at an early age insures the Navy of an exceptionally able officer personnel for years to come.

A few months ago strange rumors came out of Washington. The Navy and its air arm were to be given as their function the protection of convoys and warfare against submarines. It had no need of large carriers. The Marine Corps was to be deprived of its aviation and restricted to guard duty at naval stations. Coming as they did, after the brilliant campaign in the Pacific, they caused consternation in the Navy, especially since there was considerable basis for the rumor.

It is common knowledge that the Army would like to see the Marine Corps reduced to corporals' guards at naval stations, or disbanded entirely. This feeling has existed since the First World War.

In September 1918 I returned to Washington from duty in London on Admiral Sims' staff. One of the tasks assigned me before leaving London was to see the Army Chief of Staff and request the shipment of the Sixth Brigade of Marines in France of a number of 7-inch tractor mounted guns that were available at Quantico. I explained the object of my visit and the need of the guns by the marines.

"These guns are for the marines?" he asked.

"Yes, sir."

"I will never have another marine in France."

The marines did not get their guns.

It is also common knowledge that the Air Force would like to absorb naval aviation, or, failing that, to see it reduced to the lowest possible limit.

In 1941, there were eight bills in Congress providing for a separate Air Force. Six of these bills provided for the inclusion in the Air Force of all naval aviation.

The cancellation of the contract for the construction of the large carrier last spring was mainly due, without doubt, to the objections of the Air Force who feared that such a vessel might encroach on their function of strategic bombing.

At any rate this crescendo of rumors, baseless or otherwise, resulted in the congressional investigation and the disclosure of reports of naval officers which would have gathered dust in the secret archives had they not been brought to light by means not included in the regulation book.

There is no doubt but that the disclosure of these reports and the testimony before the committee have brought into the open a situation that should be in the open. Wars are fought by the youth of the Nation and paid for by every taxpayer. Surely they should be entitled to information regarding the state of efficiency of the armed forces. And it is the youth of the Nation that will give their lives; if another war comes.

Furthermore, the charge of disloyalty directed against the naval officers who testified before the recent congressional committee has no basis. It is the duty of any conscientious officer to report situations which in his opinion are contrary to the national interest. His oath of allegiance is to the Constitution; not to personalities. When the Pentagon is manned with "yes-men," it will be a sad day for the Nation.

What will be the final result of the Security Act remains a question. There is no doubt but that it requires many changes to make it an effective instrument. There is also no doubt but that an organization which provides a square deal for each service without fear of discrimination will receive the wholehearted support of the Navy.

Furthermore, the organization of the armed forces must provide for the control of the war plan itself by the civilian authorities, if we are to avoid another total war which will result in the destruction of our civilization.

High Panama Canal Tolls Hurt Pacific Coast Shipping

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. McDONOUGH. Mr. Speaker, the present toll rates charged vessels passing through the Panama Canal are greatly in excess of the actual cost of operating and maintaining the Panama Canal and should be reduced.

Excessive toll rates are oppressive to our California intercoastal shipping and have brought a reduction in the volume of cargo handled at Los Angeles Harbor, as well as at all other Pacific coast ports, with the attendant loss of business and pay rolls.

The intercoastal shipping industry of California and the other Pacific Coast States is a vital factor in our national economy, as well as in our national defense. But high toll charges have caused a steady decline in our intercoastal merchant shipping.

I have received resolutions from many substantial organizations protesting the present rates and requesting that serious consideration be given to a reduction in Panama Canal toll rates based on the belief that the present tolls are a deterrent to intercoastal shipping, which is a valuable asset to the Pacific coast economy. The following are copies of the resolutions I have received from the California State Legislature, the San Francisco Chamber of Commerce, the board of directors of Marine Exchange, Inc., the Sacramento Chamber of Commerce, the Los Angeles Chamber of Commerce, the Board of Port Commissioners of the City of Oakland, the Export Managers Association of San Francisco, and the Motor Truck Association of South California:

Senate Joint Resolution 1

Joint resolution relative to memorializing the President of the United States, the Congress of the United States, the Secretary of Defense, the Secretary of the Navy, and the Maritime Commission of the United States, to reduce the tolls of the Panama Canal

Whereas vessels passing through the Panama Canal are now required to pay tolls which are greatly in excess of the cost of operating and maintaining the Panama Canal and are oppressive and destructive to the intercoastal shipping industry; and

Whereas such tolls have been a most important factor in reducing the number of privately owned vessels in the intercoastal shipping service from 170 before World War II to 18 at the present time; and

Whereas this decline in intercoastal merchant shipping has resulted in a corresponding reduction in the volume of cargo handled by all ports on the west coast of the United States with a consequent loss of business and pay rolls by the ports of California, Oregon, and Washington; and

Whereas a number of chambers of commerce and civic organizations have emphatically urged a reduction of Canal toll rates; and

Whereas an active and prosperous intercoastal shipping service is vital to national defense and the welfare of the Pacific coast: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the President of the United States, the Congress of the United States, the Secretary of Defense, the Secretary of the Navy, and the Maritime Commission of the United States, are hereby respectfully memorialized and requested to take such steps as may be necessary to reduce Panama Canal tolls to fair and equitable rates which will encourage and stimulate intercoastal shipping; and be it further

Resolved, That the secretary of the senate be hereby directed to prepare and transmit copies of this resolution to the President of the United States, the Vice President of the United States, the Secretary of the Navy, the Secretary of Defense, the Maritime Commission of the United States, the Chief of Naval Operations, the Congress of the United States, the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

RESOLUTION OF THE SAN FRANCISCO CHAMBER OF COMMERCE RELATIVE TO PANAMA CANAL TOLLS ON COMMERCIAL SHIPPING

Whereas water-borne commerce is essential to the economic welfare of the San Francisco Bay area; and

Whereas 64 percent of all intercoastal and foreign-trade cargoes in all Pacific coast ports are subjected to tolls at the Panama Canal; and

Whereas only 20 percent of Gulf cargoes and 14 percent of Atlantic coast cargoes are subjected to such tolls; and

Whereas by means of the accounting practices at the Panama Canal, tolls on commercial shipping are based not only on the cost of providing Canal transit to commercial vessels, but also the cost of providing toll-free transit to Government ships; the cost of certain expense items at the Canal not related to the transit of commercial shipping; and a 3-percent annual interest charge on building funds; and

Whereas no such interest charges are made at the 12 other major, federally built canals in the United States: Therefore be it

Resolved, That Congress is urged to develop a definite formula for computing tolls at the Panama Canal, based on these principles:

1. That tolls should reflect only the cost of providing transit to commercial ships—

(a) the cost of providing toll-free transits to Government ships should be eliminated as toll factors on commercial ships.

(b) the cost of certain dual-purpose items should be eliminated as toll factors, on an equitable division of such costs should be made in the case of those adjudged to be of service to both the national defense and commercial aspects of the Canal.

2. That as a minimum recognition of the national defense value of the Canal, no interest should be charged on building funds used.

That the president of the chamber of commerce is requested to furnish copies of this resolution to the President, the California delegation in the United States Congress, and to members of the House Merchant Marine and Fisheries Committee and the Senate Interstate and Foreign Commerce Committee.

Approved by the board of directors, San Francisco Chamber of Commerce.

M. A. HOGAN, *Secretary*.

RESOLUTION ADOPTED BY BOARD OF DIRECTORS, MARINE EXCHANGE, INC., SAN FRANCISCO, AT THEIR REGULAR MONTHLY MEETING ON NOVEMBER 8, 1949

Whereas bay area employment is largely dependent upon shipping operations in the various ports in the San Francisco Harbor; and

Whereas like other Pacific coast ports, nearly two-thirds of all cargoes moving across bay area docks pass through the Panama Canal and thus are in effect subjected to its tolls; and

Whereas the tolls are not based solely on the true cost of providing transit for commercial vessels through the Canal; and

Whereas free transits to Government ships, numerous quasi-Government activities, and a permanent, non-amortizing interest charge are all cost factors in establishing Canal tolls; and

Whereas no such interest charges and in fact no tolls are charged at 12 other Government-built canals in the United States: Therefore be it

Resolved, That tolls on commercial vessels at the Panama Canal should be based solely on the true cost of providing transit to commercial ships and that all building and operating expenses at the Canal properly allocable to the national defense should be so charged and should not be included in Canal tolls computation.

RESOLUTION OF SACRAMENTO (CALIF.) CHAMBER OF COMMERCE

Resolution on Panama Canal tolls

Whereas the second economic development of ocean transportation is vital to the welfare of Sacramento and the northern California area; and

Whereas the Panama Canal is recognized to be vital as a national defense utility and to commercial shipping; and

Whereas it appears that the cost of certain governmental functions cannot rightly be considered to be part of those directly related to the transits of commercial vessels: Now, therefore, be it

Resolved, That the Sacramento Chamber of Commerce, Sacramento, Calif., recommends the establishment of a definite policy for assessing tolls on commercial shipping through the Panama Canal; such formula should be based solely on the cost of providing transit to commercial vessels; all expenses properly chargeable to the national defense should be so allocated and not be considered as factors in the tolls formula; be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to each member of the Merchant Marine and Fisheries Committee and our Senators and Congressmen.

A. S. DUDLEY,
Secretary-Manager.

LOS ANGELES CHAMBER OF COMMERCE,
December 12, 1949.

Hon. GORDON L. MCDONOUGH,
House of Representatives,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN MCDONOUGH: The board of directors of the Los Angeles Chamber of Commerce has adopted the following resolution:

"*Be it resolved*, That the board of directors of the Los Angeles Chamber of Commerce, fully cognizant of the value of the Panama Canal to the national defense and the importance of the Panama Canal to the economic welfare of the ports of Los Angeles-Long Beach and the maritime industry, hereby goes on record:

"1. In favor of a reexamination of the costs and expenses arising out of the maintenance of the numerous civic, Government, and military activities in the Canal Zone which costs and expenses are presently viewed as reimbursable through toll charges; and

"2. In favor of a formula for the assessing of toll charges on all ships of every character on such basis as to equalize all proper operating expenses of the facility, including depreciation and interest on investment."

In the discussion resulting in the adoption of this resolution, the board considered many important facts; some of these are as follows:

1. Approximately 64 percent of all west coast cargoes in foreign and intercoastal trade are subject to Panama Canal tolls.

2. Such tolls are reflected in the general costs of shipping and therefore should be regarded as important to the economic welfare and growth of the maritime shipping industry.

3. The volume of cargo moving through the ports of Los Angeles-Long Beach is vital to the prosperity and economy of the general public and business of this area.

4. The burden of inequitable costs and charges will have an adverse effect on the welfare of the community as well as that of the maritime industry.

5. It appears that the present financial operation of the Panama Canal places the cost burden for certain Government operations on commercial shipping.

There are several very important factors which should be considered in the operation of the Panama Canal. These factors are as follows:

1. Commercial shipping be charged only those costs directly assessable to the transits of commercial vessels.

2. The national-defense value of the Canal be recognized by the Congress.

3. A fair and equitable fomula be established for setting toll rates based on those considerations as well as—

(a) Elimination of the costs of toll-free Government transits as a factor in determining tolls on commercial ships.

(b) Unrelated Government functions should be eliminated as factors in arriving at tolls on commercial shipping.

The Board of Directors, by its resolution, does not propose the cancellation of these tolls and has no intention of creating an unfair competitive situation. Because of the importance of the Panama Canal to the Nation as a whole, and to the Pacific coast specifically, the Board has merely indicated that a policy should be followed which is fair and equitable to all concerned.

In the interest of the ports of Los Angeles-Long Beach, the maritime industry and the community generally, your serious consideration and careful attention to the matter will be greatly appreciated.

Sincerely yours,

EARLE V. GROVER,
President, Los Angeles Chamber of Commerce.

BOARD OF PORT COMMISSIONERS, CITY OF OAKLAND

Resolution B678

Resolution with respect to Panama Canal tolls

Whereas the Board of Port Commissioners of the City of Oakland is engaged in the operation of the municipal marine terminal facilities of that city, and the success of its operations is directly dependent upon the extent of ocean freight it can serve; and

Whereas the cost to commercial vessels in transiting the Panama Canal is a large factor in the movement of that freight; and

Whereas the tolls for the use of the Canal assessed against commercial vessels are inequitable and unduly burdensome: Now, therefore, be it

Resolved, That this board hereby urges Congress to enact legislation providing the basis for fixing tolls against commercial vessels using the Panama Canal do not include (1) the share of the cost of operation attributable to the transit of Government vessels, calculated on the basis of proportionate use; (2) interest charges on the cost of the construction of the Canal; and (3) not more than half the costs of carrying on governmental functions in the Canal Zone.

RESOLUTION OF THE EXPORT MANAGERS ASSOCIATION OF SAN FRANCISCO, DECEMBER 13, 1949

Whereas this association is vitally interested in the promotion and welfare of intercoastal and foreign water-borne commerce through the ports of San Francisco Bay; and

Whereas it appears that free transit to Government ships, numerous quasi-Government activities and a permanent, nonamortizing interest charge are considered as cost factors in establishing Panama Canal tolls against commercial vessels: Now, therefore, be it

Resolved, That we believe that in the establishment of Panama Canal tolls for commercial shipping, consideration should be given to the exclusion from computation of such tolls, the expenses and costs of operations rightly chargeable to governmental functions and military defense, to the end that tolls may be established which are just and equitable charges on commercial water carriers.

A. E. OJEDA,
President.

RESOLUTION OF THE MOTOR TRUCK ASSOCIATION OF SOUTHERN CALIFORNIA, LOS ANGELES, CALIF.

Whereas the construction of the Panama Canal opened the transit of water-borne freight and passengers between the Atlantic and Pacific Oceans, and facilitated the

prompt and efficient movement of military vessels in the national defense; and

Whereas investigations have been made by the Congress from time to time to determine proper methods for administering the operation of the Canal and the apportionment cost thereof; and

Whereas it has been developed that since 1931 the national defense share of the capital cost has been so readjusted as to place the entire financial burden of the canal on commercial users; and

Whereas 64.2 percent of all tonnage paying canal tolls has been charged to Pacific tonnage, thus adding to the already heavy burden of costs imposed upon such water-borne traffic, necessitating increases in rates to meet the mounting costs, which the public is required to pay in the purchase of such tonnage; and

Whereas it is believed that a more equitable formula for the distribution of Canal costs should be arrived at under the following suggested policy:

1. Commercial shipping should pay only its own way, with tolls reflecting the true cost of providing transit for commercial vessels.

2. Interest should not be charged on funds used to build the canal. No interest or tolls are charged on the 12 other Federal-built canals. Panama Canal interest charges should be eliminated as a minimum acknowledgement of its national defense value.

3. All vessels of all types should pay tolls at the Canal. Government vessels now transit the Canal toll free.

4. Commercial shipping should pay through tolls no more than half the cost of dual-purpose expenses at the Canal. Military and civil-government activities should bear at least half: Now, therefore, be it

Resolved by the board of directors of the Motor Truck Association of Southern California, representing the major portion of the trucking industry handling water-borne commerce through the ports of southern California, That the Congress of the United States in considering the report of the Bureau of the Budget covering the within subject, take into consideration the matters submitted herein and act favorably upon the suggested policy hereinabove stated; and be it further

Resolved, That a copy of this resolution be forwarded to each Member of the Congress from the State of California.

Coal Situation in New England

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. GOODWIN. Mr. Speaker, I have sent the following telegram to President Truman:

The coal situation in New England has reached a stage of emergency in the opinion of all in position to know the facts. Three days of operation each week is inadequate to care for normal winter demands and a serious cold spell due any time at this season of the year would bring on much unnecessary suffering. Dealers report to me that their supplies are shrinking rapidly. Many are now having difficulties supplying day to day needs, and unless action is taken immediately to assure adequate supplies from the mines, widespread suffering could develop almost overnight. I urgently request that you recognize the existence of this emergency and take immediate action under present law with proper authorities to avert what might develop into a serious situation.

I took this action following the receipt of various communications from constituents and others of which the following are typical:

NEW ENGLAND FUEL DEALERS ASSOCIATION,
Boston, Mass., December 30, 1949.

Hon. ANGIER L. GOODWIN,
United States Congressman,
House Office Building,
Washington, D. C.

DEAR SIR: It is apparent to everyone in the coal business that 3 days per week operation at the mines does not furnish enough coal to take care of normal winter demands.

In the last few weeks, inventories in the hands of dealers have been shrinking very rapidly. With the advent of cold weather, many dealers will be entirely without coal. Unless action is taken immediately to assure adequate supplies from the mines, widespread suffering is apt to result.

I enclose copy of a letter sent to the President of the United States, which bears on this subject.

I hope that you will use your influence to secure action.

Very truly yours,

J. L. JOHNSON,
President.

NEW ENGLAND FUEL DEALERS ASSOCIATION,
Boston, Mass., December 29, 1949.

Hon. HARRY S. TRUMAN,
President of the United States of America,
The White House,
Washington, D. C.

MY DEAR MR. PRESIDENT: In the newspapers and on the radio last week, you were quoted as saying, in effect, that you would take the necessary action if the coal situation reached the emergency stage. I heartily approve of your determination to act, but I am afraid that we may differ as to what constitutes the emergency stage.

I am reminded of the story which we used to read when we were children about the little Dutch boy who discovered a hole in the dike through which the water was seeping from the ocean on the outside of the dike. He put his thumb in the hole and kept it there, effectively stopping the flow of water until others could come and repair the damaged dike. The little Dutch boy, while probably knowing that the amount of water flowing through the little hole of itself would do no great damage, realized that without immediate action on his part the hole would gradually grow until the water came through in torrents and the countryside would be flooded. The emergency existed although the immediate consequences were not great. If immediate action had not been taken, it is probable that the dike would have been demolished and irremedial damage caused.

The present emergency stage of the coal situation, of course, is much more advanced than that discovered by the little Dutch boy. Irremedial damage will soon be with us unless effective steps are taken immediately to prevent it.

An emergency exists, in my opinion, when current economic forces will bring widespread hardship and suffering unless curbed. It is not dependent upon the actual present existence of hardship and suffering.

Unless the present forces at play in the coal business are checked, it is inevitable that people will suffer from lack of heat, that factories will close from lack of fuel, and their employees thrown out of employment.

On behalf of the fuel dealers of New England and the people who are dependent, directly or indirectly, upon coal for their livelihood and comfort, I urge you to recognize immediately the existence of an emergency and to take such steps as will assure the people of an adequate supply of their vitally necessary fuel.

Respectfully yours,

J. L. JOHNSON,
President.

THE CARBON COAL & COKE CO.,
Boston, January 4, 1950.

Hon. ANGIER L. GOODWIN,
House of Representatives,
Washington, D. C.

DEAR ANGIER: As a good lawyer, I thought you would be interested to see the list of "unfair practices" of John Lewis and the United Mine Workers, as listed in the petition which the Northern and Southern Coal Producers Associations have presented to General Counsel Denham of the NLRB. They are listed on page 2 of the enclosed bulletin.

Also is a column clipped from the Commercial Bulletin, of Boston, current issue, listing some of the results of Mr. Lewis' bad union leadership during the past year.

If there is anything that can be done to bring such monopoly unions under the Sherman antitrust law, it seems to many of us coal men that it should be taken up by Congress as promptly as possible. The present restrictions of the union seem very much like a conspiracy in restraint of trade.

With my best personal regards, I remain,

Sincerely yours,

L. F. LEIGHTON, *President.*

[From Bulletin No. 242 of the American Coal Sales Association, Washington, D. C., December 30, 1949]

NORTHERN AND MIDDLE WESTERN OPERATORS FILE CHARGES WITH NATIONAL LABOR RELATIONS BOARD AGAINST UMWA

Late this afternoon eight operator associations filed charges of unfair labor practices against the United Mine Workers of America; namely, Indiana Coal Producers Association, Indiana Coal Operators Association, Ohio Coal Association, Northern West Virginia Coal Association, Western Pennsylvania Coal Operators Association, Virginia Coal Operators Association, Winding Gulf Operators Association, and Somerset County (Pa.) Coal Operators Association. The operator members of these eight associations mined, in 1948, in excess of 111,000,000 tons of bituminous coal.

The petition charges that the union is attempting, coercing, and forcing members of the association to enter into the "illegal" contract by strikes and partial strikes. The petition concludes by averring that the union has committed the following unfair practices:

1. It has insisted upon a collective-bargaining agreement containing the illegal clause requiring all miners to be or become members of the UMWA. The union has not petitioned the National Labor Relations Board nor has the Board conducted any election or have the majority of the employees voted in such an election to authorize the union to make an agreement embodying such a requirement. The union has forced this provision upon members of the association in the past despite its illegality.

2. The union has insisted on a contract provision with respect to the welfare and retirement fund which would limit the benefits of the fund to members of the union and require administration of the fund solely through local offices of the union in violation of the National Labor Relations Act.

3. The union insisted upon provisions which would extend benefits of a welfare fund to persons who have never been employees, and who are not members of the family or dependent upon persons who had been employees, of any of the employers who contributed to the fund. Such terms are illegal under the National Labor Relations Act.

4. The union's insistence upon the "able and willing" clause is a refusal to make a contract for a definite term and withholds the mutuality which is essential to the existence of a contract and denies to employers the benefits of collective bargaining in good faith.

5. The insistence by the union of the unrestricted memorial periods also withholds the mutuality which is essential in a contract and denies to the operators the benefit of good-faith collective bargaining.

6. The union has refused to make a new contract giving employers representation in the administration of the welfare and pension fund, but has insisted upon the right to designate all three trustees of such fund, and has thereby refused to bargain except on terms made criminal by the laws of the United States.

7. It has refused to bargain in good faith with authorized representatives of employers and has made offers of contracts to individual employers which it has not offered to the operators' committee.

8. The various meetings held by the union with the operators' committee were not serious efforts in good faith to bargain and reach an agreement.

9. Finally, the union has, through coercion, caused and attempted to cause the operators in the hiring of employees to discriminate against those not members of the union, despite the fact that no lawful agreement requiring membership in the union has ever been in effect.

[From the Commercial Bulletin, Boston, December 31, 1949]

A RECORD NOT TO BE PROUD OF

In 1949 the leadership for which coal miners pay high salaries was responsible for a $1,420,000 fine for lawbreaking. The miners paid.

The same leadership in March cost the miners 2 weeks' pay for a strike ordered to protest the appointment of James Boyd as Director of the United States Bureau of Mines.

It has failed to negotiate a new contract to replace the old one, expired June 30.

It put the miners on a 3-day week in midsummer with heavy loss in pay.

It called a second strike for 52 days which ended November 10.

It has dissipated the welfare fund—no coal mined, no 20-cents-a-ton royalty.

It insulted the head of the United States mediation service.

The current report of one of the leading coal companies for the 9 months ended September 30, 1949, shows that on a 5-day week basis from January 1 to November 9, the mines lost 82 days due to strikes. The loss in wages to the miners in this particular company for the period in question was $1,250 per union employee.

Labor leadership in the coal mines has kept them closed for long intervals for many years, and the miners' loss in wages has been enormous. Wages in other lines of business and industry have increased without disastrous strikes each year.

The United Mine Workers' long continued policy of insolence shows the lengths to which an uncontrolled monopoly will go to gain its ends.

It has forced hours, working conditions and wages on the coal industry, regardless of the laws of economics, that make it impossible for that industry under normal conditions to pay those wages and operate at a profit. That is part of the reason the coal industry is only employing 400,000 men and that is why it is losing a large percentage of the American fuel business that it used to have.

Labor rates, like other commodities, are supposed to be competitive. But coal mine labor rates under the United Mine Workers' monopoly are not. The product of the mines, however, must be sold in a highly competitive field. Thus UMW leadership is rapidly turning the coal business over to competitive fuels and destroying jobs of miners.

Dean Roscoe Pound Explains What the Bill of Rights Means to Us Today

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. McDONOUGH. Mr. Speaker, during the recent recess of Congress, I had the privilege of attending a meeting of the Bill of Rights Commemorative Committee which was originated by Mr. Joe Crail, a nephew of the former Member of the House of Representatives from California, the late Honorable Joe Crail.

This meeting was known as the Freedom of Press and Speech luncheon, and was attended by prominent members of the press, radio, television, public officials, and civic leaders. The principal address was delivered by the illustrious Roscoe Pound, dean emeritus of Harvard Law School and visiting professor and dean of the law school at the University of California at Los Angeles.

Dean Pound's address is the most illuminating, intelligent, and logical I have ever heard on the origin and the present-day application of the Bill of Rights. I was unable to obtain a full transcript of his speech, but submit herewith a few of the pertinent highlights of the excellent speech made on this occasion by Dean Roscoe Pound. I am confident that all Members of the Congress will be better informed after reading the following excerpts from Dean Pound's address:

A bill of rights is a characteristic Anglo-American institution. Indeed, although it had its origin in Magna Carta and royal charters in medieval England, it has had its highest development as an effective guaranty of fundamental individual rights in the United States where it has behind it a Constitution as the supreme law of the land enforced by independent courts bound to deny effect to all infringements by it and to treat all infringements as actionable wrongs at suit of person injured thereby.

As far back as the thirteenth century it was pronounced that the King ruled under God and the law. In the fourteenth century when Edward III wrote a letter to a sheriff directing him not to execute a writ for seizing a person outlawed by the judgment by a court, the Court of King's Bench fined the sheriff for not executing the writ, issued a new writ, and said in effect that Edward, King of England, could pardon an offender by pardon under the great seal, but Edward Plantagenet could not interfere with the course of justice in the courts by a private letter to the sheriff.

In the seventeenth century contests between the courts and the Crown the common-law rights of Englishmen were firmly established as beyond royal power and in 1774 the American colonists, in the Declaration of Rights of the Continental Congress, claimed them as the birthright of Americans. They were guaranteed in the Virginia Bill of Rights in 1776 and have been guaranteed in bills of rights in the Federal and all State constitutions since.

It is instructive to compare these bills of rights with the continental European declarations of rights following the French Declaration of the Rights of Man of 1791. These latter have no independent judiciary behind them and give no power to injured individuals to invoke them against unconstitutional official action. They are only preachments; only exhortations to the executive or the legislative organs of government as to what they should do or not do. The constitution of the second French Republic committed enforcement of its provisions to the senate. At his coup d'etat Napoleon III, then President of the Republic, sent a body of soldiers to put out the Assembly which would not ratify the coup. The president of the senate read the constitution to them. But they were responsible to the executive which was the judge of its own powers, and the reading had no effect. The incident speaks for itself.

So long as the Constitution is upheld by independent courts as the supreme law of the land and the guaranties of the Bill of Rights are not frittered away or lose their hold on the people by spurious interpretation, freedom of the press and freedom of speech are secure. The danger to them today is twofold: (1) Growing disrespect for courts and a cult of force throughout the world; (2) weakening of the Bill of Rights by extending State guaranties to impossible undertakings to secure claims not enforceable by a legal order under a constitution. The staple argument by which dictators overthrow constitutions and come to power is that a constitution cannot and they can guarantee complete satisfaction of all human wants.

Thirteenth Annual Wildlife Restoration Week

EXTENSION OF REMARKS
OF
HON. CLARK W. THOMPSON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, January 6, 1950

Mr. THOMPSON. Mr. Speaker, my attention has just been invited to an event of great interest to conservationists—particularly sportsmen.

It is the thirteenth annual Wildlife Restoration Week, and it is described in the following announcement from the National Wildlife Federation to which I invite the attention of Members of Congress and others interested in wildlife conservation:

NATIONAL WILDLIFE FEDERATION ANNOUNCES THIRTEENTH ANNUAL WILDLIFE WEEK PLANS

America's thirteenth annual National Wildlife Restoration Week, originally established by Presidential proclamation in 1938, will be observed this year during the week of March 19–25, under the sponsorship of the National Wildlife Federation.

Wildlife Week aims to focus the attention of 150,000,000 Americans upon the importance of wildlife conservation to their everyday life and the debt which they owe coming generations to help perpetuate our natural resources for future welfare and prosperity.

State, county, and local group meetings throughout the Nation will direct public

discussions of wildlife conservation through prudent management of America's natural resources, including water, soil, trees, and all other plant as well as animal life. Conservation-minded and public-spirited organizations participating will include sportsmen's associations, garden and nature clubs, and other adult and school groups.

Calling all lovers of the outdoors to take part in a Nation-wide conservation program, the National Wildlife Federation urges cooperation with State conservation officials, as emergencies may arise, in winter feeding of snowbound birds and animals to prevent suffering and losses through starvation.

Ever since Wildlife Week was inaugurated by the federation and recognized by proclamation of the late President Franklin D. Roosevelt in 1938, the federation has carried on a year-round conservation education program. The federation business office issues annually a series of wildlife conservation stamps, with descriptive albums for preserving them.

The distribution of these stamps during Wildlife Week and other times is a part of the education program of the federation. Proceeds from their sale are the organization's main source of income to carry on its wildlife programs. The 1950 series in natural colors includes 36 animal, bird, and plant subjects from the brush of Walter Weber of Vienna, Va., famed wildlife artist and former art consultant to the federation.

A nonprofit and nonpartisan organization, the National Wildlife Federation is composed of an estimated 5,000,000 members of affiliated community and county clubs and State wildlife federations.

Conservation studies initiated in 1938 resulted in concentration in the grade schools on teaching conservation. A series of four books, entitled "My Land and Your Land" is in wide use in grades 3 to 8. It is the federation's aim that these books will become an integral part of the Nation's school curricula. Series for junior high and high-school grades are in preparation.

During 1949 Man on the Landscape, by Vernon Gill Carter, was published by the federation's committee of conservation education. The author is head of the conservation department of the Zanesville, Ohio, schools. The book tells the story of a human being in relation to his land environment, and is designed primarily as a teacher's guide and textbook.

"Much responsibility for the control of erosion, floods, forest butchery, pollution, and declining living standards," says Mr. Carter, "rests on the parents and teachers of American youth." This statement has special emphasis during Wildlife Week.

As a clearinghouse for public as well as members' information on congressional legislation and administrative actions relating to conservation of wildlife and other natural resources, the federation issues Conservation News and Conservation Report. During the first session of the Eighty-first Congress, 53 reports were issued, totaling 480 pages and digesting 1,164 Senate and House bills, as well as reporting any actions taken on them. These bills also have been tabulated in a 34-page index.

During its existence, the federation has sponsored and supported legislation which is today basic in the administration of wildlife, such as the Pittman-Robertson Act, providing Federal aid to State wildlife restoration. The federation believes the time has come for legislation that will do for State fisheries restoration what the Pittman-Robertson Act has done in saving our game.

The average citizen can take part in Wildlife Week by attending community conservation meetings, reading wildlife literature, and purchasing wildlife stamps. These activities will inspire him to practice conservation every day of the year in such simple ways as, for example, extinguishing matches to prevent forest fires.

A musical feature of 1950 Wildlife Week will be the singing of favorite songs of the outdoors at conservation gatherings, aided by the Society for the Preservation and Encouragement of Barber Shop Quartet Singing in America, Inc., and its 30,000 members.

The Navy of the Future

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a copy of an address entitled "The Navy of the Future" made by Admiral Forrest P. Sherman, Chief of Naval Operations, before members of the first class of the brigade of midshipmen, United States Naval Academy, Annapolis, Md., on Friday, December 2, 1949. In my opinion, Admiral Sherman's remarks display a penetrating and high-minded understanding of the functions of the modern Navy in this troubled world. Such remarks as his should do much for Navy morale and should dispel the doubts which some appear to have regarding the Navy's future.

The address follows:

THE NAVY OF THE FUTURE

The uppermost thought in the mind of every man here, at one time or another, has been: "What are my chances for a successful career in the Navy?"

I make no exceptions, when I say "every man here." Some of us wrestled with that question 30 years ago. So must it have been with the officers and midshipmen of 1899, of 1866, and even of 1815.

I must say to you at the outset, that the young men in the Navy today face a greater challenge, and are confronted by greater opportunities than any of their predecessors in the indispensable service whose uniform we wear.

Times have changed since the days of the frigate, but the necessity for a Navy is as vital to the Nation as it was in the time of Stephen Decatur. That necessity will endure as long as humanity survives on continents separated by oceans. And as long as the necessity exists, just so long will the Navy offer its officers an honorable career, a career of opportunity limited only by the ability and determination of the young man who enters it. I need not tell you that it is not an easy life; that the material rewards are often not adequate to the sacrifices, toil, and devotion to duty required. You took that all into consideration when you accepted your midshipman's warrant.

It seems to me that midshipmen at the Naval Academy are in many ways better fitted to view the future of the United States Navy with complete objectivity than are older officers in mid-career, or nearing the end of their service. There are reasons why, at this time, I should be seeking your guidance, instead of offering advice to you. Midshipmen are, in many ways, closer to the glorious history of our service, to its traditions, and to its ideals, than we who have grown gray wearing the Navy's blue and gold. You are certainly less marked by events of recent years which tend to obscure the broad view of the future—and also of the past from which the future must be appraised.

The physical Navy is ever changing and always evolutionary. Its officers have maintained throughout its existence, ideals and standards which have changed but little. Our high traditions of loyalty, service, and devotion to duty will always be upheld. However, the ships in which we serve and the weapons with which we fight have changed continuously. We can be certain that they will continue to change. Technological developments during any long peace will change the art of war at sea and the character of the fleets we need.

The conclusion of nearly every war in our history has produced not only the same contraction in naval strength necessary to peacetime economy which some of us tend to overemphasize and misinterpret today, but also recurring gloomy prophecies that the Navy itself will become obsolete. Thus it was when we scrapped the 1816 program of sailing ships of the line. Thus it was when ironclads and torpedoes made our great Civil War fleet obsolete. When after the First World War we scrapped not only our older battleships, but also seven new battleships and four battle cruisers, it was claimed that the airplane had sounded the death knell of surface warships. Earlier the same had been claimed for the submarine. Yet, during the Second World War, we had to build, man, and take into battle greater fleets of surface ships and greater numbers of naval aircraft than the world had ever envisioned. Today—and tomorrow—and as far ahead as we can see, the airplane and the submarine, and for that matter guided missiles and atomic energy, which have been claimed to mark the end of great navies, will in fact increase naval requirements and result not only in survival but also further development of fighting ships.

Our Navy finished the war with a great fleet in which the aircraft carrier had become the ship of the line, and the battleship a supporting ship for the carrier task group or for shore bombardment. We had more of every useful type of ship and aircraft than could possibly be kept active. We have carefully moth-balled most of this victorious Navy. This has given us a reserve fleet so large that there is some question as to our ability to maintain it without expenditures which will prevent maintaining an adequate active fleet. We have a shore establishment so large that it absorbs funds needed to maintain combat forces in being.

Furthermore, although our ships are new and powerful, they steam through an age of change. We can be very proud of our active ships spreading America's influence around the world. Ship for ship, they far excel the ships of other nations and are the envy of other navies.

But without progress they will not long remain superior. We live in an age of tremendous change. The atom has been split, airplanes roar through the sonic barrier, metals have been transmuted. Like all else in life, our Navy must move forward, must keep up to date or slowly die.

We must shape our future Navy in the light of the lessons of the past and the indications as to future needs. We must take into account the lessons of Hiroshima, Nagasaki, Bikini, and Eniwetok. We must consider the implications of the revelation of Soviet developments in the field of atomic explosions. We must consider the significance of guided missiles and of the feasibility of conducting very long-range bombing in connection with the results of bombing in the last war.

We must remember that in two wars we and our allies have suffered heavy losses from enemy submarines and that much development has taken place in submarines and

more is to be expected. We must make certain that every practicable means is exploited to make the Navy fully ready to defeat a third attempt to deny us the use of the sea by undersea warfare. At the same time, we must be prepared to prevent aircraft from denying us the use of the sea. Our naval counter measures against both the submarine and the aircraft must include striking them at their bases as well as local defense against them.

While we should not adhere blindly to the weapons of the past, it is well to remember that although men thought that Jutland would be the last great sea battle we had nearly 30 years later to fight the great battles of Midway, the Philippine Sea, and Leyte Gulf. Men thought that the advent of aircraft, of coast defenses, machine guns, and automatic weapons had made great amphibious operations impracticable, yet this same generation lived to see the greatest amphibious operations in history. Despite every opposition, we moved great armies over long distances, landed them on hostile shores, and supported them as long as support was needed. We must always move forward, but we must move sanely, grasping the strength of the future, holding the useful from the past.

Within a sound national economy there must be provided airborne and amphibious troops, soldiers and marines; there must be an Air Force capable of defending our vital centers against attack, capable of striking our enemies at great distances, and capable of effectively supporting the Army and the Navy. There must be a Navy strong enough to control the seas which separate us from our potential enemies.

Our country is fortunate in being in effect an island power. As long as we control the sea we cannot be attacked except by airborne weapons, and we can attack any target within reach of the aircraft and other weapons which we carry in our ships. We can establish and maintain our troops and land-based air power in positions from which they can operate effectively.

The seas are cushions of distance which protect us against our enemies. They are also avenues through which we can project and support our joint military power. The seas enable us to apply relatively small forces and yet achieve superiority in critical areas of our own choosing, and to give visible and substantial support to our national interests and national policies.

Ability to control the seas and the airways which cross the seas is essential to our security, and to our struggle to prevent any hostile power from so dominating all of Europe, Asia, and Africa as to menace our survival. Our national security, I repeat, requires that we maintain a balanced team of fighting services and you may be sure that the Navy is and will be a vital element in the fighting team—a vital necessity in our national life.

My belief in the future of the Navy is shared by everyone who objectively ponders the security of the United States. In his very recent but already important book, Modern Arms and Free Men, Dr. Vannevar Bush has this to say:

"The mission of the Navy will be as important, and as difficult, as it ever has been in history. It will need to employ modern techniques to the utmost, and in ample quantity." And, again, "The days of the Navy are not over, nor are its missions less essential. We are a power in the world and we intend to exert that power, if need be, far from our shores to support our friends and strike an enemy where he is the most vulnerable. * * * We shall still need to sweep enemy forces from the seas, whether they are under its surface or above it."

In those quotations you have the opinion of probably the best-informed civilian on military matters today. I can assure you that similar beliefs are deeply rooted in the American people and are held also by the responsible heads of our Government. Do not be misled by the moaning of the perennial pessimists nor the partisan propaganda of proponents of other programs.

That leads me to a topic which is made more important by the realization that a number of you are destined to serve in the United States Air Force.

It would be less than realistic not to take cognizance of the conflicting views of the services with respect to their responsibilities for national security which have been aired since the end of the war, and particularly in recent months. Differences in professional opinion are to be expected, and with the strong characters required in military leaders, sharp conflicts are apt to occur. Adequate presentation of such opinions is healthy if kept within proper bounds, but never forget that we are all striving for a common goal—the preservation of our country, our freedom, and our national way of life. When our beliefs and professional advice have been adequately presented—on any level of command or responsibility—it is then our duty to carry out the decisions of our superiors without equivocation or evasion. This is particularly necessary in the case of decisions by the civil authorities in whom the ultimate responsibility rests.

We in the Navy must aid and support our sister services, and we have a right to expect them to aid and support us in maintaining the essential naval elements of the national defense.

We often hear the question, "Why do we need a powerful Navy in peacetime?" The answer, of course, is that if we need a Navy in wartime, we have to have one in peacetime. A navy can't be conjured into being by a Jason sowing dragon's teeth. The question is sometimes elaborated in these terms: The Japanese and German fleets are destroyed; the British will always be our allies; the Russian fleet is relatively small; why then spend three or four billion dollars a year on the maintenance of a powerful United States Navy?

You young gentlemen know as well as I how specious that question is. All we have to do is go back to General Marshall's statement in his final report, as follows:

"Oceans are formidable barriers, but to the nation enjoying naval superiority, they become highways of invasion."

It is essentially the Navy's job in wartime to keep the conflict remote from our own shores, and to deliver the Nation's fighting strength overseas. These are still our principal functions, although not an enemy surface vessel be on the high seas.

But that question ignores a very patent fact, which is that our principal potential enemy does in truth possess a very powerful Navy designed for its own unique geographical situation. A self-contained military power, already in possession of the bulk of two continents and with the potential possibility to envelop and occupy the territory adjacent, has no need for extended lines of sea communications. Its naval problem differs radically from our own. Our business, in a war with such a power, would be to get at the enemy with speed and in strength, while at the same time keeping open the sealanes upon which we depend. Our possible opponent, on the other hand, would seek to prevent us from transporting our military strength across the ocean, and to cripple that strength by denying to the United States essential overseas trade.

For the foreseeable future, the fast carrier task force will be the principal offensive striking element in our fleets—the core of their offensive power, available to strike far from our own bases and to cover and support the operations of other services. This force gives us the power to move wherever we choose against enemy shores, while denying the enemy that same freedom of operation against us. This force is essential to all naval operations. The composition of our fast carrier force must, however, be so adjusted as to bring into balance the expenditures for procurement, maintenance, and operations in the fields of personnel, ships, and aircraft. This is a complex problem on which we are working.

Amphibious operations will continue to play an important part in the Navy of the future. Tactics and techniques will change and equipment will be improved. The availability of weapons of mass destruction, such as an atomic bomb, will exert a profound influence, but they will not change the fundamental necessity in war for moving men and material into overseas positions. They will not reduce the benefits that control of the sea brings in permitting selection of time and place of attack while forcing on the enemy overwhelming defensive commitments. We may expect a highly coordinated and highly flexible use of both airborne and amphibious elements. We must develop speed in preparation, speed in the movement to the objective, and speed in getting troops and supplies ashore and dispersed. Heavy concentrations on the shore line will have to be avoided by speed and dispersal, by the use of separated attack points and by greater use of preliminary infiltrations.

The development of atomic bombs will actually increase the requirement for overseas operations and overseas bases, and will therefore increase the need to maintain in the fleet an amphibious task force and to develop greater skill in its employment.

Besides the fast carrier and amphibious task forces, you may expect to find in the fleets a third type of task force—the antisubmarine task force in recognition of the seriousness of the submarine threat and our major responsibility for insuring the safe movement of men and supplies by sea.

There actually exist in the world today two very powerful navies with opposite and therefore intensely conflicting missions. That we have aircraft carriers and the other naval power has none, that we have a large amphibious force and the other naval power has only a collection of small landing craft, are unacceptable arguments for diminution of American fleet strength. That the other power has a submarine force larger than ours is a potent argument for the United States to possess, not an equal number of submarines, but antisubmarine naval elements of great effectiveness.

These must be so constituted as to permit attacking the submarine by every possible means, not only in our coastal waters and the high seas, but in the enemy coastal waters and bases themselves. Our antisubmarine task force may thus include fast carriers in conjunction with surface and submarine guided missile ships for attacking bases. It might include special raider amphibious units for demolition of bases. It will require hunter-killer teams of submarines, surface ships, and many types of airplanes and blimps. It will require powerful convoy escorts and coastal defense forces especially against submarines firing guided missiles into our cities.

We do not today need to match an enemy naval force type for type, because our probable function is not to resist invasion, but to support military operations overseas. Tomorrow it may be different, and always we must clearly understand the great necessity for a powerful peacetime Navy is the need to have it ready for war. It also has a continuing and a salutary function in the retardation—if not the prevention—of war. A strong navy, by virtue of its mobility, is a potent factor in upholding United States foreign policy. Naval forces have been truly defined as the precision tools of diplomacy. Unlike armies or airplanes, the Navy can traverse the globe without trespassing upon the sovereignty of any nation. As a decisive deterrent to piecemeal aggression, the United States Navy has amply justified its existence in the last 2 years alone.

At that, however, the Navy has been but the visible projection of a tremendous strength in military power and manpower—the latter both militarily and industrially. It could not do the job alone. I sometimes regret that the entire American public is not as aware of the power for peace that our Navy exerts as are the people of Europe. The aircraft carriers, cruisers, destroyers, and marines which have operated in the Mediterranean during the past 3 years have been essential factors in the maintenance of peace and stability in the area. The Mediterranean people know and appreciate our naval strength. Many of our own people do not. If the American Navy is allowed to languish and deteriorate, it will largely be the fault of us, the articulate Navy, for not presenting these facts and our needs more convincingly. Incidentally, one of the best ways to insure the continuance of our vital part in the national defense structure is to demonstrate not only our individual importance but also our ability to work with the sister services as an integrated team.

The three fighting services must become a single versatile team with the single purpose of the security of our country. It is our business, in that team, to shape the country's naval forces so they contribute their maximum to the total fighting strength of the Nation. It is our sacred duty to translate into a maximum of useful fighting power the appropriations given us for that purpose, to take full advantage of every available scientific and technological development to do our specific job as perfectly as human ability permits, and to help our sister services to conclude their tasks as we expect them to help us. It is our duty, too, to prune from the Naval Establishment every component that does not contribute in dollar value to our actual or potential combat strength in those definitive terms.

The Navy is a big business. As such it must be prudently operated, and must have competent administrators in its officer corps. There is no one commercial concern whose business affairs approach the Navy in scope, diversity, or complexity. During the fiscal year, 1949, the Navy had over 524,000 contracts with industry, of a total value of $2,000,000,000. Over 2,000 persons in the Navy were wholly employed in that time with purchasing alone.

The money spent by the taxpayers for their Navy is not just an insurance premium, paying off manyfold in war, but returns to swell the national wealth and augment the national income. Navy personnel work intimately with leaders of all fields of activity and endeavor, from agriculture to the pure sciences, from medicine to machine shops.

The identical developments which superficial thinkers argue spell the Navy's obsolescence are the essential ingredients of the greater Navy of the future. Whether they be guided missiles, supersonic aviation of hitherto incredible ranges vertically and horizontally, noiseless high-speed submarines which never need to surface except for replenishment, or atomic missiles—they are all implements which the Navy now and in the future must be prepared to employ, and also combat.

What does this mean to you, individually and collectively? It may appear that you are being pushed, willy-nilly, into specialization; that no individual can hope to gain proficiency in a profession which has so many facets. Not so. You are required first to be naval officers. There is never an excess of the all-round, highly competent combat officer. But for the individual with special interests or special talents, each technological advance offers a new route for advancement in the naval profession. I could give you innumerable examples of officers whose promotion has been accelerated by specialization; I could also give innumerable examples of officers whose promotion has been accelerated by maintaining a thorough grasp of the broader aspects of the naval profession.

All of you are aware of, and some of you may have been unduly impressed by, the headlines which announce drastic reductions in the Navy in the fleet and in personnel. Remember this, however: We are still in the process of contracting a wartime Navy to one consistent with the national economy, and the Nation's peacetime requirements. But when completed, the contraction will give us a Navy very much larger and more diversified in its functions than this country has ever before possessed in peacetime. It will still be small enough, of course, for the duties and responsibilities placed on its ships. In our generation we have witnessed profound changes in world powers. Swiftly the United States has moved to world leadership with all the great obligations inherent therein. Not the least of these is control of the seas; nor is the least part of this problem the incorporation into the Navy both for offense and defense the incredible technical advances that have made modern navies tridimensional.

Consider this also. So insistent are the requirements of the transitional Navy of today and the Navy of the immediate future, that the United States Naval Academy is not able of itself to meet all the officer needs of the Naval Establishment.

The challenge, then, is to you. It is not so much a question of "What does the Navy offer me today?" as "What have I to offer the Navy?"

What have you to offer the Navy in, say, the primary field of endeavor of the seagoing line officer, or in such specialties as logistics, law, aviation, submarines? Numbers of you will elect the Marine Corps for your career, where specialization and integration, paradoxically, are both of the essence. You will find that the outstanding characteristic of the Marine Corps will always be, as it is today and always has been—readiness. Readiness to go anywhere, at any time, to do any job. In the Marines, the Nation truly has a force in constant readiness.

Recently there has been added to the Navy's responsibilities, the function of sea transport for all the armed services. The Military Sea Transport Service may seem like humdrum duty in peacetime, but it will give many officers valuable sea experience, acquaintance with foreign ports, and a more thorough knowledge of shipping problems than we have had heretofore. Should war come, it will be responsible for the delivery overseas of troops and supplies for all our fighting forces and will become a combat element of great importance.

Whether it be in fighting on the sea, under the sea, or over the sea with the fleet, fighting on land with the marines, transporting the fighting men, or laboring behind desks to keep the combat forces equipped with all they need—our Nation in the crisis of war will need every one of you, and 10 more as near like each of you as can be obtained. None of us looks forward to the catastrophe of war with eager anticipation, but there is no more noble a profession than that of the man who dedicates his life to be ready—amply ready—when his Nation's existence depends upon his skill to meet that catastrophe, to confine it and to resolve it in victory.

If you are to be ready you must perfect yourself in every duty assigned. You must learn the art of command by seeking opportunities to lead, and by observing carefully the methods of successful leaders. You must cultivate a philosophy of loyalty and objectivity, must develop tolerance and understanding of human attributes, and never forget that you are learning to command men—not material. You must cultivate the ability to work with others within your ship, within the fleet, within the service, and as between the services. You must be guided by faith in our country and its free institutions.

The Navy has a glorious future. Those who serve in it have glorious opportunities to contribute to the national welfare both in peace and in war. The Navy may be a stern taskmaster, make many demands on us, and be less than tolerant of serious shortcomings, but in it may be found a life of satisfaction—a life so attractive that those who leave it carry with them, more often than not, a never-ending nostalgia for the service and its ways.

In peace and in war, the officers of the Navy must serve their country unselfishly and faithfully. By our industry, our loyalty, our self-discipline, we must set an example to those who serve under us. We must also set an example to every American in the responsibilities of citizenship.

I envy those of you who will carry on and shape the Navy of the future. You will have a life of fascinating interest, of self-respect, and of achievement. To you, I present the Navy of the future in terms of opportunity unlimited.

Why a Worthless Income Under Inflation?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. REED of New York. Mr. Speaker, there are many countries under inflation that have paid wages far in excess of $12,000 incomes to its individual workers. The money, however, had no purchasing power so that the people who received it were on a starvation basis. It is not what the people receive in money—it is what the money will buy. Under the wasteful, extravagant, boondoggling program of the Truman administration our dollar will depreciate so that even the President's $50,000 exemption would not buy a ticket to the beaches in Florida.

Under leave to extend my remarks heretofore granted, I am inserting in the Appendix of the RECORD the following editorial which appeared in one of the outstanding newspapers in my district, the Olean (N. Y.) Times-Herald of January 7, 1950:

THAT $12,000 INCOME

Vern Croop, the head of the Gannett News Service Bureau in Washington, has a most illuminating dispatch from the National Capital on this page today.

His theme is just what President Truman did not say in his state of the Union message; and it is a most intriguing theme, too.

But one thing the President did say probably has been engaging the attention of a great many of our citizens to an unusual degree.

Most of us—human nature being what it is—like money. The more we can put our paws on, the more we are pleased. Money is the root of all evil; but it also comes in very handily in buying groceries, clothing the children, buying furniture and gasoline and a thousand and one other things. Even the churches would close without money.

So that when the President solemnly holds out the lure—and we think we have used the right word there—that in another 50 years' time the "real income" of the average American family (that takes in the vast majority of us) would be $12,000 a year or better, it is

only to be expected that a lot of people would ejaculate: "Suffering ducks! Is it possible?" or something to that effect.

And they have a perfect right to be startled.

For most of us have never experienced a "real income" of $12,000 a year; and never expect to.

It's a lot of money; and it is an interesting procedure to speculate on what the average family would do if it had $12,000 a year coming in.

Sounds wonderful, doesn't it?

But we're always a little suspicious of such things; and we have that pesky habit of trying to figure just how they would work out if put into actual practice. For if they don't work out in actual practice—well, that's the end of them.

Well, let's try and think this thing through.

Suppose the working force of any business you can name were in receipt of a wage around $12,000 a year, what would the cost of its product have to be in order to keep going and make a profit—for if there isn't a profit there won't be any keeping going.

Suppose, for instance, that the packing houses of the country paid their vast working forces $12,000 a year—or better—what would a pound of sausage or a can of corned beef hash cost?

If the automobile industry were to pay such wages, what do you think the price of new cars would be?

What do you think a newspaper would have to charge for its advertising and for its subscription rates?

Oh, well, some enthusiast might respond, if we all had that amount of money coming in we would not care what things cost?

No?

Do you think we would sell anything to any other country with manufacturing costs at such a level?

Would we not have to put up abnormal tariff walls around our country in order to keep cheaper foreign-made goods out and prevent them from putting our own industry out of business?

And if we kept all foreign goods out, and did not sell any of our own abroad, where would we land within a very short space of time?

You're right, brother; we would land back on solid earth with such a thud that it would take us a long, long time to get the jar out of our systems and be able to function normally again.

And that process might be very, very painful.

But apparently, we still have people in this country who are convinced that there will be always more where that came from, that the sky's the limit, that there's no need to save and be thrifty, that a beneficent government will provide this and that, and that everything in the national garden will be perfectly lovely—even to the extent of the average family receiving a real income of $12,000 a year or better."

Isn't it about time we snapped out of it?

The Problem of Federal Grants-in-Aid and Federal Taxes

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, time and again I have referred on the floor of the Senate to the crucial problem of increasing Federal intervention in State and local affairs. Tied up with that problem of Federal centralization is the interrelated problem of Federal grants-in-aid and Federal taxes. I have suggested that the only way to end the duplication of power and taxes and the increasing centralization of functions in Washington, is to pass legislation, of which I am a cosponsor, to set up a little Hoover Commission to analyze the status of Federal-State-local relations.

Throughout my own State of Wisconsin, as I have previously reported, there is an increasing discussion on this issue of Federal grants, taxes, and powers. Some of the ablest newspaper columnists in Wisconsin have devoted many columns to this subject and have enabled our State to be among the leaders in seeking a solution to this problem.

I ask unanimous consent that there be printed in the Appendix of the CONGRESSIONAL RECORD the text of two of the ablest write-ups, in my opinion, on this subject. One is a copy of a write-up by Mr. John Wyngaard, of Madison, as published in the Janesville Daily Gazette of Friday, January 6; and the other is a column published some time earlier in the Wisconsin State Journal by Mr. Sanford Goltz.

There being no objection, the articles referred to were ordered to be printed in the RECORD, as follows:

[From the Janesville (Wis.) Daily Gazette of January 6, 1950]

UNDER THE CAPITOL DOME—INDEPENDENCE OF STATE AGENCIES IS SHRINKING UNDER FEDERAL AUTHORITY

(By John Wyngaard)

MADISON.—There is an adage in folklore, about the rule that he who hires the fiddler calls the tune. The State government has become aware of that ancient saying. Federal financial intervention in State services has grown steadily, and with the Federal cash windfalls has come increasing Federal control. In some State agencies independence of action and State sovereignty are almost theoretical today.

After years of silence on the subject, there is today an increasing study of Federal subsidies and their effect in local government. The Wisconsin Taxpayers' Alliance recently analyzed the Federal aids that accounted for 16 percent of all State expenditures during the last fiscal year. The flow of Federal dollars also was given prominent display in the annual report of State Budget Chief E. C. Giessell.

THE EFFECT

The Alliance report always is judicious and careful. In the current issue the Alliance observes that "Federal aid funds must be spent according to the pattern and rules laid down by the Federal Government," and that when State funds are used to match the Federal hand-outs, the Federal rules also determine how the State tax dollar is spent.

Thus is the budgeting authority of the State legislature, and its responsibility, gradually being chipped away. The Federal funds are not budgeted by the State's own elected lawmakers. They are sent into particular departments for designated purposes. The effect, moreover, is to reduce legislative authority over the disposition of funds matched out of the State treasury.

The Washington rules also apply to the actual administrative details of the subsized programs. There are many irritants in these "directives" from the remote Potomac for State officers, but they rarely complain because they want the flow of Federal dollars to continue. They suspect, and some of them have learned, that it is infinitely easier to apply for money to Washington than to persuade locally elected lawmakers to provide it. In the designing of roads, the hiring of personnel, the promulgations of standards, hours of work and many other details, the decisions and the rules are made by Washington, in an ostensibly sovereign State government.

The proportion of State and Federal money that is contained in some State department budgets suggests how limited State authority must be. About four-fifths of all the money spent by the industrial commission comes from Washington. About half of all the dollars spent by the board of health are Federal aids. About two-thirds of the budget of the State board of vocational education comes from the National Government, although the agency is peculiarly a Wisconsin development.

ALTERNATIVE

Wisconsin citizens are paying out millions in Federal taxes that are being returned to Wisconsin to pay for local governmental services.

Governor Dewey, of New York, who has made frequent representations about the threat to the integrity of the States, proposes that the National Government abandon the numerous excise taxes it now levies and allow the States to use such sources of revenue to pay for public expenditures that now receive Federal aids.

It is likely that if Wisconsin were to get its per capita share of Federal excise taxes now being sent to the Federal tax collectors, it could comfortably finance all of the Federal aid programs now operative according to its own rules and wishes, and according to local needs. Then would the Wisconsin State government be independent and sovereign according to the original meaning of the Constitution. At the present rate, the Federal tax dollar will become a gradually increasing factor and State responsibility finally will be stultified.

[From the Wisconsin State Journal]

UNDER THE DOME

FEDERAL HAND-OUTS TANGLE TAX PICTURE

(By Sanford Goltz)

A rising tide of Federal grants-in-aids to State governments—practically doubled in 2 years and still on the increase—is being pointed to by the council of State governments with something resembling alarm.

Resisting money from Washington is a rather uncommon occurrence, and probably will continue to be. But the State governments group has a reason for its concern.

"If the upward trend of Federal aid continues," a special council committee that has been studying the subject commented this week, "there is little likelihood that any considerable tax reduction will occur in fields suitable for State and local taxation.

"If the States and localities are to regain some of the tax sources preempted by the Federal Government, it is essential that Federal tax reduction be accomplished, and this is dependent upon a substantial reduction in Federal expenditures."

In 1948 the Federal Treasury put out just about a billion and a half dollars to the States, either for use by them or for distribution to their political subdivisions. Two years earlier the amount was $770,700,000, roughly half as much.

For Wisconsin, Federal aids for the fiscal year ended June 30, 1947, added up to $23,600,000. For the year ended last June 30, the figure was $33,811,000.

Next year, the total is expected to be $44,600,000, and for the 1950–51 fiscal year, $46,300,000.

The council's study showed that for fiscal year 1947, Federal grants-in-aid averaged just over $8 per person. They ranged from a low of $4.22 in New Jersey to $34.85 in Nevada.

In Wisconsin the Federal money was the equivalent of $6.72 per person, putting it thirty-eighth in rank in amount of aid received although the State ranks twentieth in per capita income and twentieth in amount of Federal taxes paid.

The variation in Federal aid from State to State is largely explained by differences in their welfare programs, which account for more than half the aid payments.

Public-assistance aids, including payments and administration of old-age assistance, aid to dependent children, and aid to the blind, are paid federally in proportion to what the State and local units of government will contribute. Higher contributions there mean more Federal money.

Federal aids for highways, the second most important aid in size, goes to the States on the basis of total area. Figured that way, Nevada got $24.40 per capita, while Wisconsin got less than a dollar, and little Rhode Island wound up with 12 cents.

The council may be overhopeful in looking to Washington for lower spending so that the State and local taxing units can be given a little more leeway in its tax choices.

If it could be done, for instance, there's no doubt that most States would be glad to have the Federal gasoline tax of a cent and a half wiped out, leaving that field entirely to the State.

Those States that wanted to raise the equivalent of Federal highway aids could boost their State gas taxes to do it, and have complete say-so on where the money was used.

There are not many fields, however, where the idea of cutting Federal taxes at the price of lost Federal grants would be popular. Many Wisconsin legislators undoubtedly would balk at boosting the State budget by the $15,000,000 or more a year that Federal old-age assistance grants alone run to—although there, too, Wisconsin would be the gainer if the Federal tax bite here were reduced thereby.

It still remains to be seen if the States mean it when they say now and then, that they don't want all that Federal money.

Address by the President at the Samuel Gompers Centennial Dinner

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a brief extemporaneous address delivered by the President of the United States, at Hotel Statler, Washington, D. C., on January 5, 1950, before the assembled guests who were celebrating the birthday of Samuel Gompers.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The PRESIDENT. Mr. Chairman, Mr. Vice President, members of this big organization, I have been at my House all evening working on two more messages on the state of the Union. [Applause.] One of them, the economic message is ready, it is going down tomorrow. [Laughter.] Then I have one that is creating a great deal of conversation, known as the Budget Message. [Laughter.] Everybody thinks they know all about it but me, and I am the only one who knows all the figures in it. [Laughter.] But I was sitting there thinking about this celebration in honor of one of labor's greatest statesmen, and I could not stay away. [Applause.] I knew that anything I would say would be a surface remark after the Vice President and Matthew Woll and William Green had paid a tribute to the great Samuel Gompers, but I wanted you to understand that I remember him distinctly as an originator of the great movement that set labor free. [Applause.] And I wanted to come here and pay tribute to him. I remember when he passed away. It was back in 1924, the year in which I was defeated for reelection. They have never succeeded in doing that to me since. [Applause.]

I was one of Samuel Gompers' great admirers when I was a very young man on the farm. Everybody in that day and age considered him a labor statesman. He was not only a labor statesman in a bipartisan sense, but he was just as good a Democrat as I ever was. [Applause.] I remember very distinctly he supported Woodrow Wilson when Woodrow Wilson needed support worse than anything he ever needed in his life. That was when California decided the election for Woodrow Wilson in 1916. [Applause.]

Samuel Gompers made a great contribution to the welfare of this great Nation of ours, and I consider it a very high honor that Mr. Green and the men who are conducting this meeting tonight should ask me to come here and pay this very slight tribute to one of the greatest labor leaders who ever lived. I thank you for the privilege. [Applause.]

Recognition of Communists in China

EXTENSION OF REMARKS
OF
HON. BURNET R. MAYBANK
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. MAYBANK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "We Needn't Follow Britain," from the Greenville (S. C.) News of January 7, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE NEEDN'T FOLLOW BRITAIN

As had been widely forecast the British Government is moving to accord full diplomatic recognition to the Communist regime in China and to cease to recognize Chiang's Nationalists.

The action follows similar moves by other British Commonwealth countries; and it must be acknowledged that it marks a rift, or at least a pronounced divergence, between America and Britain over this phase of policy in the Orient.

Britain, of course, is no less opposed than before to communism, but the British statesmen take what they regard as the practical attitude that nothing would be gained by "boycotting indefinitely a Government ruling over a vast territory and population."

But we dare say Britain's desire to safeguard the huge British investments in China and to maintain and expand trade with China is really at the bottom of the apparent British haste to get on good diplomatic terms with the Red regime.

But if Britain is moved by these economic considerations to be so prompt to extend the diplomatic hand to the Chinese Reds there is no corresponding reason why this country should be in any haste to follow suit.

On the other hand there is very good reason why this country should hold itself aloof from this Red Chinese regime for an indefinite time. We have nothing to gain by rushing to extend the "hand of diplomatic fellowship" to it. The Chinese—any Chinese governmental regime—wants a lot more from the United States than we could possibly want from them, or it. We can very well wait to let them make the approaches and we have no reason to be eager to shake hands.

Maybe we shall eventually feel that this regime is sufficiently well established to merit our diplomatic recognition, on the same basis that we recognize well-established governments in Russia and other Communist countries.

But we might as well make it clear in our current policy that we are not currying any favors from this Red regime in China and that on the other hand we still stand ready to give assistance to any soundly based movement in China to achieve a really democratic government that will seek sincerely to serve the people's welfare.

Let Britain, if she will, act with eagerness for "trade advantages." We have no such motive, and we can very well let the Chinese Red regime stew for an indefinite time, and leave to it the burden of demonstrating its worthiness for our recognition.

How Falsehoods Spread

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "How Falsehoods Spread," which was published in the Bismarck (N. Dak.) Leader, January 5, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOW FALSEHOODS SPREAD

A recent Saturday Evening Post article dealing with the city of Minot has brought a blizzard of letters to the editor of the Post's letters column.

Some of the letters agree with the Post's story on the Magic City; some don't.

But that isn't the important thing. Disagreement is good and healthy in any free country. When the day comes that all persons think alike, it will mean the end of progress.

What we'd like to point out is a certain letter about farm co-ops which was written to the Post by a member of the Nebraska State Grange. The Grange and the Farmers Union don't always think alike; they are rival farm groups. But when H. C. Filley, of the Nebraska Grange, saw a false statement about co-ops in the Post's Minot article, Mr. Filley sat down and wrote an answer to it. Here it is, as published in the Post's letters column:

"The author made a misstatement concerning cooperative companies '* * * The

Farmers Union * * * operates oil companies, general stores, feed stores, and farmers' supply and implement shops, all on a cooperative, nontaxpaying basis.' * * *

"Business enterprises (such as those mentioned) organized under cooperative statutes pay real-estate taxes, personal-property taxes, sales taxes, social-security taxes, communication taxes, excise taxes, and franchise taxes, where applicable, the same as any other corporation."

This newspaper wants to compliment the Post for retracting the error of its reporter.

The reporter probably met some Minot businessman who has been misinformed by the false propaganda of the North Dakota tax-equality lobby—and as a result a huge falsehood was spread among the SEP's many millions of readers.

Great publications can reach millions—and it is not easy to retract an error in a small letter to the editor—when the original article may have been seen by many more persons than will see the letter. And the impression they may have got from the article will, by retraction time, have been scattered widespread by word of mouth.

The Leader wants to compliment again the Saturday Evening Post for its retraction, but it wants to compliment even more the member of a farm organization who had the goodness to defend another farm organization against an unjust attack.

Lobbying Money

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. I ask unanimous consent to have printed in the RECORD an article entitled "Lobbying Money," written by Joseph Harsch, and published in the Christian Science Monitor. It was republished in the Leader, of Bismarck, N. Dak.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOBBYING MONEY

The news that the American Medical Association is going to collect and spend $2,000,000 next year to oppose socialized medicine shows that the AMA is going to be doing a lot of opposing of socialized medicine next year. (It has spent most of $1,500,000 doing the same thing this past year.)

It also shows something else about our political system which, for the most part, has passed us by without our attention.

Two million dollars is a lot more money than the Republican Party has in its treasury today. And it is money that the Republican National Committee would give its eye teeth to get its hand on.

Two million dollars would also look big to the Democratic National Committee, although the Democrats are currently a bit better off than the Republicans, thanks to all the Democrats who experienced a reawakening of party loyalty in the early hours of the morning after last November's election day.

The Republicans, after spending approximately $2,000,000 in the last Presidential election, started 1949 with $800,000 in the till. When the balance was drawn down below $100,000 their national treasurer resigned. It is supposed to be a bit above that figure today, but not by much. The Democrats, who spent $1,680,000 in the 1948 campaign, probably have about $250,000 on tap. But neither Republicans nor Democrats have anything like the wealth of the AMA at their immediate disposal, although, of course, this is an off year.

Behind these figures is the fact that much big money which used to go to the big party organizations for direct political action is now moving instead into the treasuries of organizations with special political causes to plead.

Partly this is because their causes are not identical with those of one or the other of the two big parties; partly because they think they can get more for their money if they spend it themselves than if they donate it to a political party, and partly because of new laws which make party contributions reportable. The reason undoubtedly varies with different organizations.

The AMA is operating the single biggest lobbying operation in the United States today. But it is not the only organization spending large sums of money for political action by itself, rather than contributing it to the coffers of one of the regular parties. The CIO and AFL, in particular, are in the big league.

Here is a list of organizations which reported to Congress that they spent over $100,000 during the first 9 months of this year on lobbying or political action and the amount spent by each:

American Medical Association, $1,225,028.
Committee for Constitutional Government, $443,756.
National Association of Electric Companies, $305,751.
Townsend Plan, Inc., $285,371.
United World Federalists, $220,509.
Citizens Committee on Displaced Persons, $186,371.
National Small Businessmen's Association, $161,283.
Association of American Railroads, $135,671.
National Cooperative Milk Producers Association, $131,781.
General Electric Corporation, $128,563.
National Association of Real Estate Boards, $111,172.

This is only a small part of the picture of the money being spent on political action outside the channels of political practices. No one could estimate the cost to the taxpayer of political action involved in Government operations, such as the campaign to win support for a nationalized health service. No one could discover what moneys labor unions spend indirectly on political action. The amounts which they report to Congress as direct lobbying expense are far smaller than their total budgets for political action.

No one has ever compiled the total of the cost of institutional advertising which has a political purpose although it goes on the advertising budget of corporations and thereby cuts their taxes. No one could estimate the cost of political pleading on some of our radio programs because it is mixed in with news and product promotion.

When Republicans or Democrats take an ad, or buy radio time, or put up bill posters we know who is advocating what. And the time was when most political pleading was in such forthright and overt form. But those days are long gone by. Today politics shuns the overt form and the direct appeal. Today you are like as not to find it disguised with your breakfast cereal, your comics, your music.

And the treasuries of the two big parties languish.—Joseph Harsch in the Christian Science Monitor.

Government Expenditures

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. KEM. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the December 1949 issue of the Reader's Digest entitled "Is This the Time To Spend Billions More?"

The amount of money spent by President Truman up to September 30, 1949, is shown in this article to be in excess of $191,000,000,000 as compared to less than $180,000,000,000 for all Presidents from George Washington through the second term of Franklin D. Roosevelt. To this amount spent by Mr. Truman should be added the expenditures of the Government from September 30, 1949, to June 30, 1950, the end of the present fiscal year. The Congress has already appropriated funds to cover the cost of Government to that time.

Today the President submitted his budget for the fiscal year beginning July 1, 1950, and ending June 30, 1951. He proposes expenditures in excess of $42,000,000,000 for that period. This brings the total amount spent or requested by President Truman to over $250,000,000,000.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS THIS THE TIME TO SPEND BILLIONS MORE?

(Compiled by John T. Flynn, from historical statistics of the U. S. Census Bureau and U. S. Treasury reports)

Here are two columns of figures. One gives the amount spent by each of our 32 Presidents from George Washington to the end of Franklin Roosevelt's second administration. The other gives the amount spent by President Truman since his inauguration up to September 30, 1949.

Spent by 32 Presidents from Washington to Roosevelt (through second term)

Washington	$34,088,486
Adams	34,262,668
Jefferson	72,424,269
Madison	176,473,964
Monroe	147,237,899
Adams	65,427,017
Jackson	152,969,968
Van Buren	122,325,242
Harrison and Tyler	108,904,678
Polk	173,477,220
Taylor and Fillmore	179,631,529
Pierce	255,154,244
Buchanan	272,933,490
Lincoln	3,252,380,410
Johnson	1,578,557,645
Grant	2,253,386,743
Hayes	1,032,268,037
Garfield and Arthur	1,027,742,757
Cleveland	1,077,629,089
Harrison	1,412,315,899
Cleveland	1,441,674,174
McKinley	2,093,918,514
T. Roosevelt	4,655,450,505
Taft	2,799,211,854
Wilson	46,938,260,143
Harding	6,667,235,429

Spent by 32 Presidents from Washington to Roosevelt (through second term)—Con.

Coolidge	$18,585,549,115
Hoover	15,490,476,636
Roosevelt (8 years)	67,518,746,001
Total	179,620,113,645

Spent by President Truman from fiscal year 1946 to Sept. 30, 1949

Truman	$191,081,394,191
	191,081,394,191

Experts predict a large Federal deficit during the current fiscal year, ending next June. Yet the administration is demanding expenditure of many additional billions of dollars on vast new and untried projects.

All those who are critical of the program, whether Democrat or Republican, are castigated by the President as being just about 160 years behind the times.

Think this over:

Thirty-two Presidents in 156 years spent $179,620,113,645.

One President in less than 5 years has spent $191,081,394,191.

(The extraordinary expenditures of the war years from 1941 to 1945 have been excluded.)

Basing-Point System Not Needed in Our Economy—Propaganda Predictions of the Calamitous Effects of Cement Decision Fail To Materialize—Building of New Steel and Cement Plants and Increasing Capacity of Old Plants a Good Omen—S. 1008 Must Be Defeated To Allow Present Trend of Normal Plant Dispersal To Continue—Small-Business Stake in S. 1008 Is Destruction of Robinson-Patman Act

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. PATMAN. Mr. Speaker, the calamity howlers who have insistently, through their billion-dollar lobby, pounded on the doors of the Congress for legislation upsetting the cement decision should, if they have the least bit of modesty, run for cover. The predictions which flew thick and fast after the cement decision, to the effect that the steel, cement, and other industries would pine away and die because they could not use the basing-point system of pricing, has turned out to be, like most propaganda, pure bunk.

The plain truth is that the dispersal of factories, which the prophets of doom predicted would be pulled up by their roots and moved, has occurred to some extent but not in the way these predictors expected. There have been completed many new plants throughout the country, and many plants heretofore restricted to small production now have increased capacity. Because of the high level of business, the population increase, and many other factors in our economy, the building up of sections of the country which need production has been taking place. The continued abandonment of artificial price controls will make available to all sections of the country production and distribution of basic materials at fair prices and lower transportation costs.

NEW ENGLAND PLANS NEW STEEL PLANT

New England, where the steel and iron industry had its birth in this country, but which for over 100 years has been paying high transportation costs, whether incurred or not, now contemplates building a steel plant. This plant will not take care of all of New England's needs, but it is a start in the right direction. Many small plants in many sections of the country, relieved of the restraint and threat inherent in artificial pricing such as the basing-point system, are encouraged to increase production without the threat of their big competitors "dumping" in their own back yard. It is a fallacious argument to speak of local monopoly in the steel, cement, brick, and lumber, and many other industries in our industrial structure. The day has passed when it is possible for local monopolies to exist unless artificial restrictions in the form of pricing and transportation are invoked. Free use of all forms of transportation in a competitive manner lowers the cost to the consumer. The railroads are making a tremendous mistake in constantly and insistently pressing for higher and yet higher freight rates. The railroads can live as a necessary part of our economy only to the extent that they render service in competition with other forms of transportation. We need the railroads. They did a tremendous job during World War II, but they did not do it for nothing. The railroads did this job for profit, and it shows even today in their balance sheets and in the retirement of obligations which appeared to be insurmountable before the war came on. If any industry in this country profited because of the war, it is the railroad industry. However, the railroads cannot expect to live in the lap of luxury at the expense of other forms of transportation and at the expense of the consumer. But with determined greed, the railroads not only press for increased freight rates but lend their influence to industries which desire to use artificial pricing systems. It is a short-range view and one if successful, will eventually be detrimental both to the railroads and to our entire economy.

LOBBYISTS BUSY DURING RECESS—TRY TO INFILTRATE RANKS OF SMALL BUSINESS

The Supreme Court decisions in cement, in certain steel products, in oil, and in other industries added day by day to the array of industrial giants determined to secure legislation upsetting the court decisions. The greed and determination to secure legislation adverse to the public interest is astonishing. All during the recess of the Congress the lobbyists have been busy. These lobbyists have tried to infiltrate into the defense of small-business organizations, honest organizations which are rendering a real service to their members, not the phony ones, for these they already have under their wing. These lobbyists have lost no opportunity to address bodies of small-business men and to feed such groups words upsetting to their business digestive system. Fortunately, it is a rare occasion when these prophets of doom make much impression. Nevertheless, with bottomless pocketbooks and genius minds, they continue to hammer on the antitrust laws and particularly laws which were designed to protect, and are protecting, small business. The focal point of the attack is the act amending the Clayton Act, which since 1936 has afforded small business its greatest protection.

DESTRUCTION OF ROBINSON-PATMAN ACT AND CHARTING FOR PRICE FIXING DUAL AIM OF LOBBYISTS

With hands folded in upright supplication and a look innocent of all guile, these billion-dollar lobbyists say they do not want to harm small business; they want small business to live and prosper. Yes, they want small business to live and prosper like a cat wanting a mouse to live and prosper or like a wolfhound wanting a rabbit to be free to attend to its own enterprise. There is only one appellation which could properly describe these lobbyists—a word which I leave to your own imagination. The truth leaks out occasionally, as it did before the American Bar Association meeting in St. Louis, at the convention of the National Association of Retail Druggists in New York, and at a more recent meeting of the American Petroleum Institute. The truth that leaks out is the desire of the lobbyists for the artificial-pricing-system crowd to destroy the Robinson-Patman Act. Nothing less—nothing more.

THE CHAINS AND OTHER PRICE FIXERS

The passage of S. 1008 will destroy the Robinson-Patman Act and allow the giant chains to move in on the hometown merchant. The predatory interests in any industry can move in on the hometown manufacturer. In other words, we revert to the situation that existed in the depths of the depression before there was any Robinson-Patman Act. The same interests which now seek to destroy the antitrust laws are the same interests that originally fought the Robinson-Patman Act. They are the same interests which believe in the divine rights of the seller to fix prices. They are the same interests which want little or no Government control of any kind and, if permitted, would sweep all antitrust laws off the books, set up cartels and trusts which would draw the life-blood of our economic stream into their own coffers and eventually—and this has been said before—become more powerful than government itself. It is the truth, however, and it is up to the Congress to see to it that such a situation does not exist.

PROPOSED STEEL BASING-POINT ORDER

More lately, having failed temporarily in securing passage of S. 1008—the basing-point bill, the Robinson-Patman-Act-destroying bill, the antitrust-law-destroying bill—the steel crowd made another approach, with wonderful unanimity of thought. They have attempted, through the administrative

procedures of the Federal Trade Commission, to secure what they have not thus far secured by way of legislation from the Congress. This neat little package which is proposed to the Federal Trade Commission permits some fancy variations of the basing-point system. Surely the representatives of FTC were guiltless of any knowledge that such a thing would happen, but nevertheless it is there to be read by all with an inquiring mind. Astute commentators for big-business mouthpieces so admit, and impartial commentators in a somewhat freer press so analyze the situation with respect to the proposed steel order.

STEEL INDUSTRY BOOSTS PRICES IN FOND ANTICIPATION OF PHONY FREIGHT ABSORPTION

In preparation for all of this—that is, in preparation for the basing-point system—Big Steel and its satellites have boosted the price of its products. In addition to boosting the base price of steel, the extras and differentials have been so juggled that men long familiar with steel-industry prices are unable to estimate exactly what the cost to the American consumer will be. Interestingly enough, in a leading article in the impartial New York Times of Sunday, December 18, Thomas E. Mullaney, commenting on the recent steel price rise, attributes this increase to the prospective reestablishment of artificial selling controls. Mr. Mullaney stated his analysis of the situation in part as follows:

ACCORD ON FREIGHT IN VIEW

Another reason for the suddenness of the steel price rise may be the expectation of the industry that its long quest for permission to absorb freight charges in shipments of steel to customers will be granted early next year. It has been reported that the Federal Trade Commission is on the verge of agreeing to a settlement of the 1947 price-fixing case against the steel companies to give them the privilege of limited freight absorption.

Even if the FTC does not extend that privilege it has been taken as assured that Congress will pass an enabling measure early next year. The steel industry has refrained from absorbing freight charges since it abandoned the basing-point system last year, following FTC and United States Supreme Court decisions interpreted as placing a question of legality on the steel industry's freight-absorption practices.

With steel prices higher now in advance of either FTC or congressional rulings allowing freight absorption, the industry will be better prepared to bear the cut in revenues that such a system of forgiving part of the shipment cost to customers entails.

PLENARY BASING-POINT SYSTEM ALLOWED BY PROPOSED STEEL ORDER

The fact that the steel companies agree to quote f. o. b. mill means nothing, for most quotations mean little without an obligation to ship if an order is placed. The meat in the proposed FTC steel order is permitting a basing point at every mill. This looks, on the face of it, as if all prices would be based on the mill from which the purchase is made. This is not the case at all, for it is the controlling mill that sets the destination price. A consumer might have a steel mill across the street which was a basing-point mill, but steel from this neighboring mill into his yard might cost as much as steel from a mill many miles away. Thus, the local mill under a plenary basing-point system is enabled to charge some other mill's base price plus the freight from that mill to the customer's destination, which, as pointed out above, may be only across the street.

Under a free competitive system in the steel industry, the tendency would be for the local mill to protect its customers and protect itself from the inroads of its competitors.

EXAMPLES OF NEW PIPE AND TUBE FACILITIES IN STEEL INDUSTRY

It is all quite elemental and should not cause Members of Congress a moment's doubt in arriving at a decision. The fact is that any scheme, such as the proposed FTC steel order, or any law which the Congress may pass, permitting any deviation from the present rules of the game is injurious to the public interest and destructive of free competition. I am confident that if the Congress upholds the Supreme Court decisions the trend which has already started in a quiet and orderly way will eventually lead to a dispersal of our basic industries, which will not only be beneficial to our economy but will be vital to our total national defense. For the information of the Members, I include a list of completed and contemplated pipe and tube mills in the United States, most of them in sections of the country where they are most needed.

Company and location	Type and size	Capacity (in net tons annually)	Date of completion
Formed Tubes, Inc., Sturgis, Mich	2 Yoder mills	10,000	August 1949.
Basalt Rock Co.-Kaiser, Napa, Calif	14- to 36-inch welded	Unknown	In operation.
Kaiser Steel Corp., Fontana, Calif	5⅝- to 14-inch welded	Unknown	Early 1950.
Sharon Steel Co., Farrell, Pa	2 electric weld mills	Unknown	Mills installed March 1949.
National Tube Co.:			
Lorain, Ohio	2- to 4½-inch seamless	216,000	Began November 1949.
McKeesport, Pa	Welded pipe 26 inches and larger	100,000	March 1950.
Youngstown Sheet & Tube, Indiana Harbor, Ind	1- to 4-inch butt weld	Unknown	Expected May 1950.
Lone Star Steel Corp., Daingerfield, Tex	Up to 16 inches welded	350,000	Expected 1950 or 1951.
A. O. Smith Corp., Houston, Tex. (jointly with Sheffield Steel).	8⅝- to 30-inch welded	360,000–420,000	Expected mid-1950.
Consolidated Western Steel Corp., Orange, Tex	24 inches and larger welded	100,000	Company purchased Government plant November 1949. Will install equipment.
Portsmouth Steel Co., Portsmouth Ohio	4- to 16-inch welded	Unknown	Planned for 1950 under company's expansion program.

1 eastern company is planning the construction of a new mill to make 6- to 20-inch seamless pipe.

To show the Members what has happened in the cement industry since the Cement decision by the Supreme Court on April 26, 1948, I include a list of new plants and improvements to existing installations in the cement industry, as follows:

Item No.	State	Company	Data on new plants and improvements on existing installations, 1949
1	Alabama	The Ideal Cement Co	To increase capacity of Mobile plant.
2	Alaska	Alaska Portland Cement Co	New $2,500,000 plant proposed—1,500 barrels daily.
3	Arizona	Arizona Portland Cement Co	New $3,976,000 plant at Rillito—2,000 barrels daily.
4	Arkansas	Ideal Cement Co	Plans to double capacity at Okay plant.
5	California	Calaveras Portland Cement Co	Plans to increase capacity 80 percent.
6	do	Riverside Portland Cement Co	Plans to increase capacity at Oro Grande plant to 3,500,000 barrels.
7	do	Whitewater Portland Cement Co. (Samuel Guiberson)	Plans new $15,000,000 plant near Palm Springs.
8	do	California Portland Cement Co	Improvements and general rehabilitation of the Colton plant.
9	Colorado	The Ideal Cement Co	Improvements, increased production of Portland plant by 1,000 barrels per day.
10	Florida	Florida Portland Cement Co	Plans to increase capacity at Tampa plant.
11	do	Lehigh Portland Cement Co	9,500 acres cement-bearing materials near Flagler Beach.
12	Idaho	Lewiston Area Development Association, Inc	Announced that a $4,000,000 cement plant will be constructed in that area—capacity 3,000 barrels daily.
13	Illinois	General Portland Cement Co	$4,000,000 expansion program at Chicago.
14	do	Medusa Portland Cement Co	Improvement program for Dixon plant.
15	Iowa	Dewey Portland Cement Co	Improvements at Davenport plant to increase production 40 percent.
16	do	Northwestern States Portland Cement Co	Carrying on $1,000,000 improvements at Mason City plant.
17	Kansas	Monarch Cement Co	Plans to increase capacity to 700,000 barrels annually at Humboldt plant.
18	do	Universal-Atlas Cement Co	Plans modernization of Independence plant.
19	Louisiana	Lone Star Cement Corp	Completed $1,000,000 improvements which boosted capacity 50 percent to 6,400 barrels per day.
20	Missouri	Missouri Portland Cement Co	New 6 000-barrel plant at Prospect Hill—to be completed in 1950.

Item No.	State	Company	Data on new plants and improvements on existing installations, 1949
21	Montana	Ideal Cement Co.	Improvements completed doubling plant capacity at Trident.
22	do	Permanente Cement Co.	490 acres cement-bearing materials—Helena.
23	North Carolina		1949 assembly proposes a new State-owned plant. Plan an $8,000,000 cement plant in Raleigh area.
24	North Dakota		State legislature grants $25,000 for survey to establish cement plant.
25	Ohio	Diamond Portland Cement Co.	Completed improvements increasing capacity Middle Branch plant 50 percent.
26	do	Universal-Atlas Cement Co.	Plans modernization of Osborn plant.
27	Oklahoma	Dewey Cement Co.	Began $1,445,000 expansion program at Bartlesville plant.
28	do	Ideal Cement Co.	To increase capacity at Ada plant.
29	Pennsylvania	Penn-Dixie Cement Corp.	Plans improvements at West Winfield plant.
30	do	Medusa Portland Cement Co.	Improvements at York and Wampum plants—part of multimillion-dollar program.
31	Puerto Rico	Ponce Cement Corp.	Plans to increase capacity to 10,000,000 sacks annually (2,500,000 barrels).
32	do	Puerto Rico Cement Corp.	Plans to increase capacity.
33	South Dakota	South Dakota State cement plant	Plans to double capacity to 4,000 barrels daily.
34	Tennessee	Signal Mountain Portland Cement Co.	Plans to increase capacity at Chattanooga plant.
35	Texas	Tex-Mex.s Cement Co.	New $6,000,000 plant at Corpus Christi.
36	do	Lone Star Cement Co.	Plans to increase capacity 20 to 25 percent at New Orleans.
37	do	Trinity Portland Cement Co.	Plans to increase capacity at Eagle Ford, Fort Worth, and Waco plants.
38	do	Ideal Cement Co.	Plans to double capacity at Houston plant.
39	do	Lone Star Cement Corp.	New plant near Sweetwater.
40	Virginia	(a) Lone Star Cement Co. (b) Universal-Atlas Cement Corp.	1,700 barrels daily—plans to build new plant near Roanoke. Capacity unknown.
41	Washington	Lehigh Portland Cement Co.	Plans to increase capacity.

DEFEAT OF S. 1008 WILL RELIEVE PRESSURE ON DESTRUCTION OF THE ROBINSON-PATMAN ACT

The defeat of S. 1008 will continue the beneficial trends now under way in our basic industries and will protect and invigorate our small-business institutions throughout the country because the threat to the Robinson-Patman Act, now so imminent, will have been dissipated. I cannot believe that the Federal Trade Commission will so depart from the fundamental concept of its original sponsors as to approve a document such as the proposed steel order.

RESTRICTED PRODUCTIVE CAPACITY PREVAILED PRIOR TO THE SUPREME COURT DECISION IN THE CEMENT CASE

The foregoing list of cement production facilities, which covers a period of less than 2 years, in sum total is greatly in excess of new facilities built in the previous 25 years. Restricted production of cement and other commodities in our basic industries is the legitimate offspring of the basing-point system. Many instances of powerful forces at play in the cement industry during the basing-point era were brought to light by the proceedings in the cement case before the Federal Trade Commission.

California had a thorough investigation, by a committee of its State Senate during the twenties, which revealed the devastating effects of the basing-point system on dealers in cement in the State of California. Also revealed was the lack of cement production to supply that rapidly growing area. Many stories of intimidation and threats have come to light, which makes it common knowledge that under the basing-point system it was virtually impossible for an outsider to get into the cement business. Henry Kaiser, by the dint of sheer pluck and keen business acumen, bucked the cement trust and built a new plant in the West to supply the Mount Shasta Dam. However, many times in the 25 years prior to the war, even existing plants were forced out of business. Many of these plants were owned by local people who had invested their savings in the cement business.

It is astounding, indeed, how rapidly cement plants and additional facilities in old plants have been built and planned since the Supreme Court decision outlawing the basing-point system. The record shows that fewer plants were built between the years 1920 and 1945 than are presently contemplated. The real reason for cement plants being built over the distant reaches of the United States is recognition of a fact so often stressed; namely, that without artificial pricing controls our heavy basic industries will build their plants at locations where the demand can be supplied at its source. The continued outlawry of the basing-point system, to reiterate, will see cement, steel, and many other plants manufacturing basic commodities erected in every corner of the United States. This is as it should be. The buyer must have more of a choice than the choice of paying the same price, regardless of who furnishes the material. The basing-point system, that handy instrument for the elimination of all price competition, must itself be eliminated permanently if small business and free competition are to have their innings in a postwar world.

DEFEAT OF S. 1008 WILL RELIEVE PRESSURE ON DESTRUCTION OF THE ROBINSON-PATMAN ACT

The defeat of S. 1008 will continue the beneficial trends now under way in our basic industries and will protect and invigorate our small-business institutions throughout the country because the threat to the Robinson-Patman Act, now so imminent, will have been dissipated. I cannot believe that the Federal Trade Commission will so depart from the fundamental concept of its original sponsors as to approve a document such as the proposed steel order.

THIS IS NO TIME FOR RETREAT—FRIENDS OF SMALL BUSINESS MUST STAND FIRM

This is no time to open the doors to cutthroat competition, to fixed prices, to the destruction of small business; and this is no time to open the doors to a situation which further restricts the choice of consumer by the elimination of competition. This is a time for the resurgence of the spirit of free enterprise and a time to consolidate our gains on the antitrust front. Any weakening of our position now is an invitation for the destruction of small business in the United States.

Address by the Vice President at the Samuel Gompers Centennial Dinner

EXTENSION OF REMARKS
OF
HON. MATTHEW M. NEELY
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, January 9 (legislative day of Wednesday, January 4), 1950

Mr. NEELY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the address delivered by the distinguished Vice President, ALBEN W. BARKLEY, at the Samuel Gompers centennial dinner on January 5, 1950, in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, distinguished guests, ladies and gentlemen, I greatly appreciate the honor involved in the invitation extended by President Green and his associates to me to participate in this memorial program on the one hundredth anniversary of the birth of Samuel Gompers.

I did not realize when I accepted the invitation that I would run into so much competition. [Laughter.] I have seen more vice presidents assembled under this roof than I have since the twentieth of January, when I was inaugurated. [Laughter.] But I welcome them into the fraternity of vice presidents with the same spirit with which they welcome me into their fraternity. [Applause.]

It is a great pleasure always to memorialize the lives of great men. It is a great thing to receive inspiration from the lives of men who have consecrated themselves to some great cause, whether religious, educational, economical, or political—and it is a greater thing to have been permitted to enjoy an intimate acquaintance with any of these great men whose lives we celebrate, or whose hundredth anniversary we celebrate and memorialize.

It was my happy privilege to know Samuel Gompers in person. I came here as a young, inexperienced Member of the House of Representatives on the 4th of March 1913—longer ago than I sometimes like to admit. [Laughter.] I have not been here, however, as long as Samuel Gompers was president of the American Federation of Labor. [Laughter.] I came into the House of Representatives with the Woodrow Wilson administration, and I learned, very shortly

thereafter to respect and honor two great Americans. One of them had dedicated his life to education and to politics—not politics in the sense of politics as a game in which men maneuver for position, for high office or preferment—in which men maneuver for the success of a political party merely for its own sake—but one to whom politics was the science of government, as it really is in its truest sense. The other one had dedicated his life to the welfare of the American working man and woman, those who draw the water and hew the wood, those whose names rarely ever find a place on the front pages of our newspapers or periodicals, but who live the lowly walks, in the shadows that infest the valleys between the mountain peaks of achievement, of honor, and of notoriety. This leader dedicated himself to such an extent that I doubt if there has ever been a leader of the American working man or woman—or whether there can ever be one—who so indelibly impressed his personality and his character upon the American people as did he. [Applause.]

These two men whom I learned early in my own congressional career to respect, to revere, and honor were Woodrow Wilson and Samuel Gompers. [Applause.] Strange as it may seem, they were men of the same stripe of humanity—men of keen intellect, discriminating taste, eloquent tongue. And strange at it may seem also to those who do not recall it, in the great crisis that faced our country in World War I there was no man in America upon whom Woodrow Wilson leaned more heavily or confidently than upon Samuel Gompers. [Applause.]

Gompers was not only a labor leader, he was a labor statesman. He was broad-minded in his sympathies and understanding, and he recognized that American labor had its fight to make—had its way to make—and had to establish its right to organize and to act in solidarity for the welfare of the American workingman. I recall his appearance before committees of the House of Representatives. I recall his deep emotion as he pleaded the cause of the American workingman. I recall his cryptic sentences, his eloquence, his deep convictions. I recall the profound impression made not only upon me as a young member of the House, but upon the whole committee and the whole Congress and the whole American people.

I recall that when the Clayton antitrust law was before the House of Representatives and its Committee on the Judiciary, it was largely due to the eloquence and the conviction and the persuasion of Samuel Gompers that we wrote into that law a provision that the labor of a human being is not a commodity to be peddled in the market place [shouts—applause], giving legality and sanction to the membership of men and women in labor unions, for their own mutual advantage and protection, and for the guaranty of their rights. Samuel Gompers was this sort of a statesman.

I recall on one occasion when the Kentucky delegation went out to see President Wilson to recommend a great Kentucky lawyer and jurist for appointment to the Supreme Court of the United States. One by one we made our little speeches in our candidate's behalf, including two Senators from the State and all the Members of the House. When we had concluded, President Wilson, with that keen insight for which he was noted, said to us: "Gentlemen, does your candidate believe that the law grows, or does he take the legalistic view that it is finished?" By that interrogatory he drew a picture of the sort of man he wanted to put on the Supreme Court. But far beyond the appointment of a single man to the highest Court in our land, he drew his picture of the sort of Government in which he believed and the sort of Government that Samuel Gompers believed in and fought for—not only for labor, but for all American people. [Applause.]

We know that the law is not finished; we know that it does grow. It can never be finished nor cease to grow so long as humanity grows. We know that just as science and education and medicine and religion and agriculture and industry are constantly in search of new avenues for expansion and for development and the betterment of their own positions Government likewise must grow and remain modern [applause] in order that it may meet the requirements of a dynamic age where men and women are no longer satisfied that their Government shall sit merely in Washington and in any other capital complacently and with self-satisfaction and draw its pay and do nothing. I recall—and I beg your pardon for these personal references—but I'm sure you'll understand the reverence with which I recite them—I recall one day as I sat in my office in the House Office Building rather unexpectedly a delegation came to see me. It was headed by Samuel Gompers. There were many members of organized labor on that committee, including the railway brotherhoods, and I recall that Davey Robertson and Bert Jewell—George Harrison, of course, will know the significance of those names—came into my office. And Mr. Gompers was the spokesman of that committee, and he, on their behalf and on his own and on behalf of the great American Federation of Labor, asked me if I would introduce and fight for the passage of a law repealing what was then the Railway Labor Act and enacting a new railway labor act which would give fairness to railway employees and not make it one-sided, as the Taft-Hartley law is now [drowning applause]. You may understand that I felt greatly complimented by this honor being done to me. We worked for days and weeks and months in preparation of that legislation. I introduced it in the House of Representatives and Senator Howell, of Nebraska, in the Senate, and it became known as the Howell-Barkley bill. That was in 1924. We were unable to secure passage at the session, but in the next session we did enact it into law and, with such modifications as have been found necessary by experience and administration, it is still the law of this land, and the fairest and the best and the most workable labor law that has ever been enacted in the history of the United States. [Applause.]

These personal experiences of mine with this great labor leader endeared him to me as a young man devoted to the ideals of fairness, just principles in the administration of our growing economic system in which labor and industry must work together in peace and harmony insofar as it can be done in fairness and justice to those who are engaged in it. The century which has been marked by the hundred years since the birth of Samuel Gompers has been sometimes referred to as the "wonderful century." In many respects it has been one of the most wonderful centuries in all the history of man. In many respects mankind has advanced further in all fields of his activity and his endeavors than all the previous history of the world. I need not now recite these advances for lack of time.

Samuel Gompers came to this country when he was about 10 years of age, and through the force of his character, through the clarity of his intellect, through the foresight of his vision, he became the great leader, not only of American labor but, as a symbol, he became the leader of labor throughout the world. [Applause.] During his 48 years as president of the American Federation of Labor, he saw that great organization of human effort, human blood and bone and sinew—sometimes symbolized by tears and heartaches—grow into a body of 3,000,000 men. And when he died, the American Federation of Labor numbered its members at the 3,000,000 mark. Twenty-five years have passed since then, and as his successor William Green [applause] and as his associates and inheritors Dan Tobin and Matthew Woll have epitomized and characterized and emphasized the good principles of Samuel Gompers, until today the American Federation of Labor numbers 8,000,000 men and women. [Applause.] They are, as has been said, a great bulwark against un-American influences seeking now to penetrate our country. And so long as American labor, organized and unorganized, hold the fortresses and the buttresses and the ramparts of democracy and liberty and freedom—fight for freedom of religion and of speech and of the press and assembly—there will not be enough crackpots in America to break down the stability of our great country. [Applause.]

Samuel Gompers came here to find a land of promise. He helped to make it a land of fulfillment. The American way of life which we cherish and enjoy has been humanized and infinitely enriched by his life and by his labors. With all of his heart he believed in the words of Abraham Lincoln, who said, "Whatever helps labor helps the Nation." He fought against industrial serfdom and oppression. Out of the vision of his life, out of his great heart and of his great brain, he helped to create American labor democracy—equality and justice. He added to the Lincoln philosophy one of his own when he said, "Any good union member must first be a good citizen." [Applause.] He believed that in a free country like ours free men and women working freely together could advance their standard of living, elevate their lives, and appreciate more and more their Government and their political and social institutions because under a real democracy they were permitted to help fashion them. History now records how right he was. [Applause.]

A Word About Formosa

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. REED of New York. Mr. Speaker, the internationalists have betrayed the taxpayers of this country by pouring billions of their money into England to keep the Socialists in power. Now this Socialist regime at the first opportunity has shown its true colors by joining its Communist brethren in Moscow and surrendering China, our traditional friend, to the tender mercies of Stalin and his raiders. This whole move has been aided and abetted and planned by the Communists who have infiltrated into the inner circles of our Government.

It will not be long now before the nations that the internationalists have been supplying with our taxpayers' money will line up against their United States benefactor; then this Nation's young men will have to face the Communist armies of the organized nations to the east of us and to the west of us. UNRRA and ECA and the internationalists have done their deadly work and sooner or later the people will pay for this with their material treasures and the blood of their boys.

Under leave to extend my remarks, I am inserting in the Appendix of the RECORD the following editorial which ap-

peared in the Washington Times-Herald of Monday, January 9, 1950:

FORMOSA

Mr. Truman's announcement that the United States would do nothing to keep the Chinese Communists out of Formosa preceded by a few hours Britain's recognition of Communist China's Peiping government. Britain no longer recognizes the Chiang Kai-shek government.

Mr. Truman's Anglophile administration and State Department had unquestionably been notified of Britain's intentions, and the President faithfully brought American policy into conformity with them. The fact that he and Secretary Acheson have not yet extended formal recognition and the possibility that they may not do so later do not alter this judgment.

Britain's principal interest is to preserve her billion-dollar investment in China, her long-established China trade, and her title to the crown colony of Hong Kong. It is incumbent upon her to cozy up to the Chinese Communists, even at a considerable sacrifice in self-respect, in order to hold what she has. An Associated Press report is that she has exceeded the minimum requirements to curry favor by selling 20 British tank landing ships and a number of motor-boats to the Communists at Hong Kong for use in their coming invasion of Formosa.

Mr. Truman and Secretary Acheson can serve British interests quite effectively by denying further support to Nationalist resistance without going the whole way and recognizing the Communist regime. In this way they separate themselves from the British only in the sense that we are left to carry on a technical opposition to the Chinese Communists, while the British carry on the trade with them.

By thus placing us at a disadvantage their policy works out for the benefit of England—which is the usual goal of American foreign policy.

ADMINISTRATION GOES ISOLATIONIST

The Truman administration, in abandoning all of China to the Communists, with Formosa to follow, has gone isolationist with a vengeance. This decision means that Soviet Russia's Chinese satellite will now be installed in the same threatening position on the flank of America's outposts and communications as Japan was in 1941, when Formosa was under Japanese rule.

The parallel is heightened by the fact that the Communists are preparing an invasion of Hainan Island, in the south China Sea, which Japan seized from China in 1939. From Formosa the bombing run to the American base at Okinawa is 300 miles, and to the American bases in the Philippines 250 miles. It will be recalled that Jap planes from Formosa wiped out the American Air Force in the Philippines at the very outset of the Pacific war in December 1941.

In 1941 Mr. Roosevelt brought the United States to war with Japan on the theory that a China under partial domination by Japan was a threat to American survival, and that Japanese occupation of such other positions as Hainan and Formosa was contrary to the interests of America and her imperialist friends. Now Mr. Truman would have us believe that, although he regards communism as a threat to the survival of free government everywhere, and although the Communists of Mao Tse-tung are allied with Stalin, a China wholly controlled by the Communists is to be regarded as a matter of indifference to the United States, and Communist control of the strategic bases of Formosa and Hainan need not disturb us.

If Mr. Truman's view is correct, Mr. Roosevelt's certainly could not have been correct. Mr. Truman is, in effect, conceding that his predecessor plunged the United States into a wholly unnecessary and terribly costly war, to no purpose at all. For all of the objects that Mr. Roosevelt regarded as essential to be attained through his war policy have now been sacrificed by Mr. Truman's policy of neutrality. Russia and its Chinese agents are conceded everything which, when held by Japan, was supposed to make war by America imperative.

FOREIGN POLICY IS LUDICROUS

This confusion of foreign policy is rendered still more ludicrous by the fact that, while Mr. Truman, in pursuit of his policy of containing Russia's aggressive expansion, corks up the European end of the bottle, he leaves the Asiatic end open. While he deems Chiang to be a person unworthy of American support, he and his Ambassador in Belgrade, George V. Allen, vow that they will oppose any Russian aggression against Yugoslavia. Thus they make a distinction in favor of the shabby Communist Nationalist dictator, Tito, who not so long ago was killing American aviators.

The whole development of present official administration attitudes toward China and Formosa demonstrates the folly of Mr. Roosevelt's war and the fatuity of Mr. Roosevelt's and Mr. Truman's personal war diplomacy. It demonstrates, also, the subservience of American foreign policy to British interests and the irrationality of spending twenty-three billion annually on a cold war to stop communism in the west while it is permitted to run wild in the east. Mr. Truman's decision that China is none of our business is a decision which Mr. Roosevelt should have reached 8 years ago.

Freedom and Security

EXTENSION OF REMARKS

OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the remarks made by me on Thursday, January 5, 1950, at the ceremonies attending the visit of the New York State Freedom Train to Bay Shore, Long Island, in my home township of Islip, N. Y.:

Save for such parts of the past as have enriched us by experience and may be resummoned by recollection, history for us is a scroll of object lessons seldom learned. However, when we individuals wrest so little profit from mistakes that have resulted in personal disappointment or anguish, it is small wonder that the collective experience of the ages has proven so poor a palliative against tragedy.

Our recorded approach to history sometimes seems to me ranting and vainglorious and, unconsciously or otherwise, designed to magnify our globe-dwelling ego as though we traveled into the future's space with a comet's blazing beauty in our wake, instead of crawling as we do through the centuries, dragging history behind us like a long chain of mortal and venial sins. Saga and song have aggrandized our slow progression, highlighting all epic events, recounting the splendors and importance of men and principalities. Even as the kings of old had their sweet singers—David to praise Saul in Israel, the bards to harp Ireland's greatness at Tara—modern nations and public men have press agents to herald and interpret their events and actions. Distortion is inevitable, confusion is to be expected.

Much that historians should have recorded has been left to the novelists. Stephen Crane in his Red Badge of Courage, Remarque in All Quiet on the Western Front, and more latterly, Mailler in The Naked and the Dead, show the fumbling admixture of sordid and splendid that compose outcomes known as history, and how pathetically the individual man is bewildered by his puppet-like compulsions. For him the present itself is unrelated.

Historians have yet to give us an integrated picture of the past wherein so much ancient and new now appears foolish beyond belief until we realize that reflective review requires only evaluation and not the exercise of judgment, and that history is as much a matter of judgment as it is continual struggle against nature and the nature of man.

Unquestionably of all studies, history is the most fascinating, unrolling for us as it does—in picture after picture of passion and sublimity, sweat, and vanity—the leavening, making and crumbling of gens and tribes and nations. Even though we may view it with the irony the Welsh put in their proverb—"Human history is similar to the heroic tales pigs relate of swine"—we cannot but be deeply moved by the rare moments in time when man has manifested his spiritual nature through action for freedom and human dignity.

In such high moments America's patrimony is great and rich and of this happy benefice, the Freedom Train carries much precious documented proof, evidence that arouses and inspires. In incentive to freedom we are a Nation singularly endowed, and this incentive, this latent desire which mounts up like fire when the winds reach it, is our true wealth, our treasure.

Without it America would coarsen and turn its will in crassness to building a silk-lined corncrib for security. There is nothing wrong with security. Unlike sin, no one "is agin it," and come the millennium, I might hasten to add, we shall have it.

In the meantime, though every child knows actuality's fingers prick bubbles, the delectable delusion that security can be rolled off the White House lawn like a wonderful and imperishable egg, seems to be making the rounds in so-called adult circles.

Many serious thinkers are disturbed by the problem this puff-and-promise game is propounding. Included among them is my honored and long-time friend, Bernard M. Baruch, who discussed the subject at length with me when I visited with him recently in his New York home. He does not know the answer, he says, nor do I.

How can we best serve the common welfare, now and ultimately? Can we buy future security with today's dollars in the light of possible dollar-value fluctuations? Should we lay away funds for security payments at a stated retirement age in terms of units cashable at a movable rate to be computed annually during those years payment is made? Should the basic subsistence need of the individual be determined and fixed like a parity price, with the government or the social security funds coming through with the differentials?

These are merely questions concerning the social security system that I throw out to you. Actually my concern is comprehensive, as I pointed out some 3 years ago when I addressed the Sons of the American Revolution in Manhattan and said:

"America, meshed in economic complexity, can only retain its place untrammeled in the forefront of free men if it improves its social structure with emphasis on economic independence and not on social security.

"When I talk of social security I do not refer to the old-age pension system, a thing for which I fought in the New York State Legislature when it was exceedingly unpopular with the leaders of my own party. Then, as now, I considered it a sad

commentary on the involved financial structure controlling our great wealth that men need cry out to the State for aid in sickness or old age. I believed then, as I do now, that through education, scholastic and civic, and without sacrifice of the primary concept of freedom, the time could eventually come when there would be no 'underprivileged.'

"Our freedom today is threatened by the mounting economic pyramid of developing industrial civilization. Built on the broad base of American free enterprise, this pyramid is ever narrowing. As it grows it is limited, tier by tier, by monopoly and specialization. When its apex is reached free enterprise will be done for and freedom will be gone. * * * The mechanized civilization we have built will circumscribe us with constraints unless we are watchful. Freedom shall be a small thing dwarfed by security.

"Unless we concern ourselves passionately with freedom, how shall we place it comparatively? Unless we are enamored of it, how shall we say it is not to be superseded? What was a conviction with Washington and the creators of America, will be a mere historical footnote of an era's aspiration if our desire for easy living distorts our sense of proportion and we erroneously diminish the great."

What I said 3 years ago still seems true to me and so I repeat it, though perhaps today when honored to address you who have come to view the Freedom Train, my time should have been devoted to listing documents aboard these richly freighted cars and expounding upon their significance as it reaches through to me. I must confess, however, to not getting much beyond the name of the train itself, for there is something about the very words "Freedom Train" that sets one to thinking in wide measure.

Everything to be seen will interest you I know, for it was my pleasure, as one of the Regents of the University of the State of New York, to have a part in preparing the train and sending it on its way.

It carries the original draft by Abraham Lincoln of the emancipation proclamation with corrections in the handwriting of Seward; the "Duke's Laws," enacted in Hempstead in 1665 to protect labor; and the Flushing Remonstrance, sometimes called "the First Declaration of Independence," that firm protest of the Quakers to Peter Stuyvesant against restriction of worship. These and many other of the exhibits will have great meaning for you, including the petition of the coopers of Southampton and East Hampton against unfair competition in one of our early Long Island industries. All these documents, manuscripts, and imprints collected and collated by the New York State Freedom Train Commission, represent tangible evidence that when jeopardy of inherent rights and allowable privileges arouses men, men make such history as that which shapes an America—a country, that will, with God's help, continue to keep clear the rails upon which a freedom train may forever run.

Our Retreat From Asia

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York World-Telegram and the Sun dated Friday, January 6, 1950:

OUR RETREAT FROM ASIA

President Truman's refusal to give either military supplies or advice to the Chinese Nationalists in their fight to save Formosa from the Communists may prove the most fateful decision of his administration.

China held the key to the situation on the Asiatic mainland. When it was lost western civilization was left with no dependable ally there.

That pushed us back out to sea, behind a defense line based on the islands of Japan, Okinawa, and the Philippines. Formosa, in Red hands, will endanger that whole line.

In September 1947 Lt. Gen. A. C. Wedemeyer recommended that Manchuria be placed under a United Nations trusteeship, and submitted a program to the President which he believed would save China from communism. His memorandum contained this warning:

"Continued deterioration of the situation may result in the early establishment of a Soviet satellite government in Manchuria, and ultimately in the evolution of a Communist-dominated China."

General Wedemeyer's plan for positive action was suppressed in favor of then Secretary of State Marshall's do-nothing policy, which in turn was succeeded by Secretary Acheson's wait-and-see policy.

So, while our Government sat on its hands, both of General Wedemeyer's dire predictions have come to pass.

In March 1948 General MacArthur joined General Wedemeyer in urging a positive policy in the Pacific. He said, in part:

"The Chinese problem is a part of a global situation which should be considered in its entirety * * * for if we embark upon a general policy to bulwark the frontiers of freedom against the assaults of political despotism, one major front is no less important than another, and a decisive breach of any will inevitably threaten to engulf all."

Loss of China broke the Asiatic frontier, and loss of Formosa will breach our defenses in the Pacific.

However, though the President's attitude toward the Formosan issue has been clarified, the issue has not been settled, as Senator VANDENBERG has warned. Debate on that issue has just begun.

Britain and France did not secure "peace in our time" at Munich, and Britain and the United States cannot buy peace in Asia by compromising with totalitarianism there. Meanwhile, if the Chinese Nationalists, left to their own meager resources, can withstand an armed attack on Formosa, President Truman and the British Foreign Office may find to their chagrin that they have been backing the wrong horse.

Deliberately Placing a Communistic Enemy Across From Our Western Frontier

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. REED of New York. Mr. Speaker, it is refreshing to note that the press is taking notice, through some of the articles of the outstanding columnists, that this administration has been betrayed by the British Fabian Socialist government. The propaganda of the communists in this country has been so effective that the citizens have ignored the warnings that some of us have given them and they have swallowed the propaganda of the administration hook, line, and sinker.

I am inserting the article entitled "These Days" by George Sokolsky to give it wider circulation among the people who will suffer most as a result of the betrayal of their interests by the department of the government which is supposed to protect the people of this country in their foreign relations.

The article which I am inserting in the Appendix of the RECORD, under consent heretofore given, appeared in the Times-Herald of January 9, 1950:

THESE DAYS

(By George Sokolsky)

Having given China to Soviet Russia, the Yalta traditionalists in the State Department are faced by the sharp fact that their British mentors are fast at work preparing for arrangements with Soviet Russia that would, if successful, isolate the United States more effectively than any "America Firster" ever dreamed possible.

The British have to be understood, if we are to see this picture clearly. They realize that there are to be no additional gifts to Great Britain beyond our current commitments under the Marshall plan.

They would like an additional $2,000,000,000, but they can read the signs of the times and it is obvious that the next Congress will reduce rather than increase the burden of foreign assistance. Therefore, they would, on the continent of Europe, like to increase east-west trade; that is, the trade between England and such countries as Czechoslovakia, Poland, and Soviet Russia.

It should be recalled that this idea was included in the Marshall plan, but did not develop because the iron-curtain countries refused to join the Marshall plan.

The British had to be cautioned not to sell goods sent to them from the United States to such countries and there was at one time a bit of a scandal concerning that.

At any rate, the British have been very busy fixing up the east-west trade and their economic relations may force them to become a neutral as between the United States and Soviet Russia. Such neutrality, in the political field, could tie us in a knot in the United Nations.

As regards China, the British concern themselves only with trade relations and whatever arrangements they can make with the Chinese Communists concerning Hong Kong, which cannot be adequately defended by the British.

Before the China war (1931), the British had a commercial and industrial capital investment in China of about $1,500,000,000. Such firms as the British-American Tobacco Co., Jardine's, Butterfield & Swire, the Hong Kong and Shanghai bank, and many others are tremendously important in Britain's world economic picture.

If the Chinese Communists follow the universal Marxian pattern, they will, in time, seize and nationalize all property.

The British would like to salvage what they can and to hold it for as long as possible. All that they can offer the Chinese Communists as a quid pro quo is recognition and such trade as would aid Mao Tze-tung's regime, which is at this time particularly short of foodstuffs and construction materials.

It could be a profitable barter trade, the Chinese providing hides, skins, silk, tea, or

other exports. It is a trade to which the British are accustomed.

Hong Kong is an island, rising to a deep peak. At the base of the hill is a mass of Chinese. Opposite is an area called Kowloon which is also inhabited by Chinese.

Hong Kong itself produces practically nothing but is dependent upon a hinterland, the center of which is Canton, now in Communist hands. It would be easy to starve Hong Kong. A general strike would leave the city without essential services.

Therefore, if the Communists decide to take Hong Kong, they can do it by starvation and attrition. No military force which the British could muster in China would be sufficient to save the city.

The problem for the British then is whether they are prepared to abandon Hong Kong or make a deal with the Chinese Communists, whose bargaining power is enormous.

On the other hand, Chiang Kai-shek is not altogether without strength. The next few months will show whether his guerrilla forces can be effective. His base on Formosa could be made good for some time for guerrilla operations in southern and western China.

Furthermore, Formosa lies on the Philippines-Japan defenses of the United States. With Formosa in Russian hands, General MacArthur's situation in Japan would finally become untenable.

He admits that the effort of the State Department to minimize the strategic position of Formosa is deceitful propaganda in support of the British and may, with safety, be discounted.

The soundest proposition would be to relieve the State Department of its responsibility for our China policy, which it has messed up beyond belief, and to turn the Formosan problem over to the Department of Defense so that it may come under the aegis of General MacArthur.

New England Hopes To Have Its Own Steel Plant—Freedom From Steel Monopoly Sought by the Six New England States—Small Business Will Be Greatly Helped by New England Steel Plant—Many Regions West of Mississippi Still on Steel Starvation Basis

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. PATMAN. Mr. Speaker, plans of New Englanders for a steel mill to turn out 1,250,000 tons of steel ingots annually seem close to maturity. This will be an integrated mill which will have a finished steel capacity of over a million tons of hot- and cold-rolled sheets, bars, and light plates. More than 2,000 acres of land will be required for this plant, which will employ approximately 5,000 persons. This mill, when completed, will be a magnificent contribution to New England's economy. Since the beginning of the steel industry in this country, New England has paid a heavy toll, through the price-fixing mechanics of the basing-point system, for raw and semifinished steel to keep its thousands of metalworking and fabricating plants in operation.

New Englanders have long operated small, medium, and large plants manufacturing fine tools and hundreds of mechanical appliances which have been distributed throughout the country. New England is noted for its quality products in this field.

NEW ENGLAND AT A DISADVANTAGE WITHOUT STEEL-PRODUCING CAPACITY

Over the years, New England has hauled its steel in from distant points, manufactured it into various products which were shipped back over the same lines from whence came the raw materials for the manufacture of these products. Thus, competitively, New England was at a disadvantage against products produced by factories in the Ohio Valley and Midwest which were close to steel plants. The outlawing of the basing-point system has undoubtedly spurred New Englanders on with the hope of finally having, partially at least, its own steel supply. It is understood that the ore is expected to be hauled in by water from the newly explored deposits in Labrador and that coal for coking and other purposes, produced in the southern Appalachian fields, will flow in, also by water, from Hampton Roads, Va. Limestone is plentiful in nearby locations.

NEW ENGLANDERS PRAISED FOR COURAGE AND FORESIGHT

New Englanders have a big raw-materiel supply problem in undertaking to build this mill. Their foresight and courage to overcome all of these obstacles is to be highly commended. In comparison, the flow of raw materials into the Lone Star plant at Daingerfield is relatively simple. Lone Star mines in Oklahoma have as fine a coking coal as is produced in the Appalachian fields. Its large body of ore nearby and limestone and other materials are accessible and convenient. New England is to be congratulated for conceiving and carrying out plans to take care of a portion of its steel needs in the face of such tremendous obstacles.

MANY AREAS ON STEEL-STARVATION BASIS

Many great areas of our country, particularly west of the Mississippi, have been on a starvation basis, as far as the supply of steel is concerned, for the last 50 years or more. The time has come for these regions to throw off the shackles which have bound them to the steel trust and to build their own steel plants. There are many bodies of low-grade ore in this country where a plentiful supply of fuel is available, as well as limestone and other ingredients suitable for the manufacture of steel.

We have come to accept, no matter how thoroughly we dislike, a huddle of steel plants in a few spots east of the Mississippi River. This is all right as far as it goes, but this country needs, from the standpoint of both utility and national defense, more steel-producing capacity closer to the point of consumption. Again I commend the enterprise of the New Englanders and hope that other great sections of our country will profit by their example.

New York Times and Labor Note Progress of Tennessee Valley Authority

EXTENSION OF REMARKS

OF

HON. HUGH B. MITCHELL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. MITCHELL. Mr. Speaker, the annual TVA report elicited commendatory comments from newspapers with widely differing editorial attitudes. Labor scoffed at those who in speaking of TVA "make a lot of noise about socialism, and the Welfare State" and added that the actual TVA accomplishments "makes the woeful prophets look silly and should make every American proud."

The New York Times, in a different tone, praises TVA accomplishments and says it "continues to be a success." I ask that the two editorials be published in the CONGRESSIONAL RECORD.

[From Labor for January 7, 1950]

NORRIS AND ROOSEVELT ALSO WERE CALLED SOCIALISTS—BUT SEE WHAT THEIR GREAT TVA HAS DONE—SAME CRY NOW RAISED AGAINST TRUMAN

Politicians and propagandists who are on the pay roll of the predatory interests continue to make a lot of noise about socialism, the welfare state, and how they are ruining our country. This is not the first nor loudest noise made by these gentlemen.

Back in the 1930's, power-trust propagandists led a furious shouting against socialism. They were positive the country was headed for the rocks of ruin, because the late Senator George W. Norris and President Roosevelt were teaming up to create the TVA.

For 16 years the Tennessee Valley Authority has been carrying on the Norris-Roosevelt program. Have the dire predictions about it come true? Far from it. On the contrary the TVA this week published an annual report which makes the woeful prophets look silly and should make every American proud.

"The seven-State valley served by the TVA," the report points out, "is becoming more and more productive, both agriculturally and industrially. Its resources, being more efficiently conserved and used, have strengthened both the region and the country as a whole.

"Average income per person in the Valley increased from $148 in 1933 to $797 in 1947," the last year for which figures are available. That is a rise of 440 percent, compared with only 260 percent for the entire United States."

By its system of 27 dams and reservoirs, TVA has reduced floods in the Tennessee and lower Ohio and Mississippi River Basins, saving the people of those vast regions tens of millions of dollars annually.

By soil conservation, improvement of navigation, wiping out malarial mosquitoes, improving farming methods and fertilizers, and providing new facilities for the people's recreation, Uncle Sam's great public enterprise has brought untold benefits to the citizens of the region and Nation.

All that, and more, on top of achieving the purpose of which most people think when they read or hear the famous intials TVA—production of plentiful and cheap electric power. Here, too, great success is reported.

In 1949, TVA power cost the average residential consumer only 1.4 cents a kilowatt-hour, compared with the national average of 2.98 cents. That's a saving of more than 50 percent.

Incidentally, consumers all over the United States would be paying much more for electricity if Uncle Sam's TVA yardstick had not educated the people and forced private utility companies to bring their rates down.

Yet, while providing power at less than half the average price, TVA in 1949 made a profit of $21,000,000, or 5 percent on the money Uncle Sam invested in his power yardstick.

No private corporation could or would dream of undertaking such a huge all-around development of an immense region and its resources, for the benefit of its people and the entire country.

Yet politicians and propagandists—of the same kind now shouting "welfare state" at President Truman—screamed "socialism" at Norris and Roosevelt when they asked Congress to create the TVA.

[From the New York Times]

PROGRESS ON THE TENNESSEE

By every measurable test the Tennessee Valley Authority continues to be a success. Its sixteenth annual report shows an annual production of nearly 16,000,000,000 kilowatt-hours, or about 10 times as much electricity as was available in its area in 1933. In 1933, 3 percent of the farms in the area were electrified; now the proportion is 66 percent and growing. The improved Tennessee last year carried 427,000,000 tons of freight, or 13 times the load it did in 1933. TVA has taken the lead in conservation measures to protect soil, forests and wild life; it has had a large share in the nearly complete elimination of malaria. Private business has flourished. The per capita income in TVA territory has gone up from $148 in 1933 to $797 this year—still below the national average but increasing much more rapidly than the national average.

TVA's great building period is nearly over. It has constructed 17 dams and operates a system of 27 major dams and reservoirs. To the installations on the Tennessee and its tributaries will be added dams being built by the Army on the Cumberland, power from which will be distributed by TVA. By 1952 TVA expects to be turning out 22,000,000,000 kilowatt-hours annually, for which a ready market will be found. All this has been done with much less mandatory legal power than most people outside of the Tennessee Valley suppose.

The argument as to whether TVA is in unfair competition with the privately owned electrical industry may long continue. On the face of this report and other official documents it seems likely that TVA is paying sums in lieu of taxes and sums to the Federal Government out of its net profits that come close to being equivalent to the taxes it would have to pay if it were a private enterprise. In addition to these payments, municipalities which operate their own distribution plants are earning net incomes which, in effect, are a species of tax on the ultimate consumer. The real argument for the TVA principle remains substantially what it has always been: that the multiple-purpose development of a great river is too huge an enterprise to be entrusted to a private monopoly. What we can hope to get out of such enterprises, publicly owned and managed, is decentralized and democratic management and the least possible amount of interference with local communities and private businesses. We think that in these objectives TVA has set an admirable example.

The ECA Racket

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. REED of New York. Mr. Speaker, the observations of a noted columnist, George Rockwell Brown, who has been an ardent and able supporter of sound government throughout the years, and who has been so recognized by all thoughtful people, are pertinent with reference to our foreign situation, and I am placing them in part in the Appendix of the RECORD, under consent heretofore granted. These remarks appeared in the Times-Herald of January 9, 1950:

Congress has repeatedly voted Marshall-plan money to keep the Socialist-Labor Government at London in power.

It has permitted the financing with ECA funds of organized British effort to steal the American domestic market with the ultimate object of flooding this country with British goods, and sending American working men and women to the unemployment-relief agency.

It has poured billions into Europe, ostensibly to stop the march of communism, whilst the Truman government was steadily and stealthily permitting the march of communism in Asia. Another ECA appropriation bill is in the making.

Congress can deny further aid to Britain on two grounds, one that it is financing the extension of state socialism with American tax money; secondly, that British recognition of the Communist government of China defeats the whole purpose of the Marshall plan.

Against such a program of courageous Americanism the administration will bring to bear all its power and strength.

If socialism fails in Britain, this spring or summer, as it has in New Zealand and Australia, the Truman welfare state will be on its way out in November.

And well does it know it.

Socialism Suffers New Set-Back

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Star and Herald of Panama City, Panama, of December 11, 1949:

SOCIALISM SUFFERS NEW SET-BACK

After 8 years of experimenting with socialism, the Australians yesterday voted the Laborites out of office and placed a Liberal-Country Party coalition in office.

Socialism received the same set-back almost a fortnight ago in New Zealand, where a Socialist regime had been in office for 14 years.

As Lord Woolton, chairman of the Conservative Organization of Great Britain, said last night, both Australia and New Zealand have tried out socialism and found it lacking and they now know from experience that it just does not bring contentment and a higher standard of living.

It would be interesting to see what the captive peoples who live on the fringe of Red Russia would do to their Communist regimes if they were afforded such an opportunity as the free people of Australia and New Zealand to express their will without fear of repressive reprisals by the armed minority which holds the rights of people in absolute contempt.

Unfortunately, those people live in a so-called new democracy, wholly bereft of the freedoms which we of the old democracy enjoy. To these freedoms we owe the progress of civilization to its present stage; to their regimentation they owe the iron curtain that blacks out the rest of the world from their eyes and keeps them under the yoke of the tyrants who usurped their human rights.

It is possible that the next people to cut themselves free of the Socialist experiment in government will be those of the United Kingdom. Their lot has been a tragic one. They are still just as badly off, if not worse than during those trying days when the Nazi blitz and submarine blockade forced short rations as an unavoidable necessity.

Many billions of dollars have rolled into Britain's treasury from the United States and apparently rolled out just as easily, without doing any apparent good under the present Socialist regime. Many industries have been nationalized but the benefits, if any, of this drastic action do not seem to have advanced the welfare of the people to any appreciable extent. Of what good then, has been the Socialist experiment? If it failed in Britain, it surely must fail anywhere else.

Only when shielded behind an iron curtain can socialism be made to appear as a success by the distortions and half-truths of the propagandists.

The New Zealanders and the Australians no doubt have sounded the death knell of socialism as a governing system in the Western World.

What the A & P Ads Don't Reveal

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. PATMAN. Mr. Speaker, I have before me the November 5, 1949, issue of America, also known as the Catholic Review of the Week. The feature article, prominently listed on the cover page, is entitled "What the A. & P. Ads Don't Reveal—the Law Catches Up With the Nation's Big Grocer."

AMERICA—CATHOLIC REVIEW OF THE WEEK

This review of the A. & P. matter by one of the country's most respected weeklies is worthy of attention by all of us, particularly doubting Thomases who may still think that A. & P. is being abused by the Government's present suit to compel it to end its monopolistic practices.

A. & P. ALREADY CONVICTED IN CRIMINAL TRIAL

The article brings out clearly what the A. & P. advertisements studiously omit—that A. & P. has already been criminally

convicted on the charges in the present suit, the purpose of which is merely to enjoin and prevent A. & P. from continuing activities already found to be unlawful.

PRESENT ACTION IS CIVIL

The present suit is a civil action, and is being tried for the Government by J. Francis Hayden, former chief of the New York office of the Antitrust Division.

With the leave of the Speaker and the Members of this House, I am inserting in the CONGRESSIONAL RECORD the article in America, as follows:

WHAT THE A. & P. ADS DON'T REVEAL

(By Robert F. Drinan)

The announcement by the Department of Justice on September 15, 1949, of a civil suit to break up the Great Atlantic & Pacific Tea Co. for repeated violations of the Federal antimonopoly laws came as a surprise to most consumers who, taken in by A. & P.'s adroit public relations, felt that this mammoth chain was one of the unmixed blessings of the American housewife. The A. & P. also pretended to be surprised. In a series of four Nation-wide, full-page newspaper advertisements, it claimed that the Justice Department was operating on a false interpretation of the antitrust laws and that the company was guilty of nothing except selflessly building up its giant grocery business with the sole purpose of providing the American consumer with better food more cheaply. The advertisements could deceive only the more naive. They were promptly and publicly repudiated by the United States Attorney General.

The truth of the matter is that the A. & P. has behind it a 25-year record of violations of the antitrust laws, a record built up in its attempt to dominate and control the retail grocery business in the United States. The pyramiding of manufacturing, distributing and holding companies which make up the gargantuan A. & P. is one of the most incredible stories in American industrial history.

It all started innocently enough with the opening of the first A. & P. some 90 years ago by the Hartford family. By 1925, however, the company owned 14,220 of the 46,800 chain grocery stores in America. In that year a complete reorganization of the A. & P. into 14 distinct corporations took place. No managerial revolution overtook them, because George and John Hartford, heirs of the company's founder, remained as A. & P.'s top executives. Keeping a very close control over the entire organization, they perpetuated their ancestor's drive for domination of the grocery field.

After the 1925 buying policy of A. & P. became more and more one of using its strong and ever-growing power to get a lower price on merchandise purchased than that obtained by its competitors. The company sent its own agents into the field disguised as independent brokers. The suppliers would pay the ordinary brokerage fees, which would, of course, immediately be transferred into the coffers of A. & P. In 1935 gross revenues from this source alone approached $3,000,000. This system of sham brokerages continued to operate until it was made illegal by the passage of the Robinson-Patman Act in 1936. The small-business men of America engineered this legislation through Congress. It provided, also, among other things, that any price-discrimination in favor of purchasers of large quantities of goods would be illegal, unless the discount was based on actual savings to the supplier.

In an effort to evade this new legislation, A. & P. then instructed its buyers to induce A. & P.'s suppliers to reduce their price by the amount of the brokerage fee now outlawed. If the suppliers protested or refused, the company threatened to refuse to buy from them or to set up its own manufacturing plant for the item in question. Most suppliers succumbed. Once again A. & P. had the edge over its competitors, at least until the Federal Trade Commission issued a cease-and-desist order against evasion of the Robinson-Patman Act. The Third Circuit Court of Appeals sustained FTC, and in 1940 the Supreme Court refused to review the case.

Indomitable A. & P. now resorted to "direct buying"—again a disguise, because the great grocery chain insisted that its suppliers pay A. & P. for advertising of their products, for sales promotion, and other such services, found to be largely fictional by the courts. Since the funds from these "advertising allowances" took the place of the forbidden brokerage fees, A. & P. continued to undersell the market and overcome its competitors.

At this juncture A. & P. became ever more subtle in its attempts to obtain discriminatory allowances. It required certain suppliers to file with the corporation letters, framed by A. & P., certifying that no concessions were tendered A. & P. in violation of the Robinson-Patman Act. At the same time, however, the grocery chain insisted on its rebates camouflaged as "advertising allowances." During this period, too, the company consolidated its far-flung chain into supermarkets and accepted deliveries to the retail outlets at a discounted price, while it protested against direct deliveries from its suppliers to the stores of its rivals. Another less lucrative but valuable way of securing secret rebates was A. & P.'s custom of furnishing bags and labels to its own manufacturers at a substantial mark-up from the cost of these items.

THE GOVERNMENT BRINGS ACTION

These practices were continued until February 1944 when the Antitrust Bureau of the Department of Justice brought action against A. & P., alleging a conspiracy to restrain interstate commerce and to monopolize a substantial part of the retail food market. The suit was criminal, an action reserved for willful or repeated offenders against the antitrust laws. After a trial lasting several months, A. & P. was found guilty of violating the Sherman Act, and in February 1949 the trial court's verdict was affirmed by the circuit court of appeals in a decision written by Judge Sherman Minton, recently appointed to the United States Supreme Court.

The trial court's decision made it clear that there is no law to prevent the normal expansion of a business, that there is no objection to the mere size of a corporation even if the resources and strength of the corporation give it a dominating place in the industry. Neither horizontal integration nor vertical integration is in itself illegal under the Sherman Act. The use of this concentrated power becomes illegal, however, when, by reason of intent or the inherent nature of contemplated acts, the public interest is prejudiced by the restriction of competition.

The A. & P. trial has brought out into the open the hidden role of the corporation's alter ego, the Atlantic Commission Co., commonly called ACCO. This vast wholesale purchasing company, incorporated by A. & P. in 1926, purchased in huge quantities, sold to A. & P. at preferential rates and to its competitors at tidy profits. In 1940, ACCO handled about 12 percent of the total national movement of fresh fruits and produce. ACCO's size and power have frequently permitted it to reserve to itself the right to set prices unilaterally.

A. & P.'s greatest profits have been derived from the hidden mark-up on all merchandise transferred from ACCO to A. & P.'s 6,000 retail outlets. In fact, the annual earnings from ACCO alone have very nearly approached the total retail earnings of all the stores. Because of this hidden income, A. & P. has been able to undersell, even at a loss, where necessary, all competitors in a certain substantial territory and thus, by this lethal weapon, force all other grocers out of business. When State minimum mark-up laws made such practices illegal, A. & P. would neatly evade the laws by underbilling the products from their own manufacturing plants and from ACCO to the retail outlets. When competition was dead, the A. & P. would then raise its prices above normal, recoup its losses and settle down to enjoy the fruits of relative monopoly in the territory in question.

ACCO—A. & P.'S PAC

With the help of ACCO, the A. & P. has organized the Better Business Association, Inc., to protect A. & P.'s interests, but never has A. & P. let it appear to the public that this association was financed and dominated by the grocery chain itself. Likewise, A. & P. has operated behind the front of the Emergency Tax Council of New Jersey, which, supposedly in the name of and for the sake of the public, conducted a State-wide campaign against special taxes on supermarkets. A. & P. also organized the National Consumers' Tax Commission of Illinois, for the ostensible purpose of studying taxes but actually to express A. & P.'s views on the chain-store-tax question.

Closely connected with this phase of A. & P.'s activities were ACCO's attempts to organize various producers' cooperatives, some of which ACCO sought to dominate, others of which it sought to direct, all with the intent, of course, of securing reduced wholesale prices for A. & P. ACCO's most ambitious effort along these lines was the organization of the Super-Co-op, an association dominated by the grocery chain and designated to give ACCO greater control over its suppliers, but camouflaged to make it appear that the shippers themselves were the moving force in the organization. Super-Co-op was to be used as a propaganda agency to fight A. & P.'s enemies and to induce the movement of all fruits and vegetables through ACCO. Super-Co-op was abandoned, however, because of the admitted fear that it was too apparent an attempt to monopolize the entire produce industry.

Restraint of competition must inevitably follow, the trial court held, from the multiple, irreconcilable, inconsistent functions of ACCO, including its obligation as an agent for sellers to sell high and its obligation as a buying agent for A. & P. to purchase as cheaply as possible. ACCO, said the Court, is the "rotten thread" that runs through the entire corporate structure of A. & P.

THE GOVERNMENT'S SOLUTION

To effectuate last February's verdict of guilty against A. & P., the Justice Department has recently filed a civil action to enforce the Government's recommended reorganization of the company. The suit demands the complete separation of A. & P. from its vast wholesale affiliate, ACCO. The manufacturing and processing of food conducted by A. & P. must be made entirely distinct from its business of buying and selling food. The national network of A. & P. must be divided into seven separate parts, each part to be under independent ownership, control, and management. Its national headquarters purchasing departments must be abolished, and all shadow of collusion and conspiracy between the autonomous sections of the new organization is forbidden.

The Government's remedy seems drastic. Yet it only enforces the strong language of the Sherman Act passed by a Republican

Congress in 1890. The mere attempt to monopolize any part of the commerce between the various States is there made illegal. Likewise, the strong language of the Robinson-Patman Act of 1936, outlawing any discrimination in prices not based on real saving, allows but one interpretation.

The A. & P. fought back at the Government enforcement agency in a second series of full-page advertisements on September 30. The grocery chain asserted that its patrons have deluged the company with messages to the effect that the dissolution of the A. & P. will be a great loss to American consumers. This is, of course, beside the point, since the preservation of free competition is the real good for the consumer. The stifling of competition, even if it brings present reduction in prices, will inevitably lead to partial or total monopoly, and monopoly always makes the many the victim of the few. At least, that is the underlying premise of the Sherman Antitrust Act. In the ads, A. & P. also assured the public that it is not a monopoly because some years ago it controlled 11 percent of the retail grocery business and today it controls only 6 percent. This is merely in line, however, with the Government's position that bigness is not necessarily badness unless the power inherent in bigness is abused.

Other arguments put forth by A. & P. in this second series of advertisements are not worth answering. We can be grateful at least that the newspaper editorial writers have not echoed A. & P.'s misrepresentations of the issue, although it is probably a foregone conclusion that the public will hear nothing of the truth of the matter, even during the long negotiations between the company and the Antitrust Bureau which will soon begin.

A. & P.'s suppressed major premise is its belief in limitless free competition, a system which results, as Pius XI put it so well in Quadragesimo Anno, in the "survival of those who are the strongest, which means those who fight most relentlessly, who pay least heed to the dictates of conscience." Even the inadequate existing antimonopoly legislation in the United States will prevent such a result if this legislation is properly enforced. The A. & P. has done its bit to obscure the value of such legislation in the public eye.

The corporation skilled legal staff will spend the next several months in defending the practices of its employer. Victory for the Government, however, is all but certain, even though it will cost the taxpayer several hundred thousand dollars to prove that A. & P. is wrong. I hope that the money will not be entirely wasted, insofar as it will further the preservation of the system of free, but not entirely unrestricted, competition which is an essential and valuable part of the American way.

Betrayal Completed

EXTENSION OF REMARKS
OF
HON CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks, I would like to include an editorial that appeared in one of the Nation's leading newspapers, the Omaha World-Herald, on January 6, 1950. The editorial is as follows:

BETRAYAL COMPLETED

Now the betrayal of Nationalist China by its allies in World War II is complete. President Truman has announced that the United States will not aid in the defense of Chiang's last fortress, Formosa.

In the opinion of many responsible Americans—among them, ex-President Hoover, Senator Taft and, reputedly, Douglas MacArthur—the interests of the United States also have been betrayed.

Whether the President was chiefly influenced by the State Department, or by the Joint Chiefs of Staff, or by the Government of Great Britain, was not stated.

But this much is known:

The Joint Chiefs had proposed sending a mission to Tokyo and Formosa in February, to consult with General MacArthur and to study western defense plans. The President's decision short-circuits that proposal, and gives a direct slap to America's greatest authority on Pacific warfare.

Some days before the Presidential decision was announced, word leaked out that Secretary Acheson had sent a secret memorandum to his men in striped pants, advising them that the capture of Formosa by the Communists was widely anticipated, and that the American public should be prepared in advance for the loss of the militarily unimportant island.

In other words, the abandonment of Formosa was an Acheson policy before it was announced as a Truman policy.

Whatever its origin, abandonment of Formosa is a logical extension of the appeasement policies begun at Yalta. There the late President Roosevelt pledged to Stalin that Russia could have Manchuria, the Kuriles, Sakhalin Island, Port Arthur, almost anything else she wanted, if only she would join, sometime, in the war against Japan.

Chiang, one of the allied Big Five, didn't hear about the Yalta deal until 4 months afterward. When he learned of it, he was helpless.

Russia did enter the war against Japan—for 1 week. Then she seized the promised territory, including huge stores of war matériel which were used by the Reds against the beleaguered Chiang.

Now, with the official abandonment of Formosa by the Government in Washington, the Communist world has harvested the full fruits of Yalta.

The State Department's advocacy of the Formosa decision is especially interesting because it is primarily the work of two men.

One is Secretary Acheson, who was Assistant Secretary and Under Secretary during the war, and who is the continuity man between the Roosevelt and Truman Administrations. The China white paper issued last year under his sponsorship was an amazing exposition of the view that Chiang, not communism, was the enemy of America in the Orient.

The other architect of Asiatic policy is Philip C. Jessup, the Department's far eastern investigator. Some years ago Mr. Jessup was associated with the Institute of Pacific Relations, a propaganda organization which campaigned against Chiang and in favor of the Communist rebels. He was a supporter of Red Spain. More recently, he appeared as a character witness for Alger Hiss, the man accused of giving State Department documents to Soviet Russia.

On those two men, apparently, President Truman relied.

To General MacArthur he did not even listen.

Admittedly, a decision to defend Formosa or to strengthen Chiang's forces there would have involved the grave risk of war.

But as against that risk, the chosen policy creates prospects which are no less grave.

One is that Formosa will fall. Military men say there is little if any doubt of it. In that case it will be a Red dagger point at the Philippines, Japan, and all American outposts in the West.

Another is that the Red Government will then become the undisputed ruler of China, and as such entitled to general recognition—and to China's permanent seat on the Security Council of the United Nations. That body will then be divided 3-2 between Communists and non-Communists—with either Britain, the friend of Red China, or France, which sometimes wavers toward communism holding the balance of power.

Not a pleasant prospect for Americans to contemplate. Conceivably the consequences may be more dreadful than those which followed Munich. But it is the course which President Truman and his trusted advisers irrevocably have chosen.

We Have Forsaken Formosa

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 7, 1950, issue of the Bridgeport (Conn.) Post:

WE HAVE FORSAKEN FORMOSA

Why we have abandoned Formosa to the Communists, for that is what we have done, is not yet clear. President Truman has barred any United States military intervention, aid, or advice, asserting that the program conforms to the traditions of our foreign policy in China, the Cairo and Potsdam agreements, and to a United Nations resolution against any nation's seeking influence or imperial aggrandizement in China.

Did he prevent a war, a real shooting war, by leaving the island open to Communist invasion? Or has he brought us closer to a shooting war by allowing the Communists to take over an island which endangers our Pacific defense line from Japan to Okinawa and the Philippines?

The military leaders of the country were stunned by the abandonment of this Pacific bastion. They disagree fully with Secretary Acheson, who, like his predecessors in the Cabinet post have been sitting on their hands while Moscow has spread its armies and its political control all over Asia.

Intervention to save the island, and the remnants of Chiang Kai-shek's government and troops, might have gotten us into an early war with Russia, is Secretary Acheson's view. We would like some more light on that view. The administration is committed, after all, to stopping communism, yet by its decision on Formosa, it provides Russian communism with an opportunity to advance and menace our Pacific outposts.

The loss of China was bad enough, as it broke the Asiatic frontier, and as soon as the Communists step into Formosa, as they will eventually, our defenses will suffer another break. It all looks very much like a compromise with totalitarianism.

Now that Britain has given full diplomatic recognition to China's Red government, the first major break in Anglo-American accord on foreign policy in 25 years, perhaps an explanation of our policy in Asia will be forthcoming from Mr. Truman. Such an explanation is more important now than anything he said in his state of the Union address. We hope he gives it.

Abject Surrender to Communism

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. REED of New York. Mr. Speaker, the credulity of many of our citizens under the persuasive power of propaganda seems to know no limits. Millions of our citizens know that Poland was betrayed at Yalta and they know that the existing administration has coddled the Communists and given them a key to the front door of many of the departments of our Government. The internationalists representing credulous constituencies without regard to party have voted billions of the taxpayers' money to promote and to perpetuate a Fabian socialistic government in England. Now, when the ECA notorious racket bids fair to collapse and the stream of our taxpayers' money is now to be curtailed, the Fabian socialistic government, which I repeat has been supported by internationalists, has double-crossed our people and have recognized the Communist Government set-up in China. I am wondering just how long the people are going to be bamboozled and fooled by the men who have squandered these billions and who now shout for economy and refuse to support tax reduction. I admit that they are playing a clever game of deception, but it ought to be obvious now to thoughtful people that they have been sold and are about to be again sold down the river. The administration plan now is to pass a few crumbs in the way of the elimination of excise taxes to quiet down the public urge for real tax reduction and thus preserve the larger portions of the revenues collected for further domestic and international boondoggling.

It is the people who should demand forthrightness on the part of their representatives and not be lulled into false security by the shouts for economy on the part of the most notorious spenders of the taxpayers' billions.

The economic principles which have given this country a sound economy and a safe foreign policy have been scrapped.

Under leave heretofore granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD an article by Dorothy Thompson which appeared in a recent edition of the Washington Evening Star:

PRINCIPLES OF UNITED STATES SEEN THROWN TO WIND AT YALTA CONFERENCE—RESULTS IN CHINA DECLARED INEVITABLE; MEANING OF PARLEY STILL UNDIGESTED

(By Dorothy Thompson)

The case against the Chinese National Government and Chiang Kai-shek was presented to the State Department as early as 1934 and again in 1941 by the Japanese, who argued that Chiang was corrupt and reactionary and that this justified Japanese intervention. Then the State Department, under Mr. Hull, stood on the basis of legitimacy and international law, arguing that the incapacities of the government of a country furnished no excuse for fishing in its troubled waters. It was the maintenance of that standpoint against appeasing Japan that precipitated the war with Japan.

The viewpoint had the merit of embodying a traditional and understandable principle. It was entirely abandoned at Yalta, in February 1945.

Although the Chinese Government was an ally, our Government, in a secret agreement with Stalin, of which the Chinese Government was informed only 4 months later, effectively assured that Manchuria should fall to Russia and—if our previous attitude made any sense at all—that this would assure Russian hegemony over all China. We thereby threw previous principles of legitimacy and law to the winds, and also abandoned the only consistent China policy the United States had ever had—that of the open door and no special interests in China.

BARRAGE OF PROPAGANDA

This was preceded and followed by a barrage of American propaganda against Chiang Kai-shek and for the Chinese Communists. Leading in this propaganda were the publications of the Institute for Pacific Relations—on whose board Prof. Philip C. Jessup, now of the State Department, sat in various high capacities—which, as early as 1943, had opened a blast against the national government, presenting the issue as between feudal and democratic China.

The campaign was taken up by most American writers on China; by Gen. Joseph W. Stilwell and finally—in a veiled way—by the official white paper, whose thesis is we could have done nothing anyhow. This thesis is flatly denied by our Ambassador to China. The paper is an appalling record of the disintegration of an originally clear policy, even to the extent of justifying the Yalta deal by historical precedent—the precedent being Russian intervention in China under the Tsars.

The meaning of Yalta has still not been digested. Administration apologists (including the late Edward R. Stettinius, in his book Roosevelt and Yalta) take the line that Yalta was all right but the Russians did not respect their agreeements. This is tantamount to saying Munich was all right but Hitler did not respect his agreements. Like Munich, Yalta established spheres of influence among three great powers, and contemplated a Big Three peace in a Big Three United Nations. Russia was granted special interests in east Europe and China, in no case were the Allied Governments consulted.

RESULTS WERE INEVITABLE

The fundamental thesis of Yalta was incompatible with every principle of freedom, equality, and international law. It was, therefore, incompatible with democracy. It denied every paragraph of the Atlantic Charter, and it had inevitable results.

Because the Atlantic Charter was abandoned, we have the Atlantic Pact.

Because we agreed to the division of Europe and the partition of Germany we have our frantic efforts to integrate and unite a rump Europe which is a political and economic monstrosity.

Because we recognized special Russian interests in China, overthrowing the whole concept of the open door, we have a Russian puppet government over the whole China mainland.

You cannot destroy the authority of a government in one place and restore it in another. The case against the Chinese Nationalists has been written by American officials, journalists, and policy. The Communists don't need to write a word of their own propaganda. They can quote Americans.

There is no principle of any kind we can invoke, not even the principle of nonintervention, because at Yalta we did intervene, and made a deal, which we enforced on the China Government.

We are now in the preposterous situation of standing out alone against recognizing the Communist Government which we, more than any country except Russia, helped create. It cannot be done, and certainly not by this administration. We shall have to lie in the bed made for us, though we shall not sleep. The last laugh may well be Chiang's.

Technique of Point 4

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Ira E. Bennett entitled "Technique of Point 4" which appeared in the Christian Science Monitor of December 31, 1949:

TECHNIQUE OF POINT 4—PROPOSED PROGRAM LINKED CLOSELY TO NATIONAL SECURITY AND WORLD DEVELOPMENT

(By Ira E. Bennett)

The preliminary study thus far given by Congress to the so-called point-4 program reveals that the proposal is closely linked with problems of national defense and security and also that certain basic features of the program are already in successful operation in Latin America. There, through cooperation, American technique in the fields of education, sanitation, and agriculture has accomplished gratifying results at insignificant cost, and with increased assurance that enormous supplies of materials needful for hemispheric defense will be available.

It is assumed by critics of point 4 that it is a fantastic semisocialistic scheme for feeding hungry people all over the world at the expense of American taxpayers. It is described as a program for delivering a bottle of pasteurized milk daily to every Hottentot, with the compliments of the United States, in the hope that the Hottentotters will join hands in fomenting world affection, fraternity, and eternal peace.

Some of the critics insist that the scheme will not work successfully because bureaucrats will botch it in the administration thereof. Others hold fast to the central idea that it is not the business of the United States to uplift lazy, swarming hordes of foreigners, and that the spending of billions of tax money for this purpose would be a crime. Hence, without examining point 4, they condemn it in toto.

A few minutes' study of point 4 reveals that the really fantastic part of the picture is the criticism of the program and not the program itself. The United States stands to gain vastly greater benefits through the program than it could gain by the expenditure of billions otherwise. While the cost to the United States—the cost in public money—will be very small, however rich the resulting benefits to the peoples of undeveloped countries by the application of American "know-how" and industrial methods to potentially great natural resources.

In the American Republics there have been exchanges of skilled advisers with good results at small cost. One expert from the American Geological Survey assisted Brazilian colleagues to map a reserve of 17,000,000 tons of manganese ore, and two other American geologists from the Survey mapped a manganese reserve of 7,500,000 tons in the Amazon area. The Bureau of Mines, according to Julius A. Krug, formerly Secretary of the Interior, has done fruitful cooperative work with Brazil, Bolivia, Mexico, and Peru.

A small technical mission to Mexico contributed substantially to an enormous expansion in fish production.

About 600 projects, large and small, are comprised within the cooperative work now going on in 10 American Republics, under the general jurisdiction of the Institute of Inter-American Affairs. American experts are aiding in the task of bettering education, sanitation, and agriculture in the countries concerned.

The cost to the United States is insignificant, but the ultimate benefits are expected to be very important as the level of living standards rises and the productive capacity of the workers increases with improved health and better education.

Congress was so favorably impressed by the operations of the Institute of Inter-American Affairs that it unanimously, in the recent session, extended the life of the institute for 5 years and gave it a modest appropriation with which to finance the American share of the program.

Far-reaching political considerations are involved in the work now going on. All the American Republics are bound by the Treaty of Rio de Janeiro to act as one in case of aggression, and at the conference at Bogotá they agreed to cooperate against Communist propaganda and intrigue. In case of war it could be assumed that the resources of Central and South America, as well as those of the United States and Canada, would be made available for the defense of this hemisphere. Thus the manganese of Brazil and the uranium of Canada would help the United States to replenish its stock of strategic materials.

It is not solely in a quixotic mood, therefore, that the United States desires the increase of production in undeveloped democratic countries. The Soviet embargo upon manganese exports to the United States means little in any event, as manganese is obtainable elsewhere; but it is a comfort to know that South America contains immense stores of this necessary component of steel.

Treaty negotiations are under way, it is said, with 16 countries for the purpose of safeguarding American capital and assuring its fair treatment while engaged in developing foreign resources.

The proposed treaties are to be the basis of policy under point 4 so far as American investments abroad are concerned. The objective is to encourage American capital to take hold of enterprises which American technical experts have found to be capable of development on a large scale with profit to the investors, and with great benefit to the producing country in the way of good wages to workers. This procedure has already brought rich returns in the development of the copper and nitrate industries of Chile by American capital. Venezuela's oil production is largely financed by Americans. Central American countries are benefited by American enterprise in developing banana production.

Altogether, it is estimated that American capital invested in foreign countries aggregates $17,000,000,000. Only $2,000,000,000 of this, however, has been invested since World War II, as capital has been wary of taking risks in politically restive countries.

The solidarity of the American republics in the matter of common defense has helped to reassure American capital that it can feel fairly safe hereafter when the republics make treaties intended to insure fair treatment and immunity from expropriation. The profit motive in such conditions could be expected to induce American capital to consummate mass production development which would be too heavy for native capital to tackle.

Point 4 involves no expenditure of public money in any foreign enterprise; but it does contemplate the use of public funds in sharing with other countries the modest cost of pilot work by technical experts in finding the places and means whereby great natural resources can be developed. The lion's share of benefit would go to the producing country. The byproduct of such development would benefit the United States in several ways—by the lessening of tensions and war dangers; by the increase of trade with countries making headway toward a higher standard of living; and by better assurance that vitally necessary strategic materials would be available when needed.

Among these strategic materials are copper, tin, nickel, manganese, uranium, high-grade iron ore, oil, certain chemical products, etc., all of which are obtainable within the Western Hemisphere.

Venezuelan and Mexican oil production is to be joined now by Canadian production from several new fields. In Ecuador vigorous exploration is going on by several strong companies. An outstanding geologist not long ago stated that all signs pointed to large oil pools under Florida.

Just as the American Republics are combined in a defensive past against aggression, so all self-governing nations are in process of combining to resist the Communist world revolution. The Atlantic Treaty embraces some of these free governments. Other alliances probably will be made if Soviet pressure increases. The point-4 program contemplates cooperation with our governments only when those governments are opposed to communism. It would be economically impossible to cooperate with the Soviet Union or its satellite governments, because all of them prohibit private enterprise and monopolize all commerce and shipping.

To the extent that development of natural resources under point 4 would raise living standards and increase the strength of free peoples, the program commends itself to Americans as useful in combating the Communist world revolution. But, of course, they would be opposed to giving public money to develop the resources of other countries, rich or poor.

Since private capital cannot be compelled to go abroad, there need be no apprehension that American investors would suffer losses in foreign enterprises voluntarily undertaken by big American corporations. Those corporations have suffered sometimes, and they are now only too cautious in entering foreign fields. They know, however, that the foreign field can yield enormously rich returns to capital when conditions are favorable. It is for the purpose of bringing about favorable conditions that point 4 has been devised.

It would be possible to abuse the discretion to be lodged in the State Department with respect to lending technical experts to assist foreign governments in developing their economy. However, if enthusiasm for the program should lead to rainbow-chasing by overgenerous bureaucrats, Congress could quickly bring the dreamers to earth by cutting off the appropriation.

In any event, it seems probable that the point-4 program will be approved by Congress after perfecting the legislation that is now pending, and that administration of the program will be directed by the State Department. International political considerations require that execution of the program shall be in harmony with the Nation's foreign policy. Naturally, all agencies of the Government would furnish technicians for foreign exploratory work as directed by the President under the proposed legislation.

A point sometimes overlooked is this: The United States is itself one of the "undeveloped countries of the world." It can profit by exchanging technicians with other countries whose experts could be sent to this country to assist in developing American resources to better advantage.

Still another point of cooperative advantage is the fact that foreign students trained here in American technical and scientific institutions, including Federal agencies, become the forerunners of important constructive enterprises in their home countries. One of these men who studied the methods of the Reclamation Service was placed in charge of two projects in his own country requiring an outlay of $40,000,000.

Whether American or foreign technicians familiar with American equipment are the pilots of new undertakings, their natural inclination is to recommend the use of American machinery and equipment. Thus foreign enterprises, even if not financed by American capital, will enlarge the demand for American materials, machinery, equipment, and skilled personnel.

Old Man of the Mountain

EXTENSION OF REMARKS
OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the National Tribune of January 5, 1950:

OLD MAN OF THE MOUNTAIN

With years a richer life begins,
The spirit mellows;
Ripe age gives tone to violins,
Wine, and good fellows.
—*Trowbridge.*

The announcement on Christmas Day by Commander George Craig, of the American Legion, that Miles Kennedy, of New York, is to replace Gen. Thomas Taylor as legislative director will doubtless cause a pang in the hearts of many a legionnaire. And, for that matter, the news will be received with regret by numerous of Taylor's friends who are not of the Legion and by some who are not unfriendly but who have often locked horns with him in his official capacity. Certainly we of the Tribune, even though it has been an open secret for months that the general must retire, felt a bit uncomfortable when it seemed necessary to name a successor, and we could not permit the news to travel far without attempting to voice briefly our reactions.

In Washington Jack Taylor is something of an institution and one with which people have had to reckon for many years. Beloved by most with whom he has dealt, feared by some because he was once ruthless when opposed in the performance of his Legion duties, but respected by all for his fearlessness in carrying out the dictates of convention resolutions, he is perhaps best known around the Nation's Capital as a lobbyist without a peer. A familiar figure in the Halls of Congress, his mind has clicked for years as precisely as have his heels on the marble of the corridors on Capitol Hill. He was, and is, a familiar figure, carrying always his ash walking stick and wearing spats of gray that are as much a part of him as his tousled mane of gray hair, his flying coat tails, his warm smile, and his static speech.

This commentator has known him at his best—and at his worst—for 25 of the more than 30 years Taylor has devoted to the Legion. It gives us license to treat a little familiarly with the history of a man whom nature endowed with a force of character possessed by few and with whom time has dealt gently. We say he is beloved by most men for the reason that there is gentleness and a warmth of understanding in him; he

likes well those who are attracted to him and those he can call his friends. We say he is feared because we have heard him blasphemed by Congressmen, legislators who had to be whipped into line by an artful and fluid tongue, sometimes by the banging on a solon's desk with that ash cane; aye, we have seen recalcitrants persuaded by a man and his machine until they have voted right, even though that day and that sort of inducement is no longer in vogue. And that he and those he represents are respected is a living thing that can be found in accomplishment When Taylor finally passes into history, his works will ever shine as a splendid example of love to fellow man. If the American Legion has given to him, he has given to the Legion.

Because, perchance, some may look upon this as an obituary, we hasten to make two assurances. Taylor has his faults like any other human, and he has erred, but it is proper to be kind when a person of his mein approaches retirement, so we avoid listing his shortcomings. Also, he is not yet through. The governing group of the Legion has recognized that the "old rock" has not yet disintegrated, and, by special dispensation, it has wisely decided to continue Taylor in a consultant capacity and as a tutor and guide to his successor. At a proper time we shall warn Kennedy against the good general's failings, while we meantime commend to him his virtues. We treat here mostly with good deeds and with a struggle with Father Time. Under Legion rules it is as inevitable that retirement must come with the months ahead as it is impossible that time will not take its toll. Yet time travels in divers paces with divers persons.

Nobody who looks upon the Taylor countenance would judge him to have seen 65 summers. Nevertheles, he was 34 when he came out of World War I as a high-ranking shavetail with 17 months of overseas service. It would have been doubted that he was 57 years young when he again went abroad for action in World War II in which he participated for 2½ years, and that he was edging on to retirement when he earned that star on his shoulder. A few people rush to get a pencil and paper when they begin to count the many ribbons on Taylor's broad chest, and, if it will suit any sourpuss to know it, one marks him as a first-class private in the French Foreign Legion, but there are some there that denote distinguished service, and we consider him to have a medal of gold for a great performance of duty to the Legion, with a diamond added for his long years of helpfulness to the sick and the disabled of our wars and to the dependents of our departed dead. Thirty-one years of application to work in the veterans' cause and to the Nation, from the birth of the American Legion to its present peak of usefulness, is a mark of distinction given to a very small number of the people's servants.

Back in the 1500's, a poet wrote these lines which we feel fit a landmark in Legion history and one of its foremost participants:

His golden locks time hath to silver turned;
O time too swift! O swiftness never ceasing.
His youth 'gainst time and age hath ever spurned,
But spurned in vain; youth waneth by encreasing.

Jack Taylor has not squandered time nor effort. In the past he has mastered both, because they demand no waste. Time can be counted by heartthrobs or by creeping hours, and too many have elaborately thrown it away, but Taylor has had the strong mind to combat it. Withal, it gallops by relentlessly and they are to be envied who have left strong and eraseless footprints in its sands. It has not been ungenerous to Jack, even though it has tamed a little his hand and tempered his judgment, but there must be a follower, a next of kin, if the good of his work to go on. We know that the new legislative director has the required energy and the native ability to fill a pair of shoes, difficult though the transition may be, and that he will have the companionable assistance that only one with Taylor's qualifications can give him in carrying on the assignment and in performing the service that the position demands. We look forward confidently even as we are forced to witness the early passing of the Old Man of the Mountain. We cannot have all we desire for all time, or, as Browning put it:

Never the time and the place
And the loved one all together.

Cotton Acreage Allotments

EXTENSION OF REMARKS
OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. DEANE. Mr. Speaker, much is being said concerning the cotton acreage allotments. I have been interested in reading a telegram forwarded by Mr. Allan B. Kline, president, American Farm Bureau Federation, to the Secretary of Agriculture and the reply of Secretary Brannan to Mr. Kline.

In view of the apparent confusion concerning this important legislation, the Congress and the public, I feel, are entitled to have the benefit of views expressed in the following telegram from Mr. Kline and the response from Secretary Brannan, and under permission to extend my remarks, I include these statements and likewise express the hope that the Committee on Agriculture will rapidly develop corrective legislation to avoid exceedingly serious economic disorders throughout the cotton-producing area of this country.

The statements follow:

UNITED STATES DEPARTMENT
OF AGRICULTURE,
December 16, 1949.

Mr. ALLAN B. KLINE, *President,*
American Farm Bureau Federation,
Chicago, Ill.

DEAR ALLAN: I have briefly delayed answering your wire of December 10 concerning the 1949 cotton marketing quota legislation because I did not want to appear to be influencing the referendum under this new law held yesterday. Now that the referendum has been concluded, I want to set the record straight on this vital subject.

The American Farm Bureau Federation authored and aggressively supported the legislation by many hours of testimony, by the activities of many of its national and State officers in the Halls of the Congress, and by other means. The bill was adopted in almost the precise form which the American Farm Bureau Federation prescribed, notwithstanding the fact that representatives of the Department of Agriculture and others pointed out that the already discredited method for allotting acres among farms within the county by a cropland formula would create many difficulties and inequities and invite litigation.

I agree with you that the law does create inequities. But I do not agree with you that its defects can be corrected by administrative determinations.

With respect to the three provisions of the law which are the primary contributing factors to the inequities complained of; namely, the cropland formula, the large war crop credits, and minimum small farm provisions, the American Farm Bureau Federation vigorously opposed the vesting of any latitude or discretionary authority in the Department of Agriculture.

Your statement that I have authority to make farm allotments more equitable by reallocating to hardship cases the acreage which will not be planted by the farmers to whom it has been allotted is not borne out by the language of the legislation or the legislative history. Such authority was contained in the act of 1938, but was consciously deleted from the present law. In short, you ask me to take administrative steps which the Congress specifically refused to authorize.

The Solicitor of the Department of Agriculture and all of our staff working on cotton legislation have devoted many hours to the task of making this legislation as workable as possible. But we have been frustrated at every turn by the strict, mandatory provisions of the law. Nevertheless, we are still trying to find means for alleviating the inequities and we heartily welcome your suggestions to that end. If any step now being taken is not consistent with the law, or if another step which you wish to suggest is reasonably authorized by law, please supply us with your recommendations.

I am presenting a chronology of how this legislation came into existence because the cotton producers of this country should be allowed to judge for themselves.

It is clear from this record that the troublesome provisions as to county and farm acreage allotments had their origin in Farm Bureau action even before the Memphis conference or the subsequent activities of its steering committee which itself was dominated by Farm Bureau officials.

Walter Randolph, president of the Alabama Farm Bureau and official cotton spokesman for the American Farm Bureau Federation, during hearings on the cotton allotment law, assured Congress that your members would be "delighted" if Congress adopted his proposal.

This legislation came about as a result of the following events and activities:

1. A special subcommittee of the House Committee on Agriculture, headed by Congressmen STEPHEN PACE, began hearings on January 7, 1949, on cotton-marketing quota and acreage-allotment legislation. On January 26, the Secretary appeared before the full House Agriculture Committee and urged that the marketing-quota provisions of the 1938 act be modernized. In the course of his remarks he declared that:

"In establishing a basis for apportioning State, county, and farm allotments, a recent period of years should be used."

It was also explained to the committee:

"The recommendations which will be given to you in detail by other department witnesses are in the main the cumulative results of many months of work by the field staff of the Production and Marketing Administration through democratically elected farmer committeemen. State committeemen have obtained, analyzed, and passed on to me the farmers' thinking as to what their program should include, and how it may best be administered."

2. On January 26 and 28, the Production and Marketing Administration made specific recommendations to the special subcommittee regarding cotton legislation, emphasizing that they originated with the farmers out of nearly 2 years of discussions in the Cotton Belt. They recommended (a) that the national acreage allotment for 1950 and 1951 be

apportioned to the States on the basis of cotton plantings for the years 1945–48, inclusive, and for each year thereafter on the basis of the 5 years preceding the year in which the national allotment is established, excluding 1949 in all cases, (b) that the State acreage allotment be apportioned to the counties on the basis of the cotton plantings during the same period of years used in apportioning the national allotment to the States, with 10 percent State reserve for adjustments, and (c) that the county allotment for 1950 be apportioned to farms on the basis of cotton plantings on the farm in 1947 and 1948 and for each year thereafter on the basis of such plantings in the preceding 3 years, excluding 1949 in all cases, with a county reserve for adjustments of 25 percent for 1950 and 15 percent for each year thereafter.

3. On January 31, Walter L. Randolph, president of the Alabama Farm Bureau Federation and a member of the board of directors and executive committee of the American Farm Bureau Federation, appeared before the committee, announcing he was testifying in behalf of the national organization. His testimony on the point at issue opposed the Department. For example:

"We recommend that the county allotment be apportioned to farms primarily on the basis of the cropland on the farms in the county that are adapted to the growing of cotton. Experience has demonstrated that this is the most satisfactory method of apportioning county allotments to individual farms."

4. The hearings of the special subcommittee of the House Committee on Agriculture ended February 11, but the only cotton bill which resulted directly from these hearings was the one later enacted as Public Law 28, which excluded 1949 plantings in the calculation of cotton allotments for future years.

5. A nongovernmental belt-wide cotton conference was held in Memphis, Tenn., on April 24 and 25, in which farm bureau leaders from the Southern States took a very active role. Recommendations were made for establishing national and State acreage allotments, along with other recommendations for cotton marketing quota legislation. There were no recommendations regarding acreage allotment distribution from States to counties, or from counties to farms—the present trouble area. But the conference provided at its conclusion that each cotton-producing State should appoint one man to serve on a general committee "to implement measures adopted at this meeting."

As a result, an eight-man steering committee was created, headed by H. L. Wingate, president of the Georgia Farm Bureau Federation, as chairman; and J. A. Sweet, chairman of the New Mexico Farm Bureau's cotton committee, as vice chairman; and including Hugh Agnew, president of the South Carolina Farm Bureau, and J. H. West, of the Texas Farm Bureau. Thus half the committee was comprised of farm bureau leaders. The recommendations worked out by this committee were incorporated into Senate bill 1962 introduced by Senator CLINTON P. ANDERSON on May 27.

6. On May 27, the Department submitted a bill to the Congress which was introduced as S. 1971 by Senator ELMER THOMAS, chairman of the Senate Committee on Agriculture and Forestry, on May 31. This bill contained, among other things, a complete revision of the cotton marketing quota provisions of the Agricultural Adjustment Act of 1938. The cotton provisions conformed substantially to the recommendations made to the House by the PMA in January.

7. A special subcommittee of the Senate Committee on Agriculture and Forestry, headed by Senator ANDERSON, began hearings on S. 1962 on June 14. On that day the Deputy Administrator of the Production and Marketing Administration appeared before this committee with the adverse recommendations of the Department and to explain the Department's views on S. 1962. Those views had been set forth in a letter from the Acting Secretary of Agriculture to Chairman THOMAS dated June 13. This report on S. 1962 included the following:

"The Department recognizes the desirability of legislation which will accomplish the general objectives of section 344 (c), which establishes a formula for apportioning the national acreage allotments to States for 1950 and 1951. However, the formula proposed appears to be unduly complicated and to involve factors difficult to justify. In lieu of the establishment of fixed and temporary minimum State allotment bases, we suggest that as a means of providing equitable allotments for 1950 and 1951 factors or guides should be established for the use of the Secretary in making adjustments for trends or abnormal conditions."

The letter then goes on to say that the Department opposed the use of cropland as a basis for apportioning the county allotments to farms, citing five specific reasons, including:

"Under a uniform cropland factor approach, farms do not share in the county allotment according to their contribution to the county allotment, and some producers would bear a greater share of the acreage reduction than others. State and county allotments are based on the total cotton acreage of individual farms located within their boundaries, since the apportionment of the national allotment to the State and of the State to the county is based primarily on cotton-acreage history. Under the cropland-factor approach, however, two farms with the same cropland acreage may obtain the same size farm allotment, even though one of the farms historically may have contributed considerably more acreage to the county and State totals."

The Department emphasized its stand that the historical basis was the traditional way of establishing allotments—it had been tested in the courts, it worked effectively with other crops, and it was accepted and understood by the farmers. By contrast, the Department report said the cropland factor method had not worked satisfactorily when tried in the past until the historical factor was added, commenting:

"The Agricultural Adjustment Act of 1938, as originally enacted, contained a similar provision (to that in S. 1962) and it was found necessary to supplement this provision for determining farm-acreage allotments * * * with other provisions so as to correct inequities. These supplementary provisions * * * were based mostly on historical plantings."

The report added:

"In connection with the use of a uniform cropland factor for determining cotton farm allotments, it also should be noted that farm allotments for other commodities, such as wheat, corn, tobacco, rice, and peanuts, have been established largely upon acreage history and that this method apparently has been satisfactory to producers of these commodities. Since it is probable that allotments for these other commodities may be established on a cotton farm, it will be confusing to producers as to why different methods are used for farm allotments for cotton as compared with other crops."

The Department's report concluded that S. 1962 should not be passed.

8. In explaining to the Senate subcommittee why the Department opposed S. 1962 and made other recommendations, a Department spokesman told of efforts ever since 1945 to obtain, compile, and analyze views of cotton growers generally and county and State PMA committeemen in cotton-producing areas in regard to preferences on all phases of farm, county, State, and national cotton-acreage allotments, adding:

"Then, in January of 1949, another meeting was held in Washington of the PMA State committmen, who went into this question very, very thoroughly, considered every conceivable angle, and took a vote by States on the most pertinent points that were in issue. On the basis of all that background and study, we drafted language for a bill that would modify the Agricultural Act of 1938 (S. 1971).

"I relate all of this background to emphasize the fact that we have, to the best of our ability, tapped the sources of information out in the country and have tried to find out the thinking of the farmers themselves and of those people who are very close to farmers."

The Department's testimony then pointed out the necessity of having some reserve set up in the national allotments to provide for adjustments in new areas, new farms, and small farms:

"The reason we make that suggestion is we think there will always be cases coming up which none of us can foresee, where new areas will be entering into the picture for which some sort of adjustment will have to be made. * * *

"We would suggest that it be deducted on a national basis * * * it makes it much more flexible and more workable."

9. The chairman of the Senate subcommittee stated that it seemed unlikely that all of S. 1971 would be enacted at the first session of the Eighty-first Congress and requested that the Department submit its recommendations in a separate bill dealing only with cotton. Such a bill was presented to the subcommittee later that same day, June 14. Its provisions were the same as those pertaining to cotton in S. 1971

10. H. L. Wingate, president of the Georgia Farm Bureau and chairman of the Memphis conference steering committee, testified before the Senate subcommittee to urge passage of S. 1962, saying it carried out the general objectives of the Memphis meeting and the manner in which such points had been implemented by the steering committee. Dr. C. R. Sayre also appeared as a spokesman for the steering committee, explaining the "added work done by the steering committee to make more feasible in a legislative sense the actual basic principles worked out at Memphis."

J. A. Sweet, chairman of the New Mexico Farm Bureau cotton committee and vice chairman of the steering committee, said it was their specific aim to permit as little latitude as possible for the Secretary of Agriculture in assigning or adjusting allotments:

"May I comment, too, upon the recommendations made by the Secretary of Agriculture. * * * The chief difference lies in the fact that in Senate bill 1962 adjustments for trends and shifts in acreages as between the States are spelled out. The members of this committee have studied carefully the Secretary's recommendations and we can assure you that there is unanimous support behind our proposal that the allotments to the States during the next three years be fully and explicitly spelled out in legislation. You will find other differences between the two sets of recommendations and nearly in every case it is a matter of defining in detail the administration of allotments in Senate bill 1962 and broad authority in the Secretary's suggested legislation."

11. Other Farm Bureau officers testifying in support of S. 1962 as official spokesmen for their natural organization included R. E. Short, of Arkansas, vice president of the American Farm Bureau Federation; Walter Randolph, president of the Alabama Farm Bureau, executive committee member of the American Farm Bureau Federation; Delmar Roberts, president of the New Mexico Farm Bureau; John Taylor, president of the Okla-

homa Farm Bureau; and R. Flake Shaw, executive vice president of the North Carolina Farm Bureau.

Both Mr. Randolph and Mr. Short specifically supported the cropland ratio factor of distributing allotments to farms. Mr. Short testified:

"I take the opportunity here to emphasize that we are very strong for allocating cotton acreage to farms primarily on the basis of tilled acres * * *

"We strongly approve the suggestion in this bill, and do not agree with the suggestion of the Department of Agriculture."

Both Mr. Short and Mr. Randolph opposed the Department's recommendations for a national reserve for adjustment purposes.

Mr. Short testified:

"The bill has sufficient provisions to take care of the reserves for small farmers. We believe those requirements can be met much more equitably on a local and State basis than on a national basis. Administration of the program in the past has indicated that ample provision is made for it, and therefore no need for national reserves on that basis. We therefore strongly oppose it."

Mr. Randolph testified:

"I think this bill better than any bill ever before Congress, takes care of the purposes for which this national reserve is recommended, and this bill leaves the major portion of the decision to the local committees and the State committees.

"So we would say we are very much opposed to a national acreage reserve. We are very strongly in favor of the provisions of this bill * * *."

Mr. Randolph told the committee the farm bureau had approved the principles of the bill long before the Memphis meeting, saying:

"At our national meeting in Atlantic City in December we had a committee of which Mr. Short was chairman, and nearly every State was represented * * * we reached agreement there which was substantially in line with this bill, and at our board meetings that has been refined from time to time, and we feel and believe that we represent our membership, which is 1,325,826. In the State of Alabama, I can say with all confidence that the producers, by their repeated votes, the members of the farm bureau, by repeated unanimous votes, have authorized me to represent them, and many of them do know about provisions of this bill and I am certain they will be delighted with the bill if it is enacted."

Mr. Short further testified:

"I think it is rather significant that the Memphis recommendations are in substantial agreement with our original recommendations."

12. A warning contrary to the farm-bureau viewpoint was voiced at that same hearing by Congressman CECIL WHITE, a member of the House Committee on Agriculture:

"It is my observation, gentlemen, that very few of the cotton producers in the United States, particularly in California, know anything about the provisions of the Memphis agreement."

13. On June 29, the Senate Committee on Agriculture and Forestry reported favorably on S. 1962 with minor amendments. The report makes clear the origin of the provisions now being protested by the farm bureau. Of the Memphis conference, it stated:

"At that conference, the proposed system of cotton-marketing quotas and acreage allotments contained in S. 1962 was agreed upon."

The Senate passed S. 1962 on July 6 in substantially the same form in which it was reported by the Senate Committee on Agriculture and Forestry.

14. On June 29, the special subcommittee of the House Committee on Agriculture began hearings on H. R. 5392, differing in some respects from S. 1962 but incorporating substantially all of the provisions of the so-called Memphis plan. Although no formal report from the Department was requested on H. R. 5392, representatives of the Department were asked questions regarding provisions of the bill during the hearing.

15. H. L. Wingate, as chairman of the Memphis steering committee, and other members of that committee appeared before the subcommittee to urge passage of the Memphis plan, the major provisions of which were set forth in H. R. 5392.

16. The only national farm organization which appeared before the special committee of the House at hearings on this bill was the American Farm Bureau Federation, represented by Walter Randolph. After proposing a number of minor revisions in the bill, Mr. Randolph stated:

"We strongly support the essential features of H. R. 5392 relating to the computation and apportionment of National, State, county, and farm cotton allotments. * * *

"We want to emphasize our support for the provisions of H. R. 5392, which provide that county allotments shall be distributed to individual farms primarily on the basis of the cropland on the farms in the county that are adapted to the growing of cotton. Experience has demonstrated that this is the most satisfactory method of apportioning allotments to individual farms."

17. Following the conclusion of the hearings by the special subcommittee of the House, Congressman Pace introduced a new cotton bill (H. R. 5738) which differed in some respects from both his earlier bill and S. 1962. However, the revised bill contained substantially all of the provisions of the Memphis plan, except one important provision relating to the problem which has since developed.

18. On August 1 the House committee reported favorably on H. R. 5738 with certain amendments which did not alter materially the general plan of cotton allotments set forth in the original House bill. The House sent the bill to conference after a parliamentary move (substituting the provisions of H. R. 5738 for the provisions of S. 1962, as passed by the Senate).

19. The Senate and House conferees agreed for the most part on the provisions of the House bill, except for the provisions relating to the manner in which the State acreage allotments should be apportioned to the counties. In this respect the present legislation contains the provisions of the Senate bill which had been insisted on by Mr. Randolph for the Farm Bureau.

20. The legislation which was finally enacted as Public Law 272 contained the Memphis plan, as expanded by the steering committee, almost in its entirety. Thus, the two provisions of the legislation which are giving trouble at the moment—namely, the provisions relating to the establishment of county and individual farm allotments, were worked out entirely by the Memphis steering committee along the lines of Farm Bureau recommendations. The Department of Agriculture recommended against both proposals and suggested instead that the county and farm allotments be established primarily on the basis of county and farm cotton history, with provisions for considering other appropriate factors.

That is the record.

It is unfortunate for the cotton growers of this country that such a situation has developed, but I hope it may be turned to a constructive end by serving as an example.

Meanwhile, we will administer the law as best we can. Interpretations of the law to date have been made, of course, under the direction of our Solicitor. We have tried to alleviate the ill effects of which your organization complains by the most liberal interpretation of the terms of the act.

We will welcome an opportunity to work with the Congress and the farmer representatives during the next session of Congress to obtain workable amendments. Until we have this opportunity, however, I invite you to give the Department the benefit of any recommendations which might show us how we could steer a different course than that which we have announced and followed.

Farm leadership is no better than the direction in which it leads. If the direction proves to be wrong, then the leadership was wrong. The only way to correct it is to have a candid examination of the reasons for the error. It will do neither the organization leaders nor the farmers any good to blame the leaders' error on a Government official or agency. My duty as Secretary of Agriculture requires me to make it clear to the farmers where the responsibility rests for mistakes in representing the farmers' interest. For this reason, and because your telegram was made public, I am releasing this letter.

Sincerely yours,

CHARLES F. BRANNAN,
Secretary.

CHICAGO, ILL., *December 18, 1949.*

CHARLES F. BRANNAN,
Secretary of Agriculture,
Washington, D. C.:

The board of directors of the American Farm Bureau Federation today issued the following statement:

"Cotton producers will vote December 15 on the question of marketing quotas for the 1950 cotton crop under a new law passed by the last session of Congress. Many farmers are reported to be dissatisfied with the acreage allotments which have been issued under this law. Marketing quotas have not been in force since they were suspended in 1942. It is only natural that some difficulties should arise the first year that a new program is put into effect, or an old program reinstated after several years of disuse. Actually, the 1949 Cotton Allotments Act is not a new law, but a modernization of the cotton provisions of the Agricultural Adjustment Act of 1938.

"While everyone recognizes that it is impossible to write an acreage-allotment law that will cover all cases equitably, the major difficulties thus far encountered with cotton allotments are in the main a result of administrative failure to make full use of the authority provided in the law for the establishment of administrative areas within countries and the setting up of State and county acreage reserves to meet the very type of situations which are now arising. This is not solely the responsibility of the State and county committees. The ultimate responsibility rests squarely with the United States Department of Agriculture.

"The Secretary of Agriculture has full authority to make the allotments much more equitable than they are by reallocating to hardship cases the acreage which will not be planted by the farmers to whom it has been allotted. We call upon the Secretary to issue an administrative ruling providing for such reallocations wherever county committees find that the acreage allotted to a farmer exceeds his intention to plant.

"We believe that a vast majority of the inequitable allotments can still be corrected by administrative action without amending the law, but if amendments are found necessary, we shall seek prompt action when Congress reconvenes in January.

"The question of correcting inequities in acreage allotments, however, should not be confused with the main issue farmers must decide in the December 15 referendum on marketing quotas. That issue is whether the 1950 cotton crop is to receive price support at 50 percent or 90 percent of parity. If quotas are approved, the support price for 1950 will be about 28 cents per pound. If quotas are defeated, the support price will drop to 15 cents per pound. The economy of the Cotton Belt cannot stand such a drastic cut in income as would probably result. We therefore urge that cotton farmers

overwhelmingly approve marketing quotas. We can then concentrate our efforts on ironing out inequities in the acreage allotments."

ALLAN B. KLINE,
President, American Farm Bureau Federation.

The Spanish Fraud

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would wish to include an editorial from the Washington Star of January 2, 1950. This important declaration should be considered in connection with the fact that, in the last General Assembly of the United Nations, the membership voted 40 to 6 against the Sovietized Polish delegation's motion to censure Spain as Fascist and as having been "imposed by the Axis." As Dr. Joseph F. Thorning, associate editor of World Affairs, pointed out last May, this destroyed the whole basis of the case against Spain as it was originally formulated by the agents of the Soviet Union. After the unbelievable blindness of leftist propagandists about China, it would be a tragic blunder to continue to try to appease the Kremlin with reference to Spain. It is time for the resumption of full diplomatic relations with Madrid as well as for other measures of friendship and help for the Spanish people.

The editorial follows:

THE SPANISH FRAUD

Senator CONNALLY's statement that he believes this country could properly exchange ambassadors with Spain if it wanted to do so is interesting as a subject for speculation.

In 1946 the UN General Assembly adopted a resolution requesting member nations to withdraw their ambassadors from Madrid. This was a phony show of morality that was rooted in deceit and tainted with fraud. The pretense was that the Spanish Government had aided the Axis, that it was a dictatorship, and that it suppressed civil rights and religious freedom. And, of all things, the leader of this crusade for decency was that inverted model of democracy—the Communist-dominated government of Poland.

Evidently Senator CONNALLY is not in sympathy with this shabby performance by the General Assembly. And since he says that he does not regard the 1946 resolution as legally binding on this country, the inference is that he may use his influence as chairman of the Senate Foreign Relations Committee in an effort to persuade this Government to resume full diplomatic relations with Spain.

If so, he will be working in a good cause. And this is true, not because of any especially compelling reason of self-interest, but because this country, if it aspires to a position of moral leadership in the world, ought to purge itself of the intellectual dishonesty inherent in its position on the Spanish issue.

There is reason to believe that the State Department, or many of the top men in the State Department, would like to see an American Ambassador at Madrid. But they wring their hands and say that this cannot be done while the UN resolution remains in force. Perhaps there is some merit to that contention. Even if one believes that we were mouse trapped by the iron curtain delegations when the resolution was passed, there is still some force to the argument that the United States ought not to act in defiance of the Assembly.

But when these arguments are appraised in the light of the position taken last spring, they are found wanting in simple honesty. There was an effort last May to rescind the 1946 resolution. The vote was 26 to 15 in favor of repeal, but since a two-thirds majority was needed, the effort failed by a margin of 4 votes.

And what was our delegate doing in this attempt to cure the injustice of snubbing Spain while maintaining relations with the iron-curtain dictators? He was doing nothing. Under instructions from the State Department, he sat on his hands and abstained from voting.

It is this aspect of the matter which is most offensive to any concept of integrity. The United States should support the UN. But there is no valid reason why it should refuse to go on record as between right and wrong. If our Government believes the original action was a fraud, it should have voted to rescind it. If it does not believe this, its vote should have been cast against the repealer. In one breath we proclaim our greatness and our moral principles. And then we stultify ourselves by refusing to stand up and be counted on a clear-cut issue which bears not only on our own integrity, but on the integrity of the UN as well.

The Investigation of Lobbying Activities

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. BUCHANAN. Mr. Speaker, I am impressed and pleased by the widespread interest being shown throughout the country in the assignment given by the House to the Select Committee on Lobbying Activities to investigate all lobbying activities intended to influence, encourage, promote, or retard legislation. As chairman of that committee, I am also encouraged greatly by this interest and by the many suggestions we have received so far for avenues of investigation.

In the next few weeks it is my hope that the committee will determine a program of investigation and of hearings which will lead to a full report to the Congress and to the American people on the extent and nature of lobbying activity both by private and public groups on the problems of keeping this lobbying activity out in the open where it can be observed and properly assessed, and on the need for any changes in our present statute requiring the registration and filing of financial data by individuals and organizations engaging in the practice of seeking to influence, encourage, promote, or retard legislation.

The other members of this select committee, Representatives HENDERSON LANHAM, of Georgia; CARL ALBERT, of Oklahome; CLYDE DOYLE, of California; CHARLES A. HALLECK, of Indiana; CLARENCE J. BROWN, of Ohio; and JOSEPH P. O'HARA of Minnesota are, I know, sincerely committed with me to an intention to make of this committee's investigation a constructive task in the national interest and not a smear campaign or a political witch hunt.

A few weeks ago I issued a statement in the nature of a progress report on the work of the committee and its staff up to that time. At the end of that statement appears a sample of a questionnaire which was distributed among all Members of Congress, seeking their advice and suggestions on policies we should follow or investigations we should make. I hope that those Members who have not yet had an opportunity to respond to that questionnaire will do so shortly. We are finding the suggestions which have come to us so far as a result of this questionnaire to be most helpful, and I am sure every Member of the Congress has similar worth-while information of value to us.

Mr. Speaker, under unanimous consent I include in the RECORD the statement issued by me on December 19 as chairman of the House Select Committee on Lobbying Activities:

STATEMENT BY REPRESENTATIVE FRANK BUCHANAN, OF PENNSYLVANIA, CHAIRMAN, HOUSE SELECT COMMITTEE ON LOBBYING ACTIVITIES, DECEMBER 19, 1949

The Select Committee on Lobbying Activities, created by House Resolution 298, was authorized and directed by the House of Representatives earlier this year to investigate all lobbying activities, including activities of agencies of the Federal Government, "intended to influence, encourage, promote or retard legislation."

We were provided with full subpena powers, and an initial appropriation of $40,000, and were ordered to report our findings and recommendations to the House before the end of the Eighty-first Congress.

The seven-member committee appointed by the Speaker, and which includes Representatives HENDERSON LANHAM, of Georgia; CARL ALBERT, of Oklahoma; CLYDE DOYLE, of California, CHARLES A. HALLECK, of Indiana; CLARENCE J. BROWN, of Ohio; and JOSEPH P. O'HARA, of Minnesota, organized October 11. On October 19 it authorized the chairman to proceed during the congressional recess with the employment of a staff and the conduct of preliminary investigations and research designed to provide a general over-all picture of lobbying activities and the operation of the Federal Regulation of Lobbying Act of 1946.

No decisions were made by the full committee as to what specific lobbying groups, organizations or individuals, or Federal agencies or officials engaging in lobbying activities might be made the subjects of intensive inquiry and public hearings.

The scope of the inquiry the House has directed us to make into the subject of lobbying is not limited in the resolution in any particular except as to time. Obviously, however, we cannot possibly investigate every individual lobbyist and every individual lobbying practice.

At the same time, it is my hope that before this committee completes its work and makes its report and recommendations to the House, we will be able to answer definitely whether the lobbying law now in operation is being violated and, if so, to what extent and in what manner; also, whether the present act is adequate or requires amendment in order to make it conform to the purposes Congress had in mind in 1946 when it included this unprecedented Federal law on lobby regulation as title III of Public Law 601 of the Seventy-ninth Congress, the historic

La Follette-Monroney Legislative Reorganization Act.

I believe that, as a corollary aim, this committee will try to show the Congress and the American people a clear picture of the extent to which lobbies of all sorts seek to influence legislative action by Congress even when such action may be contrary to the public good and to economy and efficiency in Government.

These are our long-range goals. For the immediate present, however, and until the full membership of the committee has decided upon an agenda of full-scale investigations and hearings, the staff of the committee is engaged primarily and exclusively in the accumulation of essential information of a generally noncontroversial nature, in the compilation of what might be termed a catalog of basic fact on the theory and practice of lobbying.

In recent weeks, in addition to engaging staff members, I have, under the committee's authorization, directed the following staff activities:

1. Assignment of investigators to review the books and records of a number of prominent, acknowledged lobbying organizations for the purpose of obtaining factual information on how some typical lobbies actually operate in their efforts to influence legislative action by Congress. Since there is no particular significance attachable to the selection of these preliminary sources of such information, the committee is not presently making public the names of the groups or individuals being contacted. I might say that, with certain exceptions, cooperation on the part of the lobbyist involved so far in this preliminary study has, on the whole, been satisfactory.

2. Two sets of questionnaires, each containing the same 10 questions, have been directed to all Members of the House and Senate, in one instance, and, in the other, to several hundred scholars and journalists who have made special studies in the past of pressure tactics or of lobbying regulation. These questions (a sample copy of which is attached at the end of this statement as exhibit A) are intended to elicit leads on possible violations of the Federal Regulation of Lobbying Act or, in the case of lobbying by Federal officials or agencies, of the Criminal Code. They also invite information on lobbying practices generally and on abuses, and ask for suggestions of specific lobbies or Federal agencies or officials whose lobbying activities warrant detailed study and investigation.

3. An additional questionnaire is being prepared for eventual circulation among all of the approximately 2,000 lobbyists and lobbying organizations registered with the Clerk of the House under the lobbying law. These groups and individuals, all directly involved in this entire investigation, will be asked to make recommendations for clarification and improvement of the Lobbying Act as a result of their own experiences under it, and will also be invited to suggest specific avenues of intensive investigation.

The advice and suggestions contained in the answers we receive from these questionnaires, plus the information daily coming to the committee from a variety of other sources, including our staff investigations and research, will be compiled and analyzed for the information of the full committee as possible guides to future policies and hearings.

If I have not already made it sufficiently clear, I want to say as emphatically as I can that in any and all cases where investigators of this committee may be disclosed to have examined the files of any lobbyist or lobbying organization, there is no inference warranted that the lobbyist or organization involved is suspected of violating the lobbying law or that the actions of such lobbyists are thought to have been improper in any way. And there would be no basis for a conclusion that the particular lobbyist or organization is to be a subject for all-out investigation or any committee hearings. Our investigators are examining the records of only a limited number out of the many registered lobbyists, and in preliminary fashion only. They are studying these records as examples of typical lobbying practices. The committee itself will decide which groups will be scheduled for thorough study.

EXHIBIT A

Pursuant to House Resolution 298 of the Eighty-first Congress, first session, the Select Committee on Lobbying Activities is undertaking "a study and investigation of (1) all lobbying activities intended to influence, encourage, promote, or retard legislation; and (2) all activities of agencies of the Federal Government intended to influence, encourage, promote, or retard legislation."

In light of your past work and interest in this field, the select committee would appreciate receiving from you suggestions and information, based on your experience and study, on the following matters:

1. Lobbying activities by unregistered persons or organizations;

2. Undisclosed receipts or expenditures by lobbyists and lobby organizations;

3. Undisclosed interests behind lobbyists and lobby organizations;

4. Methods of soliciting or obtaining funds for lobby activities;

5. Methods of expending funds for lobby activities;

6. Practices and abuses of lobbyists and lobby organizations;

7. Specific lobbyists and lobby organizations whose activities in your opinion, warrant detailed study and investigation;

8. Violations of 18 U. S. C. 1913 restricting lobbying activities by Government officers and employees;

9. Practices and abuses of Government officers or employees in regard to lobbying;

10. Specific Government departments, agencies, officers, or employees whose lobbying activities, in your opinion, warrant detailed study and investigation.

The more specific your suggestions and information are, the more useful they will be to the committee. If it is convenient to supplement your response by personal interview, please let me know, so that an informal meeting can be arranged with the members of the committee or its staff.

Yours very truly,

———, *Chairman, Select Committee on Lobbying Activities.*

Welfare State Ruining British Farmers

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting an article written by one of my constituents, Louis Bromfield, of Lucas, Ohio. I am certain that friend Louie, as he is known to all of us, needs no introduction to the membership of this body. In his article he clearly sets forth what has taken place in Britain under their present regime.

THIS IS YOUR COUNTRY—WELFARE STATE RUINING BRITISH FARMERS

(By Louis Bromfield)

I have a large and lively correspondence with a considerable number of Britishers engaged in farming, livestock breeding and truck gardening. Out of that correspondence there has emerged, over a considerable period, a fairly horrible picture of the fashion in which the Socialist welfare state operates in relation to all those citizens who have to do with providing food and fibre for the British Isles. Indeed, I doubt that any American farmer, even after the experience of the OPA and other regimenting agencies during the war, could imagine the hardships of agriculture under the British welfare state. I quote below paragraphs from two or three letters. They are not from individual "soreheads" because the tone of them is universal.

Apparently the same tone colors the comments of almost any farmer one encounters on his own land in the British Isles.

Writes one, "I am just about to give up, not because I'm doing less well than before. The government subsidies take care of that and the taxpayers pay the difference between what I get for my produce and what the consumer pays for it. The money is taken out of the taxpayer in the form of taxes paid by the city chap. These fellows are perhaps less well off because they're not only paying the difference in prices but at least a couple of million pounds to support the bureaucracy, which has been set up to carry out and administer the regulations and subsidies.

"It's my own opinion that it's more fun to spend your own money for something that costs you just as much than to have the government take it and then pay a lot of incompetent fellows who probably couldn't hold a decent job elsewhere to spend it for you. No, it isn't the price factor. It's the misery of spending hour upon hour filling out forms, telling what you have raised and how much it cost you and whether you followed the recommendations of the nearest bureaucrat who probably knows less than nothing about farming.

"There comes a point when no amount of profit is worth the misery that goes with it, and believe me, Mr. B., it is misery. My sister and I sit up for hours at night after we have done a hard day's work doing bookkeeping and filling out forms.

"If you don't do it, you don't get the subsidy and without the subsidy we couldn't make ends meet on our production."

BUREAUCRATIC DELAY

Another writes: "It is the perpetual hamstringing that gets you. I may need a new machine or even a part of a machine but I can't get it unless I fill out a series of forms in triplicate. They aren't just simple forms. They practically want to know who your ancestor was under Queen Anne and how many hours and minutes you will use that particular machine during the year.

"Then the form goes off and from 6 to 9 months later you are told whether you can have that machine or part of a machine, and meanwhile the crop and your profits have gone down the drain. I'm persuaded that these forms lie about in bureaucrats' offices for weeks at a time without ever bein looked at. Some of our reports I'm sure are never looked at but simply stowed away to gather dust.

"The Government is now engaged in using valuable building materials to build structures simply to house the mountains of forms and paper work. Canute trying to keep back the sea was nothing compared to trying to keep your head above the paper work. If you don't fill out everything, you're out of the picture. You don't get subsidies and you can't make a profit, and they practically have a gestapo in operation looking out for black

marketeers, and the taxpayers pay for the gestapo as well."

Still another writes: "What in heaven's name does a Government clerk know about what a farmer ought to raise? We're supposed to have farmers' boards to set up programs of the crops which are needed most, but the whole thing is decided in the end by some Socialist bureaucrat with his feet on the desk for whom both farmer and taxpayer are paying.

"The whole thing is a case of everybody kidding everybody else and himself included. The satisfaction of growing good crops, of doing a job of good farming is practically gone, and as any farmer knows, so is the satisfaction in living.

"There isn't any flavor in life any more. We're no longer individuals. We're just cogs in a machine, told what to do from the time we get up in the morning till we go to bed at night. You can have the whole 'womb to tomb' program. I'd rather run my own life and go without a meal or a new jacket now and then."

IT COULD HAPPEN HERE

And so on they run, the letters. We had a taste of it during OPA days. Yet a lot of farmers are asking for it when they say, carelessly and without thought, that "there may be something in the Brannon plan."

And don't forget that if you don't farm in England as the bureaucrats decide is the right way to farm, the government will put you off your own place and give it to some other fellow who will do what the bureaucrats tell him to do.

They'll even sell your farm from under you and dispossess you altogether. None of this is very far from the Soviet state. Only the worst white trash among American farmers would want such a program. The next step, which may come at any time under the welfare state in England is to censor mail. My correspondence with my farmer friends in England may end at any time the Labor Government sees fit to pull down the iron curtain.

You can't be a little bit Socialist-Communist any more than you can be a little bit pregnant. The welfare state is simply the nausea symptoms.

Governmental Economy

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. LECOMPTE. Mr. Speaker, before the Congress reconvened for the second session of the Eighty-first Congress I spent considerable time in my district and observed the very obvious fact that the people of the Fourth District of Iowa are fully conscious that Federal expenditures have gone beyond bounds and will burden the generations to come with taxes. Folks are emphatic in their insistence that we start practicing economy now, and one very timely letter on this subject was written by Mrs. G. W. Norris, of Grinnell, Iowa. It was published in the Grinnell Herald-Register and the Seymour (Iowa) Herald. Under leave to extend my remarks in the RECORD, I include this article, as follows:

WHAT CAN WE DO?

Persons interested in governmental economy will rejoice in the stand taken by a former Seymour woman, Mrs. G. W. Norris, of Grinnell, the former Ferne Hart, daughter of Mr. and Mrs. Pearl Hart, of Seymour.

Mrs. Norris is legislative chairman for this district of the Federated Women's Clubs in Iowa, and wrote the following remarks in a letter to the Grinnell Herald-Register recently.

Her letter follows:

" 'What good does it do to say this?'—from your editorial tonight. That certainly is the $64 question, for all of us feel helpless when we actually realize the immensity of our Federal expenditures. Here are more interesting—and amazing—facts.

"Our Federal Government, this year, is spending about $276 for every man, woman, and child in this country. How many of us can afford it?

"It costs the Government 2½ cents to deliver a 1-cent post card and 85 percent of the post cards are sent by business firms. Would you pay 1½ cents for that advertisement you received today?

"Although the Veterans' Administration stated that they are unable to hire personnel for 5,600 of the beds they now have, Congress, in August, appropriated $237,000,000 to add another 16,000 beds, which will also, no doubt, remain unstaffed.

"What can we do? We can keep informed and inform others, and perhaps an aroused citizenry will insist on economy. The Hoover Commission, a nonpartisan group of able and public-spirited people, have presented its recommendations, but does Congress hire a good doctor and then follow his advice? Not without a big fight.

"Already legislation completed makes possible a saving of at least 1.25 billions, but such savings are resisted, almost without exception, by the bureaus and people involved. It means loss of some jobs, prestige, and power. Congress itself is allowing two bills to die which would authorize further study—one to study the overseas administration, and another to study Federal-State relations, a field in which nothing has been done in over 150 years. Congress is not eager to take any more chances on commissions which tell them more than they want to know.

"I have my information from the Citizens' Committee on the Hoover report, whose slogans are 'Waste not and want not' and 'Better government at a better price.'

"Yours sincerely,
"FERNE NORRIS
"(Mrs. G. W. Norris)."

Only Lip Service

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting a letter which I have received from a very good friend of mine. I think the points taken in this letter merits the consideration of all of us as we start the second session of the Eighty-first Congress. I respectfully ask that the membership read the following letter:

DECEMBER 29, 1949.

DEAR FRIEND: When one becomes confused or lost in a big city, it is wise to ask a policeman what to do next in order to get where one wants to go. Asking a college professor might not bring desirable results. Policemen are experienced in giving directions. They seldom lose sight of the human factor.

Being somewhat confused over domestic and foreign and philosophical problems, I recently sought the advice of three wise men—folks whose experience and wisdom might get me on the track of where I wanted to go.

The first wise man—a domestic expert—told me that mankind would be more prosperous if it were more thrifty; that the weak could not be strengthened by weakening the strong; that character and courage could not be built by destroying initiative and independence; that sound security could not be established on borrowed money; that we could not keep out of trouble by spending more than we earned; that mankind could not permanently be helped by doing for it what it should do for itself; etc.

The second wise man—a foreign expert—told me that we should not take on the quarrels and hatreds of Eurasia; that we should not expect what had failed in other countries to succeed in America; that we would eventually be better off if we tended to our own business and refrained from foreign comments; etc.

The third wise man—a philosopher—told me that kindness and love would solve all of our problems; that manners, unaccompanied by kindness, could not exist; that wars, accompanied by love, were impossible; that greed and hate had to disappear when kindness and love appeared; etc.

I passed all of this wisdom along to many of my acquaintances. Most of them privately agreed it was sound. Many of these most did not pass it along to others because it was not popular. Several of them called me an isolationist or a fundamentalist or a stand patter or a reactionary. One of them suggested I was a Communist. When I told them who the wise men were, many of them became angry—said I was platitudinous. They all gave lip service to Abraham Lincoln and George Washington and Jesus Christ, but many of them were too cowardly or too selfish to preach their gospel.

If, during this coming year, you do what you should to get mankind back on the track, I wish you a perfect 1950.

As ever,

POP.

The Political Platform of Harry S. Truman

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

THE POLITICAL PLATFORM OF HARRY S. TRUMAN

The plain truth that President Truman is using the domestic problems of the Nation to further his political aims is now definitely established.

He damned the Republican Eightieth Congress for blocking his legislation. Now he is trying to blame that Congress for the lack of satisfactory (to him) action from the Democratic Eighty-first Congress. Truman is a smart politician and he can see the trend even in his own party is away from his welfare-state program. To combat the will of the people from sending him another Republican or nonsocialistic Congress in 1950 he is carrying out the following program:

1. He is deliberately turning his back on duly enacted laws which do not fit his po-

litical conniving. Witness his refusal to use the Taft-Hartley Act to settle the Hawaiian stevedore strike.

At the same time his avowed intention to repeal this law has been allowed to lag. The bill remains to bait for labor votes in next year's congressional elections.

2. His sudden decision to put aside his civil-rights program until later is recognizable as part of the pattern to cull favor with southern Democrats while holding out hopes for future enactment of this legislation to his party supporters in the East and North.

3. He deliberately went on a spending spree he knows we can't afford, counting on raising taxes to pay for his give-away program in an off-election year.

4. Out to get the farmer and the housewife vote, he sent his Secretary of Agriculture into the breach with a farm-support program touted to guarantee farmers high prices and housewives low food prices. The fact that the money difference in such a cockeyed arrangement would have to be paid out of taxes collected from the farmers and housewives were soft-pedaled. The question of how much this deal would cost was never answered.

5. His determination to pay off his handpicked party hacks regardless of their fitness is exemplified in the cases of Mon Wallgren and Leland Olds. Apparently that is the only way he can keep supporters.

Mr. Big first attempted to force Wallgren in as chairman of the national resources board. Failing this, he then put his pal on the Federal Power Commission.

In the Olds case he put the heat on the Senate for confirmation through the Democratic national committee. He wanted Olds kept in his post on the Federal Power Commission, regardless of the nominee's record of sniping at our form of government. But such tactics were too bald for even his own party to accept.

6. In a move to win support from small business overburdened by government regulation he let fly against special interests. Thereupon the Department of Justice filed an antitrust suit against the A. & P. groceries, adopting the time-worn "soak the rich" policy.

7. In his move to expand social security as a sure vote getter he also demonstrated still further indifference to the American housewives. The new social-security amendments propose to cover domestic servants into old age retirement benefits. As a result the majority of housewives in the country will have to become tax collectors.

To Truman it's a matter of simple arithmetic. He believes more votes will come in from the domestics covered by the bill than will be withheld by the housewives.

8. Mr. Big's record on socialized medicine, the heart of his welfare program, falls into the same old rut. After sending forth his Federal Security Administrator, Oscar Ewing, to beat the bushes, he failed to hold Congress in session long enough to take action on the proposal. Such a golden lure for ballots was too good to be rushed. It makes much better campaign stuff in 1950 and 1952.

After the American Medical Association began a fight for life against this proposal the Department of Justice jumped on the American Medical Association. More arithmetic—there are more patients than doctors.

9. His sneering references to "red herrings" mark his attempts to hold onto the left-wing and one-world elements in the political machine bequeathed him by Roosevelt. His efforts to belittle the menace of communism have persisted despite the reports of the House Committee on Un-American Activities, the trial of the 11 Communists in New York, and the Alger Hiss case.

10. The neatest dodge practiced by Truman during the past congressional session was his announcement of an atomic explosion in Russia. Although the explosion is reported to have occurred 2 weeks before, nothing was said about it until the late afternoon of September 23.

In the meantime the administration's $1,314,000,000 European armament plan was being pushed in the Senate against strong opposition based on the obvious fact that normal military weapons in the hands of European mercenaries would be useless if Russia should unleash an atomic attack on this country.

The administration answer to that was that Russia did not yet have the atom bomb and we should set up strong armies in western Europe to fend off a Soviet invasion.

So the bill was passed. A few short hours afterward it was revealed from the White House that Russia had cracked the atom. Angry Senators exclaimed that the vote on the bill would have been different had they known beforehand that the immediate threat from Russia was an air-borne atomic attack, not a ground operation on foreign soil.

Truman will tamper with national security and endanger our whole economy if it will further his own political career.

Political Dilemma

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. RIEHLMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star:

POLITICAL DILEMMA

The urgent appeal from Senate Majority Leader LUCAS for action by the administration to ease the coal crisis puts the Democrats in a serious political dilemma and exposes the unworthiness of the President's campaign for repeal of the Taft-Hartley Act.

Senator LUCAS' statement came 3 days after the President, in his state of the Union message, renewed his demand for repeal of the labor statute, which he described as being punitive in purpose, one-sided in operation and inconsistent with the practice of true and effective collective bargaining.

As majority leader, Mr. LUCAS will be expected to lead the hopeless fight in the Senate for repeal of the law at this session. But as Senator from Illinois, faced with a stiff battle for reelection next November, he finds it necessary to seek for his constituents the protection which can be found only in the Taft-Hartley Act. And the need for this protection is so urgent, in his opinion, that the majority leader has announced that unless the mine operators and John L. Lewis reach some agreement under which the miners return to work on a 5-day basis he will "be constrained to take the floor of the United States Senate and protest as vigorously as I know how against the continuation of these conditions."

It is possible to sympathize with Senator LUCAS. For he is a trapped man. On the one side he is beset by the fiction, cultivated by the the Democrats for partisan political reasons, that the Taft-Hartley Act is an oppressive, union-busting law which must be wiped from the statute books. And on the other side he is hemmed in by the facts of life. His constituents, he believes, are suffering, and in an election year at that. This being so, he is forced to turn to the berated Taft-Hartley Act, which provides the sole statutory authority for cracking down in the public interest on Mr. Lewis and the operators. It is not an enviable position for such an estimable gentleman as Mr. LUCAS to be in. One hopes that he will not be driven by events to the unhappy length of appealing as vigorously as he knows how, in one breath, for action under the Taft-Hartley law in behalf of the people of Illinois, and then, in the next breath, demanding repeal of the Taft-Hartley law in behalf of the President and the party's political fortunes.

Mr. Truman has taken the position that he will invoke the national emergency provisions of the law if and when a national emergency arises. In his opinion, that stage has not been reached, and here, obviously, he differs from Senator LUCAS. It should be remembered, however, that Mr. Truman has a large responsibility. If he invokes the law, he must be prepared to satisfy the courts that a real national emergency exists, and, this being so, he is entitled to wait until satisfied as to the fact.

But if the President's reluctance to act hastily is understandable, his continued attack on the law itself is not. The Taft-Hartley Act is designed, not to punish unions, but to protect the people from excessive punishment at the hands of irresponsible labor leaders and employers. If Mr. Truman really disbelieves this, he ought to have a little talk with Senator LUCAS. And all of the Democrats who have joined in this disingenuous attack on a law, the essentials of which are needed for the protection of the public, should remember that some day they, too, may be in the unhappy position of Senator LUCAS. What will they say to their constituents then if they should succeed in scrapping the Taft-Hartley Act?

Restoring Citizenship

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. KEATING. Mr. Speaker, the elections held in Italy in April 1948 were among the most important in all world history. The issue was whether Italy would remain free or succumb to Communist enslavement. It was of vital concern to free peoples everywhere that the democratic forces should prevail and the Communists be overthrown.

For weeks, prior to these elections, the air waves were filled with messages from this country urging all Italians to get out to vote. American citizens with friends and relatives in Italy were urged to communicate with them and impress upon them the imperative necessity for casting their ballots. Thousands upon thousands of letters and cables resulted.

A number of American citizens, estimated at about 4,000, who were then in Italy on business or travel, or visiting relatives, fired with enthusiasm to join in the Italian fight for freedom, went to the polls and cast their votes. Little did they realize in so doing they would lose their American citizenship. But when they sought to return to their native land, they found they had been expatriated.

I have introduced a bill, identical to one authorized by our colleague from Pennsylvania [Mr. WALTER], chairman of the Subcommittee on Immigration and Naturalization, to remove this disability and permit these unfortunate expatriates

to rejoin their loved ones in this country, provided they have had clean records during all of the time they were out of the country. It will heal a lot of broken hearts and restore to one roof, American families disrupted by this innocent, but mistaken effort to uphold the cause of freeedom in the world.

Under leave to extend my remarks, I quote an editorial from the Washington Post commending this legislation:

RESTORING CITIZENSHIP

Several thousand native-born and naturalized Americans lost their citizenship by voting in the Italian elections of 1946 and 1948. Most of them want to come back to this country but can do so now only as immigrants and under a quota oversubscribed for the next 8 years. It seems that, in general, these people were not aware that loss of citizenship would be entailed in voting abroad. Moreover, they were subjected to a considerable amount of pressure to participate in the Italian elections. Church officials and even the British and American military authorities in Italy urged them to vote in order to overcome the Communist Party threat of the period.

These facts give persuasive support to a bill introduced by Representative FRANCIS E. WALTER and unanimously endorsed by a House Judiciary Subcommittee to amend the Nationality Act so as to enable such persons to regain their status as Americans by taking an oath of allegiance to the United States within the next 3 years. Many if not most of them are undoubtedly victims of a misapprehension about the law. They should not be penalized for so innocent an error. Careful screening of the expatriates would appear to be in order to avoid the return of the few who may not be genuinely American. But the bulk undoubtedly deserve a warm welcome home.

Mrs. Norton's Record Boost for Women in Politics

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. McCORMACK. Mr. Speaker, I herewith include in my extension of remarks a splendid but deserving editorial relating to our distinguished colleague Mrs. NORTON, of New Jersey, appearing in the Jersey Journal of December 14, 1949, entitled "Mrs. NORTON'S Record Boost for Women in Politics":

MRS. NORTON'S RECORD BOOST FOR WOMEN IN POLITICS

There will be regrets, not only among her many admirers, but also among voters who have differed sharply with some of her views, if Congresswoman MARY T. NORTON'S long-standing decision to retire from Congress a year hence is carried out. The Thirteenth Congressional District, made up of the southern half of Jersey City and Bayonne, will lose one of the Nation's notable legislators when this lady completes a congressional record covering 26 years, marked by outstanding events of national and international importance.

Mrs. NORTON'S record and activities are a devastating answer to those old-fashioned souls who insist that "woman's place is in the home," and who would limit a woman's sphere on account of sex.

Here is a woman who has not only legislated superbly in the interest of the home, but as freeholder, as political leader, and as Member of Congress has shown marked ability in grappling with hospitalization, labor problems, war and peace topics, veterans' problems, and economic subjects of the greatest importance.

Mrs. NORTON has been one of those rare human beings in politics who was not afraid to call a spade a spade, who declined to be a trimmer, who refused to smother convictions to win fleeting praise, who refused to sell what she considered the truth to serve the passing hour.

Frank Hague, who as political leader, has sometimes picked lemons, proved himself a shrewd picker when in 1920, upon the adoption of woman suffrage by national amendment, he chose MARY T. NORTON against her will to begin a public career.

Among Mrs. NORTON'S remarkable political performances was her work in pushing through the House of Representatives the Wagner Labor Relations Act, which endeared her to union labor and brought upon her head the criticism of some who feared Mrs. NORTON was going too far for the benefit of the toiler. In any event, Mrs. NORTON'S record in general provides support for the well-founded claim that in New Jersey one of the outstanding sins of both parties has been the failure to accord to women the rightful place that it has been shown they can fill.

Austere Security

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Altoona (Pa.) Tribune of November 17, 1950:

AUSTERE SECURITY

American businessmen were told Tuesday by the European Economic Cooperation Administration—Marshall program—that they must be ready to accept greater competition from European-made merchandise in the American market.

The report, sent by Mr. Truman to Congress, states that so far as can be seen, such European competition with our own business would have a minor impact on American producers.

The catch in this latter statement lies in the fact that the Government has been consistently underestimating the European economic situation.

Once a regularly established flow of foreign-made goods is directed into American trade channels, it is inevitable, and proved by the records, that our industries suffer. American watch factories, clay-products plants, glassware producers, leather and sporting goods manufacturers have felt the impact of European imports.

In our own State, the hand-blown glass industry has been cut 50 percent in the last year. Our glassworkers earn about $1.42 an hour. But glassware imported from Belgium, France, and Czechoslovakia is made by workers who earn from 20 cents an hour to 33 cents an hour. And such imports have reduced production in our own plants.

From New England come reports that watch factories are being hard hit by European imports of watches. British leather goods is displacing American-made products in many of our markets.

The economic administration and Mr. Truman contend that this is world trade, that we must build up European markets and foster foreign trade in order to keep the wheels going around.

But, there's a catch in this, too. It throws all true economic calculations out of line. That catch is that European production is based upon American tax dollars.

How far must American taxpayers go to make Europeans self-supporting?

That becomes a question our administration dodges.

For 5 years, we have been sending money, materials, and credit to Europe in tremendous amounts.

The results have not been good. Mr. Truman, Secretary Acheson, and Administrator Hoffman tell us that the Marshall plan is working. But, they belie their words the next day by hinting that we shall have to provide some kind of continuing aid for western Europe beyond the 1952 Marshall program deadline, and that unless we admit more foreign-made goods to compete with us, unless we withhold our own goods from the world market and let Britain and France sell their goods instead, the Marshall program may fail.

This all adds up to a doubtful proposition. If American taxpayers take a real appraisal of it, more will be required to soothe them than the hearty assurances of Mr. Truman and his spokesmen.

The President and Mr. Acheson are concerned about the future of Europe.

What about the future of America?

That is the question the American people should ask.

It is worth noting that the President and his spokesmen do not mention costs.

Is Mr. Truman leading this country directly toward an austerity program such as Britain has suffered for years?

Senator TAFT says he is. All political interests aside, it is worth looking at the figures, which no one denies.

America faces a deficit of five and a half billion dollars. When a man or a nation is in debt, it is necessary to ease up on spending, and to try to get more money.

Mr. Truman evades the issue on easing up on spending, but he says we'll have to have more taxes.

Senator TAFT says it will take 50 percent more taxes to finance the Truman welfare-state program, and such an increase is more than American business and American working people can stand without destroying our present high standard of living.

To increase our own taxes, increase our spending for security programs and for foreign aid will mean inevitably the destruction of many industrial plants, increasing unemployment, increasing Government work projects, and fewer of the things which Americans have grown accustomed to have—autos and homes, radios and good clothes, electric kitchens and the good food prepared in them.

Are we in America headed for austerity instead of security?

Samuel Gompers Centennial

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. MADDEN. Mr. Speaker, last Thursday evening President Truman, Vice President Barkley, President William Green, of the American Federation

of Labor, and others addressed a mammoth banquet at the Hotel Statler opening the centennial celebration of the birth of Samuel Gompers, the founder of the American Federation of Labor.

The following is the address delivered by Mr. Green, commemorating the work and accomplishments of the man who pioneered the labor movement in America:

The number of labor executives who new Samuel Gompers grows smaller each year. We are glad that this celebration of the hundredth anniversay of his birth in London, honoring the name and work of the founder of the American Federation of Labor, also permits those of us who knew and worked with him to share our experiences with newer members of our organization.

Though not a large man, Samuel Gompers had a magnetic personality and a commanding presence that forged him to the front as a leader. With a rich and powerful voice and a rare ability to plumb the mind and feelings of his listeners, his was a high crusading spirit that voiced the struggle of his fellow workers, urging them to join unions and to agitate, educate and organize and enlist others in the battle for human freedom. There was a radiance in his gift for living and enjoying homely details and this gift drew men to him in sincere comradeship.

The first 10 years of his life spanned the bridge between East Side London and East Side New York. Even at that early age he was thrilled with the opportunity of the West, the struggle to free slaves, and the hope of a better life. He explored New York, its theaters, operas, and Cooper Union, while he worked at the cigarmakers' trade. Even before maturity he found what he called the great fact of his life—the trade-union. It fascinated him and consumed his time. He tried to escape to have more time for his family but the union needed and sought him and he needed the union. East Side New York in the 1860's and 1870's was a cosmopolitan jungle where the revolutionaries of Europe sought refuge in the midst of the thousands of new immigrants coming each year. Many cigarmakers came from Germany, Scandinavian countries, from Austria as well as from England and France. Of such were the cigarmakers with whom Samuel Gompers worked. Many had known unions in Europe and they sought to adapt experiences gained in their countries to conditions in the New World. Wages were low, hours long, work uncertain and threatened by tenement production. Collective bargaining as we know it was unknown. Gompers learned much from the older workers who seemed to recognize his unusual qualities. With his inquisitive eagerness to know, he accumulated wisdom from their experiences which helped him to avoid mistakes. He learned from his first union teacher, Karl Laurrell: "Always keep your union card before you. If anything doesn't square with that card, it isn't good for you." Together these workers struggled to build up and develop their union, to better conditions for the cigarmakers of New York. To secure permanence of union membership, they developed union benefits and an employment service. They secured a State law abolishing tenement-house manufacture of cigars to rid themselves of sweatshop competition. They instituted collective bargaining and made their union a business agency, serving members as well as a fraternal agency through which they could help each other in time of need. When they succeeded in developing the New York local, they carried this union plan to their national union convention and elected one of their group president. He extended the practices to all unions.

For many years Samuel Gompers was president of this union of which he was so proud. While he worked and talked, he dreamed dreams of how unions might grow and what they might accomplish. When cigarmakers' unions were under way, Gompers and other union leaders began talking of a national federation of all trade unions. Out of such talks and letters to more distant unions came a national conference in Pittsburgh in 1881 and the Federation of Trades and Labor Unions of the United States and Canada. Without full-time officers, this organization languished. When the Knights of Labor began invading the functions of trade unions, so that the very existence of trade unions was endangered, a great national conference was called which formed a new federation to promote and conserve the trade unions—the American Federation of Labor. The old federation was merged with the new one and Samuel Gompers became its full-time president. In 1887, with an office which was contributed, with makeshift furniture, but with sturdy volunteers, he began to mold the strongest and most aggressive labor movement in the world. He had to do business with pioneers of American business. These captains of industry were strong and often ruthless. Unions also had to fight to survive and make gains. From 50,000 in 1881, the federation had increased threefold by 1886. The nucleus expanded slowly until at the turn of the century more rapid growth came. It reached 4,000,000 in the First World War but declined following the postwar drive against unions. The membership was approximately 3,000,000 at the end of Mr. Gompers' career.

The organizational job alone was stupendous. It began with awakening workers to a realization of what organization could do for them—locally, regionally, and nationally. It rested upon educating individual workers to a consciousness of the personal responsibility of each for promoting his own welfare in cooperation with other workers. He had to develop the tools of operation along with working out plans to achieve its goals. Every institution has its procedures, its rules and records. If these enable it to perform its functions, the organization develops as intended. So in accord with the constitution of the American Federation of Labor, Samuel Gompers developed working rules and forms whereby representatives were authorized to work and report on problems and results. This included devising and issuing credentials to organizers and charters to unions—local, national, city and State federated bodies. Each step of progress was voluntary because the workers concerned saw it promoted their welfare. They said to each and all, "Join with us and it will do you good." Unions were educated to realize that failure to affiliate with central bodies, State federations and national organizations, weakens the whole movement and limits progress. The American Federation of Labor followed the practice—agitate, organize, educate. Force and compulsion were to be resorted to as a disciplinary measure only after all other methods had failed.

Nor was trade-unionism limited to craft workers, he said, in reflecting on unions of workers on streetcars—the horse-drawn variety: "It is not necessarily skill in work on which the union rests, but skill in organization." Sharing of each other's problems in promoting their welfare facilitated organization which was rooted in brotherhood. There is a deep significance in the American union practice of addressing fellow members as brother and sister. Unionism has a spiritual reach that makes it an indomitable force. Gompers felt that any worker taking the obligations of union membership became a person obligated to put human freedom and personal responsibility foremost in his philosophy and to live so as to give reality to that way of life. Since freedom was the goal, voluntarism was the principle he advocated. Democracy to him meant responsible individuals living in a responsible society. Individual rights were the practical results of that way of life. As president of the American Federation of Labor, Gompers could not compel any person or union to act contrary to his or their judgment. He depended, therefore, on persuasion and education to build up a federation held together by conviction and moral standards.

Voluntarism partly explains his emphasis on economic action in preference to legislative action. As workers gained in organization, they achieved economic power which in turn gave them political influence. Bettering conditions and raising standards came directly and rapidly through union demand and collective bargaining. In good times wage rates through union demand and collective bargaining. In good times wage rates could be raised by action of those concerned. To do these things by legislation took more time, for more people had to be convinced. Legislation enforces minimum standards and well-tried practices. Legislation deals with matters affecting all citizens and with rules of action conforming to the ideals of the majority of citizens. It does not provide the flexibility needed for pioneering for new standards. So in economic relations—where men and women determine their work lives—he conceived of the development of economic order by mutual contracts guided by basic principles of human welfare and scientific law. He sought to establish economic government in which all concerned in production should have representation and voice. He was preoccupied with the problems of daily progress. He declared, "We want more, we demand more, and when we get that more we shall insist upon again more and more and even more until we get the full fruition of our labor."

As opposed to the straightforward union plans to reduce hours and increase pay, there were European socialists who wanted to abolish private employers; Henry George, who argued for single tax on land; the Populists, who wanted cheap money, political reform movements, exiles from the Paris Commune, and many others led by intellectuals who wanted to use workers for their own ends rather than to improve work conditions. Watching such leaders beguile workers from the main problem of eliminating poverty, Samuel Gompers urged one organization devoted purely and simply to the welfare of workers—trade unions.

Shorter hours and more pay, he said, are the most revolutionary forces in lives of workers.

Pure and simple trade unionism meant to him unions of workers directed by workers, to promote the welfare of workers. Only workers employed in the union's jurisdiction were eligible to membership and only members were eligible to election to union office. All other organizations, however worthy, were secondary to the union. Some like the Socialists, the Knights of Labor, the American Railroad Union, and the IWW, tried to build up dual unions but without real success. These experiences led the American Federation of Labor to another cardinal principle in union government—one union for one jurisdiction. Other union principles and practices were evolved out of experience in dealing with problems. Our unions took on aggressiveness, born of the New World, where all struggled to benefit by opportunities freely available to all. Samuel Gompers realized that if the union harnessed all the energy and resourcefulness of wage earners in furtherance of economic purposes, the union would lift real standards of living for

all workers and would make workers a power in their community.

This Rope of Sand as he once called the American Federation of Labor, was to him the strongest force on earth because held together by mutual interests and moral compulsion. The principle of voluntarism he extended to political action when in 1906 and 1908 he rallied all the unions to nonpartisan trade-union action to secure relief from injunction abuses that threatened freedom and from application of antitrust legislation to trade-unions. "Laborers have no product for sale," he cried. "They possess only their labor power—their power to produce." To save trade-unions from being crushed by legislation and court decrees, he submitted a bill of grievances to Congress and petitioned the political parties to include labor's declarations in their platforms, and then called upon workers to reward their friends and punish their foes. Their guide was loyalty to the principles of unionism. His faith was later to be justified by the labor provisions of the Clayton Antitrust Act regulating and limiting the use of the injunction and declaring that the labor power of a human being is not a commodity nor article of commerce; and by the enactment of the law establishing the United States Department of Labor, and the Seamen's Act.

In his later years, still crusading for human freedom, he gave distinguished service in the First World War and helped to create the Pan-American Federation of Labor to bring economic freedom to the wage earners of the Western Hemisphere.

As Samuel Gompers journeyed across the country to what he knew was his last labor convention in El Paso, he wrote a personal and final message to labor. In it he embodied his creed. I felt it a great honor that he sent for me and asked me to read it for him as he explained that his eyes no longer served him. That message ended:

"As I review the events of my 60 years of contact with the labor movement and as I survey the problems of today and study the opportunities of the future, I want to say to you men and women of the American labor movement, do not reject the cornerstone upon which labor's structure has been builded—but base your all upon voluntary principles and illumine your every problem by consecrated devotion to that highest of all purposes—human well-being in the fullest, widest, deepest sense."

Such was the kind of labor movement Samuel Gompers helped to mold—an organization typically American and devoted to the ideals that gave our Nation purpose. It is the kind of labor movement in which any free nation may take pride. It is part of the life stream of American democracy.

The organization which Gompers built has withstood the grueling tests of business prosperity and depression. Because of its services it has gained and held members. Bound by spiritual and fraternal bonds, it has inspired its members to work on for ever higher standards. The organization he built stands today unchanged in basic principles. As new problems have developed we have applied the old guiding precept and have added a bit here and there to procedures. There has been growth without change of purpose or goals. Our foundation rooted in understanding of human dignity with inalienable right to freedom, will remain unchanged.

We pledge our founder loyalty to the principles he upheld. We know that the freedom we enjoy was gained by the sacrifices of men who understood and accepted responsibility. If we are to continue to enjoy this freedom we must also share responsibility for exercising rights and maintaining freedom.

Bible Versus Commie War

EXTENSION OF REMARKS

OF

HON. ANTHONY CAVALCANTE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. CAVALCANTE. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include an article entitled "Bible Versus Commie War," which appeared in the Uniontown Morning Herald on Saturday, December 24, 1949. I hope all the Members will read this very fine sermon by Rev. William S. Hill, of St. Peter's Episcopal Church, of Uniontown, Pa.

BIBLE VERSUS COMMIE WAR VIEWED BY LOCAL RECTOR

Parishioners of St. Peter's Episcopal Church were greatly impressed by a sermon delivered recently by the rector, William S. Hill, on the subject, Communism Confronts Christianity.

"It was one of the finest sermons I ever heard delivered anywhere," said one member of the congregation.

Enthusiastic over the masterpiece, Attorney Lynn V. Phillips, secretary of the vestry, added:

"Everyone should know what Communism is and how it works in contradiction to Christianity. The sermon by Rev. Hill is one of the best explanations I have heard or read. It is stated so simply and is so complete in thought that a youngster is able to understand the distinction and difference."

TWO ANTAGONISTS

The Morning Herald presents the sermon in its entirety:

"Over and above as well as under and behind any war of weapons, is an even more fundamental war of ideas. Whether or not there is a 'shooting war' of major proportions during the second half of the twentieth century, there is going to be a fierce continuation of the 'cold war' of ideas and the two antagonists in this war of ideas, as everyone knows, are Christianity and Communism.

"Today supplies us with a good opportunity to consider this ideological conflict for this is Bible Sunday—the day on which Christians recall with gratitude the gift of the Holy Scriptures and of course in the present controversy the arsenal of Christianity is the Bible, whereas the arsenal of Communism is the Communist Manifesto along with the writings of Karl Marx.

"The basic similarities as well as the fundamental differences between Christianity and communism can be said to arise from the conception each has of man himself. Christianity prays, 'give us this day our daily bread.' Christianity realizes that as a physical being man must eat. But Christianity also maintains that 'man does not live by bread alone.' Christianity asserts that as a spiritual being man has a hunger which mere bread will not satisfy."

MARX BOAST

"On the other hand, communism does not merely affirm that man needs bread; it goes on to assert that this is all he does need. Karl Marx himself boasted of having got rid of 'the lumber of soul and spirit' and at his death standing beside the grave, Marx's friend, Friedrich Engels said, 'Marx's discovered the simple fact that human beings must have food and drink, clothing and shelter, before they can interest themselves in politics, science, art, religion and such like' and the implication was that these things should be forgotten until all economic problems were settled.

"But now look into your own heart and ask yourself which of the two points of view describes you. Of course, you have to eat. But would you be willing to live by bread alone? Does eating alone satisfy you? Are there not great areas of the spirit which you overlook only at the cost of your own happiness? You are familiar with the lines by James Terry White:

" 'If thou of fortune be bereft
And in thy store there be but left
Two loaves, sell one and with the dole
Buy hyacinths to feed thy soul.'

"You recognize this as an adaptation of a Persian theme but doesn't it describe our own attitudes? Sure, we need the one loaf but we need the hyacinths, too. The hunger for beauty, for companionship, for affection, for inspiration, for inner security is not satisfied by bread alone.

"Now, let us consider for a moment the implications in the phrase, Give us this day our daily bread. Here there is the recognition, first of all, that men and women are physical, material beings. They have to eat. And then there is the recognition that any social order or economic system which deprives people of the opportunity to eat, that is, to make a decent living, is unjust and should be changed. Moreover, there is the further recognition that all things on earth—its fruits, its raw materials, its resources—have been put here not for the benefit of the privileged few but for the general good of all. All these points are implicit in the Lord's Prayer and all of them are made very explicit in numerous passages in the Bible."

GOAL OF COMMUNISM

"On all these points communism walks hand in hand with Christianity. In fact, Arnold Toynebee, the eminent historian, says that communism is a leaf taken from the book of Christianity. And indeed it is. The Marxist ideal of social justice comes straight from the Hebrew prophets; the belief that the strong should have power to exploit the weak comes almost word for word from Saint Paul; and the notion that the interests of humanity should be served regardless of racial or national boundary lines represents the thought of innumerable passages in scripture.

"To state it succinctly, the goal of communism is to create an international, interracial society to which each contributes according to his ability and from which each receives according to his need. The plumber, the professor, the parent, the policeman, the politician, each contributes to society according to his ability, and to each of these is given according to what he requires. Could anything be more just than that? Could anything be more Christian than that? Truly, as Toynebee says, communism is a leaf taken out of the book of Christianity.

"Now some may ask, Why did that leaf have to be taken out? Why did communism arise in the first place? Let us be honest about this. It was because Christianity did such a poor job of living up to its principles. Day after day Christians prayed for their daily bread with but little concern for whether or not their neighbors were receiving any bread at all. For too long after the social upheaval of the industrial revolution the Christians were insensitive to the needs of the downtrodden masses, unaware of the claims of simple social justice. You have heard the phrase, 'Religion is the opium of the people.' It did not originate with Karl Marx, as many think. It originated with Charles Kingsby, an English clergyman, who early in the nineteenth century despaired at

the lack of social vision on the part of religious people in his own country."

SOURCE OF POWER

"'The best reason for becoming a Communist,' it has been said, 'is an empty stomach.' And in so-called Christian countries from the beginning of the industrial revolution to the present, there have been plenty of empty stomaches. Consider the sketches made of the English laborers 100 years ago by the artist Gavarni—'the men devitalized and clad in rags, the women pining and wasted, the children pallid, rachitic and tearful'—do you wonder that Communist notions of justice got a foothold? Consider the conditions (up until very recently) of our own American workers in mills, mines, and trades. Do you wonder that there are Communists seeking to get power in some of our labor unions? Consider the economic discrimination against the Negro race. Do you wonder that many Negroes are sympathetic to communism?

"If Christianity fails to create a just social order, satisfying the elementary need for bread, we can be sure that people will incline to the false panaceas and false religions which promise them relief. If Christianity fails, communisim will succeed for within every one there is the cry, 'Give us this day our daily bread.'

"But for all that Christianity and communism have elements in common they nevertheless part company. As Arnold Toynbee has said: Communism is 'a leaf taken from the book of Christianity' but he goes on to add, 'This leaf has been torn out and misread.' And it has been torn out and misread precisely because communism deliberately ignores the fact that man does not live by bread alone. He needs the loaf but he needs the hyacinths and all they stand for, as well."

CITES COMPARISON

"One thing man wants almost as much as he wants bread is freedom and to live in a Communist regime is to live in a prison. St. Peter, St. Paul and other biblical characters have shown us how to live constructively and creatively even in a prison; but it is significant that they did their greatest work not when they were in prison, where they were fed regularly but when they were out and had to take their chance on subsistence. Interestingly enough, back in 1878, Otto von Bismarck prophesied that should a Communist state be established it would become a vast prison with all but the tyrants at the top at the mercy of the jailers. And on top of the Christian belief that life can flourish best in an atmosphere of freedom, add also the Christian belief that no one is so high and mighty that he has the right to tyrannize over another, just as no one is so lacking in personal worth that he can be expected to become another's slave.

"This brings us to another point, namely Christianity's concern with the preciousness of the individual Jesus, as you know, spoke of how terrible it is to offend one of the 'little ones' and He held up the duty to 'the least of these, my brethren.' From the Marxist point of view, however, the individual counts for little. When some of Lenin's associates were complaining about the terrible sacrifice of blood resulting from the civil war in Russia, he rejoined, 'It doesn't matter a jot if three-fourths of mankind perish. The only thing that matters is that in the end the remaining fourth should remain Communist.' Where he set out still more intransigeantly 'to reconstruct humanity to fit the machine.'"

LENIN STATEMENT

"Related to the disregard for the preciousness of individual is the doctrine wholeheartedly taken over the Marxists but always seriously questioned by the Christians that the end justifies the means. By fomenting class war, by stirring up hatred, by using all kinds of violence, by sowing confusion, by employing every form of intimidation, and by resorting to trickery, deceit, and chicanery, the Marxists hope to build a society of abundance, harmony, and general welfare. Listen to what Lenin said to Gorky in 1920 during a symphony concert, 'I do not like often to listen to music for it might make me chatter amiable stupidities and stroke these people's heads. Today is not the time for stroking heads—today we must use our hands to split skulls, to split them remorselessly.' So the perfect society is going to be built by cracking heads, by compulsory work battalions, by Siberian prisons, by the secret police. That is the kind of absurdities of reasoning you commit when you let yourself believe the end justifies the means. For more likely that all these enormities will produce further enormities. As Bertrand Russell once remarked, 'There is so much of hate in Marx and communism that Communists can hardly be expected when victorious, to establish a regime offering no outlet for malevolence. The Christian principle is that what you build out of hatred and violence will only generate more hate and violence. As the apostle put it, 'Be not overcome of evil but overcome evil with good.'

"But the great quarrel which Christianity has with communism is, of course, on the question of materialism. The Marxists believe that materialistic and economic considerations are the only ones which have any reality and any power. Karl Marx himself wrote in the Communist Manifesto: 'The charge made against communism from a religious, a philosophical, and generally, from an ideological standpoint, are not deserving of serious attention.' Why? Because from his point of view such things as religion, philosophy, and the like are simply the product of economic systems and are used by the ruling classes to keep the common people in subjection. What you think you want and what you believe, in other words, has been forced on you by the economic system under which you live. In contrast to this, Christianity affirms that life is not determined by material forces exclusively. Man does not hunger only for bread. He hungers also for beauty, for art, for understanding, for fellowship, for love, and by no means least, for God."

PERTINENT CONFLICT

"Man does not live by bread alone," says Christianity, and on this affirmation Christianity decisively and permanently parts company with communism.

"But what faces the world today is more than a 'parting of company' between communism and Christianity. It is a war—a war of ideas, a conflict between the Bible and the Communist manifesto. The lines are clearly drawn. In the Marxist view, religion impedes the evolution of this world toward a classless society, and thus religion must be eradicated. In the Christian view, on the other hand, communism for all its insistence on justice bids fair to debase human relations, to distort human personality, to defeat all striving after the beautiful and true, to destroy mankind's hard-won liberties and to desecrate the human soul; therefore communism must be eradicated. So the cold war is on.

"What part is the individual Christian to play in this conflict of ideas? I would say that our fundamental duties in this conflict are two. First, to demonstrate in our lives that our religion breeds a passion for justice more intense and more universal than any which the Marxist shows, in this passion for justice attacking the evils out of which communism frequently arises—misery, poverty, economic insecurity, and war. And then our second duty is to confront Marxist atheism with a vital theism, a living belief in and dedication to God that gives to every area of life a new quality and character making it clear to all that man does not live by bread alone but by every word that proceeds out of the mouth of God."

Conferences in the Pacific Coast States

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. KING. Mr. Speaker, under unanimous consent to extend my remarks. I include therein the report made by the Secretary of Commerce to the White House, of conditions as he found them in the Pacific Coast States during his recent tour of inspection:

CONFERENCES IN THE PACIFIC COAST STATES

The conferences which I held in cities along the Pacific coast during September reminded me once again of the differences which characterize the various broad regions of the country and of the variety of their problems and opportunities. The economy of this general area is typified by extremely dramatic and continuing growth. My meetings were held at San Diego, Los Angeles, San Francisco, Portland, and Seattle—a coverage which presented a representative picture of the current situation and a wide range of problems.

The fact which stands out above all others in California, Oregon, and Washington is that of tremendous population growth. Nearly a third of the entire national growth in population since 1940 has occurred here. California's gain of more than 3,500,000 accounts for most of it, but Washington's increase was exceeded by only five other States, and in Oregon the rate of growth was faster than that of any other State. Two aspects of this exceptional phenomenon are of particular significance, especially for California. One is that by far the larger proportion of the population increase has come not from new births but from migration into the area of people from other parts of the country, most of whom come not to retire, as in former years, but to settle and make a living. The other is that, though wartime expansion created much of the growth, it has continued steadily through the present year. Some of the current difficulties of the area are rooted in these population changes. By the same token, much of its rich economic opportunity is based on that factor—for here are hundreds of thousands of new workers to process the products of the forests, and farms, and mines, together with the resources of water and power with which to do it. And here, too, is a vast new market for their output. Indeed, the dramatic growth in employment, and business, and industry throughout this area from 1940 to 1948 demonstrates the actual workings of that process.

California, with over 10,000,000 of the area's 15,000,000 people, has felt the full force of all of this. Here, since prewar days, employment has grown rapidly—factory jobs alone have nearly doubled. Nonetheless, and though conditions have improved since the time of my visit, California unemployment has been running above national levels. In important part, this stems from the

continued influx of workers. In Los Angeles, for example, it was pointed out to me that actual employment was higher this summer than in the summer of 1948. But so was unemployment. It was estimated that as many as 15,000 people were still coming into the State monthly; estimates for the Los Angeles area alone ranged above 10,000. Unemployment conditions in Washington and Oregon more closely resembled the national picture, and there was much less difficulty reported there from influx of new workers. However, though unemployment nationally did not reach substantial proportions until the spring and summer of this year, it is important to note that both in Washington and California the number of jobless was already considerable in the summer of 1948—a situation reflecting in large part the conversion from wartime to peacetime production and employment.

Reports made to me on business conditions along the coast from San Diego to Seattle presented many contrasts. Businessmen repeatedly pointed out that levels of activity are far higher than anything known before the war, and said that most of the declines experienced this year represent normal price and inventory readjustments which were desirable and necessary. It did not appear that the general volume of sales in wholesale and retail trade had fallen much below that for last year in physical terms, though the dollar volume was indicated as being at lower than national levels. Representatives of many firms reported a noticeable improvement in sales volume during the summer. However, in those localities adversely affected by dock strikes and curtailment of shipbuilding and other military activity the picture was distinctly less favorable. It was the consensus among those in retail and wholesale trade that because of price reductions and increased operating costs their 1949 profits would be substantially under those for last year. None of the bankers attending my conferences indicated any substantial falling off of business for the year. Real-estate activity was reported to be extremely good, and in some instances, ahead of 1948. On the other hand, a number of construction firms and contractors' organizations mentioned a substantial falling off in commercial and industrial construction and some decline in residential construction as compared with last year; however, home building appeared to have turned upward during the summer, and construction of schools and public and institutional buildings had been vigorous. After experiencing an unprecedented wartime and postwar market, the lumber industry, a major economic factor in Washington, Oregon, and northern California, was said to have experienced some decline earlier in the year, with a resurgence of demand during the summer. However, there appeared to be little question that the decline was felt more severely among the small mills and logging firms which multiplied greatly during the war and find difficulty in a more competitive market. Very large numbers of these were reported to have ceased operations, a major factor contributing to unemployment. The pulp-paper industry was also reported operating at lower production levels than for last year, though activity became stronger in the summer. Production and employment in commercial fishing appeared to have been sustained very well through the year in the Northwest, though at lower prices. The tuna packing industry of southern California, however, was reported to be facing extreme difficulty in competition with tuna imports. Producers of woolens and other garments reported generally satisfactory business. Operations in the fields of basic steel products, machinery, and other heavy goods were reported below 1948 peaks but in line with national trends.

Some of the less favorable business and employment situations along the Pacific Coast, particularly in California, are clearly the aftermath of the amazing record of war production through that area. Notable among these are shipbuilding and ship repair work. San Diego, Long Beach, Richmond, and other communities grew suddenly to enormous size around the great shipyards, or within commuting distance of them. With the necessarily drastic cutback in ship construction, many of the war workers have still to find steady employment. Moreover, ship repair work had greatly fallen off due to the transfer of naval vessels to the mothball fleet, assignment of others to operations elsewhere, the postwar decline in foreign commerce, and such work stoppages as those in docks at San Francisco and Hawaii. Public officials and business and labor spokesmen from the affected communities appeared at my meetings and strongly urged that the Federal Government make a special effort to direct a larger measure of maintenance and repair work on naval and private ships to these centers. All of them, of course, were anxious to see shipbuilding activity resumed. Further, they were particularly distressed at the necessary reductions in civilian employment at military establishments. Some of them urged that the reductions be held in abeyance until displaced war workers were more fully absorbed into other employment. Others urged that the reductions be effected through normal attrition rather than through layoffs.

Still another postwar adjustment problem was posed by numerous small manufacturers doing subcontract work for the aircraft industry. They reported that, because of the postwar decline in prime contracts for military aircraft and because producers of commercial aircraft were pulling production work back into their own plants, a drastic curtailment of orders had resulted. Among this group of businesmen there was a keen interest in the Government procurement program as a source of new business. It was repeatedly urged that procurement procedures be simplified, that contracts be broken down into smaller units, and that small firms be given greater opportunity to bid on prime contracts. With reference to the aircraft industry, there were grave fears in the Seattle area and in southern California arising from discussion of the shifting of production to inland centers. These fears were related not only to the loss of employment and trade, but to the effect such a shift would have on general industrial growth.

Still other problems affecting many businesses in the Pacific Coast States related to our foreign-trade situation. Historically, foreign trade has played a major role in the economy of this whole area. Its harbors have been outlets for a great deal of its own production and that of States to the east, and they have served as ports of entry for a major portion of the Nation's imports. An important part of that trade was with the Orient; dollar shortages and unsettled postwar conditions have been such that it has failed to flourish again. Further, a number of reports made to me from the citrus industry in California and from the lumber and fruit industries of the Northwest stated that our foreign-aid programs had failed to restore to them the European markets they once enjoyed. Other exporters cited the dollar shortage for the failure of their Latin American trade to thrive. Again, both business and labor spokesmen from the movie industry described a truly serious falling off of production and employment stemming from the loss of export business, not only because of dollar shortages but because of market restrictions established by importing nations. Exporters were hopeful that the foreign-aid program would eventually ameliorate these conditions; citrus growers in particular urged that the ECA undertake to support their European markets. Flour millers operating far below capacity complained that a disproportionate amount of wheat, as against flour, was going to Japan in light of the inadequate know-how there for its conversion into superior flour and bread as a dietary supplement. It was complained, too, that because of arrangements under the international wheat agreement which permit Canada to sell in Philippine and other free markets at a price below that set for countries inside the agreement, the United States' share in wheat exports to free markets has been reduced unfairly. Finally, there were complaints that the aluminum industry was not getting an adequate share of ECA purchases, and that ECA funds were being used to purchase aluminum produced in Canada in plants which the United States helped finance during the war; it was stated that domestic producers could not match Canadian prices because of lower production costs there.

The foreign-trade problems called to my attention involved imports as well as exports. This was especially the case in Washington and Oregon. Thus, for example, representatives of the lumber, building materials, pulp-paper, fruit growing, wool, and meat-packing industries were extremely fearful that, following devaluation, imports would seriously affect their sales volume and prices. Because of high labor and other operating costs, they reported great difficulty in meeting the price competition involved. Labor officials as well as businessmen in the Northwest expressed considerable concern over the effects of devaluation because of the great similarity between agricultural and industrial production there and in nearby Canada. In southern California, as previously indicated, tuna fishermen and packers and labor representatives reported that that industry was experiencing vigorous price competition in national markets because of sizable tuna imports. As a result, inventories were said to be moving slowly and accumulating rapidly. There were indications, however, that resolution of problems within the industry domestically might soon improve that situation, and that more effective distribution methods would improve the industry's competitive position.

Along the Pacific coast, as elsewhere in the West, there were many complaints regarding freight rates. Businessmen repeatedly claimed that postwar rate increases on eastward shipments had been disproportionately higher than increases elsewhere in the country, and that the application of the wartime excise tax on top of present rates has the effect of further magnifying the distortion. Both in the Northwest and in California fruit growers and packers stated that for these reasons they were having great difficulty competing in eastern markets. They attributed a generally lower farm income partly to this situation. Among manufacturers selling in the national market there were many expressions of concern as to confusion over the legality of freight absorption in connection with basing-point pricing.

Some of the most effective activity in the field of small business credit to come to my attention I found along the west coast. Some of the banks there, along with service on commercial loans, are extending service of a technical nature on marketing and management problems, thus helping to assure profitable operations both for the bank and the borrower. However, most of the suggestions made regarding capital needs, whether in large or small firms, had to do with revision of the Federal tax structure to permit

retention of a larger share of business earnings for capital purposes and to make equity investments more attractive.

The strike among dock workers in Hawaii and San Francisco appeared to have been felt all along the west coast. A large amount of shipping was said to have been diverted from that area to the Gulf coast. Firms processing Hawaiian fruit imports were deprived of their normal receipts. Retailers importantly dependent upon dock and shipping workers as customers experienced severe losses in sales. Other firms which normally use waterborne shipping for the movement of freight were put to extra expense in using more costly forms of transportation.

The work stoppages above provoked a great deal of interest and discussion among businessmen concerning labor relations. I have already referred to the suggestion made to me in my business conference in San Francisco that both management and labor would do well to spend the money they now put into conflict on learning how to get along with each other. I was impressed, too, with the continued use and achievements of the labor-management committee which has been carried over from the war period in Portland. One of the most thoughtful and sympathetic analyses I heard of current business problems in the movie industry was given me by a labor spokesman at Los Angeles.

Labor representatives outlined a number of situations which can make for difficulties in the field of labor relations. One was the shortage of low-cost housing. It was evident, particularly in California, that population growth had considerably out-paced new residential construction and that a large market demand remains, particularly in the lower-priced field. Labor groups in the lumber industry were most anxious for more vigorous activity in the housing field as a remedy for unemployment there. Labor representatives in California were particularly distressed over what they reported to be the illegal residence of workers imported from Mexico for seasonal agricultural work; remaining in California following their seasonal work, it was claimed that these workers enter into competition with native labor and tend to depress wage patterns. Workers in California were also distressed by the continued influx of workers from other States, especially since many permanent residents have still to find regular peacetime employment.

The rapid population and economic changes through the Pacific coast area have created a host of problems for State and local government. One of the most serious of these is that of water supply in California. Another is the shortage of electric power in the Pacific Northwest, where marked increases in industrial, commercial, and residential power consumption have outdistanced the growth in basic generating capacity; as a result, that area was reported to have been unable to supply power for a number of new industries which would have provided much needed employment for displaced war workers and others moving in from other States. In California, municipalities and private utilities had greatly expanded production capacity to keep up with constantly rising demand. Yet it was reported that an important part of the power supply, coming from the Boulder Canyon project on the Colorado River, will revert to States to the east as they exercise their rights to it; it was strongly urged by local officials that the Federal Government accelerate its power-development program and provide municipal systems with larger amounts of available power. Public officials in California also urged that the Federal Government assist in resolving the conflict between the States over water rights in the lower Colorado Basin in order to assure more adequate water and power supplies. It appeared that San Diego, at the extreme southern tip of the State, had completely exhausted its reserve supplies of water and can sustain further growth only by development of additional facilities to carry water from mountain sources. Several alternative proposals were said to be under study by State and local officials and agencies of the Federal Government.

Population growth in the west-coast area has been largely a matter of urban expansion. Particularly in California this has created extremely serious deficiencies in community facilities and services—schools, sewer and water systems, streets, etc., as well as in those provided by State government. I heard numerous reports there on the very large outlays made since the war both by the State and the communities for all kinds of public works. It was stated that in some localities the financing of such outlays is made difficult by virtue of the large property holdings of Federal agencies and the loss of local tax revenues on such holdings. State and local public works needs were acute also in Washington and Oregon communities on which reports were made, though the situation appears less critical than among California communities. In none of my meetings, despite the urgency of these needs, was there any significant sentiment for lavish Federal spending on State and local public works as an unemployment remedy. Indeed, labor spokesmen in California expressed the fear that such a program might greatly aggravate the unemployment situation by attracting an even larger influx of workers from outside the State. They urged, instead, that public-works expenditures be carefully programmed to fit actual needs and used to provide employment for permanent residents and older workers out of jobs and for the training of unskilled workers. Considerable interest was expressed in Federal aid for the advance planning of public works, and all communities were interested in financial aid for actual construction should it become actually necessary to initiate such programs.

In all of my west-coast meetings there was a very keen consciousness of the need for constant enlargement of the economic base of the area to provide employment and business opportunities for a rapidly growing population. Accordingly, on every hand I heard pleas for development of the power and water resources of the Central Valley of California and the Columbia and Colorado River basins, though there was no unanimity as to the type of administrative arrangement which would best achieve that objective. I heard earnest pleas that the services of this and other departments be made fully available to public and private groups in connection with their efforts to attract new industries and to develop others indigenously.

It was a rich experience to talk with those who have participated so intimately in the recent economic development of our Pacific Coast States. That development has been phenomenal. Business and labor and government there have many vexing problems. But they are largely problems of growth, not of decline. And that growth has added and is adding greatly to our national wealth and strength. The potentials for further growth are very large. Throughout the whole area I found high confidence in the future and a driving enthusiasm to get on with the task of achieving it.

These lengthy accounts of business, employment, and general economic conditions in the regions which I visited necessarily compress a vast amount of factual information and numerous detailed observations and suggestions made to me. They may serve, however, to underscore the obvious fact that this is an extremely diverse country. Trends in employment and production and sales do not take place on some abstract national basis, but within the distinctive and varying settings found in the economies of the several great regions of the Nation. Programs of the Government can gain much in effectiveness when formulated and executed with due regard to these differing needs and aspirations.

The President's Budget Message

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. TABER. Mr. Speaker, the President says his budget estimate calls for expenditures in the fiscal year 1951 of $42,400,000,000. That is what he says.

But on page A–6 of the budget appears the real story of what is being requested.

The President is asking for appropriations for 1951 of $40,244,000,000. Of this, $4,513,000,000 is said to be for liquidating previous contract authorizations. In addition to that, he is asking in his budget estimates for $1,444,000,000 of deficiency items for 1950, the current fiscal year. He is asking for new contract authorizations of $148,000,000 and for new funds for 1950, which requires legislation, of $4,275,000,000 and new funds for 1951, which requires legislation, of $1,360,000,000 and new contract authorizations for 1951 of $3,362,000,000.

If you add the new appropriations that he is asking for, including the contract authorizations, the deficiency which this Congress is asked to provide, the new authorizations which this Congress is asked to provide, the items provided for in new legislation carrying an over-all picture of what the President is asking the Congress to give him in this session, you get a total of $50,833,000,000.

Of this amount $3,511,000,000 is new contract authorizations, so that the cash requests total $47,322,000,000. This is an increase of almost $9,000,000,000 over the $38,500,000,000, of cash provided by the first session of the Eighty-first Congress.

It is easy enough to see that if the President's budget goes through there are only two choices for the Government: To default on its obligations or to impose additional taxes on a tax paying public that is already groaning from the load.

There can be no question but that this request for cash totalling over $47,000,000,000 means vast spending programs not included in the $42,400,000,000 which the President states he plans to spend in 1951.

The whole situation is critical for the American people. It means so many new taxes and such a drain upon the economy of the country that if we are to have a solvent Government the Congress must wake up to its responsibilities, even though the President himself has no sense of responsibility.

We cannot maintain our liberties if we turn this money over to the President

and the socialistic schemers who surround him.

I intend to fight for a balanced budget. The revenues in sight are $38,000,000,000 and we must keep our expenditures down below that.

More Papa Knows Best

EXTENSION OF REMARKS

OF

HON. ANGIER L. GOODWIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Boston Herald of Thursday, January 5, 1950:

MORE PAPA KNOWS BEST

There will be little fault to find with President Truman's state of the Union message insofar as his external objective of peace is concerned, but on the domestic side it is a hodgepodge of glaring contradictions which are all too familiar. We suspect that this phonograph record has by now been played so often that not many will be fooled by it.

The President paid tribute in his state of the Union message to fundamental American principles. These principles—of life, liberty, and the pursuit of happiness—to these he dedicates himself and his administration. Yet, he steps on the accelerator of domestic social reform, going whole hog for European socialistic measures when he hasn't even tried the most obvious American solutions to such problems as public health. He is for "the incentives necessary for investment and for the development of new lines of enterprise," but he makes no more than a gesture toward reducing the taxes which are strangling enterprise. He deplores monopoly as the great hindrance to small business on the very day that a great New York newspaper, the Sun, is forced to give up its existence because of the high costs of production brought about by Truman policies.

The President is for freedom and a chance for the entrepreneur, but he wants to keep on rent controls. He talks about our freedom-loving farmers and yet espouses the Brannan farm plan which is so unfreedom looking to the farmers that some of their largest organizations have opposed it. Implicit throughout the message is the President's faith, not in the people, but in a government under his direction to give the people benefits. Despite persuasive showings that there are little promising hydroelectric development prospects in New England, he would have the Government look into that, too. In short, if anything can be done by Government that might please a lot of voters, regardless of cost, Mr. Truman's for that.

This doesn't sound like statesmanship to us. It doesn't sound like even well-visioned leadership. There is little evidence in this message of national stewardship, of any serious attempt having been made to evaluate the relative importance of national and domestic programs, of putting first things first, or of any awareness of a calendar which leaves room for doing some things when they can be better afforded by those who have to pay the bills.

Once again, papa knows best, but it isn't papa who pays.

The Young Plan

EXTENSION OF REMARKS

OF

HON. HENRY O. TALLE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial which are self-explanatory:

THE MARION SENTINEL,
Cedar Rapids, Iowa, January 2, 1950.

Hon. HENRY O. TALLE,
Washington, D. C.

DEAR CONGRESSMAN: Last summer I worked out the Young plan for TVA. We published it October 13, and you probably read it.

On November 20, the Knoxville Journal published the Holt plan. Holt, a former TVA employee and evidently a competent man, has presented his plan, originally proposed by me, to seven southern governors.

I wish him all the power in the world, but in justice to the Sentinel, I would appreciate having the original proposition and date printed in the CONGRESSIONAL RECORD. With kindest regards, I am,

Sincerely,

ROSS N. YOUNG.

[From the Marion (Iowa) Sentinel of October 13, 1949]

FACING THE FACTS

(By Ross Young)

It is time to call the bluff of the public power lobby and its captive columnist. The weird bookkeeping and other sly actions of TVA may seem smart to a Lilienthal, but they are offensive to many informed and honorable citizens.

It will not be too difficult to discover if TVA bureaucrats, the public-power lobby, and the liberal columnists are really sincere. Simply offer to sell TVA to the people of the Tennessee Valley. The selling price could be the actual cost plus interest. The people in the Tennessee Valley should jump at such a bargain, for most of the construction was carried on at half the present costs. The State of Tennessee and other affected areas could form a corporation. All or part of the stock could be sold to individuals, companies, cooperatives, and municipalities.

In giving the locally owned TVA such a bargain, the Government would insist, of course, on certain safeguards. The new corporation would pay the regular local and Federal taxes. It would be required by law to set aside depreciation and other reserves in accordance with the best business practices.

A first lien on income would be obligations owed the Government. While the sale of stock and local appropriations could take care of much of the necessary financing, the new corporation might wish to take from 10 to 20 years to complete payments. These payments and all future borrowings from the Government would be amortized by standard procedures.

The new corporation could charge any rates it saw fit. Rates could be high enough for solvency, replacement, and expansion. They could be low enough to improve living standards and to stimulate business in the valley.

The experience would be valuable in guiding the American people in making decisions on other projects. There would be a genuine yardstick. TVA would no longer have its hands in the people's pockets, and Federal taxes could be reduced. Does the public-power lobby dare to accept such a challenge to honesty and sanity?

Rice Acreage Allotments and Marketing Quotas

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit copy of a letter addressed to Hon. Charles F. Brannan, the Secretary of Agriculture, of date November 22, 1949, from Mr. Homer Brinkley, general manager of the American Rice Growers Cooperative Association on the subject of rice acreage allotments and quotas.

Mr. Speaker, my constituent, Mr. Brinkley, is recognized as one of the outstanding leaders in the rice industry, and his opinion is generally accepted as reflecting the ideas and wishes of the producers of rice in the Southern States.

Mr. Speaker, in view of the fact that the Department of Agriculture is contemplating the imposition of acreage allotments and marketing quotas for rice in the United States, I am submitting this statement for the information of interested parties, and I hope that those concerned with the administration of the program under contemplation will give favorable consideration to the recommendations and facts which are included in the following letter:

AMERICAN RICE GROWERS
COOPERATIVE ASSOCIATION,
Lake Charles, La., November 22, 1949.

Re rice acreage allotments and marketing quotas.

Hon. CHARLES F. BRANNAN,
Secretary of Agriculture,
Washington, D. C.

DEAR MR. SECRETARY: In response to your invitation to interested parties to submit their views with respect to the establishment of rice-marketing quotas for 1950, the following statement represents the attitude of the American Rice Growers Cooperative Association.

This association is an organization of rice growers in Louisiana and Texas which this year will handle for its members approximately 40 percent of the rice marketed for commercial purposes in these two States. In addition to 20 division organizations operating sales offices in both States for the sale of rough rice, members of this organization own three rice mills which this year will mill over 1,500,000 barrels of rice; 20 rice driers with a drying capacity of 2,500,000 barrels of rice; 17 rough-rice warehouses, an irrigation system, a wholesale producer supply organization, and miscellaneous other enterprises.

At a meeting of the directors of the association in Beaumont, Tex., on November 19, 1949, the following resolution was unanimously passed, and a committee was appointed to implement the resolution with a more detailed statement with respect to our position:

"*Be it resolved,* That this association is not opposed to the principle of acreage allotments but is gravely concerned over the prospect of the establishment of marketing quotas affecting the 1950 rice crop. In addition to many other factors influencing our opposition to the establishment of marketing

quotas for the 1950 crop, we stress the fact that the active demand and extremely rapid movement of the rice crop for the past several years, occasioned by the need for supplying the deficit areas no longer supplied by the traditional surplus areas, gives us reason to believe that as long as the world-wide rice deficit continues no reduction under the present rice production in this country is either necessary or desirable, and therefore that the imposition of marketing quotas should not be resorted to for the 1950 rice crop."

In order to elaborate our views on the subject, a committee of the board of directors, appointed for the purpose, submits the following points in support thereof:

1. The average production of rice in Louisiana, Texas, and Arkansas for the past 5 years amounted to 17,688,000 barrels. An allowance of 10 percent as carry-over, and an additional 10 percent as a point at which marketing quotas might be imposed, results in an amount of 19,465,000 barrels, which is 1,285,000 more than this year's estimated production in the South.

2. When the total supply of rice does not exceed the total available market, and when the carry-over at the end of each season is only sufficient to last until the new crop comes on the market, then that total supply is, by any measure of practical market philosophy, a normal supply.

Based on that hypothesis, the present statistical position of rice is such as not to justify the establishment of marketing quotas, or of establishing an acreage allotment at less-than-current acreage. The possible exception to this is in the California situation, but we insist that special means to meet special situations such as this are indicated rather than drastic blanket measures affecting tens of thousands of rice growers in other areas who are in no degree whatever responsible for the problems arising therefrom.

3. California has increased its production 2,000,000 barrels over last year, which is at least 2,000,000 barrels in excess of any commercial market they have ever had. It is this sudden increase in production in California which is responsible for the estimated record supply of rice this year, and we regard as unjust to the South to permit this situation to tip the scale as to whether quotas should be imposed on the entire United States industry, including the South.

In contrast with the California position, the South this year is estimated to produce more than a million barrels less than the actual production last season. It is our view that we in the South have about reached the maximum capacity of land and water requirements.

4. The southern crop has moved into channels of direct consumption and has not been a burden on Commodity Credit Corporation. At the present time harvesting in Louisiana and Texas is practically complete, and at this time the stock of unsold rough rice in first hands is below that of last season.

5. It is our view that since the world-wide shortage of rice still exists and is critical in many areas of the world, we have both an opportunity and an obligation to help supply the deficit. For example, FAO this week issued a statement indicating its alarm at the general world-wide increase in price levels for rice. This increase reflects the deficit situation referred to. Trade opportunities over the world exist, and we cite the case of the Philippine purchase last year, which absorbed the last of our remaining stocks of low-grade rice in the South, and of Indonesia this year which has recently come into the southern market for a quantity of rice estimated at 1,600,000 pockets.

6. While the world market for rice of the type produced in California is far more restricted than for the southern types, we point to the fact that there is ample need for this rice in Japan; and in view of the fact that the United States is responsible for the economic welfare of Japan, such surplus rice as is produced in California can readily be disposed of in that country.

7. The armed forces of the United States have recently purchased $1,600,000 of rice in Egypt. Purchases were also made last year in that country. Such rice might well be purchased in this country, thereby still further obviating the possibility of unsalable surpluses here.

8. Recent events have convinced us we can be and are competitive in world markets, quality considered. For example, on November 18 the following bids were submitted in Jamaica: Italy, $8; Ecuador, $8.50; Indochina, $11.40; Siam, $9; Egypt, $9.35; and ourselves, $7; all c. and f. Kingston. Such foreign markets will absorb large quanities of our lower-grade rice at competitive prices, and there is the additional opportunity of moving even larger quantities of our broken rice into industrial channels in this country. Furthermore our domestic markets are being expanded under the stimulus of the most comprehensive advertising program in the history of the industry.

9. The growers of Louisiana and Texas particularly have regarded the Commodity Credit Corporation program as a device for supporting prices and not a dumping ground for surplus supplies. We have moved out the current crop at prices below, at, and above support levels, and the average for the season will be above. We do not think it likely that in Louisiana and Texas at any rate, any material quantity of rice will be acquired by CCC this year. We definitely do not view CCC as a market, but rather as a means by which prices may be stabilized at reasonable levels and bankruptcy conditions prevented.

10. We submit that growers should know what their acreage allotments are before being called upon to vote on marketing quotas. We point to the grave inequities and instances of uncorrected injustices that existed when we previously had acreage allotments. From that sad memory comes the conviction that at least a year's experience with acreage allotments should be sought before marketing quotas are imposed.

Individual grower production programs are generally geared to a certain narrow range of acreage—the most economic individual operation as determined by ability, need, and experience. Allotments and quotas become a vested property right and tend to make very difficult those normal adjustments between, for example, landlords and tenants; provision for new producers; the needs of more efficient producers; desirable changes of production areas, etc. All this clearly indicates the need for far more experience with acreage allotments before the vastly more drastic quotas may become effective.

11. It is our view that acreage allotments are desirable and will be a deterring factor in further increases in acreage, particularly in such areas as California where growers are apparently producing for a CCC market. Under such circumstances they cannot afford to lose the support which may be gained only by compliance with acreage allotments. If growers in any area are obviously planning their production and marketing program very largely on the basis of CCC operations instead of for the commercial market, it appears to us quite logical that if such a program is not available to them, they will seriously re-examine the inherent danger of their position. The same is true of the high-cost individual producers.

12. The world trend of rice prices is up because of continued abnormally low production and of population increases in the heavy rice-consuming areas of the world. If this situation continues rice producers may become priced out of markets by competitive foods or by lack of sufficient purchasing power. United States rice growers may find themselves in identically the same position if our supply is artifically reduced below the total demand. High support prices coupled with sharp reduction of production constitute strong incentives for continued production by inefficient producers and in marginal areas.

The proposed cut of 20 percent in acreage allotments is far too severe a reduction. It should be clearly understood that while we are not opposed to acreage allotments, we are unalterably opposed to a reduction which establishes acreage at so far below current levels.

13. A sharply curtailed production coupled with the increase of parity of 15 to 18 percent which will become effective next year will run grave risk of resulting in a price structure materially higher than substitute or competitive foods in both foreign and domestic markets; therefore even a smaller production may actually result in a greater surplus at the end of the season than would otherwise be the case. This identical situation existed when the rice industry operated under a marketing agreement program in the early thirties. This surplus would in that case then become the problem of the Commodity Credit Corporation and of the industry as well, since it would seriously affect the marketing situation of succeeding crops so long as it remained unsold. A surplus is always a surplus regardless of ownership.

14. A penalty of 50 percent of the parity price on the marketing excess does not constitute a serious hazard to those highly efficient producers raising rice on good land with the most modern and efficient machinery known to agriculture. If marketing quotas are established on the basis of what we understand to be a proposed reduction of 20 percent under the 5-year average, such growers as referred to above, with their acreage so sharply curtailed, will unquestionably have an incentive and an opportunity under the stimulus of the increased support levels resulting from the new parity constituting as it will an important stimulus to generally higher price levels, to ignore the quotas and produce outside the program. Ironically enough, the smaller producers, those least able to afford reduced acreage, will be much more seriously affected in their operations than the large producers and the corporate farms.

15. An acreage reduction of 20 percent under the average acreage of the past 5 years will result in acreage allotments of 1,126,000 in the South and 199,000 for California, or a total United States allotment of 1,325,000 acres. This compares with a 1949 acreage of 1,794,000 for the United States, therefore a reduction of 20 percent under the 5-year average will be an actual reduction of 26 percent under the 1949 acreage.

Such a reduction can be justified only by an aggravated situation of surplus supplies and depressed prices, neither of which exists in the industry today. At the present time, for example, there is expected to be an actual scarcity of rice in Louisiana and Texas. We have seen the fastest moving market we have ever had, even during wartime, with a steady increase in price levels. Bad weather conditions during the harvesting period over the entire South will, we believe, be reflected in a considerable reduction in estimated production before the end of the season. Such situations are the very opposite to those which might justify drastic measures to reduce production next year.

Yours very truly,

HOMER L. BRINKLEY,
General Manager.

Something for Nothing

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks, I include the following article by Wheeler McMillen, editor-in-chief, Pathfinder News Magazine:

SOMETHING FOR NOTHING

(By Wheeler McMillen, editor in chief, Pathfinder News magazine)

Looking toward next year's elections, politicians in both parties are hunting for surefire vote bait. Each party wants to gain as much as possible in order to build greater strength for the 1952 Presidential struggle. Many governorships, many local offices, and control of Congress are at stake.

Also at stake is the future of America.

Politicians are almost overwhelmingly tempted by the lure that so frequently in history has rolled up majorities, kept parties in power, and ruined nations. That is to "promise 'em something for nothing."

How long has it been since a political campaign was waged on the principles of patriotism? Two wars in this century have shown that most Americans are willing to make some sacrifices in favor of patriotism and freedom. Has it become impossible for a political leader to rise who can appeal to that spirit, instead of to the spirit of larceny?

If so, and if no administration can govern other than by following the give-away system, the bright future of America is fading fast. Leave the people be free and the American standard of living can be doubled in another generation. But the give-aways mean controls, controls reduce production incentives, work will go down and prices go up, then more controls will come and the United States of America will drift on down to the end of the era of freedom.

What would happen if the whole United States Government, all the laws and all the governmental bodies were by some improbable miracle suddenly blanked out? What would America do if they now had to start from scratch, as their forefathers did in 1787, to create an entirely new Government?

My guess is that the people would very quickly set up a new government to maintain order and to provide national defense. Those are the only absolutely essential jobs for which a country needs government.

Then, if wisdom prevailed, people would wait awhile to see what they missed most. They might find no reasons for recreating more than about half the functions which they now support.

How much of the present Government do you think you would miss if it no longer existed?

The space that we of the press devote to Government seems to me to be out of proportion to its real importance. Of course, we do have to discharge the duty of a free press to place information before the people. We have to criticize and oppose what appears to be wrong. At its best, the press should never wholly support any administration because always some weaknesses need to be brought to public attention.

The advances of the country rise out of the efforts of men in industry, agriculture, commerce, education, and science. One Thomas A. Edison or one Henry Ford has done far more to raise the national standard of living than almost any half-dozen Presidents. One business genius, by developing some better method for distributing goods, will accomplish more than two or three Congresses.

I have remarked before that as long as Government every week takes one-fourth or more of every worker's income, perhaps every citizen should devote one-fourth or more of his time toward trying to reduce and improve Government. Certainly few do anything like that. Our preoccupations are with our jobs and our duties. And that's natural, since our own personal standards of living and satisfactions come mainly from the discharge of our personal responsibilities. But we do need to be alert to prevent Government from interfering with our doing our work successfully.

We Are Losing Patience

EXTENSION OF REMARKS
OF
HON. JOHN A. WHITAKER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. WHITAKER. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include the following editorial entitled "We Are Losing Patience," written by W. C. Lassetter, vice president and editor of the Progressive Farmer, which appeared in the January issue of this magazine:

American Government is big business. Able men of unquestioned honesty and integrity are required in its administration for the public. Yet, no sooner does an able, courageous man accept an important post in public service than he becomes a target for the sharpshooters. No matter how honest he may be, no matter how capable in carrying out the duties of his post, the villainous crew starts tearing him apart.

There's always room for difference of opinion. Difference of opinion invites argument. But an argument, even though it be heated, does not justify vilification.

We are losing patience with those who differ with others just for the sake of being different. We have long since lost patience with those who, in their effort to win an argument, stoop to vilification of the person with whom they differ.

We hold no brief for those few who seek public post with selfish intent. These few are soon unmasked and made to pay the penalty. Such persons should be exposed and we honor those who bring their shame to light. But in seeking out these few, why crucify the far greater number who are working diligently, earnestly and ably in behalf of the public good?

How can any man in position of public trust render best service when he is forced to spend much of his time in parrying personal slander? How can any man, feeling the dejection that comes from unjust attacks, be expected to render top service? How can any able businessman, one who enjoyed the accomplishment of building up and directing a successful business, one who has enjoyed the prestige that comes from such accomplishment, have the courage to accept a high position in Government where he will be the target for all types and classes of vicious snipers? The ablest among us sometimes are the most sensitive.

We have many, many able men who have been in public service over a long period of years. These men continue to flinch when hit by the barbs cast their way. These men still have feelings. But their appreciation of importance of the work they are doing, their feeling of responsibility for the proper performance of this work goads them on, dulls the pain from the uncalled-for attacks. We feel for these men who have the courage to remain in public service. We are losing patience with those who can see no good, those who can think nothing but evil.

Formosa

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 9, 1950

Mr. LeFEVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an article by Bert Andrews appearing in yesterday's New York Herald Tribune.

Mr. Speaker, there surely is something decidedly wrong with the foreign policy of the administration, or rather the lack of foreign policy. I had the privilege of visiting the Far East this fall and the crossfire bickering among those representing us in this part of the world is disgraceful. Now we have the English recognizing the Soviet Republic of China for what they consider their own benefit and which will also be for the benefit of the Soviet Union of Russia. For one not on the inside of our diplomatic affairs, it does seem rather idiotic to continue helping a country that is helping communism, while we are spending billions to fight communism.

The article follows:

FORMOSA: WHAT HAPPENED—FULL STORY OF WASHINGTON INTRIGUE ON POLICY SETS A RECORD IN SCHEMING AND BACKBITING

(By Bert Andrews)

WASHINGTON.—A strange and fascinating story of backbiting, infighting, news suppression and news leaking lies behind President Truman's final decision to have the United States maintain a hands-off policy toward Formosa.

It is a tale that has flabbergasted even veteran observers of the Washington scene, who thought they'd seen just about everything in the way of official intrigue, only to learn in this case that new and fancy touches can be added at will by inventive minds.

It is a chapter in the book of history which involves President Truman, Secretary of State Dean Acheson, Secretary of Defense Louis Johnson, General of the Army Douglas MacArthur, and Senator H. Alexander Smith, Republican, of New Jersey, to say nothing of a host of minor characters.

The basic issue of what to do about Formosa and what is left of the Nationalist government of China is a problem of long standing, of course, and this account will deal only with the weird happenings of the 36 days from December 1, 1949, to January 5, 1950, when the matter came to a head with the President's decision.

Senator SMITH, 69 years old, one of the mildest-mannered and best-intentioned men in the Congress, was, to his own astonishment, the man who set off the chain of events leading up to the show-down.

Senator SMITH did it by holding a press conference in his office on December 1.

He had just returned from a trip to the Orient. In Tokyo he talked with General MacArthur. To be precise, he probably listened to General MacArthur, for it has been the experience of most individuals who have visited General MacArthur since the

tide turned in World War II in the Pacific that the general does most of the talking.

Senator SMITH, being a gentleman who abides by promises not to quote people when he has been asked not to, didn't quote General MacArthur. But it was clear that the Senator wasn't merely giving his own views when he contended:

That it was unthinkable that Formosa should be lost to the Chinese Communists.

That Communist possession of Formosa, 100 miles off the coast of China, would endanger the Philippines, American-held Okinawa, and perhaps even Japan.

That Communist drives made possible by a Formosa base might eventually push America's defense back to the Marianas, the Hawaiian Islands—and the Pacific coast.

The Senator got some headlines in the afternoon papers. But by the time the morning papers came out, his views were pretty well down in the stories, for the leaking had begun and the stories were topped by contrary word from authoritative sources.

The authoritative sources in this instance were men in the State Department.

(Secretary Acheson was to say subsequently: "We have had leak and counterleak, gossip and countergossip." He ought to know.)

The sources solemnly told reporters that the as yet unannounced view of the Department was that Formosa was of no strategic value to the United States and that the Department consequently was prepared to see the island fall to the Chinese Communists.

Over in the Pentagon, where Secretary Johnson holds sway and sometimes gets himself into difficulties by talking too much to the wrong people at the wrong time, there had been some advance notice that that was the way Secretary Acheson felt.

It was also known that the Joint Chiefs of Staff weren't, as of that day, inclined to dispute Secretary Acheson on Formosa.

But—on that same December 1—two men were sent on a flying trip to Tokyo and it seems reasonable to think they went with the blessing of Secretary Johnson and with instructions to "get me something to fight with."

Mr. Johnson, it should be explained, had been saying privately that he thought China policy had been mismanaged and that he was going to keep on asking what our present policy was until he found out.

The messengers to MacArthur were Tracy S. Voorhees, Under Secretary of the Army, and Lt. Gen. Alfred M. Gruenther, Army Deputy Chief of Staff for Operations.

They talked with General MacArthur. Or listened to him. Evidently they got an earful, for they came back to Washington in mid-December and reported to Secretary Johnson and things began to happen. Like this:

December 22: An all-day meeting of the Joint Chiefs of Staff was held. The members drafted a recommendation that the National Security Council attempt to deny Formosa to the Communists to the extent of sending a United States military mission there. The argument, straight from General MacArthur, was that it wasn't necessary to send troops. The argument was further that Gen. Sun Li-jen's forces on Formosa were strong enough to stop any Communist invasion if properly trained and equipped, and if their Chinese commanders had the advice of experienced American officers.

December 23: Presumably the new decision on the joint chiefs was communicated to Secretary Acheson. It didn't seem to make much difference, for a couple of other things happened on this day:

1. The State Department notified its attachés in a memo dated December 23 that Formosa wasn't considered important strategically and that the attachés ought to begin to publicize that view so the United States wouldn't lose prestige if the island fell. (What price a decision by the joint chiefs?)

2. Chinese Ambassador V. K. Wellington Koo called at the State Department and talked to W. Walton Butterworth, Assistant Secretary of State for Foreign Affairs. The Ambassador made a formal request for military, political, and economic advisers for Formosa.

This was at 4:30 p. m. on the day before Christmas, and all through the State Department house things were pretty quiet. Thus no reporters saw the Ambassador enter the Department. No announcement was made, and Mr. Butterworth left for a Christmas holiday without telling Michael J. McDermott, the Department's top public-relations man, anything about the visit.

There matters stood until December 28, when this reporter learned from a good friend and trustworthy source (reporter's note: sorry G. F. and T. S. that you won't take credit though credit is due and that your G. F.'s and T. S.'s won't either) that the criticism by Senator SMITH and others was about to bear strange fruit.

President Truman and his top advisers began to get worried lest Senator SMITH and other critics accuse them in the Congress that was then about to reconvene of having no policy for Asia. So the orders were to have the National Security Council get together on Thursday, December 29, so that a positive policy could be prepared for presentation to Congress.

The statutory members of the N. S. C. are the President, Vice President, Defense Secretary, Secretary of State, and chairman of the National Security Resources Board. The law gives the President the right to invite any other Government officials to the council meetings in an advisory capacity.

It seemed that the showdown was at hand: that the long-held differences of opinion between Secretary Acheson and Secretary Johnson would be aired in a face-to-face meeting.

Secretary Acheson was there.

Where was Secretary Johnson? In Florida getting some sun.

Why wasn't he there? Well, the best information this reporter has been able to get is that Secretary Johnson had heard that Secretary Acheson had already sold President Truman on his arguments, and that there wasn't any use of him being there.

Unkind critics suggested, of course, as unkind critics are prone to do in such cases in Washington, that Secretary Johnson had run out on the fight. The other view is that if a decision had already been made, there wouldn't be any fight, and hence there was no need for him to listen in while the President gave the nod to the other side.

The best information is that Secretary Johnson asked the President if it was O. K. for him to go away for a while and that the President kindly assured him it wasn't necessary for him to attend the NSC meeting.

At any rate, Gen. Omar Bradley, Chairman of the Joint Chiefs of Staff, stated the MacArthur-backed arguments for keeping Formosa out of the hands of the Chinese Communists.

About all General Bradley did was to read the document prepared by the Joint Chiefs of Staff. Reporters couldn't learn whether he backed it up with emphatic arguments of his own, thus taking personal as well as offical issue with Secretary Acheson.

Secretary Acheson was prepared with official and personal arguments. He insisted that the United States should not go a little way toward aiding Formosa unless it was prepared to go all the way, including war to protect it from aggression. One report was that he got General Bradley to concede that Formosa did not warrant the commitment of American troops now or even if the Chinese Communists attacked it.

So—with Secretary Acheson in the driver's seat and Secretary Johnson in the Florida sun—President Truman decided for Secretary Acheson's views.

Friends say that Secretary Johnson hasn't given up the fight.

They point to the fact that the Joint Chiefs of Staff are scheduled to visit General MacArthur in February to talk with him. Or listen to him. They might come back so strongly reinforced with arguments as to compel reopening of the case. But that's doubtful.

There is some more chronology:

December 30: Mr. McDermott denied that Nationalist China had formally requested aid for Formosa.

January 2: Senator WILLIAM F. KNOWLAND, Republican, of California, just returned from a visit to General MacArthur, said Mr. McDermott had erred; that the Senator knew a formal request had been made.

January 2: Herbert Hoover, America's only living ex-President, and Senators Knowland and Robert A. Taft, Republican, of Ohio, agreed that the United States should use its Navy if necessary to protect Formosa and raise "a wall against communism in the Pacific."

January 3: Mr. McDermott, who never deceives reporters when he knows or can get the answers to queries, sadly admitted he had erred in his December 30 statement. Seems Mr. Butterworth hadn't told him anything about the Ambassador's call.

(Mr. Butterworth, incidentally, had been upset on December 28 when this reporter got wind of the fact that a meeting of the NSC had been called to frame a China policy. Seems he had just got back from his holiday and that he decided on December 28, "If that's coming up, I'm going right away from the office again." He did.)

Then came January 5, with President Truman's announcement of the hands-off policy and Mr. Acheson's statement giving details.

It has made the Republicans so angry—both what was done and the manner in which it was done—that attempts to keep foreign policy going on a bipartisan basis are in danger.

"It has been kicked out the window by the President and the Secretary of State," said Senator HOMER FERGUSON, Republican, of Michigan. "I mean in all fields. The President and the Secretary can't divide the world into two parts and say we'll have bipartisanship in one part and to hell with Congress in the other part."

Secretary Acheson summed it all up when he told why the President and he issued their statements:

"We have had leak and counterleak gossip and countergossip. We have gotten a great deal of confusion in the minds of foreign people. We have stirred up a good deal of speculation, all of which, if allowed to continue, would be highly prejudicial to the interests of the United States of America. And, therefore, it was the President's desire to clarify the situation."

Is everybody clarified?

History of the Labor Movement

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following address made by me to the Massachusetts CIO Convention in Boston on November 27, 1949:

President Belanger, distinguished and invited guests, officers of the Massachusetts State CIO, and delegates to the convention,

since the development of trade-union organization is one of the principal themes of this convention, it is altogether fitting and proper that we pause and reflect upon the tremendous strides which the past 60 years have witnessed in the labor movement.

Significantly, labor relations concepts in this country were developed largely by means of judicial decisions. Near the end of the last century, prevailing opinion recognized the legal right of workingmen to combine and to strike in order to secure for themselves higher wages, shorter hours, and improved working conditions.

A great diversity of opinion developed, however, relative to the means by which, the persons through whom, and the persons upon whom, pressure might permissibly be exerted in order to enforce the demands of the workers.

In the absence of legislation, the courts were thus called upon to determine what the public welfare demanded in answer to these problems.

The first judicial opinion on boycotting was rendered in 1886; that on peaceful picketing in 1888. Our courts, then, became the arbiters of social policy in the field of labor relations, and being thus called upon to exercise a quasi legislative function, they naturally differed in their conclusions.

The injunction first came into prominence as a weapon in labor conflicts in 1888. A few years later, when its use became widespread and conspicuous, the controversy surrounding it outweighed the question of the substantive rights of the parties themselves.

This equitable remedy, even though it was applied in conformity with established judicial practice, had unintended effects which impinged upon the personal rights and liberty of the wage earners.

Allegations of violating the terms of injunctions were often heard upon affidavits alone, without any opportunity for confron tion of witnesses or the right of cross-examination. Findings of guilt for contempt and commitment in the judge's discretion had the effect of successful prosecution for crime; but in the course of such proceedings, the wage earner was denied all of the rights commonly assured by the constitution to one charged with crime.

Judges, therefore, were accused of usurping the functions of a jury in finding facts on affidavit; of usurping legislative functions in prescribing conditions under which strikes were permissible; and incidentally, of seriously limiting the constitutional rights of a free press, free speech, and to peaceable assembly.

In urging restrictions of the use of the injunctive device, the most powerful argument was that its uninhibited use endowed property with a force which would make it dominant over human beings and the rights of man. In other words, under the guise of safeguarding property rights, the employer was allegedly seeking sovereign power.

At this juncture, right-thinking citizens, zealous only for the public welfare, advanced the commendable theory that the law of property was not an appropriate channel for dealing with problems of social progress or of social unrest, and that the power of State should not be exercised through the courts in favor of one side in the social struggle.

It was believed that the problem of control and conduct of labor relations demanded a solution of its own apart from traditional judicial techniques—and until such time as the proper principles for the governance of industrial relations were formulated, it was wiser not to determine industrial issues by means of injunction.

Opposition to the practice of "government by injunction" led to the seeking of aid from Congress and the State legislatures.

From 1894 to 1914, legislative proposals relating to labor disputes, boycotting, picketing, restraints on injunctions, and the right of workers to combine occupied every session of the Congress; and only within our own memory did these efforts result in enactment of such broad and progressive legislation as the Norris-LaGuardia Act, the Wagner Act, the Walsh-Healey Act, and the Wages and Hours Act.

Out of this history of American experiences grew the plan of federation and combination which gave labor its place in the sun. It started with the organization, in 1869, of the Knights of Labor. Then came the American Federation of Labor, and more recently, your own progressive and forward-looking organization—the CIO.

The legal right of employees, through their unions, to negotiate as a partner in industry—the right of collective bargaining—was fought for fiercely for many years—and with the passage of the last 17 years, under the leadership of the immortal Franklin D. Roosevelt until his untimely death, and now President Harry S. Truman, it has been my happy privilege, as a participant in enlightened national administrations, to see it recognized and vindicated.

During the Eightieth Congress a marked step backward was taken in the passage of the Taft-Hartley Act. This will be only temporary. Progress of man's associations with man may be delayed by powerful forces, or a step backward taken at times, but the onward journey of progress cannot be stopped.

In the Congress a combination of forces having different intents and interests have blocked temporarily the repeal of the Taft-Hartley Act and have prevented the substitution for it of sound labor law conducive to the best interests of capital and labor and of the country as a whole. This combination can only delay, not stop, the ultimate repeal of this unsound, unhealthy, unfair piece of legislation.

It is my opinion, which I express in all frankness to you, that we will not be able to repeal the Taft-Hartley Act in this Congress. But while this may be so, we can get satisfaction out of the fact that further antilabor legislation, which was intended before the last election by certain forces, cannot and will not pass this Congress.

The repeal of this law is not alone for the best interests of labor. It is for the best interests of capital and management. It is for the best interests of the country.

If my opinion that the Taft-Hartley Act is not repealed in the next session of Congress is later proven to be correct, I make the prediction that if a minimum of 20 more progressive-minded Members are elected to the National House of Representative, and a minimum of 5 in the Senate, that this punitive and discriminatory bill will be repealed in the Eighty-second Congress.

In that masterful encyclical on the conditions of the working classes, Pope Leo XIII stated, in part:

"That workingmen's associations should be organized and governed as to furnish the best and most suitable means for attaining what is aimed at; that is to say, for helping each individual member to better his condition to the utmost in body, soul, and property."

You have for decades been a leader in achieving this aim, not only for the organized worker but for the unorganized worker.

Labor has not confined itself in its leadership of progress to its own immediate field. It has consistently led the fight for all workers against exploitation; against low wages and inhumanly long hours. It has been a leader in the field of social-security legislation; of legislation to develop the national resources of our country; of legislation to strengthen the position of agriculture and the farmer; of legislation to remove and prevent discriminations against our fellow Americans; all along the line of legislation that will strengthen our country by making the family life of our Nation strong and virile.

The strength or weakness of a nation is dependent upon the strength or weakness of its basic unit—the family.

Labor has been the leader in the constant fight for economic security or, to put it conversely, a leader in the fight against economic insecurity.

In times of peace American labor has been a great force in sound progressive action. In times of war it has always responded to the maximum extent possible. It has repeatedly shown its patriotism and the love of its members for our country.

And in the many contributions to our progress, in peace, and our safety in war, your organization, the CIO, has played a most important part.

I predict that with the completion of the elimination of the dissident elements that your organization will play a far greater and more important part in the future life of our great Nation.

The aim of workingmen's associations in the words of Pope Leo XIII: "Helping each individual member to better his condition to the utmost in body, soul, and property" can further be achieved by balancing right with duty, privilege with obligation, and immunity with license.

As a great American organization, imbued with and actuated as you are by high American ideals and objectives, in the years ahead of us the CIO will continue to grow and expand in influence as a free, American, and democratic movement.

Your President and Mine

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Millard D. Gibbs, D. D. S., of Hot Springs National Park, Ark.:

YOUR PRESIDENT AND MINE

(By Millard D. Gibbs, D. D. S., Hot Springs National Park, Ark.)

In discussing "Your President and Mine" I am doing so in a plural sense and what I wish to present is nonpolitical and nonpartisan. The man in the White House is our recognized first citizen and Chief Executive. The freedoms we have in America are the envy of most people in foreign lands. We must preserve them at all costs, and one way to accomplish this is not to abuse them.

Some individuals speak most disrespectfully of the President of our country and, in my opinion, they are sowing seeds of discontent when such abusive tactics are indulged in. In the interest of unity in our Nation, there should be instilled in the hearts of all Americans a more profound respect for whoever may occupy the White House as President of the United States. The application of the golden rule would accomplish this.

Any movement that may serve to strengthen our Nation should be definitely encouraged. Communism, socialism, and other "isms" are continually in our midst, and each has leaders who have strong desires to destroy the democracy our forebears fought for and died to preserve. The Star-Spangled Banner and America, My Country 'Tis of Thee, we proudly sing, but to build a stronger and a lasting America should be our goal for not only this generation but for those of the future.

To be respected as a nation we need to exemplify the same high regard in our daily lives that we exact of other nations for America. If, as an American citizen, one feels justified in criticizing our Chief Executive, why not let such nonapproval be registered in an honorable and respectful manner? Let us stop pretending Americanism and be real supporters of America and the true democracy she stands for and un-American activities will fade out of the picture.

One may have the right as an American to speak disrespectfully of the President, but such practice is an indication of a shrinking patriotism. As Americans we proudly proclaim our freedoms, but seldom alert ourselves regarding the abuse of these cherished possessions and the resulting damage to America and all it represents.

The enemies of America and the wonderful democracy she represents are the ones who profit most when we, as American citizens, violate our moral or loyalty obligations to our Nation. Yesterday the atomic age was merely scientific speculation. Today it is a stern and dangerous reality. Will atomic energy prove an agent for the betterment of mankind or the agent for the annihilation of the human race? With this discovery now in the hands of potential enemies, it behooves all freedom-loving people to strive in every way to outlaw this horrible weapon of death and destruction.

Our President and those who may succeed him, regardless of party, will be faced with these and other grave problems that must be solved.

In a former article, Mr. President U. S. A., not only was the idea of greater respect for the office of President suggested but it was suggested that a national holiday honoring all Presidents be set aside. All civic clubs, the American Legion, Amvets, and other groups of Hot Springs approved the proposal, as did some governors, Congressmen, Senators, and Vice President BARKLEY. Some opposition to a national holiday developed because so many holidays are already in existence and this phase of the proposal has been removed.

Since the suggestion to create in America a greater respect for the high office of President and the one who occupies the office met with such unanimous endorsement, I feel it incumbent upon me to further attempt to bring to a successful termination this patriotic proposal—that America may become a stronger Nation.

The flag of our country we love, honor, and respect and this is as it should be—yet our flag is only symbolic. The President of the United States is the elected Chief Executive of our Nation and represents our country at home and abroad. He is no ordinary person, yet because of our great democracy he may have risen from a most humble environment. This man whom we call Mr. President is the chief defender of our flag as he is the Commander in Chief of both the Army and Navy. He holds the highest position in the gift of our people.

There is a radio program each Sunday afternoon at 1:30 known as Mr. President. It is well dramatized and features that well-known and popular actor, Edward Arnold. This program brings out very vividly the many problems with which our Presidents are confronted. The stories on the broadcast are based upon actual happenings during the administration of the President portrayed in each episode.

Some of our Presidents have died martyrs of assassins' bullets. Others have died in office, victims of mental and physical strain occasioned by the great responsibilities placed upon them. This exalted position most certainly cannot be termed "a bed of roses." No matter which political party succeeds in putting its candidate in the White House, the Chief Executive is not in all respects going to please even his own constituency. He will be praised and condemned, no matter which direction the pendulum may swing.

The business of such nations as ours is definitely not a one-man job, so it becomes necessary to surround the President with a law-making body and a Cabinet, representative of the different departments of government, education, banking, labor, agriculture, industry, and all phases of economics must be included. Many debatable and controversial questions come up before these bodies, and while we have a Secretary of State, Secretary of the Army, Secretary of the Navy, and other secretaries of less importance, the President is Chief over all.

Many outstanding men and some lesser lights have been candidates for the high office of President. Candidates, in most instances, are approved because they have filled either State or National positions and often because they hail from some section of the Nation where they might be a factor in influencing votes. Upon a political platform a candidate is nominated and he immediately becomes the recognized leader of his party. If elected, he becomes the leader and representative of approximately 150,000,000 people. To please all voters and millions of potential youthful voters is a target hard to shoot at with precision. If Congress is not friendly the aim cannot be relied upon.

To hold the office of President, one must believe in God but has the privilege of worshipping according to the dictates of his own conscience. This liberty is embodied in the Constitution of our Government.

The nominee of each party may have liberal tendencies or he may be of the conservative group, while some are extreme in either of these. The President can be sincere in his views that may have influenced his election, yet later realize his mistake. Should he stand by his campaign pledges or support the measures he is now convinced are best for his country?

Our two major-party systems are unquestionably democratic, yet political antagonism is so prevalent that no matter how well the party in favor succeeds it is rather generally and severely criticized by political opponents. The President, as it were, becomes a veritable target. Some Presidents can thrive on it while with others it acts as a most troublesome stumbling block. The criticisms are often abusive and destructive, yet the President of our Nation is our No. 1 citizen. Freedom of speech and freedom of the press in our democracy are granted to us but in speaking disparagingly of the President, our first citizen, I am wondering if we are not abusing our much-enjoyed freedoms.

Under normal conditions the President is endowed with the power to act, and in case of war or other vital emergencies, he is accorded increased power. He makes many proclamations regarding the observance of days set aside to do honor to some worthy cause or individual. Why not honor him? The Congress, Senate, churches, schools, colleges, universities, the radio and press, and other organizations could arrange appropriate programs. Such a plan would no doubt develop in the hearts and minds of our people a far greater respect for our chief executive. George Washington is known as the Father of his Country and we honor him still. History records the main events occuring during the administration of a President. We should not wait to pay tribute until he has gone fom us, but rather let him know during his life that Americans hold him in high esteem.

Differences of opinion exist among men, even when they are members of the same religious or political organizations. This is true in every walk of life. These facts make it impossible for any one individual to decide momentous questions that will be satisfactory to all in a single or collective group. The President, to be such, must have attained a certain degree of success in former undertakings. Otherwise he would never have been selected as the leader of a great political party. He holds an honorable position and at heart is interested in the welfare of the Nation he has been selected to serve. Let the Nation, in turn, honor him by instilling in the hearts of all our people and the nations of the world that the President of the United States is worthy of the honor we have bestowed and that he is entitled to the most profound respect at home and abroad, regardless of political affiliations.

To pay homage or proper respect to the President of our Nation should be a pleasure to all good Americans. Constructive criticism is right and proper but to desecrate the highest office in our land is failing definitely in our patriotic duty as citizens of what we consider the greatest Nation of all. In attempting to keep "our Government house in order" the President needs the help of God and a sympathetic, understanding public. As true American citizens we designate ourselves 100 percent. If we slander and speak disrespectfully of the President of the United States, I am wondering if we are not lowering the patriotic standards we claim to uphold. The high office he holds deserves the respect of every American. In our evaluation of any President of the United States, let us think first before becoming harsh and abusive because someone unfriendly to America may be among those present.

Remember, he is "your President and mine." God bless America!

Record of the First Session of the Eighty-first Congress

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following radio address made by me over the National Broadcasting Co. network, out of Station WBL of Boston, the evening of November 18, 1949:

Ladies and gentlemen, tonight I would like to review quickly my impressions of what people—the voters—think of the record of the first session of the Eighty-first Congress and what it means for 1950.

When the first session of the Eighty-first Congress concluded after a near-record session that lasted nearly 10 months, I addressed the House of Representatives as majority leader and summed up the record of accomplishments.

It was an excellent record. But I would like to give you an idea of what the people in my own district in Massachusetts think of that record and what that means as regards the future. And my district is a representative American district.

Immediately following the close of Congress I came home.

I sought out my friends at home and asked them to tell me candidly what they thought. There were many others who sought me out and told me, candidly, what they thought.

During the same time I have had occasion to talk to many of my colleagues in the House of Representatives and Members of the Senate and I have compared notes with them.

The results of our joint findings are very similar.

The people—and I mean the vast voting public which elects Congressmen to office—feel that the Eighty-first Congress is the best Congress since the emergencies of war took the accent off domestic legislation.

They feel that their Democratic Eighty-first Congress has gone far toward redeeming its 1948 campaign promises. Furthermore, in the instances where the promises have not been fulfilled, a good fight was put up, or a good start made toward fulfillment.

In the field of international relations there was a solid record of achievement. The foreign policy of the Democratic administration was enacted into law. The economic recovery program—the Marshall plan—was extended for another year.

Most voters think this is the single greatest step ever taken by this country in the field of international relations. Almost all the people I talked to—and my colleagues report the same—feel that the democracies of western Europe depend on ECA and unless we continue to help them, Russia will be able to extend her regime of godless communism further toward our shores.

Now I think it is important to realize that people do understand that the ECA alone is not the solution. For that reason they know that the extension of the Reciprocal Trade Act was essential, if the full benefit of our ECA program is to be realized.

I was not surprised to learn, although some of my friends seemed to doubt it, that the voter understood the implications of this important law. The people understand that trade does not work on a one-way street, but has to go both ways. They understand that the only way in which such a balance can be reached is to lower tariff barriers everywhere in the world.

With our production capacity and technical know-how we are bound to be the eventual gainer on the upturn in trade that will result.

To implement our policy, the Eighty-first Congress also approved the North Atlantic Pact and Arms Aid to Europe, which strengthens the defensive position of the western democracies. Thus we have moved to rebuild the European democracies economically and to safeguard them politically and militarily.

My constituents understood these things and approved.

They asked shrewd questions—questions that went to the heart of each subject. They knew what I was talking about and they knew how it affected New England and the Nation.

My people are not a provincial-minded group who fail to see the forest for the trees. On the contrary they understand very well the implications and the necessities and they, if anything, are ahead of the thinking in the Congress.

This is particularly true in the field of domestic legislation.

In Boston we knew by personal experience the terrible problems of the housing shortage. We knew the problems of high rents and insufficient homes.

It was a major issue and the people of my district regard the passage of the long range housing bill and of the extension of the rent-control law as major steps forward in meeting their needs.

They know in my district that slums breed more crime, more disease, and require more State and municipal services paid for out of the tax bill of every citizen than do any other areas.

My constituents and the voters in other Congressmen's districts with whom I have talked knew all about the efforts of the real-estate lobby to stop action in this vital field. If the real-estate lobby had succeeded—well, there's a song title that answers what would happen—There'll Be Some Changes Made.

One of the most important pieces of legislation passed by the Eighty-first Congress was the new Fair Labor Standards Act, which raised the minimum wage of labor from 40 cents an hour to 75 cents an hour. Now it is true that in New England where I come from this affected relatively few workingmen because labor is well organized.

But it is important from a national sense, in that it betters working conditions for labor in general and tends to equalize labor costs in the various sections of the country. Low-wage areas cannot compete with low sweatshop labor costs with the high living standard areas and get away with it.

Now, as I said, the voting public knows why this law is important. They also know that while the minimum wage was raised, its coverage was not expanded as broadly as the President asked. They know why. That'll be important politically in some areas next year.

In New England, too, where the problem of cheap power has become a paramount issue because industry needs great quantities of cheap power to survive, the people were interested in the action taken by the Congress on public power questions.

Unfortunately the matters considered by the Congress did not include power projects for New England. But the principle of public power transmitted over publicly owned transmission lines to the user at the lowest possible price was enunciated by the Eighty-first Congress. In New England this move was applauded by the people—while the power interests gritted their teeth.

But the people wanted to know:

"If cheap public power is good for the Northwest and for the Tennessee Valley why isn't it good for New England?"

They are going to continue to ask that question until something is done. It may be that the voting public will do something itself—in 1950.

Here in New England there are few large farms. But the workingman and the businessman in New England realize full well that the economic fate of the farmer is bound inextricably with his own.

They wanted to know about the new Farm Support legislation and they asked penetrating questions concerning the Brannan Plan. The people wanted to know why it wasn't good to allow farm surpluses to be eaten rather than allowed to rot in storage. They will continue to ask such questions.

As for the actions of the Congress in rectifying the ripper legislation passed by the Republican Eightieth Congress, the people overwhelmingly approve. They know that if a farmer, for instance, is to get his government loan under the law, he must have storage space for his grain. And they approve the legislation which the Democrats passed to give that storage back to the farmer after it had been taken away by the Republicans.

The people heartily favor the bill passed by the Congress which allows the Rural Electrification Administration to loan money for cooperative telephone service in areas where there is no service now. This was a great step forward and the people so regard it.

So far I have discussed the manner in which the people regard the accomplishments of the Eighty-first Congress. They approve of those bills and approve highly. But they are also conscious of the failures.

They want the Taft-Hartley Act repealed. They don't want labor shackled with an unfair law. They want labor allowed to sit at the collective bargaining table as the equal of industry. They don't want government interference to give management an unfair advantage in the collective bargaining act.

They want civil rights legislation passed.

The people know that the Republicans in the Senate, through their cynical repudiation of their own civil-rights plank in the Republican national platform, allowed a southern minority to establish a new rule governing debate in the Senate which places the problem of limiting debate back beyond the 1917 reform.

The Republicans egged the southern Democrats into the filibuster and when the vote finally came to uphold Vice President BARKLEY's key ruling, 23 Republicans—a majority of the Republican membership of the Senate—repudiated their own national stand on the issue to join with the southern Democrats to kill the civil-rights program.

Since fewer than half of the Republicans in the Senate had stood by the platform pledge of their party something had to be done to fix up the record. Under its terms, a minority of only 33 Senators representing perhaps 8 to 10 percent of the Nation's voters can kill any bill it wants to kill. The resolution was passed and the southerners won their victory.

But the Republicans, while they have tried to make a lawyer's record, have not fooled the people. There will be questions asked, and changes made.

Now there are some other phases of the Eighty-first Congress' work in the first session which have been watched with great interest at home. The displaced persons bill for one.

This has passed the House of Representatives. It will be brought up in the Senate early in the next session. I am sure action will be taken promptly to liberalize an unjust law.

And believe me, the people who know who wrote the present unfair law. And they know why it was delayed.

The passage of legislation extending the coverage of the Social Security Act and increasing the benefits paid under the act was also passed by the House and is now up before the Senate. I am sure this will pass with speed as soon as the Congress convenes in January.

This bill is one of the very important parts of the Fair Deal program advanced by President Truman and will bring some 11,000,000 additional persons under the coverage of the social-security law. It will increase benefits in line with advancing costs of living.

Now I have summed up many of the major items passed, defeated, and pending. That is the basic record which the voting people at home in the States are talking about when they see their Congressman or their Senator.

Now let me project this record into the future.

Actually this was a good session of the Congress. But its record was marred by the actions of some of its Members.

Those Members, mostly Republicans, will feel the wrath of their constituents come next year unless they watch their steps.

The recent elections were a good demonstration of the truth of what I say.

The people at home are for the Fair Deal. They know the Fair Deal means the people's deal.

They do not care if the Republicans try to scare them away by screaming "welfare state," "statism," "collectivism."

The people at home only know that for 17 years under Democratic administration, with the exception of 2 years of a Republican-controlled Congress, they received constructive and courageous leadership. They know they have improved their lot immeasureably. They know that labor and the farmer have been able to advance, to take their rightful place as full partners in the economy. They know they got these things as the result of Democratic leadership.

They will not be scared off.

They showed it on November 8, 1948.

And in 1950 they will underscore it once again.

The first session of the Eighty-first Congress has made an outstanding record.

The Eighty-first Congress will make a fine record of accomplishment.

But in 1950 there will be an even stronger Democratic majority for the Eighty-second Congress, and even more will be done.

My people, and the people strongly throughout the Nation, realize that the Democratic Party under the leadership of the immortal Franklin D. Roosevelt, and now under the leadership of our sincere and courageous President, Hon. Harry S. Truman, is dedicated to fighting economic insecurity, and to strengthening the family life of America.

Santa Claus and Politics

EXTENSION OF REMARKS
OF

HON. ANDREW JACOBS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. JACOBS. Mr. Speaker, this year I received a lot of form Christmas cards which said:

A very merry Christmas to you, my Congressman, and you can make it a happy new year for me if you'll help put these packages under my 1950 Christmas tree: Government economy, tax the untaxed, excise tax relief.

I answered all of them with this letter:

I acknowledge receipt of the generous sentiments expressed in your Christmas card. I'm sure you will excuse the delay in responding in view of the impropriety of mixing politics with the spirit of Christmas.

Responding to the political page of your greeting, I will vote to equalize taxes on every commercial enterprise. But I doubt the wisdom of taxing churches, lodges, charitable institutions, labor unions, and chambers of commerce. If you feel differently about the latter be assured I'll give your views my prompt and careful consideration when communicated to me. It will not be necessary to wait until next Christmas and couple your views with the affectionate sentiments with which your heart seems to be filled for me. I will consider a letter written for that purpose without any sentimental overtone.

Further answering your political expressions (which I am sure were merely incidental to your burning desire to wish me a merry Christmas), I am in favor of every economy consistent with our safety, and I also favor repeal of most excise taxes—liquor and tobacco being notable among my exceptions.

However, this repeal may necessitate an increase in income-tax rates during unsettled international affairs. For example, the five economy-minded Republican members of the Foreign Affairs Committee condemned the Secretary of State for first appealing to the conscience of the world, rather than immediately appealing to arms, in his successful efforts to procure the release of Angus Ward from the Chinese Reds. These same folks are demanding a drastically reduced budget. But you don't fight wars with popguns. An appeal to arms could well await failure of peaceful efforts. These folks remind me of a fellow who once stood with his hands in his pockets and told another fellow he'd knock his nose in, then turned his head to spit. When he got up he advised his friends to be ready when offering to fight.

Some of these folks also derisively accuse this administration of playing false Santa Claus. Yet they have induced you to ask me to do just that. I know of no way we can provide free protection for you, your loved ones, and your possessions. I suggest you examine the exhortations of those who demand we first resort to arms in each international incident and, at the same time, demand less taxes.

Many of these folks foster the belief that most of your taxes go for welfare legislation. Hence it might not be amiss to remind you of the figures: Health and welfare services, 6 percent; interest on debt, 13 percent; veterans' affairs, 13 percent; military, 34 percent; and international affairs (bipartisan), 16 percent; and general government, 18 percent; the last being swelled by many incidental relationships to present and past defense.

Those are the facts. But they are never related by those who sneer Santa Claus at this administration, while inducing you to demand that I play Santa Claus by providing for your protection for less than it costs.

I lay no claim to occult powers. Nor do I propose to play the role of a charlatan by pretending I have a magic formula. I conceive it to be my duty to tell you the truth, and the truth is that this is a dangerous world—we are on it and we can't move off of it. The atomic bomb is real, not a fairy tale, and Russia has the bomb. The Indianapolis News said (January 13, 1949): "Whether we like it or not a foreign dictator, Joseph Stalin, is writing the ticket for our national expenditures and taxation for the fiscal year 1950."

I shall effect every economy possible while a Representative; but I refuse to turn my back on the facts and when the people want to be kidded by their Representative, they can get another to do the job.

For example, the Indiana Congressman who talks most about economy voted for the military pay raise bill; arms to Europe and to pay the same pension to a 90-day veteran as to a 4-year veteran. I voted against these measures, but I voted for expenditures I deem necessary and honest. Furthermore, I tell the people how I voted and why. Which type of Representative do you prefer?

Would you write me as your Representative in Congress your own views on:

1. Where would you cut expenditures and how much in each instance? (NOTE.—This question is not facetious. I will carefully consider your views.)

2. The Republican State committee recently asserted that expenditures should be cut 20 percent each year. Do you believe this can be done, and if so where, in detail?

3. Would you approve of this administration advocating strengthening of the United Nations to empower it to decide international disputes (even to the point of bindingly deciding against the United States) and to furnish the United Nations the military power to enforce such decisions (even against the United States)?

4. Would you condemn or approve this administration if it took a softer approach toward Russia in its efforts to find a solution to the cold war?

5. Before settlement of the cold war would you approve withdrawal of our armed forces from any, and if so, what parts of the world?

6. Do you disapprove of the bipartisan aid to western Europe program and are you acquainted with the end objectives of that program?

7. Would you agree with me that the Federal Government should adopt Indiana's plan of pay as you go even when expenditures are enormous due to war or threats thereof?

8. Finally, you must realize that the industrial age has thrust a tremendous problem upon us; i. e., business must be big (how big is a question) to produce what we need. Hence corporations (combined financing by many) are necessary. Any one of 50 corporations own assets in double the amount of the assessed valuation of all property found in any one of 13 States. Seven corporations each own assets exceeding the assessed valuation of all property found in Indiana. This wealth creates power, and many of these corporations employ more workers than the population of some States. Therefore, we permit labor to organize to create counter power to protect workers. These combinations present a new problem to society; that is, how to control these enormous concentrations of power without breaking down the very entities necessary to produce. I will read and study any proposal made to solve this problem. Name-calling will not do it, neither will blind criticism. It requires thinking and some give and take. Your help in thinking out this problem will be deeply appreciated.

Senator CAPEHART lambasted the New Deal for years. Then when the issue was put squarely to him in debate he admitted he wouldn't repeal any of it. So he isn't a Santa Claus either—he has no magic free solution to the enormous problems of the day. Neither do I, but neither do I pretend that I do. If you have, I would be pleased to have your suggestions.

In the meantime, I have played Santa Claus by putting one package under your Christmas tree. In that package is this pledge: "I will tell you the truth and not practice demagoguery by pretending there is a Santa Claus who can give you what you want for nothing."

I wish you and yours a happy and prosperous year and many more to come and I thank you for the kind sentiments you expressed.

Resolution of North Dakota American Legion

EXTENSION OF REMARKS
OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. LEMKE. Mr. Speaker, in my extension I shall include a resolution passed by the American Legion, Department of North Dakota, at Fargo, N. Dak. In reading this resolution we realize that it is the same old story told over and over again in a different way and on a different occasion.

When the war drums begin to beat then nothing is too good for the boys. They are lauded and assured that their patriotism will be appreciated. We assure them that if disabled they will be taken care of. We assure them that their dependents will be taken care of. We assure them that when they return they will be put as near as possible in the same position they would have been in if they had not been called to serve their country.

But when the war drums cease to beat we gradually lose interest in the veterans. We become more niggardly. We appropriate billions to foreign sponging governments. Governments that started the wars that our boys finished. We give these governments blank checks to do as they please. Yet we should never forget that we owe our

first obligation to the veterans who won the wars that these nations started.

Here is the resolution:

Whereas certain uninformed individuals and organizations have recently seen fit to again flood this country, as they did following World War I, with erroneous propaganda concerning the cost of the veterans' rehabilitation program established by the Congress of the United States; and

Whereas such activity is designed to bluff the American people into believing that this Nation's veterans, particularly the wounded and disabled who are still fighting their war from hospital and sick beds, are receiving benefits to which they are not justly entitled; and

Whereas the cost of rehabilitating this Nation's veterans, who served their country in time of need, must be considered as part of the actual expense of war as was the cost of bombs, planes, and ships during armed hostilities; and

Whereas the Hoover Commission Report, which suggests the elimination of the Veterans' Administration as the agency responsible for the administration of veterans laws, was written without seeking the advice and counsel of those who have made the care of disabled veterans their lifework; and

Whereas the adoption of the Hoover Commission Report would place the care of disabled veterans under several Government agencies wholly incapable of and absolutely unwilling to appreciate the many problems of the veterans of all our wars and their dependents; and

Whereas the Hoover suggested procedure was tested after World War I and was found wanting because of the red tape and confusion it caused and the unnecessary expense it placed upon the taxpayers of our country due to the many Government agencies which attempted the handling of veterans' affairs; and

Whereas Congress eliminated such confusion by establishing the Veterans Bureau, now known as the Veterans' Administration: Now, therefore, be it

Resolved by the annual midwinter conference of the American Legion, Department of North Dakota, meeting at Fargo, N. Dak., December 12 and 13, 1949, That the American Legion vigorously oppose that portion of the Hoover Commission Report pertaining to veterans which advocates the elimination of the Veterans' Administration hospital program and the turning over of that program to social welfare agencies, and that the American Legion take immediate steps necessary to present the true picture of veterans' activities in correction of the insidious misinformation now being circulated by antiveteran individuals and organizations.

Justice for Poland

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following splendid address recently made over the radio by Hon. Paul A. Dever, Governor of the Commonwealth of Massachusetts:

Ladies and gentlemen of the radio audience, I consider it a genuine privilege to be invited to address you under the sponsorship of the Polish-American Congress on the subject Justice for Poland.

It is especially appropriate that the Governor of Massachusetts should appear on this program. For here in the commonwealth we have a great many citizens of whom we are justly proud and who trace their ancestry to that long-suffering nation against which crimes of unspeakable enormity have been perpetrated in our own time.

This valiant country which lies eastward of Germany and westward of Russia has undoubtedly been the victim of the most savage and sanguinary warfare; the most hypocritical and deceitful diplomacy; the most harsh and despotic tyrannies; in short—the most outrageous injustice known to the people of our generation.

Suffering is not novel in the experience of Poland. Long prior to our time it has suffered aggression, oppression and cruelty at the hands of the tyrannical regimes which governed its neighbors. More than once in history its fair and fertile lands and its architecturally imposing cities have been ravished by conquering hordes who came in overwhelming numbers and irresistible combinations. Not for the first time has Poland had her birthright stolen by the fraudulent transactions of enemies who, behind her back and without her consent, cynically disposed of her possessions at the tables of diplomacy.

Yes, many are the injustices which have been worked upon this ancient nation to whom European civilization owes its very existence; whose history reaches back as far, if not further, than any other country in the world; who has made to the culture of mankind contributions as great as those made by any people on the face of the earth. Yet it remained for our time and a few months over 10 years ago for the most barbarous series of injustices of all to have been visited upon Poland.

It has been said, "Happy is the nation that has no history." Poland can boast of a magnificent history. Yet, just as there is no mountain without valley, so from time to time Poland has suffered occasional reverses as it marched triumphantly forward to its destiny of greatness and glory. Conquests, partitions and enemy occupations have from time to time marred her long and illustrious record.

Today, as a result of the infamy which commenced in August 1939, this great nation appears for the moment to have gone into eclipse. She has been violated and outraged in a manner that transcends the darkest days of all her past. Today she stands before the nations of the earth, a mute but eloquent accuser. She has been wronged, ravished and betrayed as she has never been wronged, ravished or betrayed before. In this her moment of sorrow and travail, her condition cries out for the compassion of the world. It should be a burden on the conscience of civilization.

Following World War I, Poland enjoyed a new and joyous rebirth after a protracted period during which she had lain dormant under the control of the despotic regimes which had partitioned her at the infamous Congress of Vienna.

During the War of 1914–18, Russia had undergone humiliating defeat at the hands of Germany and was embroiled in the throes of internal revolution when Poland reemerged in history. The Austrian-Hungarian empire had been dismembered and its former regime was deposed and banished as Poland rose once again. The German Empire which had imposed upon czarist Russia an overwhelming defeat and a brutal peace had in turn succumbed to the victorious allies, and was crushed as Poland was reborn. Once again, Poland had taken up her birthright. Once again she had recovered her liberty and independence. At that happy moment, Poland was proving to the world that what had seemed to have died had only been sleeping. With remarkable energy she reorganized her government and her economy.

Under the wise and prudent direction of the brilliant Paderewski and the formidable Pilsudski she rapidly became a power in the councils of Europe. In this period of her reviving strength she might easily have crushed the then puny tyranny which had seized the reins of power in Russia, but Poland chose to remain in peace, in dignity, and on terms of tolerance with her erstwhile enemies who then lay helpless in defeat, in revolution, in anarchy, and in chaos. Poland continued to pursue the paths of peace while her gigantic enemies gradually restored themselves so that within a generation they once again became threats to the peace of the world. In 1932, Poland in all good faith executed a nonaggression pact with Russia. Later she executed one with Germany. But in 1939, Nazi Germany without a shadow of provocation or a scintilla of justification, violated its solemn treaty obligations and with all the resources at its command invaded Poland.

Within a month, as the Poles fought gallantly, desperately, and brilliantly against the Nazi onslaught facing them from the west, the archscoundrels of Soviet Russia struck them from the rear and inflicted the death blow on the Polish nation. The Polish armies scattered. Some were enslaved in the concentration camps of Nazi Germany, some were enthralled in the equally atrocious internment hells of Communist Russia, but many escaped to fight valiantly by the sides of their allies who had brought help too little and too late. A peace-loving nation and an honorable people had stood up against overwhelming odds and against invasions hurled against them unexpectedly and in violation of solemn covenants to make no aggressions against Poland's territory or sovereignty. As she faced our faithless enemy she was stabbed in the back by an equally unfaithful neighbor.

Yet perhaps the worst was to come. At the very moment when exiled Poles were fighting with their allies on every battlefront of the world, their country was betrayed by those who had professed to be her friends.

As is ever the fashion of thieves, the Nazis and Communists fell out and Hitler's armies invaded Russia. After many dark days of war, after much treasure had been drained and millions of lives had been sacrificed, the tide of battle changed and the Nazi monster was being brought to heel in the west. Even the Red army, which had been repeatedly pushed back by the German forces, was beginning to enjoy some measure of success, and the Germans, under increased pressure from the allies, gradually fell back until ultimately they were defending the city of Warsaw. At that moment a Russian army under command of the notorious Marshal Rokosovsky was standing at the gates. Word was given to the courageous Polish people within to take up arms and they would shortly receive assistance from the Russians who were besieging from without. Bravely they arose to the occasion, but the Red army cynically betrayed them and stood unmoving beyond the gates while the Nazi overlords of the city slaughtered the people who, without adequate arms, had attempted to shake off the alien yoke.

Today a Red regime rules in Warsaw. How false, how foreign, and how anti-Polish is this regime. We need no further proof than the fact that the command of the Polish Army has been entrusted to the brutal Rokosovsky who connived at the slaughter of the people of the city of Warsaw.

For ten long years Poland has suffered the greatest infamy, the greatest outrages, and the greatest betrayals of all her history. The Polish people today are under the domination of alien tyranny. The entire history of the world records few despotisms as bad and none worse. But Poland has shaken off tyr-

anny before and Poland will do it again. The gallant nation which has fought so many successive wars in times past under the ringing battle cry, "For your freedom and ours," will, I trust, soon again achieve the independence, the liberty, and the peace to which she is entitled. May the nations of the earth soon recognize their guilt, their complicity, or at least their unjustifiable indifference, and may they see to it that Poland receives the justice to which she is entitled.

General Pick, Chief of Corps of Engineers, Says "United States Takes Water for Granted While It Runs"

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. LARCADE. Mr. Speaker, the Corps of Engineers of the United States Army has a long and honorable and successful record in protecting this country against floods, have made our rivers and streams navigable, have made possible the establishment of great ports, have builded great dams and reservoirs to control and store water to prevent devastating floods and for irrigation and to supply our cities with pure water for drinking and other commercial purposes; they keep the lanes of commerce open by maintaining the channels of our rivers and ports, protect our great recreation centers against beach erosion, build harbors and places where boats take refuge, and in disasters are the first on the ground to give relief and protection with their equipment and skill. All of this in peacetime.

In war, the Corps of Engineers are the first to be called upon to build camps, airfields, roads, bridges, ports of embarkation for men and for the transport of matériels. They prepare the landing beaches for landings, and are always necessary in the operations of our Army.

Mr. Speaker, over a long period of years the Corps of Engineers has had distinguished men at the head of its organization as the Chief of Engineers, and all of them have left their imprint upon the country by their great works.

At this time we are indeed fortunate to have as the Chief of Engineers one of the most distinguished and learned and experienced engineers that the Corps of Engineers has ever had, Maj. Gen. Lewis A. Pick.

I do not have to tell you of his record and his accomplishments as his activities are too well known to the people of the United States.

During World War II General Pick was assigned the most difficult tasks that any engineer had ever undertaken, and all of his missions were accomplished.

Last year when the Midwest was in the throes of a blizzard, one of the worst in the history of this country, the President sent General Pick to take personal charge of the operations to save the lives of the people and save thousands of head of livestock from destruction. This he did without much acclaim.

Looking back on the disasters in our country, our people in Louisiana and the entire Mississippi River Valley were reassured and glad to have General Pick in charge of the fight in the greatest of all floods in the Mississippi River Valley, the flood of 1927, when General Pick was a colonel in charge of the New Orleans, La., district engineer's office where he made a brilliant fight with the odds against him.

It has been my pleasure within the last few months to listen to several magnificent speeches given by General Pick before a number of waterway organizations, and if we will follow his advice and recommendations, there is no question in my mind that the country will be more securely protected from floods; that our resources will be conserved, and that most of our water and waterway problems will be solved.

In this connection, Mr. Speaker, I feel that, in view of the problem which we recently had in many sections of the United States in regard to water shortages caused by drought that it would be of interest to publish a statement including the opinion of General Pick on this subject given in an interview with Mr. Francis P. Douglas, in the Washington Star of December 8, 1949, as follows:

UNITED STATES TAKES WATER FOR GRANTED WHILE IT RUNS—NATION CAN'T AFFORD TO LET SURPLUSES DRAIN AWAY—ENGINEER CHIEF SAYS NEW YORK CRISIS WILL BE REPEATED

(By Francis P. Douglas)

Our future as a Nation depends on our water supply.

This is the opinion of Maj. Gen. Lewis A. Pick, Chief of Army Engineers and one of the Nation's foremost experts on water conservation on a grand scale.

He regards water as "the biggest story in the United States." To him the current shortage of water in New York City is an example of crises that will be repeated elsewhere in the future.

According to General Pick, if the United States is going to retain its world leadership it must learn to solve its water problems—husbanding the supply, using it intelligently and effectively. It cannot let surpluses drain off into the oceans in spring floods when it is needed later in the year for parched lands and to fill the streams.

He tells this "biggest story" briefly this way:

"Because we are a great industrial Nation and a great agricultural Nation we find ourselves the leading Nation of the world. If we are to continue to be the leading Nation we must continue to build as an industrial Nation and as an agricultural Nation."

WATER PROBLEM NOT NEW

"We now have 150,000,000 people. It is expected that in another century, we will have twice this number, 300,000,000.

"We have to conserve the land and water to feed this population. We have to have water for industry, which uses tremendous amounts, and for our rivers over which we carry supplies to industry. We have the best harbors in the world and 28,000 miles of inland waterways.

"From the industrial standpoint we are using up some of our basic materials. One is iron ore. A search is being made around the world for sources of iron. With cheap transportation we can afford to go abroad for our industrial raw materials and bring them here to be processed.

"We can afford to do that if we can provide meat and bread to feed our people. But we cannot afford it if we have to bring both raw materials and food from abroad.

"The only thing that will stop our development is that we fail to make proper use of our water."

General Pick declined to make comparisons with other nations. But in the light of what he said, the experience of the British Isles obviously comes to mind. Britain imports both raw materials and food, she has been outstripped in competition and there is discussion whether part of her population should move to other British lands. On the other hand, there is Russia, with great supplies of raw materials, with the possibility of producing abundant food, but so far with a deficiency in industrial experience and skills.

LOS ANGELES SITUATION

The water problem has attracted attention by the experience of New York, where the city's shortage has been dramatized by the whiskers on the faces of those observing no-shaving Fridays to conserve water. General Pick lays the New York shortage to last summer's dry weather plus the steadily increasing use of the supply.

Elsewhere, the water problems is older and more acute. The growth of Los Angeles, for example, is held to be definitely limited unless the city can obtain more water. It now brings water 350 miles from the Colorado River. So acute is the problem that the California Legislature was asked to appropriate $1,000,000 for ideas how to obtain drinkable water from the sea at reasonable cost.

There is also a supply of water underground. But in places along the California coast so much was pumped out that sea water took the place of the fresh water under ground and the wells were salted. This has occurred in Florida, too, and even in Brooklyn and adjacent areas of Long Island.

FARMS SOP IT UP

Higher farm prices led to more acres in cultivation and to the need for more water. In Arizona so much water was pumped from underground that the water tables subsided and in some places the supply of water has failed to meet the demand. Texas has similar problems, both for agriculture and for its growing cities. Parts of Illinois and Ohio have encountered shortages in their underground supply.

"Washington has an ample water supply," said General Pick, giving reassurance to this area. "But," he warned, "it would be used up quickly if we would place large industries along our streams."

General Pick asserted that we have had enough experience now to know that we cannot take from underground amounts of water comparable to the surface water that is used. Tapping the underground supply is only a temporary expedient, he said.

INDUSTRY'S USES

He gave the daily average use of water per capita in this country as 200 gallons. Since it is estimated that the domestic use runs at 100 gallons a day or less, it is apparent that industry and irrigation takes a half or even more of the supply.

To indicate the tremendous quantities of water industry uses General Pick gave these figures: It takes 10 gallons of water to produce 1 gallon of gasoline; 33 gallons of water for 1 pound of steel (steel is usually figured in tons, which means 66,000 gallons of water per ton of steel); 100 gallons of water for 1 pound of synthetic rubber.

"If we are to continue to expand our industry," he said, "we will have to decentralize our industrial areas. Defense is not necessarily a consideration in this. The main reason is water.

"Heavy industry should be along the larger streams not only where it can get water

transportation b t—and more important—where it can get fresh water. That is a must."

A new drain on the water resources, the general pointed out, is the comparatively new air-conditioning industry. He said we must look forward to the time when most stores, restaurants, public buildings, and theaters will be cooled during hot weather. And it takes a tremendous amount of water.

Much of the water used by industry for cooling can be used again. But some water so used is contaminated and must be treated before re-use. General Pick said that steel plants of the Youngstown area along the Mahoning River all use the river water and that the temperature of the stream below the city gets as high as 140°.

He cited an excellent example of industrial location the Standard Oil refinery on the Mississippi at Baton Rouge, La. The plant uses an enormous amount of fresh water, but there is plenty in the river for use when the mud is taken out. Deep-draft vessels can come directly to the refinery docks. Both rail and highway transportation are excellent.

NECESSARY STEPS

Some of the Gulf refineries are using brackish water for cooling, General Pick said. The resulting corrosion is a major problem.

How is the water problem to be met?

General Pick said we have to conserve the soil, not only to produce food and lumber but to save water as well. And we have to control the run-off.

Terracing and contour plowing prevent the erosion of the top soil. This saves fertility for food production, helps prevent the silting of reservoirs and allows more water to sink into the ground.

Reforestation not only will provide a future supply of lumber but it also will save the soil of the cut-over areas and slows the run-off of water.

There remains the major engineering problem of saving the water in the river basins and not permitting it to tear its way through the rich bottom lands in devastating spring floods and to pour itself unused into the sea.

CONGRESS COOPERATES

"We are pouring millions of gallons of water into the sea, uncontrolled and uncontrollable until we impound it," the general said.

He believes that this problem is not generally appreciated. It means saving water in every stream where it can be stored up. When that is done there will be water behind the dams for the use of an expanding industry, for electric power for industry, for irrigating the farms which must produce the food supply for a growing population and to maintain the levels in the river channels during the dry months so that the heavy freight of industry may be carried.

Congress has recognized the need of this water-conservation program. For the current fiscal year it has appropriated $633,000,000 for the Army engineers' rivers and harbors and flood-control work.

The engineers have water-conservation programs in the basins of practically all the major streams. The huge job on the upper Missouri River and its feeders, for example, will mean the construction of 110 dams.

SILTING PROBLEM

The water to be impounded is measured in acre-feet—that is, the amount of water covering an acre to a depth of 1 foot. The Garrison Dam in North Dakota will impound 23,000,000 acre-feet, the Oahe Dam at Pierre, S. Dak., 21,800,000, and the dam at Fort Randall, S. Dak., 6,800,000.

General Pick faces the problem of silting with confidence. He said the reservoirs are designed to take care of silt during the period the projects pay for themselves. Meanwhile, methods and machinery for moving earth have improved enormously. He is convinced that when the silt encroaches on the use of the reservoirs, resourceful engineers will develop a method of solving the problem and measures to prevent soil erosion will steadily reduce the silt content.

General Pick is perhaps the most widely known officer in the Army engineers. He is 59, a native of Brookneal, Va., and a graduate of the Virginia Polytechnic Institute in 1914. He entered the Army as a Reserve lieutenant in World War I and went into the Regular Army in 1920.

BUILT "PICK'S PIKE"

In World War II he directed the building of the Ledo Road section of the Burma Road to connect Burma and China. In 15 months 45,000 Americans and 42,000 natives constructed 483 miles of road through jungles and over mountains, built 155 bridges and laid 1,800 miles of pipe line. The workers referred to it facetiously and fondly as "Pick's Pike" and the Nation considered it to be one of the greatest engineering feats in Army history.

Befor that and in the 18 months after Pearl Harbor, General Pick directed 93,000 construction workers and the spending of $1,500,000,000 in building airfields, cantonments, hospitals, airplane, and munitions plants and relocation centers for the Japanese moved from the Pacific coast.

In that same period he found time to direct the fight against the Missouri River flood of the spring of 1943 and to draw up the Pick plan, a comprehensive program for over-all control and utilization of the full water resources of the Missouri.

The Army engineers and the Reclamation Bureau failed to agree on the Missouri River plan, but when General Pick was in the China-Burma-India war theater they reached a compromise with the Pick-Sloan plan. It became law in December 1944 and General Pick returned in the following November to direct its executive execution.

Last January President Truman named General Pick as Chief of the Engineer Corps to succeed Lt. Gen. Raymond A. Wheeler. It happened that at that time General Pick was tied up with another job, operation snowbound, directing the Army's relief of the areas of the West which were suffering their worst winter of 60 years.

He is concerned with no little plans.

Congressmen's Voting Records and Income

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. MANSFIELD. Mr. Speaker, today I am introducing a bill to provide that the Legislative Reference Service shall compile and make available the voting record of Members of Congress, and make available information relative to the income of Members of the House.

I feel that the wide dissemination of a Congressman's voting record should be made so that the people will know where he stands on each and every issue that is brought before the Congress for its consideration and disposal. Mr. Speaker, I feel that to provide more democracy in the operations of the United States House of Representatives, and to more effectively discharge its obligations, Members should file with the Clerk of the House a report containing full and complete statements as to, one, the amount and sources of all income received by such Member during the preceding year, including all fees, salaries, income from trusts or estates and dividends received or credited to his account, and, if such income is derived from a law firm or partnership, the names of the clients of such firm or partnership from whom fees were received; and, two, all dealings in securities or commodities by such Member, or by any person acting on behalf of, or pursuant to the direction of, such Member during the preceding year.

Under my measure the Clerk of the House will be directed to compile and to publish within 3 weeks after the close of the present session of Congress a tabulation of the voting record of its Members on all roll-call votes, together with brief descriptions of the issues voted upon. For the purpose of easy readability and quick reference, each Member's votes shall be gathered in one place. The Superintendent of Documents shall sell copies at cost, and shall print sufficient copies so that a supply is on hand at all times. It is impossible today for any voter to get such information from the Congress without authorization of the Member whose voting record is sought.

It is my hope that the Congress will see fit to consider this legislation and report it favorable at the earliest opportunity.

Socialism, Defined and Subversive

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Friday, January 6, 1950

Mr. PLUMLEY. Mr. Speaker, under leave heretofore granted, I am submitting the following remarks I made to my friends of the Associated Industries of Vermont, last fall, at Woodstock, Vt.:

Mr. Toastmaster, shortly before Congress adjourned I told some of my friends that in my judgment Aaron Burr was indicted for treason for doing less in an attempt to set up an empire within this democratic republic than some of those of today were contemplating in an effort to establish little TVA monarchies all over the United States. I am still of that opinion. Their efforts are purely socialistic as socialism is defined by economists and lexicographers. Their attempts follow directly and specifically the theory of civil polity which aims at the public collective ownership, management, and control of land, water, and capital, and sets the pattern for the public collective management of all industries. They are an opening wedge which might and, if experience of other states and countries is a guide, surely would result in the establishment of a socialistic state, called welfare.

Inherent in the proposition to establish these empires within the state is the philosophy which holds that the modern social and economic conditions make for a Socialist order and which favors the principle of such an order as against the prevailing social sys-

tem. It is a threat to free enterprise as well as destructive of individualism. I am opposed to it as a matter of principle.

I am opposed to their philosophy because of what its adoption similarly as a policy has done world-wide to those who have sold their birthright for a mess of pottage.

Not so long ago Norman Thomas, perennial socialistic candidate for President, said, and it was in 1944. I quote: "The TVA has exemplified what Socialists may and can do and the technique used in the process."

And Carl D. Thompson, guiding spirit of the Public Ownership League of America, founded in 1914, a Socialist national committeeman in 1905; candidate for the nomination for President on the Socialist ticket in 1908; official campaign manager for the National Socialist ticket in 1916, manager of the information bureau of that party, issued a leaflet which contained this:

"The Socialists * * * will control State legislatures and finally the United States Congress and the Supreme Court * * * and finally the Nation will take over one after the other of the public utilities, mines, railroads, interurban electric lines, power plants, telegraph and telephone systems, waterways and forests."

In 1923, Thompson published a map showing his proposed superpower system. This was 10 years before the passage of the TVA Act by Congress, with its misleading preamble which never once mentioned power. In 1937—after the passage of the TVA bill—Thompson again published this same map in the Socialist Public Ownership magazine, with the following headlines:

"Our Dreams Come True."

"Our Plan for a Public Superpower System for the United States Outlined and Published in 1923 Is Slowly but Surely Being Realized."

The article itself, said this:

"Step by step this plan * * * is being * * * realized * * *. The Tennessee Valley has become an outstanding reality * * * Boulder Dam has been finished * * *. The Bonneville power system * * * is nearing completion * * * Grand Coulee is well on the way * * *. In the map * * * one can see the extent to which our dream of 1922–25 has already taken form."

However, those who are really carrying the torch for authorities are not those who developed the TVA. They are simply using the TVA as a smoke screen for their real intentions, which are:

The bringing of some type of national scialism to the United States. They are the Socialists who have been working behind the scenes in America for many years, and have seized upon authorities for river basins as the great step in their plans for national socialism.

My opposition to the TVA is of very long standing, at least 17 years. The reasons for it have been so often stated over the years I see nothing to be gained by repetition, so far as justification is involved. However, I will briefly state a few of the many reasons why I am opposed to the TVA, to the establishment of any similar authority in New England, as well as to the creation of a Vermont power authority. All three ideologies stem from the same school of economies and politics (meaning science of government). Each and all involve the destruction, ultimately, of our form of government. Vermonters should understand that a very determined effort is being made openly and sub rosa and has been made for some time by an easily definable group to socialize Vermont. This group follows the teachings of Norman Thomas and both privately and publicly endorse the socialistic program which has ruined England, and for that matter every country which has followed the fallacies of the have-everything-for-nothing theories on which socialism rests. Vermonters should not be misled by the very competent methods of approach of this group who support the vagaries of the welfare state, in ultimatum, which proposes to lay the foundation of a government program which will enable them to live off the workers from the womb to the tomb.

Upon returning from a recent trip to the TVA area some who were mesmerized by the magnitude of the project came back to sing its glories. They did not tell you, did they, that of all the cities of the world Chattanooga has the highest tax rate of all and every one of the cities on this continent. They did not tell you that the inhabitants of Chattanooga live under the cloud of possible destruction by the flood waters of the Tennessee, did they? They did not tell you that nowhere on the continent are such slums to be found as presently exist in the TVA area.

Poverty in the TVA region is caused by the high tax rates and low wages concerning which the pro-TVA visitors failed to speak. They do not tell you that the TVA area is the land of displaced persons, nobody knows how many; but 14,000 families were moved and over 30,000 different tracts of land were preempted.

Half a million acres of fertile land which once produced $27,000,000 worth of crops annually, at prewar prices were taken, flooded, and are under water today.

Did these opponents of progress and the development of more power at the Wilder Dam tell you about this? They did not. They did not tell you that at least 75,000 people were actually forced to leave their homes, farms, and businesses to make way for the taming of the Tennessee.

There was hell to pay on Tennessee when all this happened. There would be worse than that to pay in Vermont where we sing the slogan of "Not 1 acre of fertile land shall be flooded to produce power," when and after hundreds of acres are already to be flooded by agreement of parties and by the beavers.

The truth is the beavers have flooded more fertile land than all the land owned by the objectors and opponents of progress in Orange County, Vt.

It nevertheless is true that when good soil and farm homes are destroyed the loss should be compensated for in dollars so far as possible.

Where are the taxes coming from formerly paid by landowners in the flooded areas? They just don't come, that's all, and are passed on to the taxpayers living elsewhere.

They did not tell you that despite all they can say TVA is primarily a power show, though the development of power was hardly an item in the original plan as presented to Congress. I know because I was on the Military Affairs Committee as far back as 1934.

Did they visit the slums in Knoxville? You should see them, the worst in the world, next to ———. Do they tell you that the soil conservation program is frozen out by TVA? So Secretary Brannan told Congress or he said that the soil conservation program was operative as to only 5 percent of the farm lands in the TVA area.

Did these TVA zealots tell you that the rural electrification in Tennessee is the fourth worst in the country because the TVA rates are so low and the taxes too high? Did they tell you that the bonded debt of Knoxville is over $18,000,000 and its tax rate over 45 mills?

Did they tell you that from 60 to 70 percent of the farmers are unable to get any of the TVA products and are in fact denied the fertilizers they need? It is so. The TVA area has suffered from lack of solid nitrates perhaps more than any other section in the United States.

If state socialism is what you want that's what you get under TVA. It will be what you will get under a New England Valley Authority, and then some. No man in the Tennessee Valley from constable to United States Senator dares run unless he is first and foremost and always for TVA.

The socialistic implications of a New England Authority are appalling. The proposal is a definite threat to local self-government.

And by the way did these hypnotized visitors at the shrine of Lilienthal tell you that TVA's "personnel policy gives no protection to workers. Its fertilizer program is not well balanced, is susceptible to favoritism. Its power policy, without checks of any kind, is wide open to criticism. Its bookkeeping system, its arbitrary allocation of costs do not follow standard practice and discriminate against other public power agencies. Its treatment of land owners, competitive private enterprise and other Federal Agencies has been high-handed and capricious. TVA has too much power over human beings, their lives and fortunes and independence."

The truth is and it is acknowledged to be true, the TVA has cost too much, almost a billion dollars in tax funds, none of which has been or will ever be returned to the United States Treasury.

It has cost too much in terms of power capacity, for the benefits so far returned or possible to provide. It has cost too much in terms of rich agricultural land permanently flooded, some 500,000 acres, half of it good bottom land.

It has cost too much in the priceless coin of regional and local autonomy. It is an empire, a dictatorship, set up within a democracy. It is completely socialistic. You cannot afford to give an agency of government so much power over water and land and hydroelectric plants, and impose that authority upon a region. The people pay for it no matter how benevolent the purpose to establish a welfare state. It is time to stop the crowd which follows the flag on which is emblazoned the slogan "This is a good country to live in—so long as we can live off it."

Any such set-up would be simply obnoxious to the independent people of Vermont.

It is passing strange as I see it that hard-headed, thrifty Vermonters should for an instant fall for such an appeal to their selfishness and possible desire to get something for nothing. I doubt that there are very many who will, yet these socialistic-inclined TVAers, country-wide "do gooders," have an insatiable lust for power (not electric). They want the power to fix prices, to fix wages, to develop and to control electric energy; the authority to distribute and to ration it, and the authority to put Government into all kinds of business everywhere. Senator TAFT recently said that a farm plan involving complete power to impose production controls on farmers who make it possible for the Government to tell the farmers how many acres of wheat, corn, and soybeans they may raise; how many hogs they can sell; how many beef cattle they can feed, and dairy cattle they can handle, and how many chickens they can keep.

These welfare-state advocates want the Government to guarantee every man a job, but it can only do that if given power to tell every man what job he shall take, and at what wages. These proposals, if carried through, would give complete control of industry, commerce, and labor, including the repeal of the Taft-Hartley law, the socialization of medicine, the other usurpations of the privileges of the individual, the other free service to those who are not entitled to them, and "we shall have," said Senator TAFT, "almost a duplicate of the labor-socialist regime in England today."

I am against such a socialistic program and the time to kill it is now. I agree with John T. Flynn that among other aspects of the TVA, which is to be used as a pattern

for all authorities, the one which should interest us most and startle us to a recognition of where we stand, is found in the fact that TVA has operated and still operates as a provisional Government agency of a regional province.

It has operated as a Federal corporation under a charter which has enabled it to do an incredible number of things and to escape Government scrutiny. The Federal charter is a comparatively new device to enable the Federal Government to expand its powers immensely. Mr. Lilienthal, in his book "TVA—Democracy on the March," calls attention to the vast growth of Federal power. It has become so great that, he says, it cannot be wisely administered from Washington. But the power must not go back to the governors, mayors, legislatures and councils elected by the people. It must go to great regional areas administered by directors appointed by the President, to a corporation cunningly devised to accumulate power and to elude congressional authority. We will see the country split into a few great regional provinces run by corporate provincial governors. This is what Mr. Lilienthal calls "democracy on the march." I think it is democracy in retreat, a return to the European system of centrally controlled provincial governors. With TVA as a beginning the advocates of regionalism are planning under the guise of flood, navigation and forestry control and other excuses to blanket America with this new type of government which represents a complete revolution in our political system.

This attempt to establish such provinces as the TVA all over this land is not just a local issue. The basic issue involved is as important from the standpoint of what's going to happen to people as if the question were on a vote to socialize physician's services (the same group which is back of a valley authority, and public power leans largely to socialized medicine); to nationalize the steel industry, the coal mines (to follow England into the ruin which confronts her), the oil wells, the railroads, telegraph and telephone lines, and radio and television and what have you. The issue confronts and merits the careful consideration of every citizen. Let's look at the record and talk figures for a minute or two.

TVA is the outstanding example of Federal power in the country today. It is urged by some as the pattern for all future Federal power developments. In 1947 the TVA and municipals and cooperatives paid approximately 5.4 percent of the total revenues in taxes and tax equivalents. This compares with 19.8 percent of total revenues paid in taxes by all electric companies in the United States. This 5.4 percent of TVA revenues paid in taxes or tax equivalents, including taxes paid by municipals and cooperatives reselling TVA power, compares with 16.1 percent in Arizona, 17.1 percent in Georgia, 19.5 percent in Oklahoma, 19.4 percent in South Carolina, 27.5 percent in Louisiana, 17.2 percent in Arkansas, 15.2 percent in Virginia, 12.3 percent in Michigan, 17.1 percent in Oregon, and 17.7 percent in Kansas (based on figures of a representative company in the State).

Taxes paid by an electric company are a cost of production, and in the final analysis they are paid by consumers of electricity. Consequently it is people who are being unfairly treated; it is business and heads of families who are being discriminated against, and this discrimination will continue either until the power industry is nationalized or until public power is made to pay full costs, including its rightful contribution to the cost of government.

Then there is in addition the question of interest. Interest-free money for public-power projects is a tremendous force leading to nationalization, for a basic economic fact of the electric utility industry is the proportionately large amounts of capital required, and therefore interest and dividend payments required per dollar of revenue. There are many, however, who do not regard interest as a cost that should be paid by Federal power projects, even though the United States taxpayer is paying in excess of $5,000,000,000 a year to the collectors of internal revenue so that the interest on the public debt can be promptly met.

TVA pays virtually no interest. TVA's annual 1948 report shows that it paid $558,637 interest in 1948 or an investment in power in excess of $400,000,000. At 2 percent—the approximate cost of money to the Federal Government—this item to cover its costs should have been about $8,000,000. With regard to interest the TVA annual report points out that "Funds for construction and operation have been obtained from congressional appropriations, requiring no return of interest. * * * No interest during construction is included in the costs of fixed assets, except for a relatively minor amount pertaining to contested condemnation awards."

If TVA paid full taxes and interest, its expenses would far exceed revenues and its accounting statements would reveal a staggering deficit. No degree of operating efficiency on the part of the full tax-paying electric companies can overcome such lavish subsidies.

We should not forget that free private enterprise as a basic principle of the American way of life is not something that belongs to the businessman, the industrialist, and the shopkeeper, or any special interest. Freedom of the press, for example, is not a concept that is the property of the newspaper publisher or the owner of the radio station. Freedom of the press, like free private enterprise, belongs to the people. Frequently we lose sight of this fact. Business has been known to lose sight of it, but when it has, the people have been quick to reestablish their claim and to make certain that it was made to operate to their advantage and not against them. Government, too, has been known to lose sight of the fact, but when it has, seldom has the ground lost ever been regained.

Free private enterprise is a way of producing wealth, goods, and services to satisfy human wants, and it is a plan just like socialism or communism is a plan. The major way in which a free economic system differs from socialism or communism is that the former is conducted by free individuals for free individuals, not by the state for those who might be the recipient of the state's favor.

I cannot agree with any plan for a New England River Authority based on the TVA plan, under which the New England States involved surrender their autonomy and our natural resources pass out of our hands and into the control of a government within our Government, made of bureaus owing allegiance only to their creator, the Federal Government.

Vermonters are strong believers in a maximum of local self-government. As you are already advised I am unalterably opposed to the establishment of powerful river valley empires to take the place of our 48 free and sovereign States.

I feel about and concerning the proposed valley authority for New England patterned after TVA, as does Representative JENSEN, of Iowa, with regard to the Missouri Valley Authority, as indicated by his reply to a letter requesting him to state his position in reference thereto. Here is a portion of his letter:

"My criticism of the TVA set-up is that a board of three men, appointed by the President, and not elected by the people, have, in effect, full and complete control over the very existence of the people living in the Tennessee Valley. We must bear in mind that he who has authority to control the electric power and water resources of America, or any given area in America in this electric age, can completely control America or that area under such control.

"Congress appropriates each session a lump sum for TVA to build power dams, transmission lines, flood control, forestry, navigation, and, in fact, for most everything to carry on the Federal functions in the valley. Then this Board of three men spend that money at will to run their empire, so you see in reality the TVA is a separate and distinct empire within our American Republic. Not only the people's elected Government officials have lost much of their authority, but this Board of three men have taken over too much of the States' authority, which was specifically delegated to the sovereign States by the Constitution.

Now, if this kind of autocratic regional control is carried on to its ultimate conclusion in the 11 river valleys of America, the Missouri being one of them, 33 men could completely control America. The 48 States could very well be expected to lose their sovereign rights and identity, and we would have in their place 11 separate, powerful regions or valley empires. I am quite certain you do not know that program is the recommendations and hope of the Communist Party of America. They know that so long as our Nation is composed of 48 States that are free and sovereign, whereby the people of the respective States elect their public servants, communism can never completely take over here.

The fact is the American people have deceived themselves far too long in thinking that our variety of socialism is different from the slave state of the Marxist. The trend in this country today is identical in principal to that in operation in other central governments which manage their people and their people's property. We are just about half way toward total socialism, the adoption of which, or the acceptance of which may have been caused by ignorance; which does not change the awful fact.

Most Americans have never stopped to define "socialism." They do not know what socialism is although right here in Vermont there are those who are nothing else but Socialists. They favor Government ownership and Government management of the Nation's economy. They would establish little empires governmentally controlled and operate within the State as they deny the right and capacity of individuals to manage their own business and their property. That's what socialism is. And Socialists and fellow travelers and Communists always move toward compulsion and violence and away from freedom.

Socialism is directly opposed to American constitutional freedom. Socialism and democracy are inherently inimical, yet socialism and absolutism and communism are natural partners. It is my well-considered judgment and long-entertained opinion that no government-controlled regime can equal a competitive system in furnishing to men and women producers the incentives to lead them to do their best along all lines. Only where everyone is free and rewarded adequately for services rendered are human energies released to the limit. Only under such conditions could the United States of America have become the world power that it is, and only under such conditions can all classes really prosper and enjoy life. Soft socialism, the idea of the welfare state, the steady increase in the Federal Government's power over the lives and purses of our citizens, are the greatest menaces confronting us today, not excluding Russia.

Former Secretary of State Byrnes well said:

"We are going down the road to statism. Where we will wind up no one can tell. But if some of the new programs seriously proposed should be adopted, there is danger that the individual—whether farmer, workers, manufacturer, lawyer, or doctor—will soon be an economic slave pulling an oar in the galley of the state."

An alluring, deceptive new term has been creeping into our political language. The kind of government which promises to give everybody health, houses, security, and the comforts of life is being called the welfare state.

Nobody opposes welfare. By hard work and ingenuity we have been able, under American freedom, to produce a great deal of welfare and to distribute it widely among the people. The American record in this respect far exceeds any of any other nation in any time. We can carry it much further.

Promises of abundant welfare have been made by many governments from ancient Rome to Hitler and Cripps. And now Truman. Those governments have always eventually gone bankrupt, or to war, or both. The people have been left with less welfare than before.

The only governments that have achieved truly remarkable records for the welfare of their people are the very few that, like ours, have left the people fairly free from restrictions, and fairly free from the overwhelming taxes that welfare measures cost.

The people have then produced their own welfare by working for it. They have had to pay little percentage to bureaucrats for its enjoyment. They earned it and it was theirs. Having no Brannan plans, they were able to buy their own groceries.

An honest name for the "welfare state" would be the "farewell state," for once we go far enough toward Government guaranties of welfare we can say farewell to American freedom as Americans long knew that blessed condition, and to American standards of welfare.

No nation under any other system has come even close to our success. To be a party to any proposed change of our form of government would be folly, yet the America of tomorrow is threatened from within by ideologies foreign to our living. We must meet and overcome ideologies which use our freedom in an effort to destroy it.

I have just read John T. Flynn's The Road Ahead. It has been appearing in serial form in the Free Press. I commend it to your very serious consideration. One of the leading editorial writers of the country in reviewing the book had this to say:

"The Road Ahead is concerned with two subjects: The first of these is the misery and poverty to which the Labor (Socialist) Government has brought the once proud and powerful British people; the second is what Mr. Flynn sees as a far-flung conspiracy to bring the American people to those same levels of misery, poverty, and weakness.

Engaged in this conspiracy, according to the Flynn report, are a multitude of Socialists who are afraid to call themselves by that name, as the honest and forthright Norman Thomas is not. These people masquerade as economic planners, do-gooders, great lovers of the common people, and fervent believers in the "welfare state."

They are moving in on the Democratic Party, as Britain's Fabian Socialists once moved in on and then virtually killed off the old Liberal Party. "Indeed," says Mr. Flynn, and makes a good case for his assertion, "our masked Socialists already have made a prisoner of President Truman, and he can't break jail."

These conspirators also have infiltrated heavily in newspaper, magazine, radio, movie, church, and educational fields. Hence, they can spread their poison around in great quantity and with considerable effect. The essence of the poison is communism, but our masked Socialists are more subtle and clever about distributing it than are the United States Reds.

The over-all plan is to change your life in every detail that counts, and in the same ways as the Laborites are changing British lives. If the plan succeeds, you will become a slave to a Government which hammers your living standards downward all the time while it tells you you're happier every day in every way. Out-and-out Russian-style communism would come somewhat later, but inevitably.

Mr. Flynn in this book names names, rips off disguises, exposes many a fake lover of the people, and cites chapter and verse. If you like the life you lead in the United States as of now, better read this book. They are after you. They are playing for keeps. They may get you if you don't look alive.

Let us determine that we shall not allow the state to be our master, but that we shall be the masters of the state. The long road to history is lined with the ruins of those states which bought the souls and wills of their peoples by the lure of a granted security, and then led them to ruin by the same mirage. The world does not need even one more such ruin.

Freedom exists only where the people take care of the government. There is no freedom where the Government takes care of the people.

Address of Matthew Woll

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. O'HARA of Illinois. Mr. Speaker, under leave unanimously granted, I am inserting in the Appendix the following text of the memorable address of Mr. Matthew Woll, a vice president of the American Federation of Labor, at the Gompers centennial dinner at the Statler Hotel in Washington, D. C., on January 5, 1950:

Why are we meeting here tonight?

Why are men and women throughout the land and of most every calling and station of life gathering here this evening as a prelude to like gatherings to follow in most of our industrial cities during the year?

What is the purpose of this festive event?

What are the objectives of this eventful occasion—this remarkable demonstration?

The answer is quite simple:

We are here as free citizens—as sons and daughters of a great democracy—a great Republic—to pay honor to a man whose lifelong energies and remarkable talents and abilities have been singly devoted to the perpetuity and enhancement of the ennobling thoughts of freedom and the furtherance of the inspiring principles that have made our Nation a truly great nation and have bestowed on our people blessings never heretofore enjoyed by humankind.

We come as wage earners to pay tribute to one lowly born, yet, who through sheer force of intellect, foresight, understanding and persistency, has contributed immeasurably to the greater fullness of life enjoyed by all and who brought to fruition to a greater, a fairer, and more equitable degree, the division of the rewards of an ever growing and expanding economic order.

We gather here, and as we will elsewhere, to pay homage to one for his unswerving devotion to the cause that binds us in fraternity—for the structure he has founded and built to help men and women rise to higher levels of life and thought and to aid those economically and socially disadvantaged.

We are meeting tonight in deep reverence to the memory of one whose genius and abilities would have carried him far in the realm of earthly possessions, but who chose rather the path of the lowly—the unpossessed—and whose brilliant mind and eloquent voice were dedicated solely to conquer material things in order to uplift humankind and free the spirit of man.

Yes; we are assembled tonight to honor the memory of Samuel Gompers, born 100 years ago this coming January 27—a great patriot, a great emancipator of labor, leader and founder of the American Federation of Labor—a great humanitarian and a crusader in the cause of freedom, justice, and democracy the world over.

The life and labors of Gompers effectually and impressively dramatize and symbolize the growth and greatness of the American democracy and of its people. Here was an immigrant boy who came to the American shores and rose to the greatest achievements in our land and who has merited the overwhelming applause of its people. What a mighty tribute to the vitality and spirit of democracy of our Nation—a vitality and spirit deeply rooted in the diversity of our national and racial origin and in the opportunities presented to all of good will by our social order.

Yes; we are met here to praise and appraise one who has passed on, but whose spirit dwells in our midst and whose teachings will live on and on so long as freedom and free trade-unions endure.

We come not only to praise Sam Gompers, but to rededicate ourselves to the task to which he applied his great qualities of heart and mind, his untiring and unsparing efforts and energies. The spiritual motives that governed his leadership stand out conspicuously in our present-day world affairs.

Gompers was indeed a great leader—a great man—and we do well to honor him.

But what made for his greatness? What are the particular qualities and characteristics that have distinguished him from others?

Friend and foe alike will acknowledge his great breadth of mind. But other men before and since have had great minds. Yet little if anything is heard of them.

True, Gompers was gifted with an eloquent tongue and with exceptional analytical powers, capable of achieving eminent success in the professional world. Yet others have been born with equal endowments but they, too, are numbered among the unremembered.

Gompers was possessed of very rare executive abilities and could have achieved a great business career—entered the realm of wealth and of affluence as others have done. Yet, their names are engraved merely on marble or stone in the silent cities of the world.

And so, too, might Gompers have chosen a political career. No one doubts or questions his preeminence in the qualities that make for high statesmanship. Yet he chose the higher concept of duty which man owes to those with whom he works and for whom he works—an enriched understanding of human justice, an understanding of the finer effects of democracy in daily life, the realization that human brotherhood is, after all, a thoroughly practical ideal and the only lasting basis for human relations.

He cared nothing for what the world calls success; ignoring public office, wealth and preferment, he reached only for that higher thing shown to be of eternal value when the final curtain ends life's play.

As trade-unionists we are here to manifest our feelings of gratitude for his unswerving devotion to the cause of trade-unionism, for his tireless efforts and energies in founding and building up our great trade-union organization and in creating the cornerstone and directing the policies of the American Federation of Labor, which for the past 69 years have withstood successfully every attack from without and every assault from within, and, more than all else, has firmly implanted into hearts and minds of

American trade-unionists the great principles that have made the American Federation of Labor the strongest, most powerful and influential, the most enduring structure of labor ever experienced in history.

What are these great principles?

It is axiomatic today for any public figure—whether identified with labor, with government, or with industry—to make laudatory statements about the value and the necessity of collective bargaining and cooperative labor-management relations.

Some 50 years ago, however, the United States was faced with such phenomena as "robber barons," a "Wall Street" entrenched in finance and Government, and a political set-up in which every city of any size was controlled by unscrupulous bosses, whose judges and police force served the employers.

In those days collective bargaining met with great obstacles, such as the Sherman antitrust laws, injunction writs, yellow-dog contracts, and the like.

In those days, to suggest that collective bargaining, the striving together of labor and industry for amicable relations would be for the advancement and benefit of both, was an open invitation to ridicule and abuse. Yet Gompers seized every opportunity to advance the doctrine of mutual cooperation of industry and labor and to further collective bargaining despite bitter abuse by both radicals and ultraconservatives.

Today the entire political and social outlook of the United States has been one of increasing acceptance of the principles of collective bargaining and of labor-management cooperation.

Gompers was not only the architect who made the blueprints for the creation of the American Federation of Labor; he was also the builder who carried out the details of those plans, and the caretaker who zealously guarded the main principles upon which the organization was built. It was his conception that in the world of labor the chain could not be any stronger than its weakest link, and that the federation would be strong or weak, progressive or retrogressive in proportion to the strength and growth and temperament of its affiliates—its national and international unions.

Conversely, in an address he delivered in 1902, Gompers said prophetically:

"As the federation is constituted, it cannot be overwhelmed by its growth. The national and international unions of the various crafts and callings relieve the central body of this danger and leave it free to do what can be done with safety and advantage for the common welfare."

And this central organization, built on the principle of autonomy for the national and international unions, has in times past, been ridiculed by opponents as a "rope of sand."

An intensely interesting episode in this connection occurred shortly after Lenin had issued his famous "Open Letter to American Workers," which was published and distributed far and wide by the Communists in the United States. In this letter Lenin criticized the form of organization of the American Federation of Labor, and in connection with it used the epithet "a rope of sand."

It was at this time that a Bolshevik commissar, visiting the United States as a representative of Lenin, begged for an interview with Gompers. However, before the conversation began, Gompers, holding a copy of the letter of Lenin in his hand, turned to the commissar and said: "Before we go any further, I want you to tell Lenin that our 'rope of sand' will prove stronger than his iron chains."

This happened about 30 years ago, and last month, in London, the representatives of the free American trade unions, in association with those of 53 other countries, laid the foundation which will bring to reality the prophecy of Gompers of 30 years past.

This reference to a "rope of sand" and the principle upon which the American Federation of Labor has been set up, brings us to another point—the position of the AFL on political action.

The American Federation of Labor has never opposed free expression of political ideologies. Its point of view is best covered in a statement by Gompers, published in the February 1896 issue of the American Federationist—the year that Gompers was reelected as president of the federation after his only defeat the year before. In that statement he wrote as follows:

"I believe in the fullest opportunity for thorough discussion and proper presentation of all schools of thought in the labor movement. My only insistence has been, and is today, that a man shall be true to his trade-union in season and out of season, in spite of friend or foe, and that, apart from that, it is his province to believe in and advocate any reform which, in his judgment, is calculated to best advance the whole line of the trade-union movement."

But Gompers fought bitterly any clique or political party, for he foresaw the dangers of zealots, who, after gaining power in a union with the help of a political party, would then sacrifice the interest of that union in the interest of party considerations.

While Gompers was strongly in favor of political actions on the part of trade-unions, summarized in the well-known phrase, "Reward your friends and punish your enemies," he was as strongly opposed to the theory supported by radicals, that of independent trade-union party political action. Today the entire labor movement holds Gompers' point of view. Only the Communist Party is in disagreement with it.

It is because of Gompers' foresight, courage and watchfulness that the Communists have at no time had any hope of infiltrating into the house of labor. As a result, the Communists looked for other fields to conquer. Due to the precepts laid down by Gompers, the American Federation of Labor has never had to face the painful and distasteful necessity of expelling from its ranks, for ideological reasons, a number of its component unions.

Gompers never made a fetish of any dogmas. He was a man of an open mind. He allowed no clique to mar his thinking or to serve as a substitute for his thinking.

He never worshiped the status quo, nor was he fearful of change. In his testimony before the Industrial Relations Commission headed by the late Frank P. Walsh, he showed clearly the difference between dynamic progression and the dogmas of the sterile Socialist movement in the United States.

Gompers had vision but was not a visionary. He had dynamic vitality and never confused noise with militancy of rowdyism with effective action and struggle against the open-shoppers and other enemies of labor.

He saw clearly and distinctly the urgency and full implication of genuine international labor solidarity. He fathered the idea of and was the driving force for the organization of the International Federation of Trade Unions.

Gompers realized that the labor movement of no single country could remain free and stay prosperous long if the working people of other lands were not free and were subjected to low standards of life and labor. That is why he pioneered in the organization of the ILO and laid special stress on raising the standards and improving the conditions of the toiling folks in the underdeveloped countries.

The labor internationalism of Gompers takes on special living significance today in view of the recent developments in the organization of over 50,000,000 free-trade unionists under the banner of the International Confederation of Free Trade Unions. It is in this spirit and aspirations of Gompers that the activities of this new world confederation of free-trade unions will have to be activated if this new world labor body is to fulfill its intended mission.

More and more, freedom-loving people everywhere are coming to realize the grave menace of concentrating power in the hands of Government bureaucrats. The rise of various types of totalitarian despotism has focused attention on this growing menace to human rights and liberties won by peoples through centuries of struggle.

As a stanch advocate and stubborn defender and champion of democracy, he never for a moment was misled as to the true nature of communism. To Gompers, communism was nothing else but twentieth century slavery. From the very moment that Bolsheviks seized power in Russia, Gompers fought its dogmas and deeds. As a consequence, the Federation has served as the most persistent and effective opponent to communism in our country and on a worldwide scale.

Finally, Gompers was a great believer in the principle of voluntarism—in action through free, voluntary, nongovernmental bodies. In his conception, the fundamentals of human liberty rested squarely on the principles of voluntarism. It was his conviction that no lasting gain has ever come from compulsion.

When at the El Paso convention of the American Federation of Labor he realized he was too feeble to address that convention in person, and conscious that life was drawing near a close, he called upon then Vice President Green, now entering his twenty-fifth year of service as president of the American Federation of Labor, to present to the convention his last message, and in which he said among other things:

"Events of recent months have made me keenly aware that the time is not far distant when I must lay down my trust for others to carry forward. When one comes to close grips with the eternal things there comes a new sense of relative values, and the less worthy things lose significance.

"As I review the events of my 60 years of contact with the labor movement, and as I survey the problems of today and study the opportunites of the future, I want to say to you, men and women of the American labor movement, do not reject the cornerstone upon which labor's structure has been builded, but base your all upon voluntary principles and illumine your every problem by consecrated devotion to that highest of all purposes, human well-being in the fullest, widest, deepest sense.

"We have tried and proved these principles in economic, political, social, and international relations. They have been tried and not found wanting. Where we have tried other ways we have failed."

And then he concluded his final message in this ennobling appeal to you and all who are to follow:

"As we move upward to higher levels, a wider vision of service and responsibility will unfold itself. Let us keep the faith. There is no other way."

And so, in drawing to a close, may I suggest that our meeting here and elsewhere should not come to an end without a permanent objective. Twenty-five years ago the people of this country and of many foreign lands, industry, and commerce, all stopped in silent homage to him whose name was known and honored the world over because he gave his life in service for others. The United States turned from other matters to consider his life and work; the Mexican Parliament and that of the Philippines did likewise. Flags were ordered at half mast in many lands.

A great man, a great patriot, a great labor leader, and champion of free people and of their rights and prerogatives—had passed on.

But the soul of Samuel Gompers has continued to live on in its potent influence on our national life and customs. It lives today in the daily lives of millions of Americans.

May I, therefore, venture to propose that we give rise to a new conception of our evaluation of the services rendered by Samuel Gompers expressed in the setting aside of January 27 of each succeeding year as Samuel Gompers' Birthday and that this day be solemnized as a holiday to be observed throughout the Nation so that his rightful place among the great of America may no longer remain void and so that to labor of America be accorded, too, the honor of having contributed to the building up of a truly great democracy such as the world has never known before.

As a final and concluding word, may I join with the expression of Daniel J. Tobin, president of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen, and Helpers of America, where in his closing chapters of an article published in the Teamsters' magazine of January 1950, he said of President Gompers:

"Those who knew Sam will agree with me when I say that it is my personal judgment that there never was any greater leader in the labor movement in this country, in Germany, in England, or any other country than the man who was born 100 years ago in the slums of London and whose anniversary will be celebrated by the American Federation of Labor, opening with a banquet on January 5 at the Statler Hotel, Washington, D. C."

And then, too, I join with him in saying that "The only missing link to the chain which binds the men of labor together is that good old Sam will not be there instilling fire and courage and determination into those present." But some of us at least believe that he still lives on and that his spirit will be moving from table to table at the banquet whispering words of hope into the ears and into the hearts of the men who have come after him who are now endeavoring to carry the banner which he so successfully held aloft for more than 50 years, the banner of clean militant trade unionism as exemplified and practiced by the 8,000,000 members of the American Federation of Labor.

Statement by Hon. Paul H. Douglas, of Illinois, on the President's Budget

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES

Tuesday, January 10 (legislative day of Wednesday, January 4), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me on the subject of the budget submitted by the President on January 9, 1950.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Although the President's budget indicates a deficit of $5,000,000,000 he has clearly made an honest effort to effect economies. Thus he has cut military expenditures by one and five-tenths billions below congressional appropriations for the current year, has reduced foreign aid by a billion and a quarter, and has had the courage to propose removing the $400,000,000 subsidy on second-, third-, and fourth-class mail. The President deserves a great deal of credit for these economies.

But still further savings can and should be made, and we in Congress should carry on in this same spirit and help the President to save another three billions of dollars. This can be done in the following ways:

(1) Reducing military expenditures by a further five hundred millions. (2) Reducing the lending powers of the Federal National Mortgage Association by eight hundred millions below the President's estimate. (3) Cutting the swollen staffs of Government civilian employees by from 8 to 10 percent and thus saving five hundred and fifty millions. (4) Cutting the present excessive vacation leave of 5½ weeks to a month, thus saving $100,000,000. (5) Cutting rivers and harbors or the modern pork-barrel bill by three hundred millions. (6) Slowing up the rate of construction of roads and dams by one hundred and fifty millions. (7) Eliminating the subsidies on silver, flax, etc., to save one hundred millions. (8) Saving $200,000,000 by consolidating all the Government agencies dealing with transportation and similarly those with engineering.

These further savings would amount to two and seven-tenths billions and if effected would reduce appropriations from the forty-two and four-tenths billions requested by the President to thirty-nine and seven-tenths billions. Furthermore, of the total of around a billion set aside for new legislation, there is probably about three hundred million which, as realists, we should recognize will not be authorized. This would bring expenditures down to thirty-nine and four-tenths billions.

While the Bureau of the Budget is apparently expecting revenues to reach thirty-seven and three-tenths billions for 1950–51, this would seem to be an understatement provided we have prosperity. For revenues in 1948–49 amounted to thirty-eight and three-tenths billions. Indeed allowing for the normal growth in the American economy, with the same average rate of taxation, receipts for 1950–51 should be over thirty-nine billions. By tightening the revenue laws in such matters as the abuse of charitable trusts and by stricter enforcement, we should be able to raise total revenues by from five hundred million to a billion dollars more.

In short, we can balance the budget if Congress and the country have the self-discipline needed to back up the President in the economies which he has already made and go further along the same path.

Proposals Affecting the Dairy Industry and Agriculture

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, January 10 (legislative day of Wednesday, January 4), 1950

Mr. WILEY. Mr. President, I send to the desk some material on the subject of grass-roots reactions of the dairymen of Wisconsin and in particular the reactions of one of their great cooperatives, the Pure Milk Products Co-op, of Fond du Lac, to proposals affecting the dairy industry and agriculture generally. I ask unanimous consent that the text of this statement be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

PURE MILK PRODUCTS COOPERATIVE RESOLUTIONS

Mr. WILEY. Mr. President, from time to time, I have placed in the CONGRESSIONAL RECORD grass-roots reports from my home State, resolutions adopted by leading organizations, editorials from newspapers, etc. I have felt that although these items obviously took up space in the RECORD, it was essential that each of us bring to the attention of our colleagues pertinent expressions from the rural crossroads and the cities of America, rather than just giving our own views and interpretations.

LARGEST MILK MARKETING CO-OP IN UNITED STATES

At this time, I have in my hand a very fine expression of opinion, consisting of resolutions adopted by one of the outstanding dairy organizations in the United States. I refer to the Pure Milk Products Cooperative of Fond du Lac, Wis. This, Mr. President, is the largest milk marketing cooperative in our country. Wisconsin has many famous cooperatives and is proud of them. In singling out this particular cooperative, at this time, I do so not with any underestimation of the importance of other fine groups, but with a recognition that here is a splendid and truly representative agricultural organization.

The Pure Milk Products Cooperative has some 26,000 members all over Wisconsin. It is owned and controlled exclusively by Badger milk producers.

Last year these producers sent to market 1,237,650,000 pounds of milk with sales valued at around $40,000,000.

I ask you to contemplate, Mr. President, the staggering amount of sweat and labor represented in that huge outpouring of milk. I ask you to contemplate the tremendous investment by small farmers in that output, and the investment by their cooperative in marketing. This is little business at its best; this is small family-type agriculture at its best; this is cooperative organization at its best.

For over two decades, the Pure Milk Products Cooperative has fought the Wisconsin milk producers' fight and has represented the dairy producer in all his legitimate needs.

CONFERENCE ON OLEO MENACE

During the last several days it has been my pleasure to confer at first hand on the crucial butter-oleomargarine subject with several of the outstanding leaders of this cooperative, including its distinguished president, Mr. William F. Groves, of Lodi, Wis., one of the most respected agricultural leaders of my State; and Mr. William O. Perdue, general manager at Fond du Lac, Wis., also one of the finest qualified individuals I know to speak for the dairyman's cause. Naturally, these leaders, like other dairy leaders who have assembled in Washington during the past week, are tremendously disturbed about the threat of the Oleo Trust against United States dairying.

DAIRY CO-OP REPRESENTS CONSUMERS AS WELL

These men, Mr. Groves, Mr. Perdue, and others in this organization have fought not only for the dairyman's view, however, but have always considered the larger interests of American agriculture and of the 150,000,000 American consumers who need nutritious dairy products.

Well, Mr. President, what do the 26,000 members of the cooperative think about the present agricultural situation? At the recent convention held in Fond du Lac, Wis., in October, 367 delegates representing 59 locals were on hand. I should like to present at this point some of their resolutions and comments. In so doing, I ask my colleagues

to bear in mind the fact that these men met at a time when dairy prices were continuing their 1949 decline throughout Wisconsin. Wisconsin farm income last year was 20 percent below that of 1948. The farmers' milk checks are sinking, and as they sink, the general economic health of the whole Badger State, indeed of the entire Midwest, is declining.

RESOLUTION ADOPTED BY PURE MILK PRODUCERS COOPERATIVE REGARDING ALTERNATIVE PLANS FOR PRICE SUPPORTS

Probably the most controversial, complex, and vital problem facing the farmer today is the problem of governmental price supports for agriculture. For this reason, your manager, president, State board, and this resolutions committee have devoted a great deal of time in analying and studying this important question. In this study we have not hesitated in asking the assistance and advice of the most prominent agricultural economists and leaders in America. We submit to you the following conclusions:

A. The principle of Government supports for vital industries is not new. This policy was inaugurated by Alexander Hamilton in Washington's first administration. The policy has been accepted and employed by every succeeding administration. Almost every branch of American industry has, at one time or another, received Government help through guaranties, tariffs, subsidies, direct grants, supports, or privileged legislation. To ask for a farm-income-support program is, therefore, in line with past and present Government policy.

B. The need for a price-support program for dairy products is obvious. During the past year dairy prices have declined over 33 percent. Wage rates have increased and the prices of industrial goods have declined very little during the same period. Thus the dairy farmer is forced to sell his product on a comparatively low market, over which he has insufficient control; and buy his needed supplies (including labor) on a high market over which labor and industry exercise considerable control. Further, organized labor and many branches of industry are subsidized or granted special protection by the Government. Even the necessary grains which the dairy farmer feeds to his cows are supported by the Government at prices which are high in comparison with the price of milk. It is evident that a continuation of this situation for any length of time will bankrupt the dairy farmer.

C. The question of whether farm-support prices should be high or low is irrelevant. The sole purpose of a farm-support program should be to provide the farmer his just minimum share of the national income. If we are to maintain a healthy national economy, the relationship of farm income, labor's wages, and industrial profits must be kept in balance. When the economy of a nation becomes unbalanced a depression inevitably follows. Farm supports are not only of interest to farmers, but are vital to the welfare and prosperity of every man, woman, and child in America. About one-fifth of our population is engaged in farming. This large segment of the population produces its just share of the Nation's wealth and is entitled to a proportionate part of the national income. The major justification for a support program is to give the farmer this just share.

D. The long-term price-support program should provide for—

1. Flexibility: By flexible we mean that the support program must be devised and administered so that the farmer will be induced to shift from one product to another to meet existing market conditions.

2. It should be inclusive: At present, primary support prices are accorded to only a few so-called basic commodities. Most dairy farmers buy large quantities of these basic commodities for feed. Dairy products and livestock are not classed as basic commodities. Feed prices, therefore, are comparatively higher than the price of milk. Any fair support program should include all important farm products, livestock, poultry, and poultry products.

3. A new or revised formula for computing farm support prices should be devised. The present formula for arriving at a parity price is outmoded. It harks back to the horse-and-buggy days. We recommend that a more recent period for determining the relationship of farm prices be used instead of the years 1910–14. We also believe that the costs of farm wages and farm labor should be included if we are to attain a real parity of farm income.

4. We realize that the present Anderson bill recently passed by Congress has taken steps at least partially to bring about the recommendations embodied in this section. We commend this action.

E. Three major methods for supporting farm prices have been recommended:

1. By Government loans and purchases. This is the method employed at the present time. Through loans and purchases the Government attempts to maintain a comparatively high and stable price on certain basic commodities. The Government is thereby assured an ever-normal granary. This policy, however, has a tendency to stimulate overproduction and often large surpluses pile up causing the Government great financial loss. This policy also has the very fatal tendency of pricing the lower income consumers out of the market.

2. The proportionate income support plan: This plan, devised by our own Dean Froker of the University of Wisconsin, would support farm income and allow farm prices to seek the natural levels dictated by the law of supply and demand. "Agriculture as a whole would be guaranteed a minimum share of the national income as a floor, below which total farm income would not be permitted to fall. If total net farm income from normal operations is below the prescribed minimum, then it should be supplemented with parity income payments direct to individual farmers in proportion to the market value of the product which they produce and sell." This plan is flexible, it is inclusive, it guarantees a balance between agricultural economy and the national economy. Control of the farmer would be negligible. "Payments would be made on the basis of production and sales rather than on the basis of curtailment of production and restrictions." Pure Milk Products recommends that Congress give this plan careful consideration.

3. Direct commodity payments to farmers: Under this method the Government fixes a parity on individual farm commodities but allows a reasonable free market. Farm prices, therefore, fluctuate with demand. Surpluses are absorbed by the consumer at low prices and the Government pays the difference to the farmer in direct payments.

We urge the Congress to consider all the above plans carefully. Each plan has some merit. We sincerely hope that partisan prejudice and bias will play no part in the evolution of a long-term-farm-support program.

F. It is a regrettable but unavoidable fact that Government aid and regulation go hand in hand. The membership of Pure Milk Products realizes that any price support program inevitably calls for some Government control of farm operations. We urge the Congress to keep such controls at a minimum and absolutely free of party bias. We also urge that the application of the program be placed in the hands of the farmer.

EXCERPTS FROM COMMENTS BY WILLIAM O. PERDUE AT PURE MILK PRODUCTS CONVENTION DESCRIBING WHY FEDERAL PRICE SUPPORTS ARE ESSENTIAL

It is generally conceded that support prices are needed to prevent below-cost-of-production farm prices due to a surplus of food products. However, complaints are still heard from some businessmen who are in a controllable type of business. They ask, "Why shouldn't we be guaranteed a profit on all the goods we manufacture, regardless of the amount we manufacture?" Their argument would be good if they were producing a product as necessary as food, and if their production unit, like the dairy farmer's cow, took about 3 years to make. Then if after the producing unit was acquired, it would be hooked up for continuous production and couldn't be stopped when started without ruining it for future operation. Even that production genius, Henry Ford, would have had a whale of a time balancing supply and demand if he had machine tools that couldn't be stopped from pouring out Fords, unless he wrecked the machine for future production. He would also be in difficulties if he depended upon the weather conditions for raw material. I believe he would have had more trouble operating under the conditions of the farmer than he did with the unions.

The milk producer is not asking for a guaranteed profit on his farm, but he does not admit that in the postwar adjustment that his prices should be the first to break, that his prices should decline more rapidly and that his prices should be cut more deeply than prices for goods that are less essential to the Nation. If prices of goods in controllable industry should decline at the same rate of speed, there would be no harm done. We have always found that industrial goods and services do not respond to supply and demand at the same speed as does the producer's price. Take our own product, for instance. The retail price for milk has not declined as fast or as far as the farmer's price. Gross margins for manufacturers and retailers, in many cases, are higher now than they were before our prices declined. Our reductions have not been passed on, and the result has been increased storage supplies, the need for Government purchases, and a threat of low prices for the producer.

It seems that people have to be a little hungry to appreciate food. A little scarcity is profitable for the producer, but in our country we have always provided abundantly. That's the way we want it. It seems logical that some method can be worked out to provide abundance and not wreck the whole economy.

Your cooperative has worked on this problem and supported and presented ideas to the Department of Agriculture and other branches of the Government that are in a position to help solve this matter. We continue to use the cooperative's influence in the milk producer's interest this year.

It may be that some farm plan can be worked out in the future that will be run by the farmer, but, at this time, we must depend upon the Government even though any plan they work out at this time will be a political compromise and not the best plan in the public interest.

Addresses by Hon. Lowell B. Mason and Hon. James M. Mead at Swearing-in Ceremonies

---

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, during the congressional recess, I had the occa-

sion to be present at the swearing-in ceremonies of former United States Senator James M. Mead as a member of the Federal Trade Commission, on November 16, 1949.

I felt that the address of welcome by Acting Chairman Lowell B. Mason, of the Commission, was such a fine tribute to the new Commissioner that many of his former colleagues here in the Senate would be interested in reading it, together with Senator Mead's speech of acceptance.

Therefore, I ask unanimous consent that these addresses be printed in the CONGRESSIONAL RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF WELCOME BY LOWELL B. MASON, ACTING CHAIRMAN, FEDERAL TRADE COMMISSION

My colleagues, Mr. Ayres, Mr. Carson, and the members of the Federal Trade Commission staff join me in welcoming you to the Commission. We know your many personal friends who had to be discouraged from coming to Washington to see your induction will realize that the desire to have the oath administered in the Commission's own home made it possible for only a small part of your friends and well-wishers to attend.

We are proud of this building, and with your help, we hope to make this building proud of us. The eyes of the business world are turned toward you for the law of the land makes the Commission the arbiter of what is fair play in our country's commerce. This means that much of the future conduct of business will come under your personal scrutiny.

The competitive 1950's will present problems which cannot be met by the technique of the 1914's. One may know all the precedents of past law from a legal staff, all the facts in a given case from a field force, and all the statistics and trends from economic advisers, but the alchemy of applying these separate wisdoms to maintain a free economy still rests on you and your colleagues' shoulders.

Nothing could augur better for the effective and beneficial relationship between business and Government than to have added to our membership a man who has slowly but steadily worked his way up from the lowest rung in the ladder of business to the highest legislative office in the world. People speak of fast, spectacular rises as though they were something to be especially proud of. I admire those who can win the summit in one easy jump. But none of your colleagues on this Commission was ever favored with such fortunes. I think it a happy circumstance which brings to our membership another who has struggled slowly but surely up the steps of man's development—for such a person brings to the Commission an experience rich in all phases of life.

Born on December 27, 1885, at Mount Morris, N. Y., of parents who were reared in the school of hard manual labor, Jim Mead rose from water boy on a railroad to tender of switch lamps, and maintenance-of-way man. His youth was not spent in idleness.

Seeking knowledge in the law, like many other young Americans who followed his example, Jim Mead took employment on the Capitol Police Force, so he could study law at night. This was followed by his election to the basic foundation of all local government—his home town county board of supervisors.

Along with his obligation to his Government, he did not neglect his loyalties to his fellow workers. In 1914 he became president of his local railroad union. Four terms as a member of the State legislature was but another seminar in the school of life for Jim Mead.

He did his job faithfully. His friends and constituents recognized his ability. They sent him to Congress in 1918. What a testing ground of a man's soul and character that great legislative body is. Many are called but few return. Reelection for three or four terms is something to be proud of, but it is the exception and not the rule. In this case however, the people kept him in Congress for 20 years, a tenure of office which would have been, in my opinion, still unbroken if he had not resigned to step into the United States Senate.

Again the people of New York showed their confidence and respect by sending him back to the Senate for another term. One need not dwell on the manner in which he handled his legislative duties. Suffice to say that as a member of the TNEC before the war, and as a member of Mr. Truman's committee during the war, his collateral legislative work was just as outstanding as his other senatorial accomplishments.

He was a Senator at a time which tried men's souls. In that august body where only strong characters and vital personalities exist, it must have been difficult to always obtain the cooperative teamwork so necessary to the political health of a nation. Yet with all this, it is interesting to note during Senator Mead's service as chairman of the Post Offices and Post Roads Committee, every peace of legislation reported out came to the floor with unanimous support.

I have given this factual sketch of James Mead, not to praise him but so that those in the Commission who do not know him may see what manner of man this is.

It is interesting to note his hobbies, for sometimes a man can be gaged not only by the company that he keeps, the books he reads, but by his hobbies. Former first baseman Mead is vice president of the Buffalo baseball team, and plain dirt farmer Mead tills the soil at Angola, N. Y. No one can say that he is one-sided in his activities or that he has a restricted view of the verities of life. Those of us who have read his speeches know that when he said, "There must be a more sympathetic administration of our social and legislative code," he was speaking as a man who had seen too much of the inequities and cynical lip service in the management of Government.

When he said that "industries must be encouraged by the enactment of legislation based on the theory that what is good for people is good for business," he may not have realized that one day he would sit on the quasi-judicial body whose main concern is that very ideal.

Ten years ago he said that he liked democracy because all men were a part of it and shared in its responsibilities. If those who come within the portals of the Federal Trade Commission could practice this homely ideal, we would never have any need for the prosecutions, the complaints, and the cease-and-desist orders that we must issue.

Your entrance on this bench, Mr. Mead, is the next step in a fruitful life and, in our opinion, will be even more valuable to your countrymen. Excepting that of President and Justice of the Supreme Court, this office is the most important in the Government. Even those who disagree with this statement will admit it is good for each of us to hold his own responsibilities in such high respect.

Commissioner Mead, we wish you good health, good fortune, and, above all, great usefulness to our country.

ACCEPTANCE SPEECH OF COMMISSIONER JAMES M. MEAD

"Very naturally in the performance of my new duties as a member of the Federal Trade Commission, I shall endeavor to carry out the intent of Congress as contained in the Federal Trade Commission Act, as well as the other laws which confer jurisdiction upon the Commission.

"I am eager to perform my responsibilities in a way which will enhance the standing of the Commission, do justice to those who come before it, and, above all, serve the common good."

RECALLS WORDS OF PRESIDENT WILSON

"In our consideration of the problems of business that come before us, I am reminded of a passage in the message to Congress of President Woodrow Wilson which echoes my attitude in such matters: 'What we are purposing to do, therefore, is, happily, not to hamper or interfere with business as enlightened businessmen prefer to do it, or in any sense to put it under the bar.'

"Speaking further on the subject of our relations with business, President Wilson stated: 'The Government and businessmen are ready to meet each other halfway in a common effort to square business methods with both public opinion and the law. The best-informed men of the business world condemn the methods and processes and consequences of monopoly as we condemn them.'

"These opinions expressed by President Wilson are my sentiments and I am sure they are the sentiments of the vast majority of the business community of the country."

Senator Mead pays the highest respect to the other members of the Commission and to the staff and concludes his comments with the following statement, which should be inspiring to all:

"It shall be my ambition to do my job well and—as I said on the occasion of my being sworn in as a member of the Commission—to do justice, show mercy, and to walk humbly with the Lord."

An attitude of fairness could not be better expressed.

Booze Has No Conscience

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10 (legislative day of Wednesday, January 4), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Booze Has No Conscience," published in the Grand Rapids (Minn.) Herald-Review, of January 5, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BOOZE HAS NO CONSCIENCE

This newspaper does not publish hard-liquor advertising.

This policy is based upon a confidence that advertising does sell goods and the conviction that the use of strong drink ought to be diminished instead of increased.

Some would say that this decision is an example of prejudice. That may be, but it is also an indication that conviction is being backed with money, for hard-liquor advertising would bring a substantial amount of cash into the tills of this institution.

Down in Washington, Congress is wrestling with a proposed law which would ban liquor advertising in newspapers of interstate circulation.

The American Association of Advertising Agencies is opposing the bill. One reason for opposition is that it means less money for them and for publishers. Another reason, which has semblance of merit, is that

the Government should not regulate such matters.

A recent issue of the Advertising Age, that of December 26, 1949, tells of the opposition of the liquor interests to such a ban.

In other columns the publication reports the increased interest of large industries in the market of the American Negro and the increased use of the advertising columns of Negro newspapers. The largest advertiser in these newspapers is now the Schenley Co., the great distillers of strong drink.

Here is an interesting paragraph showing a trend in liquor advertising and selling:

"One of the major merchandising stories of the year in the Negro market is that of Distisales, a new research organization, which has been hired by Seagram distributors to help them do a better job of selling the Negro buyer.

"Last spring Distisales made a liquor survey in Baltimore—a favorite test city for the Negro market since its approximate 1,000,000 population is 20.98 percent Negro, and since it is considered to have both northern and southern characteristics. This study showed that the Negro population of Baltimore accounted for 44 percent of the total distilled spirits sales in the city."

In other words, while the Nation hopes to bring the money and morals of the Negro to higher levels by many humane actions, the liquor business helps, through advertising and kindred activities, to bring him down.

The Passing of a Great Man—Walter B. Wooden, 1882–1949—A Tribute

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mr. PATMAN. Mr. Speaker, in the course of our allotted time here on earth it is occasionally our good fortune to know men and women who seem by their very nature to be clothed with heavenly grace. Such a soul was the late Walter Banfill Wooden. In all the years that Walter was my friend, so gracious was his personality and his spiritual outlook that the occasion never arose which would have injected into our relationship a moment of doubt as to his loyalty and devotion to his family, his friends, or his country.

WALTER WOODEN, A DISTINGUISHED ADVOCATE OF THE PUBLIC INTEREST

During the course of World War II, the public service rendered by Mr. Wooden was such that the Federal Trade Commission gave it recognition and cited it as specially meritorious service. That action was taken in accordance with the provisions of an act of Congress which provided for the recognition of especially meritorious services. The citation was based upon Mr. Wooden's expenditure of tireless effort, outstanding skill, and original thought in showing the way to more effective protection of the public interest. It was, in fact, based upon superior accomplishments. Specifically, he pointed out to the Federal Trade Commission and to the courts ways in which the antimonopoly laws could be applied to prohibit continued use of collusive and price-fixing devices, including the use of basing-point systems. It had long been recognized that basing-point systems had been used to frustrate and suppress price competition. The Temporary National Economic Committee, in its final report before the outbreak of World War II, recognized the use of basing-point systems as a force destructive of price competition in our basic industries. However, it failed to see how the antitrust laws as presently written could be utilized in challenging that evil. It recommended such new legislation as would be necessary to effectively and successfully challenge the evil. Those recommendations failed to bring congressional action. Thereupon, Mr. Wooden acted. He urged that the evils be challenged to the utmost with such tools as were at hand. He believed that the Federal Trade Commission Act and the Clayton Antitrust Act, as amended by the Robinson-Patman Act, could be used to further the public interest in challenging the evils of the basing-point and other artificial pricing systems. He recognized their weaknesses, but nevertheless urged that they be used to the extent of their limitations. That was done, but only after he alone showed the way in which it could be done.

WALTER WOODEN, A SPIRITUAL LEADER

Mr. Wooden was not only a leader in the public service; he was also a spiritual leader in his community. For approximately two decades he was a leader in the First Presbyterian Church of Riverdale, Md. Occasionally he led from the pulpit. On those occasions he delivered sermons which had been prepared with the utmost care. Frequently his theme was the goodness that could come from each of us in helping our fellow man who is unable to help himself. He was forever fighting for the cause of the oppressed. He despised bigotry, bias, and prejudice. He disliked and fought against discriminations in human relationships with no less ardor than he fought against price discriminations in business relationships which were found to be violative of our antitrust laws.

WALTER WOODEN, A CIVIC LEADER

His unselfishness added luster to his noble character. He never refrained from lending a helping hand to anyone whose cause he believed to be righteous. It mattered not to him whether the one he was helping stood alone or had the support of all in the community. That trait of unselfishness included his giving of effort, time, and financial aid. It was limited only by the limitations of his resources. His associates in public service received advice and help from him at any hour of day or night, workday or holiday, as they informed him they desired it. His associates noted how he extended help to the penniless on the streets in the different cities of the country where he was traveling on official business. The members of his church know not only of his contribution of effort and time but the substantial contributions of financial aid. At the time of his death, he was spearheading the work of a building committee to rebuild his church.

WALTER WOODEN, A FAITHFUL AND COURAGEOUS MAN ALWAYS

I do not believe that Walter Wooden would have his friends grieve that he had departed on that long journey to the eternal city beyond distant horizons. Rather, I am convinced that he would have his close friends among his fellow workers and in the orbit of his community life continue to wage battle in the public interest for those things which he thought were right and for those things in which he believed. At the time of his passing, Mr. Wooden had been designated by the Federal Trade Commission to present argument before the Supreme Court of the United States on the celebrated price-discrimination case of the Standard Oil Co. of Indiana. Despite a grave illness which had come upon him a few days previously, Mr. Wooden carried on the preparation of the briefs and arguments to be presented to the Supreme Court in this case. Almost at the very moment of his passing, his eager and scholarly mind looked forward to this last courageous effort in the public interest. It had been Mr. Wooden's plan to retire as of June 1950. His preparation of the argument in the Standard Oil case would have been the crowning effort of his public service.

It is appropriate to repeat in full the resolution adopted by the Federal Trade Commission the very day of his death:

Whereas Walter Banfill Wooden, born in Columbus, Ind., July 30, 1882, was graduated in law from Indiana University in 1905, and served in the Civil Service Commission August 2, 1905, to January 6, 1907, with the Bureau of Corporations until March 15, 1915, and with the Federal Trade Commission from March 16, 1915, the date of its organization, passed away suddenly on Monday, December 5, 1949, upon motion duly made and seconded, it is, by the Federal Trade Commission, unanimously—

Resolved, That the members of the Federal Trade Commission and its staff hereby express their deep sorrow and great sense of loss over the death of Walter Banfill Wooden, associate general counsel of the Commission, who has served with the Commission since its organization on March 16, 1915, as attorney-examiner, attorney in charge of the Chicago office, trial attorney, assistant chief counsel, and associate general counsel, covering the past 34 years, and who, throughout this period, by his devotion to the public interest and his faithful and distinguished service, has won the deep respect, admiration, and affection of his associates and of the members of the Commission.

With those who had the privilege of association with Walter Wooden in his work there will be always the remembrance of his fidelity to duty, his unwavering courage, his tireless energy, his capacity for friendship, and his constant devotion to the public interest, which was exceeded only by his devotion to the Christian principles by which he lived; be it further

Resolved, That this resolution be entered upon the records of the Federal Trade Commission and a copy thereof be sent to the family of Walter Banfill Wooden.

By the Commission.

LOWELL B. MASON,
Acting Chairman.

Adopted this 5th day of December A. D. 1949.

I shall miss Walter Wooden, his friendship and his counsel. Long ago he won my admiration and my respect, not only for his great knowledge in his field of

endeavor but because of his steadfast adherence to the fundamental principles in which he believed. Words and phrases, when one loses a friend and neighbor, often seem inadequate to convey one's real thoughts. Nevertheless, while deeply conscious of these limitations, the words "a great man, a great soul, a great patriot" come to mind. Walter Wooden was all of these—and more.

Mme. Chiang Kai-shek's Farewell Address to the United States

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 9, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks, I am inserting an article on the farewell address of Mme. Chiang Kai-shek to the United States of January 8, 1950:

[From the New York Times of January 9, 1950]

MME. CHIANG VOWS LONG WAR ON REDS IN GOOD-BY TO UNITED STATES—SAYS SHE WILL JOIN HUSBAND ON FORMOSA IN FEW DAYS IN A BROADCAST HERE—AVOIDS APPEAL FOR HELP—ONLY CONSCIENCE OF AMERICANS CAN AID, SHE SAYS—CRIES "FOR SHAME" AT BRITAIN

Mme. Chiang Kai-shek bade farewell to the United States yesterday, announcing that "within a few days" she would leave for Formosa to be by her husband's side. She pledged unending guerrilla and propaganda warfare against the Communists on the Chinese mainland.

Speaking at noon over the full network of the National Broadcasting Co., Mme. Chiang sat alone, except for an engineer and an announcer, in the drawing room of the Riverdale home of her brother-in-law, Dr. H. H. Kung. A group of Chinese friends, reporters, and photographers listened to the speech over a radio in a adjoining dining room.

The climax of her talk came when she said:

"Should it be that some of us are killed in this battle for freedom, others will rise to take our places. There will not be a day of peace for the invader. No great powers can arrange treaties, no statesmen can write contracts that will stifle the Chinese yearning for liberty."

ABANDONED AND ALONE

She made no direct appeal for United States aid. "At such a time," she said, "no pleading can be with dignity." But she declared that China, "abandoned and alone, now shoulders the only rifle in the defense of liberty." Only America's own conscience, she added, can bring her again to China's side.

Mme. Chiang denounced Great Britain's recognition of the Communist regime.

"Already the moral weaklings are forsaking us," she said. "It is with heavy heart that I note that a former ally, Britain, which sacrificed millions of lives on the altar of freedom, has now been taken by its leaders into the wilderness of political intrigue.

"Britain has bartered the soul of a nation for a few pieces of silver. I say 'for shame' to Britain. One day these pieces of silver will bear interest in British blood, sweat, and tears on the battleground of freedom. For that which is morally wrong can never be politically right."

She described her husband, the generalissimo, as the first statesman who recognized the treachery of communism and said he had fought against it for 20 years.

CALLS HUSBAND RESOLUTE

"Times have changed, but the man has not changed," she went on. "My husband remains, resolute, to lead his people against the alien invaders and their alien ideas."

Then she declared:

"Our people will continue to fight for our country from some place from such an island as Formosa, or from the fastness of some mountain, as long as we live or as long as there is an alien enemy on China's soil.

"We shall fight fire with fire. Unremittingly and with tenacity of life, we shall fight and bleed the enemy. Everywhere in China's mainland our guerrillas will keep kindled the torch of liberty. The enemy's lies and deceit, their treachery and propaganda will be defeated not only with bullets but also with truth.

"The oppressed people on the mainland will be prepared so that at a given signal they will rise up simultaneously and overthrow the yoke of Communist domination with our returning armies. To this we are dedicated with our lives."

ROLE HELD INITIAL PHASE

Mme. Chiang stressed again and again the theme that although China is now fighting alone, the battle between freedom and communism is world-wide and must be brought to a conclusion. She described China's role as the initial phase of a gigantic conflict between good and evil, between liberty and communism.

Mme. Chiang came to Washington 13 months ago, flying from San Francisco in President Truman's plane, the Independence. She was received by the President only once, at tea, although she had two long conferences with the then Secretary of State, George C. Marshall, while he was in the Naval Hospital at Bethesda, Md.

Her Washington mission in search of large and immediate aid to the Nationalist forces was generally described as a failure. Shortly after the first of last year she came to New York, spent many weeks in a hospital for observation and later retired to Dr. Kung's home.

Constitutional Aspects of the Civil-Rights Program

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Tuesday, January 10 (legislative day of Wednesday, January 4), 1950

Mr. EASTLAND. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD an article which appeared in the Illinois Law Review, entitled "The Constitutional Aspects of the Truman Civil Rights Program." I am advised that to print the manuscript will require more than the two printed pages allowed under the rule without a statement of cost; and the Government Printing Office estimates the cost of printing at $218.68.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSTITUTIONAL ASPECTS OF THE TRUMAN CIVIL-RIGHTS PROGRAM

(By Charles Wallace Collins*)

When on February 2, 1948,[1] President Truman asserted Federal jurisdiction over the civil rights of individual persons throughout the United States he precipitated a conflict which involves the fundamental question of the nature and form of our system of government. It involves considerations of origin and destiny.

What are these civil rights? These words do not occur in the Constitution but the concept was debated in the Constitution Convention of 1787 and before the public at the time of the adoption of the Constitution. The question has also been adjudicated.

Elsworth, of Connecticut, when asked whether if his State entered into a national government he would not participate equally in national security, replied that he would but that he wanted domestic happiness as well as general security and that the general government could not know his wants or relieve his distress. He said his happiness depended as much on the existence of his State government as a new-born infant depends on its mother's milk. (He was talking about his civil rights.) [2]

Madison, in the Federalist, said that the powers delegated by the proposed Constitution to the Federal Government were few and defined but that those which were to remain in the State government were numerous and indefinite; that the Federal powers would be exercised principally on external objects such as war, peace, negotiation, and commerce, while the powers reserved to the several States would extend to all the objects which, in the ordinary course of affairs, concern the lives, liberties, and properties of the people; and the internal order, improvement and prosperity of the State.[3] This is the area of civil rights.

In the Slaughter-House cases [4] the Supreme Court held that the privileges and immunities of a citizen of a State embrace nearly every civil right for the establishment and protection of which organized government is instituted.

We see, therefore, that the term civil rights embraces those intimate relationships and contacts in the daily life of the individual person in his struggle for existence, in the pursuit of happiness, in sickness and in health, under the protection and restraint of his government.

HISTORY OF CIVIL RIGHTS

The civil liberties which we enjoy today are our English heritage. They are rooted in the great charters and traditions of the English people who fought for and won them from their rulers—Magna Carta, the common

law, the Petition of Right, and the confirmation of all of these in the Bill of Rights of 1689. When the English colonial arrived on the American shores he moved into the wilderness in full possession of these precious rights. Our Declaration of Independence is a complaint against the abuse of our civil rights by the Crown and an assertion of the determination of the Colonies to protect those rights themselves. Each Colony, upon becoming an independent State under its written constitution, preserved and protected the civil rights of its citizens.

It is at this point in our constitutional history that a new contribution was made to the freedom of man. The newly organized States were established upon the republican principle. This meant government founded upon the will of the people under a system of representation and agency, without distinction of class, with checks and balances in the separation of governmental powers and with the exercise of the sovereign power diffused at all levels of local self-government from the lowly precincts to the highest State authority. In other words, they each established the republican form of government.

When these States met in the Convention of 1787 they established also upon the republican principle, a Union of States in the form of a federated republic. Throughout the debates the chief concern of the States was the preservation of control of their own internal affairs and to delegate to the Central Government only those powers which were deemed necessary to enable it to perform the functions of a central government which were beyond the powers of a single State, such as military operations, public finance, postal service, commerce, and foreign affairs. Even after the Constitution had been submitted for ratification many feared that the Federal Government might invade their internal affairs notwithstanding the consideration that the Federal Government was charged with the duty to guarantee to every State in the Union a republican form of government.[5] Madison found it necessary to give assurances. He said it must be remembered that the General Government is not to be charged with the whole power of law-making and administration; that its jurisdiction would be limited to certain enumerated objects which concern the whole Republic but which cannot be reached by any one of the States; that the States would retain their due authority over their own affairs. "Were it," he said, "proposed by the plan of the Convention to abolish the governments of the particular States, its adversaries would have some ground for their objection; though it would not be difficult to show that if they were abolished the General Government would be compelled, by the principle of self-preservation, to reinstate them in their proper jurisdiction."[6] Nevertheless these fears continued after the Constitution was ratified and the First Congress, under the leadership of Madison, drafted and submitted to the States the first 10 amendments known as the Bill of Rights, which were forthwith ratified, the tenth article of which confirmed to the States that the power not delegated to the United States by the Constitution or prohibited by it to the States, are reserved to the States respectively, or to the people.

In *Barron* v. *Baltimore*[7] the question was for the first time presented to the Supreme Court whether the first eight articles of amendment to the Constitution, known as the Bill of Rights, operated as limitations upon the powers of the several States. Marshall ruled flatly that they did not but acted as restraints upon the Federal Government alone.

[6] The Federalist, supra, note 3, No. 14, at 82.

[7] 32 U. S. (1833) (taking property without compensation).

This question did not arise again until 1866 when Congress enacted the Civil Rights Act,[8] over the President's veto, to implement the thirteenth amendment which abolished slavery. There were doubts in Congress as to its constitutionality and it was put aside. Its provisions were, however, incorporated in the subsequent reconstruction legislation after the fourteenth amendment and the fifteenth amendment had been ratified in 1868 and 1870, respectively. These were the Enforcement Act of May 31, 1870, as amended by the act of February 28, 1871 the Ku Klux Act of April 20, 1871,[9] and the Civil Rights Act of 1875.[10]

CIVIL RIGHTS SINCE THE FOURTEENTH AMENDMENT

During the debates on the adoption of the fourteenth amendment and at the time it was adopted there were among its sponsors and supporters those who held two separate but related opinions as to the effect of that article on civil rights. One was that it, in effect, reversed *Barron* v. *Baltimore*[11] and conferred jurisdiction upon the Federal Government to enforce the first eight articles of the Bill of Rights against the States and the other that, henceforth, the Federal Government had jurisdiction over the civil rights of individual persons. There are two separate lines of decisions on these points.

In the outstanding and leading case of *Twining* v. *New Jersey*,[12] in which the whole question was reviewed at length, counsel contended that by virtue of section 1 of the fourteenth amendment the privileges and immunities of citizens of the United States embraced all of the safeguards and personal rights which are enumerated in the first eight articles of the amendment to the Constitution. The Court held that this question was no longer open; that where the Court had ruled against a State for the violation of a right which is also protected from Federal interference by the Bill of Rights it was not because the fourteenth amendment gave jurisdiction to the Federal Government to enforce the Bill of Rights against the State, but because the State in that particular case had violated the fundamental concept of due process of law; that the test therefore is whether the State has violated the due process clause of the fourteenth amendment.

In *Palko* v. *Connecticut*[13] this question was again before the Court, counsel for appellant contending that whatever would be a violation of the original Bill of Rights (amendments 1 to 8) if done by the Federal Government is now equally unlawful by force of the fourteenth amendment if done by a State. The Court said: "There is no such general rule," and went on to cite a number of cases where the Court had held that there had been a denial of due process of law by the State for the deprivation of a person of some right secured against the Federal Government by the Bill of Rights.[14] *Twining* was affirmed.

In 1947, *Adamson* v. *California*[15] brought to the Court the almost identical issue as that of *Twining*,[16] decided 40 years before. It was the contention that the fifth amendment of the Bill of Rights was carried over into the fourteenth amendment as a privilege and immunity of national citizenship which a State could not lawfully violate. Here again is an able review of the whole question—going back to *Barron* v. *Baltimore*,[17] covering a period of 115 years. The majority of the Court reaffirmed the Twining and Palko cases and held that a State was free, "within the limits of the due process clause," to abridge the privileges and immunities flowing from State citizenship; that this was in accord with the constitutional doctrine of federalism by leaving to the States the responsibility of dealing with the privileges and immunities of their citizens except those inherent in national citizenship. The Court said: "This construction has become embedded in our Federal system as a functioning element in preserving the balance between national and State power."

These three cases, Twining, Palko, and Adamson, settle the question as to the relationship of civil rights to the Bill of Rights and the fourteenth amendment insofar as this can be done by the Court. Should the Court ever decide that the Federal Bill of Rights is covered in terms by the amendment, the question would then arise as to what extent civil rights had been nationalized and what, if any, powers Congress had acquired by way of implementation of the nationalization by legislation.

The discussion immediately preceding has dealt with the first and least important phase of the civil-rights question, namely, the restrictions upon the Federal and State governments. We come now to the larger and more vital question of the jurisdiction over the violation of the civil rights of one individual by another and whether the Federal jurisdiction had been extended in this respect by the fourteenth amendment.

Nearly 2 years before the Civil Rights Act of 1875 became law the Slaughter House case[18] were decided by the Supreme Court. The question involved was whether certain persons had not been deprived of the privileges and immunities, as citizens of the United States, by State legislation. The Court held that while certain privileges and immunities of citizenship are derived from the Federal Constitution and these a State may not abridge, it was not the purpose of the fourteenth amendment to transfer the security and protection of all civil rights from the States to the Federal Government nor was it intended to bring within the power of Congress the entire domain of civil rights heretofore belonging exclusively to the States.

The next to reach the Court was *United States* v. *Cruikshank*.[19] This was a prosecution under the Enforcement Act of 1870, defendants being charged with depriving certain other persons of their civil rights. The Court held that the restraints of section 1 of the fourteenth amendment ran against the States only and not against individuals. The Court said: "The very highest duty of the States, when they entered into the Union under the Constitution, was to protect all persons within their boundaries in the enjoyment of these 'unalienable rights with which they were endowed by their Creator.' Sovereignty for this purpose rests alone with the States."

On October 15, 1883, all of that part of the Civil Rights Act of 1875 which assumed direct jurisdiction over the civil rights of individuals was declared to be unconstitutional by the Supreme Court in the Civil Rights case.[20] Sections 1 and 2 of the act purported to abolish segregation of races in hotels, on public conveyances, in theaters, and other places of amusement. Five cases, respectively, from California, New York, Kansas, Missouri, and Tennessee, were consolidated

by the Court and treated as one. The Court held squarely that the prohibitions of the fourteenth amendment have no application to the wrongful acts of an individual, unsupported by the exercise of State authority; that such an act is only a private wrong or crime of that individual; that it may be an invasion of the rights of the injured party, but unless the State participates, the rights of the injured party remain in full force and effect and may be vindicated in the State courts. The Court held that Congress had "no countenance of authority" for the enactment of this legislation.

So far as the Constitution is concerned, the Supreme Court, and the legal profession generally, consider it settled law that the Bill of Rights is a limitation upon the Federal Government only and not upon the States; that the fourteenth amendment did not alter the rule in the Barron case; that Congress has not the power or jurisdiction over the question of the violation of the civil rights of an individual person by another individual person, in which violation the State has no part; that the power of restraint of the fourteenth amendment is in its "due process clause" which operates as a protection to all persons against violation by the States of fundamental rights; and that Congress has no power to legislate in respect to these rights but they must be asserted and vindicated in the courts of law by the person aggrieved. With this background let us now examine the so-called Truman program.

THE TRUMAN PROGRAM

The civil-rights program of legislation can only be attributed to President Truman in the sense that he has caused it to be formalized and has adopted it as his own. The component elements, however, reach back into the plans of the National Association for the Advancement of the Colored People and many lines of political support have been developed in support of some such legislation within recent years. When the CIO-PAC began to develop the idea of "full employment" for the United States, the Negro program for equality and nonsegregation became an integral part of that movement.[21] Anti-poll-tax and antilynching bills have been pending in Congress for several years and on June 25, 1941, President Roosevelt, by Executive order,[22] created the FEPC under his war powers. A bill to establish the FEPC in time of peace has been pending since January 17, 1944.[23] On January 11, 1944, Roosevelt in his annual message on the state of the Union laid before Congress his CIO-supported "economic bill of rights" [24] and the following year in support of the CIO plan for "full employment" in his last message to Congress on the state of the Union, he laid before it what he called "a second bill of rights." [25]

Now all of the foregoing measures and proposals made bold to assert Federal jurisdiction over the civil rights of individuals and all were to become effective without regard for religion, race, or "station." Mr. Truman, as a Senator, was familiar with them and gave them his consistent support. In his first message to Congress, after becoming President, he recommended the CIO program which embraced recommendations for Federal enforcement of the civil rights of individuals including an anti-poll-tax law, an antilynching law and the FEPC.[26] These failed of passage in the Seventy-ninth Congress.

The discussion upon which we are here engaged is not therefore ephemeral as though it came in with Truman. On the contrary it presents a great and developing constitutional issue which has now become interwoven in the fabric of our national politics. It is not easy to resolve and we shall have it with us, with perhaps increased intensity, in the years immediately ahead.

On December 5, 1946, the President appointed his Committee on Civil Rights. In the Executive order creating the committee,[27] he assigns three reasons for this action: (1) The necessity to preserve the civil rights guaranteed by the Constitution; (2) to prevent individuals from the injury of other individuals; and (3) to take all possible steps "to safeguard our civil rights."

As to (1), the constitutional guarantee of civil rights runs to the States to protect them in their republican form of government. It is a restraint upon the Federal Government and not a grant of power. As to (2), the Federal Government has no authority to concern itself with private conduct of individuals with respect to other individuals, no action by the State being involved. As to (3), it cannot concern itself with the question of safeguarding the civil rights generally of persons within such States. This has been abundantly shown in the cases cited above. The President therefore, in my opinion, had no authority to appoint the committee to consider those questions of civil rights, which, under the Constitution, rest solely under the jurisdiction of the States.

The report of the committee came out in 1947 [28] and formed the basis for President Truman's special message, on February 2, 1948,[29] to Congress on civil rights. The report contains 178 pages while the message is nothing more than a skeletonization of the report. The report therefore is the document which presents the constitutional question and will be so treated when we consider the nature of the measures proposed.

Neither President Truman, nor the report, submitted the proposed text of bills or resolutions to make effective their recommendations, consequently no concrete criticism or evaluation can be made as to their specific relationship to the Constitution in terms. For that we need words and phrases to give life and substance to the proposals. It is true, however, that there were pending before the Eightieth Congress complete drafts of bills on the subject of some of the recommendations of the President, but these were sponsored in committees controlled by the Republicans and the President did not publicly give his support to any of them. To consider them here therefore would be beyond the scope of this article.

Nevertheless, the grounds assigned as a basis for the proposed legislation present fundamental constitutional questions and are subject to critical analysis. President Truman in his message of February 2, 1948, says that the Federal Government has a clear duty to see that constitutional guaranties of individual liberties and of equal protection under the laws are not denied or abridged anywhere in our Union and that that duty is shared by all three branches of the Federal Government, but can be fulfilled only if Congress enacts comprehensive civil rights laws. As far as this statement appertains to individuals alone we have seen that there is no jurisdiction in the Federal Government and that in case a State is alleged to have deprived an individual of these rights no department of the Federal Government can take the initiative, but the person aggrieved may assert his rights in court.

The report of the committee is in part propaganda and in part a desperate speculation to find a way to overthrow or evade existing decisions of the Supreme Court. The argument runs through the report that although the American Government is dedicated to the democratic way of life where all are equal and should have equality of treatment by government and by individuals, this principle is being violated, particularly in the South, and it is time now to reconsider the whole question of civil rights with a view to understanding the causes of prejudices and to stamp them out. To this undertaking it says only the National Government is competent to come forward.

Having reached this conclusion, the task to which the committee assigned itself was to find ways and means. The present state of constitutional law on the subject is admitted. Members of the committee appear to have been familiar with most of the cases cited in this paper, which deny jurisdiction to the central grovernment. Nevertheless, they worked out a modus operandi, the first step in which was that the President and Congress, at the high policy level, and upon the advice of counsel as to the test of constitutionality, determine the wisdom of a broader civil-rights program. Consider next the marke developments in the Supreme Court within the last 10 years toward the protection of civil rights. Let Congress, upon recommendation of the President, therefore enact a series of laws which would put into effect this broader program and let it be fought through the Supreme Court.[30] In this connection the report conceives the possibility that the Supreme Court, in a new climate of opinion might reverse the opinion in the Civil Rights cases and substitute the dissenting opinion of Justice Harlan, in that case, as the basis for a proper ruling.[31]

The basis assigned by the committee for its recommendations for action are:

1. Moral. Burdens on the common conscience must be removed.

2. Economic. Heavy drain on human wealth cannot be afforded.

3. International. What foreigners think of our domestic record in democracy cannot be ignored.[32]

The committee then proceeded to recommend the enactment of 34 separate pieces of Federal legislation, ranging over the whole field of civil rights, including, an antilynching law, an antipoll tax law, FEPC, an enlarged FBI, a permanent Federal Civil Rights Commission, restoration of provisions of the Civil Rights Act of 1875 which were annulled, and acts to enforce the thirteenth, the fourteenth, and fifteenth amendments.[33]

The committee states to the President that it believes a program of positive action by the National Government "falls well within the limits of governmental power established by our Constitution." [34] The following are cited as possible sources of legal support: Authority of Congress under the thirteenth, fourteenth, and fifteenth amendments; a further enlargement of the application of *McCulloch* v. *Maryland* [35] to protect civil rights; the use of the war powers; the Interstate Commerce clause; the power to tax and expend; the postal power; "power derived from the Constitution as a whole to protect the rights essential to national citizens in a democratic nation"; [36] the power derived from the United Nations Charter and finally the clause of the Constitution which—God save

the mark—guarantees to every State a republican form of government.

The report of the committee closes with the following statement, set up in a paragraph in italics in the center of page 175:

"As the committee concludes this report we would remind ourselves that the future of our Nation rests upon the character, the vision, the high principle of our people. Democracy, brotherhood, human rights—these are practical expressions of the eternal worth of every child of God. With His guidance and help we can move forward toward a nobler social order in which there will be equal opportunity for all."

Throughout the so-called Truman program there runs the fallacious assumption that certain groups of persons in the United States are not in possession of fundamental civil rights and that these rights should be bestowed as a boon from the Federal Government. The duality of our citizenship is ignored. The citizens of a State all have equality in civil rights and these rights are protected by the due process and equal protection clauses of the Constitution. In national citizenship each has the same privileges and immunities.

Such is the nature of President Truman's program of legislation for the protection of civil rights.

ARE WE NOW GIVING CONSIDERATION TO AN ABANDONMENT OF THE CONSTITUTION?

Our American ancestors sought and won freedom. They built on virgin soil a new form of government to make men free. In the short space of our national life—only 159 years—our republican form of government has shown how freedom can be achieved under the rule of law. Nevertheless the student of the Constitution must now face the fact that a considerable body of public opinion now supports radical changes in our theory of government with the emphasis on personal security rather than freedom.

The last 10 or 15 years have brought to bear upon the minds of the American people cataclysmic concepts of human relations and we have learned a new vocabulary. We became acquainted with national statism in Russia, Italy, and Germany. And in the war with the first as an ally, and with the other two as enemies, we also, under the centralizing forces of national defense and war, followed their example by going far into national statism ourselves. And the influence of this centralization and national planning of everything for everybody has been carried over into the post-war period. Thus many are now coming to look to the Federal Government for the satisfaction of all of their needs and desires. They look to the centralized state for succor and protection from the cradle to the grave. Rugged individualism—the symbol of freedom and adventure—has become to them a term of reproach.

Within this new school of thought which is trying to bend the Constitution to its will without seeking formal amendments, religious values are also playing a part and they are frankly stated in the report of the President's Committee on Civil Rights. They are supported as legitimate Federal aims by a number of influential religious organizations. The Federal Government is urged to make effective the brotherhood of man because all men are the children of God. The democratic way of life becomes of national concern. This also is a religious or moral concept because it denotes a rule of conduct of the individual. It is different from the concept of democracy as a form of government.

Under this civil rights plan the Federal legislation recommended would carry heavy civil and criminal penalties for violations by individual persons and by State officials. The strong arm of the Federal Government with its enlarged and specially trained secret police would go out to detect and punish those who failed to observe these new laws.

Although to an old line student of the Constitution this situation may present a constitutional nightmare, he cannot afford to ignore it. We have already come a long way in this movement to change the fundamental nature of our form of government by evasion, subterfuge, indirection, and emotionalism. In the near future it bids fair to become one of the chief political issues before the country. New party alinements may arise because of it. It has already been the occasion for the States' rights Democratic revolt in the South. But it is not a local or regional question. It is a question of the survival of the Constitution.

Multiple-Purpose Dams Fit in Development of Natural Resources

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by me which was published in the January issue of the Farm and Ranch magazine with the Southern Agriculturist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By ESTES KEFAUVER, United States Senator)

It has long been recognized that the water in the streams of our country represents a vast natural resource which should be developed on a comprehensive scale. Rivers have played a big part in the life of man since earliest times, when they provided food, in the form of fish and mussels, and a simple means of travel and transportation.

As man has increased his mastery over nature through engineering and technology, the possibilities of obtaining maximum benefits from flowing water have increased. Once developments were planned and carried out for a single purpose, such as navigation, or at most for two. Today engineering advances have made it possible to develop streams for many purposes. Such multiple development is, practically speaking, a product of the past decade and a half. But the advantages of such developments were realized long before. In 1909, during the administration of President Theodore Roosevelt, a National Conservation Commission headed by Gifford Pinchot made a comprehensive report on natural resources in the United States, in which it said:

"The broad plan already framed by statesmen and experts and approved by the Executive should be put in effect. It provides for a system of waterway improvement extending to all the uses of the waters and benefits to be derived from their control, including the abatement of floods for the benefit of navigation, the extension of irrigation, the development and application of power, the prevention of soil wash, the purification of streams for water supply, and the drainage and utilization of the waters from swamp and overflow lands.

It is clear that the men who framed this statement were sound in their conception of the possibilities for development of water resources. They were also, without doubt, somewhat ahead of their time. Actual realization of their ideas was still some years off.

Even in those days, however, plans were being made to accomplish more than one objective of water control by construction of single structures. Several projects in the West envisaged the damming of streams for storage of irrigation water and at the same time the production of electric power. Such dams might be called dual-purpose dams. The damming of rivers for navigation, as on the Ohio River and other streams, had been carried on for years. These were single-purpose dams.

By the middle of 1920, and particularly after the 1927 flood of the Mississippi, it became apparent that flood control was an objective to which dams and reservoirs must be devoted. Previously, chief reliance had been placed in levees and similar works which averted damage at localized spots. At the same time, such works constricted the natural river channel in floodtime and often caused higher stages at other points along the river. Moreover, levees had been built higher and higher until they were reaching their maximum development, both from the standpoint of economic feasibility and safety. Each foot added to a levee not only added to the cost, but also increased the risk and damage in case the levee failed. Moreover, it was apparent that floods were often caused not by local rainfall and runoff, but were the result of waters falling on slopes hundreds of miles away.

Such considerations led inevitably, as public understanding grew, to the establishment of multiple-purpose projects which would carry out the objectives voiced in 1909 by the National Conservation Commission. The TVA project was the first in which the new concept was placed in effect on a major scale, and today the Tennessee and its tributaries still form the first and only entire large river system which has been brought under multiple-purpose control.

As such, this system of multiple-purpose dams is worthy of intensive study. On this river system, consisting of the Tennessee and its major tributaries, TVA has constructed 17 dams. In addition, it took over Wilson Dam at Muscle Shoals, built previously by the Government; it purchased four dams on the Tennessee system from a private company, and it worked out an agreement with the Aluminum Co. of America whereby its five major dams and reservoirs are operated as a part of a unified system. Thus the Tennessee River is controlled by a system of 27 major dams.

These dams, operated as a single system, control the run-off from an area of 41,000 square miles. They reduce flood heights during the rainy season, and they store water which is used during drier periods for maintaining the navigation channel and for producing power. Such a system is, of course, complex. It has to deal not only with a general weather cycle in the Valley, but with specific situations in limited localities.

The multiple-purpose system on the Tennessee achieves several purposes, and at bargain rates. Essentially it consists of two kinds of dams. On the main river, a series of dams creates a continuous chain of lakes from Paducah, Ky., to Knoxville, Tenn. On the tributary streams, high storage dams control the flow by storage and release of water at appropriate periods and seasons.

The system provides 11,000,000 acre-feet of storage for flood control which protects danger points in the Tennessee Valley and in the

rich areas along the Ohio and Mississippi Rivers below the mouth of the Tennessee. The Tennessee River has been made navigable for modern towboats and barges of 9-foot draft for its entire 650-mile length. And at the same time, the system of dams produces a tremendous quantity of electric power—some 15,000,000,000 kilowatts during the last year, or 10 times as much as was produced in the same region in 1933.

These are the major purposes as defined in the TVA Act of 1933. Today, the flood-control benefits of the system are estimated at $11,000,000 a year. Savings in transportation charges on automobiles, steel and iron products, wheat, corn, fertilizer, and many other items were estimated in 1948 at about four million, with nine million of such savings to be expected annually when traffic reaches mature development. The power produced by the system last year was sold for $100,000,000. In addition there are subsidiary benefits, such as the development of a recreation industry which has attracted so far—in its infancy—an investment by States, counties, cities, and private individuals of nearly sixteen million. The lakes have attracted an increasing number of wildfowl to the preserves which are spotted along their shores. Fishing has vastly increased. It has been found possible to so operate the reservoirs as to virtually eliminate the malaria hazard in areas where it once was a serious problem. States, cities, and industries are taking an increasing interest in stream sanitation in order to realize the greatest advantages from river development.

In operation, the system follows the annual cycle of rainfall and run-off. In the beginning of the flood season the reservoirs are drawn low so that they have space to store possible flood waters. As the danger of floods recedes in the spring, the reservoirs can be filled. Then, as the annual dry season makes itself felt in dwindling rainfall and run-off, the water stored in the reservoirs is released to maintain the level of the navigation channel and to produce power.

Thus the multiple-purpose system makes the most of one of the greatest of the natural resources in the Tennessee Valley, something which could never be done by piecemeal, single-purpose development of the stream flow. In the Tennessee Valley multiple-purpose developments provide a pioneering model showing the way to efficient development of water resources in other parts of the country where the streams are susceptible to similar treatment.

Agricultural Price Supports and the Brannan Farm Program

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials dealing with the agricultural price-support program and Secretary of Agriculture Brannan's views. The first, entitled "United States Price Props for Farm Crops Dip, Survey Reveals," appeared in the St. Paul Dispatch of December 12, 1949. The second, entitled "Brannan's Warning," appeared in the St. Paul Pioneer Press of December 14, 1949.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Paul (Minn.) Dispatch of December 12, 1949]

UNITED STATES PRICE PROPS FOR FARM CROPS DIP, SURVEY REVEALS

WASHINGTON.—Government price supports for farm products are going down.

A United Press survey indicated today that support prices for most farm products will be lower next year for the second straight year.

The decline in 1950—as compared to the peak price-support year of 1948—probably will range from more than 50 percent in the case of flaxseed to about 3 to 5 percent more in the case of wheat and corn.

Prospects are that price props for the 1950 cotton crop will be down at least 7 percent from the 1948 support level. Furthermore, cotton plantings will be curtailed by Government production controls.

Egg supports also will be cut in 1950, perhaps as much as 20 percent from this year's level.

Even a small drop in supports will be felt in farmers' pocketbooks next year. Two years ago most farm commodities sold far above the support prices. But most farm commodities now are hugging the support level. Only Government price guaranties are holding them up.

There are three reasons why price props are being lowered:

1. The parity prices for farm products have declined. That is, the farmer's dollar now will buy more—about 4 percent more—than it did 24 months ago. Price supports are set as a percentage of parity to maintain the farmers' purchasing power. When parity declines from one year to the next, the dollars-and-cents figures at which farm prices are pegged automatically drops.

2. In the case of some products the Government has deliberately slashed supports to hold down surplus production or to stimulate consumption through lower prices. This was down this year in the case of potatoes, flaxseed, beans, peas, and naval stores (gum turpentine and rosin).

3. New farm legislation in 1950 for the first time in 8 years strips mandatory high supports from hogs, chickens, and eggs. The Government plans to reduce egg props in hopes of curtailing production and getting people to eat more. It has had to buy more than 2,000,000,000 eggs to support prices this year. Prospects are that chicken and turkey supports also will be cut. There has been no indication as to where supports will be set for hogs or dairy products.

However, bucking the downward trend in supports are tobacco, rice, and wool. Prospects are that supports will be higher for these products next year. New farm legislation boosts the parity price for these products in 1950 and requires that supports be fixed at about the same percentage of parity as in the past.

The following table shows how farm supports are dropping. The support prices shown for 1950 are only preliminary and unofficial estimates.

One of the assumptions on which the estimates are based is that farm production and living costs will not drop in 1950. Actually, the Agriculture Department predicts these costs will drop slightly. If so, actual 1950 support prices would be lower than indicated in this price support table:

	1948	1949	1950
Commodity:			
Corn, bushel	$1.44	$1.40	$1.39
Wheat, do	2.00	1.95	1.91
Cotton, bale	.2879	.2723	.2678
Rice	1.84	1.78	2.03
Peanuts, pound	.108	.105	.1035
Wool, do	.423	.423	.448
Milk [1], 100 pounds	3.59	3.51	
Butter [1], pound	.634	.620	
Potatoes, bushel	1.67	1.08	.96
Eggs [2], dozen	.488	.470	
Hogs (during 6 months ending March 31), 100 pounds	15.57	16.38	15.84
Chickens [2], pound	.256	.250	
Turkeys, do	.323	.310	
Sweetpotatoes [3], bushel	1.98	1.72	
Dry beans [3], 100 pounds	7.61	6.55	
Soybeans [3], bushel	2.18	2.09	
Dry peas [3], 100 pounds	4.80	3.12	
Cottonseed [3], ton	0	46.50	
Turpentine and rosin, unit	131.58	114.08	82.27
Flaxseed [1] (at Minneapolis), bushel	6.00	3.99	2.82
Barley [3],	1.15	1.09	
Grain sorghums [3], 100 pounds	2.31	2.09	
Oats [3], bushel	1.29	1.27	
Honey [4],	0	0	
Mohair [4], pound	0	0	
Tung nuts [4], ton	0	0	
Tobacco:			
Flue-cured, pound	.439	.425	.442
Burley, do	.424	.403	.444
Fire-cured, do	.318	.302	.333
Dark air-cured, do	.283	.269	.296
Maryland, do	.439	.4195	.526

[1] Supports can be raised or lowered in 1950 within a range of 75 to 90 percent of parity. If estimated parity price remains unchanged, 1950 supports will be set somewhere between $3.29 to $3.94 for milk and 60.8 to 72.6 cents for butter.

[2] Supports can be eliminated in 1950 or set as high as current 90 percent of parity. If estimated parity prices remain unchanged, highest possible 1950 support level would be about 45 cents for eggs; an average of $16.92 for hogs; 25.9 cents for chickens; 33.4 cents for turkeys; $2.27 for soybeans; and $59.76 for cottonseed.

[3] Supports can be eliminated in 1950 or set as high as 90 percent of parity. If supports are fixed at the same percentage of parity as they were this year and estimated parity price doesn't change, 1950 supports would be barley $1.02 (72 percent); grain sorghums, $1.93 (70 percent); oats, 63.7 cents (70 percent); rye, $1.08 (72 percent); sweetpotatoes $1.82 (80 percent); dry beans, $6.74 (80 percent) and dry peas, $3.34 (60 percent).

[4] Must be supported in 1950. If present estimated parity prices remain unchanged, the maximum and minimum levels at which supports can be fixed are 10 to 15 cents a pound for extracted honey; $60 to $90 a ton for tung nuts; and 39.6 to 59.4 cents a pound for mohair.

[From the St. Paul (Minn.) Pioneer Press of December 14, 1949]

BRANNAN'S WARNING

Secretary of Agriculture Brannan, in his address here last night, has put the position of agriculture before the Nation in a manner that should clear up much misunderstanding and will help to define the problem. In doing so he has performed a public service.

What Secretary Brannan has pointed out is that the classic and historical pattern of agricultural deflation is now repeating itself, although fortunately in much less violent and injurious fashion than in similar economic situations of the past. American experience is that agriculture takes a price decline before other segments of the economy and is the first to feel the effects of a post-war, post-inflationary readjustment.

A great deal of political ill-will has been aroused against agriculture in the populous sections of the country because of the price support policy, with its heavy burden of public costs, during a period of high consumer prices.

What Secretary Brannan shows is that despite these price supports, the net income of the farmers is already down 20 percent from 1947. It may decline another 15 percent next year. What reduction there has

been in the cost of food to the consumer has been principally at the farmer's expense. This is true, and is usually true, because farm prices are the least artificial, and the most sensitive to the law of supply and demand, of any major group of prices in the economy. While the other costs of labor, hauling and manufacture and distribution that go into the final price of food have remained high, farm prices have been declining quite sharply. But the final price of food does not reflect this decline in full because the cost of the crop as it leaves the farm is, in most cases, a small part of the total cost.

Had it not been for the price supports, the misfortune of agriculture would have been severe. And it must be remembered that misfortune, when it hits one great branch of economy, does not stand still but spreads throughout the Nation. As Secretary Brannan observed, "Haven't we seen before what the loss of agricultural purchasing power can mean in terms of declining sales, unemployment, and unless it is checked, in full-scale national depression?"

Hence it is of general national interest to see that the agricultural industry not again become the weak link in prosperity. There is no unanimity of opinion as to the mechanics of a permanent farm program. Secretary Brannan has his own plan. It is highly controversial. The new farm act of 1949, while perhaps an improvement over the Aiken Act, can hardly be scored as more than a hastily improvised stopgap.

Apart from the problem of method, Secretary Brannan has done well in pointing out to the Nation as a whole that it has a stake in farm prosperity, that there is a cloud over the farm scene, and that what is done to stop the slump in farm income is done not just for the farmer but for everyone.

Removal of Restrictions on Margarine

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address which I delivered last night on America's Town Meeting of the Air entitled "Should the Senate Remove Restrictions on Margarine Now?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SHOULD THE SENATE REMOVE RESTRICTIONS ON MARGARINE NOW?

The only crime that margarine is guilty of is that it is cheap. The only reason that it is taxed and its sale restricted by law is that it is cheaper than butter. Margarine is made from the products of American farms, soybean oil, cottonseed oil, and milk. It is colored just as butter is colored—by a harmless artificial ingredient.

All that we are asking is that both of these perfectly legitimate, pure, nutritious food products be treated alike. If butter has the right to be colored freely—then so should margarine have that right.

Margarine sells on the average for one-half the price of butter. It is the poor man's spread. To tax and restrict its sale is to levy a further heavy burden on the backs of those who can least afford it, for the enrichment of a relatively few butter producers.

The fight between butter manufacturers and margarine manufacturers is only incidental. The 150,000,000 consumers of this country are the ones vitally interested in freeing margarine from its shackles.

Every time the people have a chance to speak on this issue, they vote for freedom of margarine. Only last November the people of Ohio—incidentally one of the greatest dairy States—the people of Ohio in a direct election spoke up for free margarine by a half-million majority. The House of Representatives twice has voted overwhelmingly by 3 to 1 to free margarine. If the butter interests will permit the Senate to vote—without confusing the issue with irrelevant amendments—the Senate, too, will express the will of the people.

The restrictions and red tape imposed upon the distributors of margarine are more burdensome than the 10-cent-a-pound tax. Most retailers refuse to handle colored margarine because the bookkeeping is similar to that of OPA days.

Butter is the only product I know of which insists that it owns a color and that its competitor can't use it.

What would you think if cotton manufacturers said rayon or nylon shirts or dresses could not be white, unless they paid a 30-percent tax? Would it be reasonable for leather manufacturers to prohibit artificial leather colored brown?

Imitation in color, in shape, in use is the essence of competition. Every new product of science to some degree imitates and supplants some existing product. Competition and change are characteristic of, and inherent in, a dynamic, progressive society.

Do any of you really believe that we should try to freeze the status quo upon our Nation by arbitrary legislation? I don't think so.

The butter people will tell you that there is great danger of fraud—that if the margarine restrictions are removed, consumers will not be able to distinguish margarine from butter. In 1886, when the antimargarine laws started, this argument carried some weight. In those days we did not have the pure food and drug laws. We do today, and it is those laws which require proper labeling. Those laws protect the consumer against impure or fraudulent products, rather than the taxes and regulations which single out margarine for punishment.

The butter people will tell you that repeal of these laws will ruin the dairy industry. But there is plenty of room in our economy for both margarine and butter. In fact, there is a serious shortage of table fats in the diets of many poor people, which the antimargarine laws accentuate by increasing its cost and by restricting its sale.

In Senator WILEY's own great dairy State of Wisconsin, butter represents a very small portion of the dairy farmer's income. In 1948, for instance, Wisconsin dairy farmers received only 1.77 percent of their income from the sale of butter. The reason for this is that butter is the least profitable outlet for milk.

There is no good argument for punitive, discriminatory legislation against a good food.

Gompers Centennial

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Gompers Centennial," published in the Washington Star of January 9, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOMPERS CENTENNIAL

The actual one hundredth anniversary of the birth of Samuel Gompers will not occur until January 27, but the centennial celebration already is well under way. This interests organized workers especially, yet it by no means is limited to them. The great American Federation of Labor president was a national figure in the full sense of the phrase and even now, though he has been dead more than a quarter century, his influence still is felt throughout the Nation.

Mr. Gompers himself appreciated his place in the history of his times. Washingtonians remember him not simply as the head of the A. F. of L., but also as a publicist, a social philosopher, with ideas and opinions on everything under the sun. The little Dutch Jewish immigrant boy of 1863 grew to maturity in a world rapidly developing new issues, new conflicts, which claimed his attention and which he rarely, if ever, attempted to avoid. Throughout his career, he kept his mind and his heart open to what was going on about him. He was exceptionally sensitive to economic, social, and political developments, but he likewise was receptive to happenings in such distant fields as music and literature, drama and painting. The major enthusiasm of his life, however, was the cause of solidarity among working people. A cobbler and then a cigar maker, he realized that the individual laborer or craftsman was handicapped by his individuality. In order to bargain sucessfully at all it was necessary to bargain collectively. So Mr. Gompers applied himself to the task of discovering competent union leadership wherever it could be found, and he set a personal example for the young lieutenants he discovered. Thus the American Federation of Labor became a reflection of his conceptions, his methods, his objectives.

Perhaps the most important test of his whole life was that which emerged with America's participation in the First World War. Thousands of American working men and working women hated the Kaiser but were opposed to the United States being involved in the struggle to defeat him. Mr. Gompers at a tensely psychological moment chose the patriotic course. With all the ardor of his soul he threw himself into a campaign for national unity in the face of popular pacifism. He toured the country speaking at meetings, talking privately with local officers, arguing with stubborn critics. The effort was strenuous, but it was continued as long as there was need for it. His part in achieving victory in 1918 is one reason why the Government is bringing out a commemorative postage stamp for Mr. Gompers on his hundredth birthday anniversary.

The National Budget of Scientific Work for 1950

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted

in the Appendix of the RECORD an address delivered by Dr. John R. Steelman, assistant to the President, before the third National Men of Science and Industry dinner in Washington, D. C., December 2, 1949, on the subject "The National Budget of Scientific Work for 1950."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am greatly honored to be with you tonight and to have this opportunity of speaking to so distinguished a group in the field of science.

I had the privilege of meeting with you once before. Since that time I have given considerable thought to some aspects of our science programs and their relation to the public policy.

Within our lifetime science has provided the key to greater material progress than had been made within any period of hundreds of years before. Science will certainly alter the lives of mankind even more in the years ahead.

The importance of science to our national life has been dramatized for all Americans by the atom bomb and the tremendous potentialities of atomic power, but on a thousand less publicized fronts the researcher and the technician are working together in the search for truth. Each new discovery, each new germ of knowledge acquired makes it easier to push further into the deep recesses of the unknown in our search for scientific truths.

As the President said before a distinguished group last year, the knowledge that we now have is but a fraction of the knowledge that we must get, whether for peaceful purposes or national defense. He has expressed the faith that when more of the people of the world have learned the ways of thought of the scientist, we shall have better reason to expect lasting peace and a fuller life for all.

It is fitting, therefore, that we now consider the direction we are taking in utilizing the great reservoir of scientific knowledge already at our disposal and the paths we must follow to acquire the further knowledge that we must have.

Just as the work of the scientist is better understood today than ever before, so is it becoming more evident—and more important—that the pursuit and application of scientific knowledge must be a joint enterprise in which the institutions of higher learning, the private foundations, industry and government cooperate, each undertaking its proper role. We gave the world an example of such teamwork during the war—and without this teamwork, as we all know, the development of the weapons that brought us victory could not have been accomplished.

There may be differences of opinion as to how far in peacetime the Federal Government should go in directly supporting research, both basic and applied, but there is a general realization, growing out of the war, that scientific research is a vital element of public policy and must be supported and encouraged by the Government.

The responsibility of the Government in this connection is threefold. First, we must respect and guard freedom of research for all our scientists, whether they are directly employed by the Government or whether they work in the universities or industry. Second, the Government should continue to encourage private research, and where necessary to support promising research. Third, as the chief supporter of scientific research today, the Government must be prepared at all times to justify its program on the basis of soundness of content, balance of emphasis, and economy of manpower and money. This can be done only by judging the Government's efforts against something which is missing today, and which we must together supply—namely, a genuine national policy and a program for scientific research. There is a close and vital relationship between these factors which must be fully recognized if science is to serve our needs.

The safeguarding of principles of freedom of research means more than making a scientist safe from political harassment, important as that is. We all know that good men of science have come in for more than their share of such harassment since the war, and they, as well as all Americans, deserve to be protected from unwarranted attack. At the same time, we must recognize that today, more than ever before, our Nation's security depends in large measure on the security of our scientific effort.

There should be no grave incompatibility between the enforcement of necessary security measures and the safeguarding of the rights of scientists to engage in free and independent research. I do not think our policy in this regard can be better stated than it was stated, first in the Bush report, "Science, the Endless Frontier," and again in the reports which I made to the President as chairman of the President's Scientific Research Board. We said, "Scientific progress on a broad front results from the free play of intellects, working on subjects of their own choice, in the manner dictated by their curiosity for exploration of the universe. Freedom of inquiry must be preserved under any plan for government support of science."

The question of providing funds and adequate facilities for research involves more than determining how much money shall be spent. Already the Federal Government is spending at the rate of more than a billion dollars annually on science projects. The estimated expenditures for fiscal year 1950 which ends next June 30 are for $1,380,000,000, including money for the construction of facilities for scientific work. I might point out that excluding the expenditures of the Atomic Energy Commission, our expenditures for science this year, are still close to $1,000,000,000, and that excluding the science expenditures of the Military Establishment, we are spending as much for other purposes as we are spending on atomic energy.

In this connection I wish to point out a fact that all of you know but many others perhaps do not stop to realize—that medical and biological studies, to use an example, which are made by the armed services benefit civilians as well, just as many wartime discoveries, utilized at first by the military, now are adding to the comforts of life for all.

The impact of the billion dollars spent by the Federal Government on research and development projects is felt beyond the executive departments, for about 30 percent of the funds are spent off-site. In the 1950 budget off-site obligations run to a total of $425,000,000. This is money allocated both to institutions of higher education and to industry for a variety of purposes. In previous years, also, a sizable portion of the research budget was spent in non-Government laboratories. In 1948, to use a single example, when our Federal research and development budget totaled a little under $1,000,000,000, we allocated nearly $73,000,000, or about $1 out of every 12, to the institutions of higher learning. And in 1949, it is estimated, expenditures for Federal research at colleges and universities were approximately $100,000,000, and this year the amount is larger still.

Federal research funds constitute a substantial portion of the research budget in many institutions, often averaging well over 50 percent of their entire research budget. Since federally sponsored research is largely in the natural sciences, the funds allocated to the schools have had the effect of greatly increasing the research in these fields.

The impact of Federal programs has further affected the work done in the institutions of higher learning by broadening the base of research. In prewar years, when college research grants came largely from private sources, the program pattern was greatly influenced by the direction of industrial research. Many schools feel today that while Federal research funds available to them are not actually the cause of a trend toward a broader research effort, these grants have been of assistance in developing a trend that had already started.

Industry, of course, has benefited dollarwise even more than the colleges from the Federal research and development budget. This year alone between a quarter of a billion and three hundred million Federal research dollars will be spent in industrial laboratories. Today the operating burden of the development of atomic energy rests primarily on industry. In fact, the entire program, except for top policy direction, is carried on through industry and institutions of higher education.

Likewise, the development and advancement of aviation in this country have been made by an industry strongly supported and encouraged by the Government, both in war and peace.

It seems to me that the record of joint interest which these examples afford provides us with the answer to the oft-asked question of who shall promote science—government, industry, or the universities. The answer cannot be "either, or," but "all together" in the pursuit of our common objectives.

But our problem is not only who, but how much. The expenditures being made out of tax funds for research and development today are at a high level not only because scientific advances of the past generation, and particularly during the war, have given us a keener realization of the importance of science to our national survival and happiness as individuals, but because of current defense requirements.

The Bush report pointed out effectively that there must be more—and more adequate—military research in peacetime. But at the time this report was made, there was no public knowledge of our atomic-energy program, and even considerably later no one foresaw that this program would be of the magnitude we hold essential today, nor that the programs of the Office of Naval Research would remain at such a high level, nor that other military research would require the expenditures that we now consider to be necessary.

Prior to the war, most of the research done in this country was concentrated in a few large laboratories. The work in some of the larger universities and colleges was financed almost entirely from endowment gifts and foundation grants. In industry, a relatively small number of large companies employed a high percentage of all industrial research workers. While to some extent this situation remains true today, both in the schools and in industry, the increase in the government's scientific budget has brought about a great increase in research together with a mounting national expenditure.

Few would question the desirability of research expenditures of the magnitude now carried in the Federal budget. But it is a matter of concern to all of us that as our Federal budget for science increases—and it has increased each year since the war—we must get full value for the money spent.

Only 20 years ago the total private and Governmental expenditures for research were about 166 million dollars. By 1940 the amount so spent was $345,000,000, and today the Federal expenditures alone are nearly $1,400,000,000.

Prior to the war industry paid a high percentage of the cost of all research. In 1930, for instance, the Federal Government provided 14 cents of the research dollar, the

universities 12 cents, and industry 70 cents. During the war, understandably, this situation was reversed, with the Federal Government contributing 83 cents of the science research dollar.

This is the century of science. Never before in history has science so influenced human conduct. Never before have so many millions of people held science in such respect—and fear, as today. Our research budget of a billion dollars plus is itself dramatic emphasis of the vital role of scientific research in the shaping and conduct of public policy. For these reasons, we must assume that the Federal contribution to research and development will continue to be large.

The report of the President's Scientific Research Board gave estimates of the growth that will be necessary. It stated that by 1957 as a Nation—and that means not only the Federal Government, but the colleges and industry, all together—should be spending:

At least four times as much as in 1947 on basic research; at least three times as much on health and medical research, and at least twice as much as in 1947 on nonmilitary development.

These targets are high. There is a real question as to how much further the Government can go, under the existing critical budget pressures, in extending its support. There is a growing belief that the Government should not greatly step up its participation in the Nation's research effort until the total budget for research, private as well as public, can be appraised and redefined as to objectives and resources. But I believe strongly that the attainment of our goals of maximum employment and maximum productivity, based upon expanded business investment, will require a vigorous research and development program supported by private capital. New industries, new products, and new jobs must be created to maintain our prosperity. The Government's research program is heavily burdened by national defense needs, and in consequence the balance of its research funds are very largely limited to filling critical gaps in the nondefense areas. This situation is not conducive to the achievement of the balanced research program which the Nation requires for its human and economic well-being, and for the conservation and development of its natural resources. Government alone cannot do the whole job. I question whether, in the absence of an extraordinarily high peacetime national-defense program, there would exist sufficient public support for a Federal research program on a level comparable to what we now have. We must think ahead to the decisions which will confront us when more stable conditions prevail. I regard this problem as one of the really important issues of public policy facing us for the future.

Steps toward the development and integration of a national defense policy were made through the studies of the President's Scientific Research Board. The report made to the President considered the interrelation of Federal and non-Federal research and development, and contained recommendations for coordinating the Federal program for greater efficiency, and for more effective use of national scientific resources.

The report reemphasized the need for establishment of a National Science Foundation, which the President has repeatedly urged the Congress to authorize.

It is hoped that when the Congress returns in January prompt attention will be directed to this long-overdue legislation. Next year should mark the creation of this important Foundation. I firmly believe that this would constitute the most far-reaching and important step we have taken in the field of science in the postwar world.

In the foundation we should have a focal point for appraising and evaluating our national research needs, and through its operations we could expect the evolution of a national policy and the shaping of a truly national research budget which would make it possible to relate the activities of Government, industry, and higher education on a more balanced basis than has been the case up to now.

Pending the establishment of the foundation, the Federal Government is improving the administration of its own research activities through the work of the Interdepartmental Science Committee, which is composed of representatives of the Executive agencies engaged in research. This committee is concerned in an advisory capacity with a variety of common problems facing Government research organizations, and only recently has transmitted to me a report outlining a suggested course of action to improve Federal practices in the field of research contracts and grants.

The committee is also concerned with problems of budgeting for the Federal research program, dissemination of information about the Federal research program, and scientific personnel in the Federal program.

We must as a Nation take steps to increase the support of basic research. The creation of the National Science Foundation would be an important step in this direction. The Foundation would be empowered to make grants to universities and to offer scholarships and other incentives to scientific activity.

Thus, many top-flight scientists would be encouraged to remain in the schools where they could engage in research in which they are interested and continue their role as teachers. In this way, we would provide for an increasing number of scientists for the future. Under present conditions, lack of trained manpower is one of the limiting factors in research.

This gap in our science program is one that is of increasing concern to all of us, for in the final analysis, the value of any science program is determined by the caliber of the scientists who are doing the job. Since the war there has been no index, anywhere, of the special skills of scientists in this country. Nor is there any accurate information as to the extent and character of the science manpower deficit.

The National Security Resources Board, of which I am acting chairman, strongly feels that appropriate steps should be taken to formulate a national policy on scientific manpower, and it may be that this action should not wait on the establishment of the National Science Foundation, which if it existed would be the logical agency to deal with this urgent problem.

There is some reason to believe that in many important fields the national supply of fully trained scientists is insufficient to meet our needs—particularly as they apply to national security under emergency conditions. It is unquestionably true that nearly every research organization in the country today has unfilled positions—and this situation prevails in universities and in industry as well as in government.

This country, to maintain a place of leadership in science, must be constantly alert to the problems of manpower shortages, must encourage the development of new scientists—involving years of training—and must encourage the sound distribution of scientists.

The most important way in which the Federal Government can promote industrial research, in which you are primarily interested, is to make possible a continuing stream of new scientific knowledge. Basic research such as the Foundation would foster provides the means. But this requires skilled manpower, even more than dollars. It is important, also, in any expansion or redirection of the Federal research program, that Government activity be limited to fields of paramount public importance, which cannot adequately be carried on by private enterprise.

The intelligent and patriotic efforts of the men of science in industry, so well represented by this group tonight, have in large measure made possible our progress in science up to now.

Civilization owes an incalculable debt to the men who manage—and man—the large research programs. Many of them have names that are known around the world, but many more work in comparative anonymity that in nowise lessens their service to humanity.

As the President has said, it is to the scientists themselves that we owe the existence of our atomic-energy enterprise. And it is to the scientists, in industry and elsewhere, that we owe a wealth of knowledge that has made possible our war against disease, that has given us new products, new industries, more jobs—and the hope of still better things to come.

The common objective before us all—in industry, in the college, and in government—is the increase of human knowledge in order to promote the security and welfare of the Nation, and thus to help bring peace and happiness to people everywhere.

Last Year's Lynchings

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Last Year's Lynchings," published in the Washington Star of January 9, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LAST YEAR'S LYNCHINGS

The report of the Tuskegee Institute lists three lynchings in 1949. This seems to suggest a loss of ground in the fight against this racial crime, since there were but two lynchings reported in 1948 and only one in 1947. There are other factors, however, which bolster the hope that enlightened forces in the South are making progress in their determined efforts to extend to the Negro the same legal protection that is enjoyed by the white man.

For one thing, the 1949 Tuskegee report is open to some question. One of the offenses reported was unquestionably a lynching. An Irwinton, Ga., Negro was arrested on a charge of disturbing the peace. While in the custody of the arresting authorities, he was taken from jail by a mob and beaten to death. This clearly was a lynching within the commonly accepted meaning of the term.

There is room for doubt as to the classification of the two other offenses. In one case a Negro tenant farmer in Georgia was driving along a road in his wagon. Several white men in an automobile were unable to pass the wagon and, it is reported, accused the Negro of hogging the road. They dragged the farmer from his wagon and

killed him. The other killing also occurred in Georgia. A Negro farmer objected to white men fishing in his pond without first obtaining permission. Later, he was found dead with a number of bullet wounds in his body.

In both of these cases, a wanton crime was committed. But their classification as lynching is open to question. Had they occurred anywhere except in the South they would have been listed as murders, not as lynchings. These victims were not taken from jail or from the custody of police officials. There is no conclusive evidence in either case of the premeditated and organized mob action usually associated with lynchings. Had the victims been white men, they might have been beaten but probably would not have been killed. This, however, is not a certain basis for listing the crimes as lynchings rather than murders.

More important is the fact that in fourteen instances during the year attempted lynchings were frustrated. In one case the intended victim escaped by his own efforts. But in 13 others the would-be lynchers were turned back by the police officials.

This certainly is evidence of progress in the South. A few decades ago the police more often than not were apt to be indifferent to lynchings, if not active members of the lynch mob. But in 1949, in 13 out of 15 instances, they protected their prisoners from the lynchers. This is a fact that will be minimized by the politically minded advocates of a Federal antilynching law. But nevertheless it indicates that education and respect for the rights of Negroes are gaining in the Southern States, and that the vast majority of Southern white people are just as anxious as anyone else to wipe out the crime of lynching, once and for all.

Support for Margarine Legislation

EXTENSION OF REMARKS

OF

HON. J. WILLIAM FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent that a letter written by Mr. Harold A. Young, president of the National Cotton Council, urging support for the margarine legislation now pending, published in the Progress Bulletin of Memphis, Tenn., of January 1, 1950, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARGARINE SUPPORT URGED AS FIGHT IN FINAL ROUND

Congress is reconvening in Washington today. And that immediately brings up a mighty important issue insofar as cotton is concerned. The issue I'm talking about is the margarine tax-repeal bill.

Probably all of us need some refreshing as to just where we stand on the matter of margarine legislation. Well, here is the picture as I get it:

Right now we are closer than ever before to getting something done about the unfair and un-American laws that are strangling and restricting the sales of the product which was the second biggest outlet for our cottonseed oil in 1949.

In 1949, the House, by an overwhelming 3 to 1 vote, passed H. R. 2023 which would repeal all the Federal taxes and license fees on both yellow and white margarine. The Senate Finance Committee reported the House bill with one very minor amendment.

WILL BE FIRST

Now, Senator SCOTT LUCAS, of Illinois, the Democratic majority leader in the Senate, has definitely promised that margarine legislation will be the first order of business in the new session.

In other words, we have reached the final round of the fight. And I don't have to tell anyone in the cotton industry that it is tremendously important that we win and win now.

For 63 years now we have seen margarine, which has become an increasingly great market for cottonseed and other vegetable oils, unjustly penalized by Federal laws which serve only to benefit one group of farmers at the expense of another. Frankly, I am getting pretty sick of being on the side that is being penalized. I think that in this respect, anyway, I can speak for every other cotton farmer as well as our friends who grow soy beans.

AREN'T ASKING PENALTY

We aren't asking that the dairy farmer be penalized through legislation. We don't believe in that. All we want is the privilege of selling our margarine—white and yellow—on a market where the consumer can make his choice without being swayed one way or the other by prices artificially elevated by taxes or by added labor requirements in coloring margarine.

All of us in the Cotton Belt know where our Senators stand on this issue. Most of them have gone on record as favoring margarine tax repeal. Now is the time for us to encourage them in their stand by telling them that we appreciate what they are trying to do for us and that we are backing them 100 percent.

This is our great opportunity to get a free and competitive market for our margarine. We must make the most of it.

HAROLD A. YOUNG.

Benefits Paid Minnesota War Vets Pass $105,000,000

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Benefits Paid Minnesota War Vets Pass $105,000,000," published in the St. Paul Dispatch of January 6, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BENEFITS PAID MINNESOTA WAR VETS PASS $105,000,000

Minnesota war veterans and their dependents received more than $105,000,000 in benefit payments through the Veterans' Administration in 1949.

This does not include more than ten million additional dollars spent to treat patients in veterans' hospitals and to administer the broad VA program.

Moreover, it does not include the $31,000,000 World War II bonus now being paid by the State.

In a year-end report, E. R. Benke, manager of the Fort Snelling VA center, said today that 1949 found most of Minnesota's World War II veterans back at full-time jobs.

Because of the continued return to normalcy, the VA during the year consolidated its offices and eliminated 679 employees from its work force.

The Fort Snelling center serves an estimated population of 346,000 veterans in 72 counties. Fifteen counties in western Minnesota are served by the VA office at Fargo. In all 87 counties in Minnesota there are an estimated 384,000 veterans—292,000 from World War II.

Benke said the major office changes during the year involved the abolition of branch-office functions at Fort Snelling last January and consolidation there last spring of VA offices formerly located in St. Paul and Minneapolis. The branch office was headquarters for VA divisions in five States.

Field offices throughout the State also were closed. The number of VA employees in Minnesota dropped from 2,918 as of December 31, 1948, to 2,239 as of December 31, 1949.

In the field of veterans activities, Benke's report showed that 20,898 former servicemen and women made initial application for education and training under the GI bill and public law 16 (the latter is for disabled veterans). In training at the end of the year were 43,919 veterans—29,821 in school studies, 6,451 taking on-the-job training, and 7,647 engaged in on-the-farm training.

Veterans made loans totaling $39,817,190 under the GI bill during the year. Of the total, the VA guaranteed or insured $18,816,027. Home loans were predominant with 5,503 veterans receiving $37,918,006 from the lenders; 285 veterans made business loans for $851,435, and another 256 veterans received farm loans totaling $1,047,749.

Readjustment allowances, which for most veterans expired last July, were paid to 18,904 veterans to the tune of $10,336,702.

Applications for disability compensation and pension were filed for the first time by 3,205 veterans. At the end of the year, 47,156 veterans were receiving disability payments and more than 10,100 dependents were drawing death compensation and pension payments.

Private doctors and dentists, reimbursed by the VA on a fee basis, handled nearly 84,000 out-patient medical and dental examination and treatment cases for veterans with service-connected disorders.

These included 54,000 medical treatments, 6,924 medical examinations, 14,000 dental treatments, and 8,934 dental examinations.

The VA clinic at Fort Snelling gave more than 102,000 medical and dental examinations and treatments during the year. Included were 17,000 medical treatments, 75,969 medical examinations, 2,000 dental treatments, and 7,215 dental examinations.

More than 12,000 patients were treated and discharged from VA hospitals at Fort Snelling and St. Cloud in 1949. At present there are about 2,200 patients in these hospitals. A 7-story, 350-bed addition to the Fort Snelling Hospital is to be built this year, with construction to get under way in the spring.

The Fort Snelling insurance office, serving veterans in Minnesota, Iowa, the Dakotas, and Nebraska, reports that more than 20,000 veterans in the area reinstated GI insurance during the year. This brings to about $1,750,000,000 the amount of protection afforded by the more than 264,000 policies now in force. Of the total, Minnesota veterans hold about 105,000 policies valued at an estimated $700,000,000.

The VA expended about $5,500,000 in salaries and other operating expenses to administer the $105,000,000 direct-benefit program. This does not include expenses of the five-State insurance office or the hospital program.

Senator Scott W. Lucas

EXTENSION OF REMARKS
OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the majority leader, the Senator from Illinois [Mr. LUCAS], written by Mr. Sidney Shalett, and published in the January 14, 1950, issue of Collier's magazine.

I am informed by the Public Printer that the article is estimated to make 2⅔ pages of the RECORD, at an estimated cost of $218.68.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SENATOR ALMOST GOT AN ULCER

(By Sidney Shalett)

MAJORITY LEADER SCOTT LUCAS WORKED HIMSELF INTO A TIZZY AND WOUND UP IN THE HOSPITAL, BUT CONCLUSIONS HE REACHED THERE GAVE HIM A FRESH START

Up until January 20, 1949, the chief claim to fame of SCOTT W. LUCAS, Democrat, Illinois, was the fact that he was a Member of the United States Senate. Some people outside of his own State had heard of him, for, during his 15 years in Congress, he had been far from a dummy; he even told off the late Franklin D. Roosevelt memorably on a couple of occasions, such as the effort (unsuccessful) to pack the Supreme Court and the effort (successful) to make Henry Wallace Vice President. But on the whole LUCAS was pretty much of a national unknown.

On the above-mentioned date, LUCAS, by unanimous choice of his party, became majority leader in the Senate of the Eighty-first Congress, which last year slugged its way through the longest and perhaps the bitterest peacetime congressional session in 27 years. From then on, SCOTT LUCAS was—and is—a national figure. Already he has graced radio and television programs with uncommon frequency; newsmen from national journals beseech his opinions on everything from politics to potato parity payments; a political columnist has likened him to Lincoln (a LUCAS hero); a society chronicler has written of "his handsome face rendered pleasantly haggard by grave responsibility," and the august New York Times, in its Sunday crossword puzzle written exclusively for intellectual giants, even has asked (No. 49, down) what President Truman's nickname is for the Senate majority leader. (Answer: "Scotty.") It now seems certain history is going to remember his name, though what history is going to say about him is still a matter for partisan debate.

One thing, however, is certain: If the final verdict on Majority Leader LUCAS' performance is favorable and he goes on, as his friends are predicting, to bigger things, he will be one of the few politicians, if not the only one, whose career was saved by a stomach ulcer. Even his best friends agree that, with the help of a GOP-Dixiecrat coalition, his own temper and some bum signals from quarterback Harry Truman, LUCAS was showing up as an ineffective if hard-fighting leader at the outset of his majority leadership. Early in the term, his ordinarily robust health temporarily deserted him and he worried himself into the hospital with the beginning of what promised to develop into a nasty ulcer.

"While I was in that hospital bed, practically starving to death and pining to be back in the Senate, on the golf course, in a duck blind, or anywhere but where I was, I did some thinking and reading," Senator LUCAS relates. "I discovered, largely from perusing Bancroft's History of the United States, that the Senate had been running along for 160 years before I got to be majority leader. I was forced to face the conclusion, though it was somewhat of a shock, that it probably would run along a bit longer without me. Call it a new philosophy or what you will, but since getting out of that hospital I haven't quarreled with any of my colleagues, my office staff, or my wife. I also think that the legislative program has moved along much better."

LUCAS' candor and his lack of stuffiness in commenting thus on his sickbed "conversion" are highly revealing of the man. He is a hard but nonhypocritical fighter, and he says what he thinks, even if it offends friends as well as foes. This frankness, while morally admirable in a man who has been a professional politician for nearly 30 of his 57 years, is not always suited to the job of leading a group of United States Senators, the most rugged individuals in the world, through the maze of disputed legislation. But more and more, particularly since he has learned occasionally to operate with scapel instead of meat ax, LUCAS has won the respect of his colleagues on the Democratic side of the aisle and even a few kind words from some Republicans.

He also has won the liking of his hard-boiled audience in the senatorial press gallery. Veteran reporters on Capitol Hill will tell you that LUCAS grew up tremendously in his job between last January and October adjournment. They admire his brutal honesty and his apparent disdain for "soft soap," and they also like the way he answers their questions with direct facts instead of oratory. "He doesn't try to sell you anything when you ask him a question," one reporter comments.

Many Republicans, including LUCAS' implacable and harsh-tongued foe, minority leader KENNETH S. WHERRY, have taken the position that the Eighty-first was the "Eighty-worst" Congress, and that its failures were the fault of the Democratic leadership—i. e., on the Senate side, SCOTT LUCAS. To counter these charges, the White House released a review of the Eighty-first's accomplishments, calling it "a remarkable record of achievement." The truth, of course, lies somewhere in between.

While the administration leadership failed spectacularly on such spotlighted issues as civil rights, Taft-Hartley repeal, a liberalized displaced persons bill, and so forth, it put through some notable victories in the foreign policy field by approving the North Atlantic Pact, extending the Marshall plan, and enacting kindred legislation. It also did some solid work in revising the reciprocal trade program, increasing storage space for grain crops, extending a modified form of rent control, setting up slum clearance and low-cost housing programs ad infinitum. As the New York Times' authoritative Arthur Krock wrote, there is no justification for trying to tag the Eighty-first Congress as a do-nothing body.

For all of this, the big, heavy-handed, stubborn majority leader from Illinois deserves much credit. This is true even though the Eighty-first was a highly mixed-up Congress and many of its praiseworthy accomplishments were the result of coalitions between Republicans and administration Democrats, just as some of its worst defeats were the result of line-ups between the GOP, Dixiecrats, and plain anti-Trumanites.

Solons find him a hard taskmaster

LUCAS is a man who, as one long-time associate remarked, "drives himself, drives those who work with him and cannot understand why the Senate of the United States should not be willing to work equally hard." Even though LUCAS lightly claims that after leaving the hospital with his appeased ulcer he hadn't "quarreled with any of my colleagues," he never ceased riding herd on intransigents on either side of the aisle; his strategy of deliberately holding the Senate in session for 9½ months, until out of sheer desire to go home it was willing to transact business, was an effective stroke of leadership.

Among other things, LUCAS unquestionably was the busiest man in the United States Senate during the first session of the Eighty-first Congress. The Democratic Senators organize things differently than the Republicans. Not only does he serve as majority leader (against the GOP's WHERRY) but he also is chairman of the Democratic Policy Committee (against the GOP's TAFT), chairman of the Democratic caucus (against the GOP's MILLIKIN) and chairman of the Democratic Steering Committee (against the GOP's BUTLER). As a man who wears these four hats, in addition to representing the 8,000,000 citizens of Illinois and serving as a key member of the important Agriculture and Forestry and Finance Committees to boot, LUCAS finds himself perpetually scuttling between at least half a dozen offices and conference rooms. He also is a member of the Democratic "big four"—Vice President BARKLEY, Speaker RAYBURN, House Majority Leader MCCORMACK, and himself—which meets every Monday morning with President Truman at the White House.

The majority leader, incidentally, receives no extra compensation for his job; the only thing in the nature of material reward is a chauffeur and a shiny black limousine which are made available to him.

When he can manage it, his mornings are spent in his senatorial suite in the Senate Office Building, where he makes an effort to catch up with correspondence (his mail mounted from 10,000 pieces in March 1948 to 25,000 pieces in March 1949) and keep appointments with constituents. His walls there are covered with scores of autographed pictures, original cartoons, and framed letters. A post-1948 election thank-you note from Truman carries a handwritten postscript: "Yours was a prophetic message. I'm a long time answering it but I received 60,000. You'd better whet your knife. I'm after you in a 'penny' anti (sic) game."

Most of his time, however, is spent in the majority leader's suite in the Capitol, which conveniently adjoins the famous old Supreme Court chamber where the Senate has been meeting while its own chamber was undergoing repairs. This particular suite was the controversial retreat fixed up for himself by LUCAS' Illinois ex-colleague, the isolationist "Curly" Brooks, who was boss of the all-powerful Rules Committee before his 1948 defeat; it has such Hollywood touches as lush drapes, green sofas, and an electric icebox concealed in what appears to be a filing cabinet. LUCAS thinks it is ironic justice that he should have inherited such a fancy lay-out from his old enemy. It made a fine GHQ for Democratic strategy during the last session, but, as it also contained the washroom nearest to the Senate's emergency quarters, LUCAS, as a humanitarian gesture, was careful to keep the doors open to Senators of all political creeds.

SCOTT LUCAS, sometimes called, because of his classic Roman profile, the John Barrymore of the Senate, is an easy man to misunderstand. A farm boy in his youth, he still remains the countryman's go-slow instincts about shining up to strangers, until he knows they're not out to do him; even his later success as a big-city politician has not made him an out-and-out glad-hander. His size—he stands 6 feet 2½ inches and weighs close to 200 pounds—gives him a rather formidable appearance, and his face seems cold and brooding, particularly when he is

mediating or when the heat of debate has accentuated the naturally downward lines of his face; he seems to scowl more than smile.

Actually, however, the LUCAS scowl is a matter of facial lines rather than inner meanness, and, when he has made up his mind that someone is a fit and reliable companion, he is the best of fellows to be around. There's nothing of the Fancy Dan about him: he likes plain solid food, good bourbon, and male talk. Out in Illinois, he's said to be almost a legendary shot in the duck blinds; recently he brought down three mallards with one shot. He is highly respected as a golfer at the exclusively male Burning Tree Club in Washington. He has been a member of a Friday-night congressional poker game, of which Harry Truman is an alumnus, for some 14 years. It is typical of him that he plays hard and doesn't coddle his companions in either duck shooting, golf, or poker. On the golf course, you'll never hear him murmur sympathetically, "Nice try, old man," when a partner or opponent has muffed a shot, and his reaction to his own poor shots is to rip his weather-beaten plaid cap off his head, hurl it to the ground and stamp on it.

Golf, incidentally, is almost a fetish with LUCAS—so much so, in fact, that his good friend and golfing companion, Senator FULBRIGHT, of Arkansas, in praising LUCAS' leadership at the Senate's closing session, commented: "I have only one regret, that as his leadership in the Senate is developing, the quality of his golf game is rapidly deteriorating." LUCAS, who had shot a poor 85 the previous Sunday while worrying about the outcome of the farm bill, went out with a clear mind the morning after the Senate finally adjourned and shot a 76.

Colleagues need not be brilliant

LUCAS is a great believer in regularity and loyalty. He believes a party man should be regular, up to the limit of his conscience. He won his own start in Illinois State politics by going out and campaigning for William H. Dieterich who had beaten him in his first primary race for the Senate.

He was furious with Vice President BARKLEY last session for using his prerogative as chairman of the Senate to cast the deciding ballot (the vote had been tied) against a farm measure that LUCAS considered had been promised by the 1948 Democratic platform, and he was even angrier with President Truman for following the BARKLEY line on the same issue. As a regular he simply cannot understand how Truman, as head of the Democratic Party and an old member of the Senate club, and BARKLEY, his own predecessor as Democratic majority leader, could thus knife their floor general. In a cold speech from the Senate floor, he told the Vice President, in effect, that BARKLEY was breaking the party's pledge to the voters; his off-the-floor comments were reported to be far more explosive. Yet, again as a regular, he agreed later with BARKLEY to edit the bickering out of the CONGRESSIONAL RECORD.

Being a regular does not mean that LUCAS is a stereotyped politician. Last session he practically broke all precedent by going into a session of the Republican Policy Committee, on invitation of his good friend Senator IVES, of New York, to appeal for bipartisan support in prying loose from the Judiciary Committee the bill to liberalize the Displaced Persons Act. It was being blocked in that committee largely by the stubbornness of Chairman PAT MCCARRAN, a member of LUCAS' own party. Before entering the lion's den, LUCAS told his press secretary, Frank Kelly, that if he wasn't back in an hour you'll know where to look for the body. LUCAS still chuckles when he recalls the shocked expression on Minority Leader WHERRY's face when he walked in. LUCAS did succeed in bringing the DP measure to the floor, but it was lost in the dying days of the session because too many of its supporters, tiring of work, had drifted away from Washington. LUCAS felt this defeat keenly and is expected to press for the bill again this month.

Nor does being a regular mean, as both Truman and Roosevelt before him learned, that LUCAS is a rubber stamp for the administration. LUCAS has always been rated as a New Dealer, though considerably right-of-center in relation to the extremists of the clan. Yet, in 1937, as a Member of the House, he rose to make an 8-minute denunciation of Roosevelt's Supreme Court packing plan that LUCAS himself regards as "perhaps the greatest speech of my career." In it he declared: "It is full of destruction. * * * Unless those in power call a halt to this useless, selfish, and futile gesture I here and now predict that the evil path of this so-called progressive action may ultimately shatter the very foundations of American liberty and life."

Friends who have followed every step of LUCAS' career feel that this memorable speech probably "put him in the United States Senate but kept him out of the White House." They estimate this speech won him the support of 100,000 to 125,000 of Illinois' independent voters, but they also believe that President Roosevelt, though he used LUCAS, never quite forgave him and for this reason would not consider him as a Vice Presidential candidate.

A test of his party loyalty

In 1940, when Henry Wallace was nominated in Chicago, LUCAS arose to withdraw his own name from the Vice Presidential nominations with these stinging words: "Had this been a free and open convention, I would not have hesitated." The same year, however, F. D. R. telephoned LUCAS personally to request that he manage the Roosevelt-Wallace campaign in the 13-State belt area of the Midwest, a summons to which Party Man LUCAS could not say no. In 1944 LUCAS was a serious contender for the Vice Presidency, but apparently F. D. R.'s old grudge still rankled and the White House blessing was given to Harry Truman.

SCOTT WIKE LUCAS grew up with politics in his blood. He was born in the Lincoln country—in Cass County, Ill., only 12 miles from New Salem, where Abraham Lincoln studied law. An avid student of Lincolniana, LUCAS loves to take a visitor from the East to the restored village and reverently point out the replica of the cabin where young Lincoln studied by light from the fireplace.

LUCAS' people originally were from Virginia and Tennessee, and his great-grandfather Lucas, one of the first white settlers in Cass County, came north by ox-drawn covered wagon in 1823. LUCAS' own father was an erstwhile tenant farmer, justice of the peace, and county tax assessor who never quite earned enough to support his brood of four boys and two girls, of whom SCOTT was the youngest. His mother used to help out by setting a boarding table for itinerant peddlers and traveling salesmen. Chris Kreiling, now a leading civil engineer in Havana, Ill., still recalls the fine dinners of beef and gravy, potatoes, vegetables, and pie—"help yourself to all you want"—that Mother Lucas used to serve for 30 cents.

Though things were somewhat better by the time SCOTT was growing up, he knew the taste of poverty. Frank Shawgo, now a tavern keeper in Havana, who grew up with SCOTT after the Lucas family had moved to the little town of Bath, recalls that SCOTT—known then as "Wax," a nickname whose origin is long since forgotten—used to work in the cornfields on Grand Island in the Illinois River for 25 cents a day. At various times, SCOTT also earned money for his education by carrying newspapers, fishing the river for catfish and sheepshead, tending furnaces, playing professional baseball (for Bloomington in the Three-I League) and teaching in a one-room country schoolhouse.

The one heritage "Squire" Lucas did give SCOTT was a taste for politics. He even named the boy SCOTT WIKE, not after any member of the family but after a Congressman of the day who had boarded with the Lucases while campaigning.

While preparing for law at Illinois Wesleyan, athletics was the great thing in LUCAS' life, and he regrets none of it, not even the bad knee from his football days which still gives him trouble. Athletics, he says, gives a man a taste for a good scrap. He was a three-letter man, an all-conference player in both football and baseball, and he was aspiring for the same honor in basketball when the school authorities discovered he had played professional baseball the previous summer under the assumed name of "Weaver" and barred him from all athletics.

"I protested like hell," LUCAS recalls. "I couldn't see, and still can't see, why playing professional baseball should keep a man from playing college football or basketball. But the dean said no, so I turned in my suit though I shed tears about it."

Today, he takes great pleasure in the career of 18-year-old Scott Lucas, Jr., the only child in the Lucas family, as a football player at the Stuyvesant School at Warrenton, Va., near Washington. Whenever Stuyvesant plays, Senator LUCAS tacks one of the posters on the wall of the majority leader's office, right along with the pictures of Washington, Lincoln, and Jefferson and the bronze plaque attesting that the first meeting of the United States Supreme Court was held in the same room in 1801.

Another high light in LUCAS' formative years was his career for two seasons as a teacher at Blackjack School, which served a little community called Snicarte. "I had 56 pupils—grades, first through eighth, all in one room," he recalls. "I lived with a family 3 miles away, and I used to walk to school, often through snow and slush.

"The year before, the big kids had chased the teacher out of school. I guaranteed the supervisors that if they ran me out I'd quit and give them back their money, so I got the job at $60 a month. I fibbed a little on my age—I was supposed to be 18 and really was only 17. There were three boys older than I, including one who was 20. I made out all right because I was bigger than any of them."

After he was admitted to the bar in 1918, LUCAS picked Havana, Ill., as the site of his first law office. In the early days, Havana was a rough, tough river town," says its most distinguished citizen. "It was settled by a guy with a red handerkerchief around his neck, a keg of whisky on his back, and $10 in his pocket." For the record, Havana still is a free-and-easy town.

His first office was up a flight of stairs over a store building opposite the courthouse. To purchase a law library, he borrowed $1,000 from a bank in Chandlerville. His oldest brother, Thurman, a brilliant country lawyer, now deceased, had to sign the note. "One afternoon soon after I had gone into practice a friend came to sell me a dollar chance on a car that some organization was raffling off," the Senator relates. "I told him if the tickets were a dime instead of a dollar I might afford one. 'Take one anyway—I'll lend you the dollar,' he said, so I did. Blamed if I didn't win the car.

"I didn't have enough money to keep it in gas, so I sold it for $525, paid my friend back his dollar, and went over to Chandlerville to put $500 on my note. The banker asked me how come I was paying back so much so soon, and I told him just how I'd come into the money. 'This is the damnedest thing I've ever heard of in 40 years,' said

the banker. 'From now on, your credit's good for $5,000 on your own signature.'"

LUCAS quickly built up a reputation in the law business. He moved so fast that he attracted a certain amount of small-town envy, and some of the town's leading legal lights, looking out at him sourly as he walked across the village square, used to sneer, "There goes young Abe Lincoln." LUCAS, incidentally, still has prosperous law offices in Springfield and Chicago, in partnership with Charles A. Thomas, a Legion friend, and he also maintains his old office in Havana, largely for sentimental reasons.

In a little more than 10 years after hanging out his shingle, LUCAS had built up a nice practice; had been elected State's attorney for his country; gone into the Army as a private and come out a lieutenant, and served as State commander of the American Legion. He went on to storm national Legion politics with the aid of a jug band from Havana and, while he didn't make the grade as national commander, he did serve four terms as national judge advocate. In 1923 he was married to Edith Biggs, daughter of a well-to-do Havana businessman. Mrs. Lucas is a woman with a good sense of humor, who didn't want her husband to go into politics in the first place and who firmly believes wives of public figures should stay in the background.

In 1932, LUCAS, who professes to a schoolboy ambition to serve in the United States Senate, decided it was time to fulfill that ambition. He was defeated in the primary by the candidate being backed by the late Henry Horner, who was nominated for governor. LUCAS was a good sport about it and campaigned vigorously for both Horner and the man who had defeated him in the primary. Horner, when elected governor, rewarded LUCAS by appointing him chairman of the Illinois State Tax Commission and giving him a post on the Democratic patronage committee.

From then on, LUCAS' political star was on the rise. In 1934 he was elected to the congressional seat left vacant by the death of Speaker Rainey, of Illinois, and subsequently he was reelected once to the House and was elected twice to the Senate. In his 1938 primary Senate race, he even won against the opposition of the Kelly-Nash Democratic machine in Chicago, which had fallen out with LUCAS' political mentor, Governor Horner.

The considered verdict on SCOTT LUCAS in the national limelight today would seem to be this: In the domestic field, he is a practical politician—skilled, hard-working, and with an eye out for the interests of his constituents, though not without regard for the over-all welfare of the country. In the international field, he has risen to the stature of leader and statesman.

In this latter field, his record is clear: He is and always has been anti-isolationist, and he believes that the only way to achieve and preserve peace is for the United States to use its great influence and resources to work with other democratic powers against communism. He felt the same way about fascism and nazism, when they were active perils in the world. Persons who disagree with his beliefs can and do attack his judgment, but, from the record of what he has said and done, it would be hard to challenge his consistency, or to claim that LUCAS has straddled any issues.

In 1940, for instance, when the Roosevelt administration was trying desperately to enact its lend-lease program, LUCAS took an unequivocal stand in favor of lend-lease, although sentiment in his own State, whipped up by the archisolationist Chicago Tribune, was strongly against it. He received 100,000 letters from his constituents on lend-lease; 80,000 of them opposed it, still he voted with the administration.

Women hecklers besiege him

The battle of the isolationists against American preparedness gave LUCAS what he admits was his worst personal moment. One day Elizabeth Dilling, who was achieving notoriety through her violent attacks on Roosevelt policies, invaded LUCAS' office with a group of women. It seemed to the Senator's embattled office staff that there were at least 80 in the contingent, and that all of them were screaming. Phrases like "Blood money!" and "Don't kill our sons for England!" kept rising above the tumult. When LUCAS came out, as a still-awed witness puts it, "absolute hell broke loose." One woman flopped to the floor, grabbed his knees and howled, "Don't send us to war." LUCAS extended his hand to Mrs. Dilling, whereupon she said, "I wouldn't shake your hand—I'd rather spit in it."

He looked her in the eye, left his hand extended and said coldly, "Have a spit, lady."

There is no doubt that SCOTT LUCAS has mellowed with experience since his early, angry days as majority leader. Not for some time has anyone felt the full lash of his naturally sarcastic tongue—at least, not in public. Still, the new LUCAS has not gone flat. "You can be pushed so far—you gotta be an S. O. B. sometime," he says. He still can stick the knife and twist it into such antagonists as his No. 1 adversary, Minority Leader WHERRY, who, in a louder, more table-thumping way, is no mean knife sticker himself. The difference is that now he usually bows to WHERRY while doing it, and refers to him as "my delightful, genial, and efficacious friend."

As a means of keeping calm, LUCAS more and more has been falling back on a hobby of his that not many persons know about. He is an amateur poet, under the nom de plume of "Senator Sorghum." Once while keeping his temper in check he wrote this couplet on the back of an envelope:

"Senators who preside,
Shouldn't rhyme, shouldn't chide."

Few things make LUCAS angrier than Senators who habitually play hooky. Once last year he discovered there was not one Republican Senator on the floor. He got up and solemnly remarked that "now would be a good time to introduce a motion to abolish the Republican Party—we could get unanimous consent." Someone sent an S O S to GOP Generalissimo WHERRY and in a matter of minutes Republican Senators were panting into the Chamber.

LUCAS' own analysis of the record of the Democratic Eighty-first Congress is that, on the whole, the box score so far is good. He admits the humiliating defeats—civil rights, Taft-Hartley, and the others—of the early days, but points to the bulk of solid legislation that was enacted. What LUCAS does not point out—though many of his friends do—is the general consensus that President Truman wished an impossible job on his leaders when he sent such a staggering legislative load to the Hill for passage in one session; also, that LUCAS, if given his own way, never would have started the session by leading off with the civil-rights issue and embittering the southern Senators for the rest of the session. In fact, he so advised the President—but Truman wasn't listening. LUCAS, however, predicts:

"By the time the Eighty-first Congress completes its 1950 session, I believe we will have enacted 80 to 85 percent of the bills in President Truman's program."

Right now, LUCAS is facing what some Illinois observers regard as a serious fight for his political future. While LUCAS was tied up with his job of leading the Senate, former Representative Everett Dirksen, a Republican and a spellbinder on the hustings, announced that he was going to oppose LUCAS in the November 1950 election. Already, Dirksen has been stumping the State. LUCAS thinks he can take Dirksen's measure. In fact, he already has mapped out his strategy—the battle, if it materializes, will be waged on the issue of Dirksen versus Dirksen. In Congress, Representative Dirksen made many fervent speeches in favor of internationalism; now, perhaps with an eye toward support from Colonel McCormick's Chicago Tribune, he is declaring that his vote for the Marshall plan in 1948 was a mistake, and he seems all out for isolationism. LUCAS avers it will be a pleasure to fight a man on such an issue.

But SCOTT LUCAS, himself a formidable campaigner, does not take the threat lightly. "In this game of politics," he declares, "you've got to run scared.

"I learned that a long time ago when I made my second race for State's attorney in Mason County. Everybody said they were for me, and I was overconfident. It was raining that day and I didn't even bother to send cars to get out the votes. My opponent was not overconfident. He got out the votes, and he beat me by a handful."

Ever since then, LUCAS' friends say, he has followed a policy of running scared—whether it is in a political campaign or a battle to put over a piece of legislation. The Senator himself says that "it's always a good idea to expect the worst and come out a little better."

Samuel Gompers—His Story

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Samuel Gompers—His Story," published in the Minneapolis Labor Review of January 5, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SAMUEL GOMPERS—HIS STORY

To Samuel Gompers, as to few men, fell the opportunity at a historic time to lead an army of men with a bright torch down a broad highway.

The torch he raised is now held high by 8,000,000 workers and blazes its light around the world.

In brief, this is his story:

Samuel Gompers was born in East Side, London, January 27, 1850. He was the son of Solomon and Sarah (Rood) Gompers, both born in Holland. His parents and forebears were wage earners.

After but 4 years of schooling, it was necessary for Samuel, then 10 years old, to help bear the burdens of his family. He was apprenticed to learn the shoemakers' trade but found that distasteful and turned to the trade of his father—cigar making. When he was but 13 years of age the Gompers family moved to America.

After learning the cigarmakers' trade under his father's tutelage, the youth became a journeyman worker and joined the English-speaking cigarmakers union in New York City, old local union No. 15.

At first strongly attracted by the humanitarian work of fraternal organizations young Gompers gave his spare time to lodge work, but as he came to realize the constructive possibilities of the union, he concentrated all of his attention and ability on the promotion of the trade-union movement. He first became leader in his local union and then became prominent in labor affairs of New York City.

Rising to prominence in his international trade organization, the Cigarmakers International Union, he earned a standing and recognition that enabled him to take part in the effort to form a national federation of trade-unions in 1881. He was active in the old federation, serving 3 years as president and 2 years as a member of its legislative committee, and after the merging of the older federation with new unions under the name, American Federation of Labor, served continuously with the exception of 1895, as president.

Samuel Gompers continued to work as a cigarmaker until 37 years of age, giving all his spare time to organization work, sacrificing even the little home life that was accorded to the workers of those days. He held card No. 1 in his international union for many years. Although given numerous opportunities to hold political positions and participate in undertakings that would have made him a rich man, Samuel Gompers held fast to his ideal to make better the lives of the workers.

He became the only full-time representative of the American Federation of Labor in 1886. From then on he gave his full time to the work of developing the economic movement of wage earners for the establishing of higher standards of work and life. Under his purposeful, constructive leadership, gains were made.

It was a cardinal principle of his leadership that the economic organization could serve all the needs of the trade-union and hence he advocated the mobilization of the economic power of wage earners along nonpartisan political lines. Heading an aggressive, nonpartisan, political movement by labor in 1906, on behalf of labor he submitted a bill of grievances to responsible political representatives. This policy was followed with increasing success and substantial labor legislation enacted by Congress.

To Samuel Gompers chiefly is due the enactment into law of that fundamental economic principle: the labor of a human being is not a commodity.

By sympathy and training Samuel Gompers was a pacifist. But when this country was confronted with the possibility of war in 1916, he was among the first to pledge wholehearted support to his country for both himself and the organization he headed.

It was largely due to his influence and determination that the forces of labor were held intact despite subtle and alluring propaganda that might have caused disaster for the cause of the Allies. Labor stood behind the Government of the United States and gave its all to the cause of democracy under the leadership of Samuel Gompers. At a possible sacrifice of even life itself, he made several trips across the water during wartime to help cement the loyalty of the workers of allied countries at a critical hour.

He was appointed by President Wilson as a member of the Commission on International Labor Legislation of the Peace Conference at Versailles. At the first meeting of the commission he was unanimously elected president. The commission drafted the labor charter of the peace treaty guaranteeing to workers of all countries an equal opportunity for better conditions of life and work.

In the year after World War I, he was a dominant figure in helping to tide over a period of unemployment and restlessness which, without his help, might have become influenced by the germs of revolt prevalent the world over.

He was successful in maintaining the morale of his organization and resisting the efforts made toward the disintegration of the forces of labor during the period of readjustment. He was keenly interested in all attempts made to stabilize production and thus guarantee a higher standard of life for wage earners the world over.

The last weeks of his life witnessed a most extraordinary rounding out of plans and activity extending over years, in the thrilling international demonstrations at El Paso, Juarez and Mexico City. He helped to make possible a Mexican federation of labor and participated in the celebration of the first constitutional succession to office of a president, and that president was elected by the laborers of Mexico.

He had just been unanimously reelected president of the American Federation of Labor and of the Pan-American Federation of Labor, of which he was founder, and was engaged in most important service when the end came December 13, 1924. His last words were for the republic he loved so dearly:

"God bless our American institutions. May they grow better day by day."

We Are for Taft's Reelection

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to insert in the RECORD an editorial on our friend and colleague, Senator ROBERT A. TAFT, of Ohio, which appears in the current number of Collier's magazine, which I have read with interest. It is marked by a very careful and thorough analysis and a high degree of prophecy, in my judgment. I commend it to Members of the Senate and to the country at large.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE ARE FOR TAFT'S REELECTION

Senator ROBERT A. TAFT's campaign for reelection this year is a national issue. The leaders of organized labor who oppose him have made it so. They have promised to send men into Ohio, backed by proceeds of a country-wide fund-raising drive, to work for his defeat, which the A. F. of L. League for Political Education has called "the chief target for 1950."

It is not Collier's custom to take sides in State politics. But in these circumstances we do not hesitate to say that we're for Senator TAFT. We think that his defeat would be costly to Congress and to the Nation. Congress needs men of his caliber if it is to function as a coequal branch of government under the two-party system. It needs men of his caliber if its legislation is not to become mere approval of the popular "mandate" of a President who got a minority of the popular vote in 1948.

Senator TAFT's defeat would also vindicate the frustrated labor bosses' bitter propaganda attack on him as the author of a "slave labor law." The Taft-Hartley law, written by a bipartisan committee and supported by more than half the Democrats in Congress, has been in effect more than 2 years. It has enslaved no one. In those 2 years union membership has grown and better contracts have been signed with fewer days' pay lost through work stoppages. It is not a perfect law, as Mr. TAFT readily admits. In the first session of the Eighty-first Congress he introduced and obtained Senate passage of 28 amendments to it, most of which were suggested by union representatives.

The persistent repetition of the slave-labor tommyrot is more insulting to union members' intelligence than it is to Mr. TAFT. Proof that many rank-and-filers realize this is found in the scores of supporting letters which they have sent the Senator, and which this writer has seen. A verbatim quote from one of them, written by a Milwaukeean, will give an idea of their general content: "I am a member of Union A. F. of L. I understand Mr. Green wants $16,000,000 to defeat you when you come up for reelection and wants a contribution from every union member for this purpose. Well, he doesn't get mine. * * * Instead you will accept my contribution for your reelection. You are a friend of labor—not its enemy."

Collier's has disagreed with Senator TAFT on several issues, among them his vote against the North Atlantic Pact and his proposal of recognition and aid for Franco Spain. We considered his legalistic quibbling over the Nuremberg trials ill-timed, to say the least. But even when we have thought him most wrong we have never doubted his motives or his honesty.

Mr. TAFT has been called a reactionary. (He has also been accused of socialism by conservative Republicans for leading the fight for a Federal housing program and Federal aid to education.) But it was the reactionary Mr. TAFT who, singlehanded, halted the administration steam roller which was pushing through Mr. Truman's bill to draft striking workers into the Armed Forces in 1946—probably the most reactionary, fascistic measure ever proposed by an American President.

These were some of the Senator's comments on the measure: "I think it offends not only the Constitution, but every basic principle for which the American Republic was established. * * * In this labor-problem situation we should give considered and unbiased consideration to the whole problem. I do not believe we should be moved by emotion, or by crisis, or by political views, or by resentment against unreasonable labor action, or unreasonable threats from labor leaders, or unreasonable demands for immediate action from thousands of persons who do not really, fundamentaly, understand the facts and difficulties involved in any labor situation."

In the past session of Congress it was a bitter opponent, Senator CLAUDE PEPPER, who called the "reactionary" Mr. TAFT the "savior" of the 75-cent minimum-wage bill, according to the labor publication, Trade Union Courier.

Senator TAFT is an easy target for name callers. He won't get down in the mud and slug it out with detractors. He won't debase his intelligence to answer smear with smear. He is no glamor boy, no spellbinder, no backslapper. He will admit to doubts and confess that he may be wrong. He has little sense of public relations or of political timing. Forthrightness may prompt him to come out with a new idea at an inappropriate time, and to phrase it bluntly and awkwardly. But as a friend and admirer put it, "If he didn't make those blunders, he wouldn't be Taft."

Our search of his legislative record shows no instance where he supported a measure simply because it was a popular vote-catcher. He votes for what he thinks is right, and then only after a thorough study which few Members of this or any Congress can match.

He has risen to Republican leadership in the Senate through character and superior ability and nothing else. Efforts to dislodge him have failed because there was no one who could match him in knowledge, industry, experience, integrity, and absolute trustworthiness.

Perhaps the gentleman from Ohio can best be called an old-fashioned liberal, but he is hard to label. He is an individualist who believes in freedom for the individual,

though not at the price of unequal justice or opportunity. He is more interested in his conscience than in his popularity. He would rather be BOB TAFT than be President. And since there are too few like him, the voters of Ohio will do their country an important service by returning him to the Senate.

Turn of the Century

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Turn of the Century," published in the Minneapolis Tribune of January 1, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TURN OF THE CENTURY

This New Year's Day is widely celebrated as the beginning of a new half-century, the midpoint of mankind's journey through the twentieth millennium of the Christian era.

Those people are right, of course, who say it is nothing of the sort, and that the second half of the twentieth century won't begin until January 1, 1951. They have logic on their side; but they lose the argument. The world insists on celebrating the turning point of the twentieth century right now. And there is sense in that, if not logic, for its reflects the unquenchable human instinct to make a new start and to invest that new start with a special significance and hope.

So this is a Super-New Year's Day—one on which to study the entrails of the last half century in search of an omen for the next.

Where do we stand, we humans, at this turn of the century? What, in history's long view, has been the thing, in the last 50 years, which more than any other suggests the shape or the problem of the 50 years ahead?

It may well be that the first half of the twentieth century saw the end of nationalism as a sound basis for peace and world order.

If that is true, it is the most important happening of this century.

For almost four centuries the British Empire had been the stabilizing force in the world—fountainhead of liberal institutions, source and stimulator of economic development, world policeman through its navy. Like Rome and Spain before it, Britain had widened human horizons and fostered human progress; and no listing of its mistakes or tyrannies (and they were many) can outweigh the record of what it did to set men's energies and spirits free.

In this last half century, the world has outgrown the British political and economic framework. Two great world wars, a grievous economic depression, and now a "cold war" between two powers grown greater than Britain—these are symptoms of man's groping for a new basis of world order, something not only to take the place of the British system but to be the framework for a better way of life for all mankind.

That new framework of peace and order and progress cannot be imposed by any one nation. We in the Western World are determined that Soviet Russia shall not be the new Rome, the new Spain, the new Britain. The American people have no ambition to make Washington the capital of a new world imperialism. Even if there were less resistance to a Sovietized world than there is, even if there were a hot desire to set up American imperialism in the world, the chances are that neither would happen nor could be brought about.

For it is not likely that any nation ever again can or will rule the world as Rome or Spain or Britain did.

Mankind has grown up to a point where every segment of it insists increasingly on a voice in determining its own destinies and conditions of life.

That, of course, is all to the good; it is progress toward government by the consent of the governed.

But it means international anarchy until nations join together in an effective international government with the powers that any government must have to be effective.

To create an effective international government is, therefore, the foremost problem of the next half century. We shall never again know peace, or military or economic security, or an end to "cold war," until we achieve it.

The arguments over what and how will be long and hard and hot. United Nations? North Atlantic Union? World federalism? Or something else? The Tribune has expressed its views on all of these, and will again—as have and will millions of other voices. But we need have no doubt of mankind's ability to work out the best answer in such a great debate if we keep our eye on one central fact.

That fact is that we must want and work toward international government, not just because we think idealistically that it would be nice to have, but because we are convinced that it is the only answer to the problem of peace and security and progress in today's and tomorrow's world.

If we will carry that conviction, that lesson of the first half of the twentieth century, into the second half of the twentieth century, the travail of the last 50 years will not have been in vain.

Address Delivered by Mary Donlon Before New York State Federation

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the recommendation presented by Mary Donlon, the national federation's program coordination chairman and chairman of the New York State Workmen's Compensation Board, at the meeting of the board of the New York State Federation, published in the Independent Woman of November 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

GET INTO POLITICS UP TO YOUR EARS

It was my good fortune this summer to visit six European countries. There I had the opportunity of discussing social, economic, and political problems with many people, both the great and the not-so-great, including cabinet ministers, leaders of management, and officials of labor unions, Parliament members in the various countries, political leaders of different parties, teachers, clergymen, and especially with young people. This sampling of opinion offered a wide range of views.

Through their own efforts and the essential aid provided by the American reconstruction program for Europe, European countries have made real progress. What is difficult for us to realize, after this lapse of time since the cease-fire in 1945, is not so much the terrible and widespread destruction of physical facilities resulting from bombings and enemy occupation; what we really fail to grasp is the cumulative effect on the spirit of a people of doing without much that is essential to a standard of living, even of a poor sort, over a long period of years. I often wonder whether we would have been able to do as well as they have done.

Keep three important factors in mind, if you want to understand the political situation in the countries of western Europe at the present time.

First, as you would surmise, there is the fear of Russia. This is really the single unifying influence in Europe today. But it is not chiefly there, as it is here, based on ideology. Rather, fear of Russia in Europe today is essentially Europe's old distrust of Russian imperialism, now aroused and deepened by the close approach of Russia, through satellite countries, to western European boundaries. Again and again, as you talk with Russia's neighbors, you get the impression that their fear is less of communism, as such, than it is an uneasy distrust of the old Russian bear, once more erect and on the prowl.

Second of the facts that bear importantly on the political situation in Europe is the cruel burden, economic and social, of repairing physical plants and of satisfying even the most urgent consumer needs. There is something akin to battle fatigue affecting millions of persons in western Europe today. There was moral shock, as well as physical destruction, from the bombings and the enemy occupation. It is small wonder that in some of these countries the suicide rate is reaching new highs ,and that tuberculosis, venereal disease, and alcoholism are on the increase. Concerned as we are, and properly, with the physical rebuilding of western Europe, we must also be concerned, and even more deeply, with improving living conditions for the people in order to cushion social shock for those brave folks who stood and are still standing as the farthest outpost in defense of western civilization. We could ill afford to let China succumb to communism. We can even less afford to allow that to happen to western Europe.

Third, and closely related to these other two factors we need to keep in mind in reading the political news of Europe, is the trade vacuum that has followed the virtual collapse of the sterling area. This is, by far, the most urgent problem of western Europe today. I find that many Americans have very little comprehension of it, yet it is something we can do much about.

The sterling area was no myth. It was a real and powerful force, creating for tens of millions of people in many countries the trading opportunities that enabled them to prosper. World trade pivoted on the sterling area for over a hundred years, with England as the international merchant and banker making it possible for small countries to buy and sell.

Forces that we all know, but need not here recount, have deprived England of her position as world leader in international trade. The other countries of the sterling area are in desperate need of attaching themselves as quickly as possible to some other trade center. They cannot prosper by barter, although as a last resort they are now trying

to find markets through barter for their goods. They must have a firm currency in which to trade and a world market through which to buy and sell. They see no alternative, with sterling no longer firm, but to join up either with the ruble or with the dollar. The ruble seeks their trade; the dollar is curiously indifferent or, perhaps, unwilling. Only Americans, in today's world, are rich enough to afford the senseless luxury of economic isolationism.

The terms "right" and "left" have different connotations in Europe from the meanings we associate with them in the United States. There is no significant political movement in England or anywhere else in western Europe today that has the slightest resemblance to the conservative thinking of southern Democrats and some Republicans. All countries and all parties are committed to broad social-welfare programs.

The Conservative and Liberal Parties in England, as well as the Labor Party, have fully endorsed the new health and national insurance programs which have been the subject of far more controversy here than there. Actually the Conservative Party, in its party platform issued for the forthcoming election, claims for the Conservatives full credit for the provision of medical care on a national scale and for the expanded social-insurance program. In assessing election probabilities in England, don't count on differences with regard to Government-provided social welfare as affecting the result. The Labor Party will profit because they put the program into effect, while the Conservatives and Liberals blueprinted it and drafted the bills.

Monopolies and cartels were permitted to flourish in Europe under Conservative governments, and were not broken up as they were in the United States. This is important. The cartels created a distrust of capitalism among working people and are probably the real reason why in Europe the labor unions are the dominant political power pressing for socialization of industry. Socialism has not gained here the political strength it has in Europe because more than 50 years ago we broke the back of industrial monopoly. We are one up on Europe, politically, in that respect. But that tremendous advantage does not justify our confusing socialism with social welfare, as the Conservative Party did for far too long, with disastrous political results.

The recent German election cannot be credited as a great victory for the right, as some newspaper headlines would have you believe. Western Germany has become a new battleground, with the present British Government determined that private capitalism in production shall not be restored. Because they do not understand the political mechanisms of regulation as we do, the leaders of the British Government honestly fear returning to German industrialists the power that, so they believe, has twice led the world into war. Our political contribution should be to teach the techniques of regulating what needs regulation in the public interest, without destroying private enterprise. These techniques are not understood or practiced in Europe.

The Central Democrats in Germany, top party in the recent election, are an uneasy aggregation of divergent viewpoints. Probably the left wing of the Christian Democrats, rather than their right, contributed the necessary margin to the party's narrow victory in the west German election.

All over free Europe there is the confident exception that the Communists will lose much of their present political strength in the next elections. This was borne out by the German election. Of real significance in Germany, however, is the fact that the neo-Nazi parties mustered only approximately the same vote as did the Communists. When it is remembered that Germany since 1932 has known no political party save the National Socialists, it seems truly remarkable that the attempted renaissance of nazism could summon no more strength than did the Communists.

The great need of Europe today is to eliminate currency and exchange restrictions and to stimulate trade. Americans must become world-trade conscious. Unless we step into the international vacuum that has resulted from the default of Britsh leadership in international trade, the small nations that must sell their goods in order to buy their needs will either have to starve or accept the alluring trade proposals of Russia. They are too close to starvation now to make starvation seem their likely choice. It is all very well to discuss important subjects like civil rights, human needs, and political elections, but people who are hungry because they canont sell fish to buy wheat, or lumber to buy fertilizer, are bound to be more concerned with achieving the modest economic security essential to the protection of independence, freedom, and civil rights.

The challenge today is for us to accept responsibility for the elimination of trade barriers and to take leadership in the restoration of world trade, as England did a hundred years ago. Whether we like it or not, and like it we should, destiny has given us the obligations of leadership in a time of crisis. We cannot adequately fulfill these obligations by debates and discussions, covenants and conventions. Action is required, and that action must be in the market places of the world as missionaries of orderly and prosperous world trade. Unless we create opportunities for the small countries to sell what they have and buy what they have not, the trade isolationism now paralyzing the world behind national barriers will surely bring on a third world war.

This challenge, if America takes it up, can bring undreamed prosperity both to ourselves and to other countries, and at last that peace in our time we so earnestly seek. It is a challenge to political leadership, and that is where we women come in.

Women in other countries are making a larger contribution to political policy making than women are making here at home. Recently Mrs. India Edwards, chairman of the women's division of the Democratic National Committee, was quoted in the press as stating that if there were proportionately as many women in Congress as there are in the Indian Parliament, we would have 85 women in Congress. Instead, we have only nine.

Extending Mrs. Edwards' example, it should be noted that if American women were as prominent in Congress as Indian women are in their Parliament, there would be 15 women in the Senate—where there is only 1—and 70 women in the House—where there are now 8.

In New York—if we did as well proportionately as they do in India—there would be 7 women from our State in Congress instead of 1 woman; there would be 9 women in the State senate, where there is no woman now; and there would be 24 women in the State assembly, instead of 7 as now.

Women are not sufficiently represented in politics or government. If politics is the art of government—and it is—and if government is public housekeeping—and it is—then women's place, quite logically, is in politics.

If you honestly mean it when you say you're for freedom and peace, you have to get into politics up to your ears.

It's not good enough, in these troubled times, to be a good lawyer or physician, teacher, housewife; or merely to do well any career job you can name. History is pulling a fast trick, and you've got to lead a double life of career plus politics.

In your home town, in your State, for that matter in Washington, women's political power is not being used effectively. Yet here are eight important areas of policy determination that are being shaped by politics, and for the most part women are now excluded from the political councils where the decisions are being made:

1. World trade must be resumed. Neither people nor nations can live much above the subsistence level if their trade is wholly by barter.

2. A realistic and consistent foreign policy must be laid down and announced. Week-to-week hit-or-miss planning prevents other nations from adjusting themselves to reasonably predictable American attitudes.

3. Russia has to be contained within her present sphere of rule and ruin. Remember that the war started 10 years ago when Hitler spilled his legions over into still another country. Dictators can't stop. They have to be stopped.

4. Our own sound national economy is the single best assurance of world peace. It must be assured.

5. Government integrity at every level is essential, if for no other reason than to get good value for our hard-earned tax dollars.

6. Government must have, and must be known to have, both a head and a heart. The welfare of each of us concerns all of us.

7. Labor has a just claim to recognition as a partner in our free-production economy; but all the partners—capital, management, labor, and consumers—must be adult and responsible.

8. None can be assured of a good living, but all should have the chance to develop their fullest capacity for useful service without limitation because of race, creed, color, or sex.

Aren't these eight good reasons why women must insist that women shall be consulted and their voices heard and listened to in politics—in your city hall, the State capitol, and in the Halls of Congress and high administrative offices?

Today there is a ninth reason. Now it has been told; Russia, too, knows how to split an atom. Can women any longer hide their heads like ostriches to avoid looking at the facts of modern life?

There are matters that are the concern of all of us as people. If the brotherhood of man remains an unrealized ideal, with men alone shaping the policies that could achieve it, perhaps through a sisterhood of women and a share in policy making we can bring recognition that "above all nations is humanity."

Were the little Japanese women in Hiroshima and Nagasaki any less interested than we American women are in child bearing and child rearing in happy, contented homes? Do the women of the Italian villages and among the mountains of Greece, on Polish farms, and in busy cities of Czechoslovakia, care less than we do that their men and boys shall not again be marched off to kill and to be killed in some cruel war that nobody wins?

What are the women thinking today in Great Britain and in Germany, where no atomic bombs have yet fallen, but where death and destruction so recently came tearing out of the sky night after awful night?

Ours is almost the only remaining land of freedom, of opportunity. Our country is the haven of the harassed, the comforter of the afflicted, the friend of those whose serious needs threaten world peace. The challenge today is not for ourselves alone. With eyes toward Europe, Liberty looks out over New York Harbor, saying now, as of old:

"Give me your tired, your poor, your huddled masses yearning to breathe free."

Europe this year, seen through American eyes, hopes for a renewal of that noble invitation from us. Western Europe is eager for both the material and spiritual assistance we alone have to offer and which she so desperately needs if she is to stay free. That is why, now more than ever, the hard-headed soft-hearted businesswomen of America must get into politics.

Policy for Asia?

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Policy for Asia?" written by Joseph and Stewart Alsop, and published in the Washington Post of January 9, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POLICY FOR ASIA?

The period of American paralysis in Asia seems to be drawing to a close, judging by advance reports of the policy that Secretary of State Dean G. Acheson is to expound to the Senate Foreign Relations Committee. Whether this is really so, is the practical test of the administration's decision to leave Formosa to its fate.

Formosa is, of course, immensely valuable, more because its surplus product can help to feed Japan, than because it has great strategic importance. By every possible test, however, whether economic or strategic or political, Formosa is infinitely less valuable than the populous, incalculably wealthy southeast Asiatic peninsula. The practical objection to the MacArthur-Louis Johnson policy for Formosa has been, simply, that it would impede and perhaps hamstring any attempt to hold southeast Asia against the Communist advance from China.

This is so, for three reasons. First, a Formosan adventure would arouse suspicions of American imperialism all over Asia. But the first principle of the new American policy in Asia must be, and is, to ally ourselves with and support the new nationalism which is the strongest Asiatic force today.

Second, a Formosan adventure would also hopelessly divide our Asiatic policy from the policies of the other western powers with Asiatic interests, and particularly from the policy of the British. Yet the second principle of our new Asiatic policy must be, and is, to secure the friendly cooperation of these former colonial powers, and particularly of the British, in the great task of putting the emerging new nations of Asia firmly on their feet.

Third, a Formosan adventure would surely alienate the leaders of the Asiatic nations, which are already independent, such as Pandit Nehru in India and President Soekarno and Premier Mohammed Hatta in Indonesia. Yet the third principle of our new Asiatic policy must be, and is, to induce Nehru and the others like him to take the lead in the effort to save Asia which we, as westerners, can only aid and back up.

Simply by stating the objections to a Formosan adventure, the main themes of the new Asiatic policy have also been stated. There are, of course, various trimmings, of greater or lesser importance. Opening up active trade between southeast Asia, with its great surplus of agricultural products, and underfed, highly industrialized Japan, is one piece of trimming of the utmost importance to this country. Other, quite obvious trimmings are ECA aid and some military aid for the new Asiatic nations. The whole adds up to the outline of an intelligent policy to halt communism's Asiatic advance.

Although it is still vitally important to know why we went wrong in China, there could be no greater error than to judge the new Asiatic policy by our old China policy. There is really only one danger from the past.

The mark of our postwar China policy was an extreme reluctance to engage the United States, in the way that we engaged ourselves in Greece, for example. Yet the new Asiatic policy will be doomed to rapid failure unless this country now engages itself very boldly, politically and strategically as well as economically.

This is so far the simplest possible reason. Burma and Indochina are the keys to southeast Asia. If Burma and Indochina go the way of China, a chain reaction will have started, which will first consume Siam, Malaya, and Indonesia, and then attack India, the Philippines, and Japan. Yet, Burma and Indochina are both in imminent peril from strong, well-armed Communist movements. Talking about trade between Japan and southeast Asia before Burma and Indochina have been made safe is like planning the garden while the house is burning down.

Since the situation is so critical, no serious effort to save Asia, coordinating as it must economic and military aid, political influence, and secret-service activity, can possibly be carried on from Washington on a committee system. Yet the Far Eastern Division of the State Department has steadfastly opposed all projects for a flexible special organization to save Asia.

Equally, saving Asia will require taking considerable political risks, and spending a good deal more money than the dribs and drabs now available. Yet the first requirement is contrary to all the present inclinations of the State Department, and the second cuts across the Truman line of holding down all foreign-policy outlays. In short, the Asiatic policy that looks so good in outline may prove to be inadequate in practice. We must be ready to put up the cash, get into the mess, and even get our hands dirty. If the Senators cannot satisfy themselves on this point, they will then be justified in reopening the Formosa issue.

Why Is Generation a Perennial Issue?

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. YOUNG. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article appearing in the January 1950 issue of the Rural Electrification magazine entitled "Why Is Generation a Perennial Issue?"

In this very timely and informative article Mr. Malcolm W. Wehrung ably presents one of the most important issues confronting the whole REA program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY IS GENERATION A PERENNIAL ISSUE?

(By Malcolm W. Wehrung)

As the second session of the Eighty-first Congress gets under way, the towlines in the struggle of private power versus low-cost rural power are again being pulled taut and new footholds are eagerly being sought on both sides. This is as it should be. America from its earliest days permitted a path to be beaten to the door of the man inventing the better mousetrap, rendering the greater service, or selling the cheaper automobile.

Both sides have their feet firmly imbedded in deep-rooted American traditions, private power in the big-business traditions of free enterprise and profit making, and low-cost rural power in the pioneering traditions of free enterprise, mutual aid, and self-help. Low-cost rural power has developed to a large extent outside the profit-motive area and private power has developed without the elements of mutual aid and self-help.

Never before, however, have the paths of each run so nearly parallel nor created such an atmosphere of competition in the power field. In essence, there should be no conflict between private power and low-cost rural power and there is none except that which is promoted and staged by the private power interests. The low-cost-rural-power people naturally are resisting unprovoked attacks on their efforts to solve their own problems.

Perhaps nowhere in the entire field of utility operation does the Geiger counter of the private-utility proponent vibrate more actively than when directed toward generation and transmission projects of the rural electric cooperatives. It is here that the most excited overstatements are whispered (or sometimes shouted) and the most odious comparisons are made. Frequently, selected statistics are expertly manipulated to arrive at intentionally distorted conclusions.

For example, let us take a look at the lead article in the Edison Electric Institute Bulletin for November. It is a statement by Elmer L. Lindseth, president of the institute, as well as of the Cleveland Electric Illuminating Co. of Ohio. The statement is redolent with self-congratulatory pats-on-the-back for the electric utility industry generally, but the writer goes out of his way to attack what he calls extensive encroachment on the electric utility field by the Government, as though the profit-making companies for whom he speaks have preemptive rights to serve all people, even those whom these companies failed to serve for so many years prior to 1935. He classes all efforts of the people to serve themselves as encroachments by Government on private enterprise.

In one paragraph of Mr. Lindseth's statements he says: "Companies generally do not object to Federal subsidy of rural distribution lines—if this is the national policy—to service rural areas not already served. But they do object to (1) duplicating existing facilities, and (2) erecting competing plants."

NO EVIDENCE OF SUBSIDY

To answer the broad unsubstantiated intimation of the first part of this paragraph, one need merely say that nowhere either in congressional hearings or legislative enactments can it be found that Congress ever stated it to be the national policy that rural electric distribution lines were to be subsidized. The records simply do not bear out the time-worn charge of subsidization. The lines are not subsidized and no substantial block of public opinion seems to advocate that they should be.

Perhaps, if enough obstables are thrown in the paths of those striving for the principle of "area coverage" in serving the last 20 percent of the Nation's rural population, subsidies may eventually become necessary—to reach the most thinly populated areas. That is a question, however, for Congress to decide when the last miles of line on a self-liquidating basis have been built.

Incidentally, members of rural electric systems and their friends bitterly resent the implication that the lines which they have built for their own use, and are paying for in full with interest, are the result of subsidies.

NOT DUPLICATING OR COMPETITIVE

As for the remainder of the paragraph quoted above, in which Mr. Lindseth states that power companies object to duplicating existing facilities and erecting competing plants, it may be said that no unnecessary duplication of facilities has occurred in the REA program. Certainly, none are "unnecessary" from the point of view of those being served.

"Competition" is a word frequently used by private power spokesmen when a group of distribution co-ops band together to build generating and transmission facilities to serve their own needs. This is a misnomer. When an industrial user who has been buying energy from a private utility installs his own generating plant to serve his own needs he is not looked upon as a "competitor," even though the cost of operating his generating plant is materially less than the cost of energy would have been if purchased. Competition is actually present only when two or more producers of energy are vying for the same customers. When consumers, either actual or potential, decide to serve themselves they are no longer in the market as customers and therefore there can be no competition.

Power companies have no legitimate complaint when this occurs, since the loads which these cooperatives have built up are products of their own industry—not of the utilities. The utilities should be happy that the majority of cooperatives still buy their energy from them. Since 1940 well over 12,500,000,000 kilowatt-hours have been purchased from privately owned utilities at a cost of over $110,000,000. This is good business in anybody's league.

Gratitude should be the proper sentiment of the utilities since this business was not developed by any efforts on their part, but in spite of the opposition which most of them interposed. It should be remembered further that a large portion of this energy is a form of "dump" power which the utilities, at little or no added cost to their normal operations, produce from generating capacity which otherwise would be considered reserve or surplus.

In 1948 REA borrowers purchased 57 percent of their energy from the private profit-making companies and in the last 6 years the amount of this business has more than tripled. The proportion of rural electrics' wholesale power purchased from the power companies has also risen. It was only 51.4 percent in 1946.

COMPARING PEANUTS AND POTATOES

Probably nowhere does Mr. Lindseth disclose the propaganda purposes of his statement more than when he compares the noncomparable average cost of purchased energy with the average cost of generated energy by REA-financed systems. The comparison is bad and the conclusion unsound when he says the average price the companies charged cooperatives is 9.5 mills per kilowatt-hour, while the average price the REA generating stations charged the cooperatives they served is 13.6 mills—that is, 43 percent more than the companies charged. No one questions the accuracy of these 1947 statistics. Their juxtaposition, however, is like placing a 5-cent bag of peanuts next to a bushel of potatoes for comparison purposes.

No consideration, for instance, is given to the fact that most present rural electric power plants are in the high-cost fuel areas, where power supply is most critically short. The broad national figure alone is simply not representative.

REA-financed co-ops have never generated for their own use more than 5 percent of their energy, except in 1946, when it was 6 percent. Even if they generated as much energy as they purchased from the private profit-making companies the elemental answer to Mr. Lindseth's comparison is that (1) the administrative policy of REA (not by way of legislative enactment) has been to make loans for generating plants in areas generally where the wholesale costs of energy are considered unnecessarily high, (2) during the first years of operation of any generating plant while its load is developing—the average kilowatt-hour costs are relatively high (the average cost per kilowatt-hour estimated for the life of the plant is the usual and proper accounting figure to use for comparison with the cost of purchased energy), and (3) such comparison does not reflect the fact that the average cost per kilowatt-hour of purchased power is as low as it is only because of the REA generating loan program, and finally (4) such comparison does not reflect the intangible advantages of any type of distribution systems owning and controlling their own source of energy supply. One can only speculate as to the reasons why Mr. Lindseth would permit himself to be caught using such noncomparable statistics.

The first opposition to an REA generating plant loan usually takes the form of showing what appears to be reserve generating capacity in the area. This is generally done by the power company or companies using statistics which make no allowance for station usage, no allowance for repairs or breakdowns, by including name-plate kilowatt rating of obsolete and inefficient equipment and by not revealing existing unserved loads. In one instance at least where voluntary curtailment of energy usage was in effect and where no new unserved loads were being connected, the private power company serving the area reported no power shortage.

INTERCONNECTIONS HIDE SHORTAGES

If one company serving an area where a group of cooperatives propose to locate a generating plant cannot show reserve capacity even by using the ruses mentioned, it will join with as many other interconnected companies as is necessary to show the desired reserve. Some of these groups may even be subsidiaries of different holding companies. They are all blood brothers when it comes to opposing the erection of a cooperative generating plant. Immediately after the co-op plant was built, the nearest company asked for an interconnection and began buying power in huge blocks, in one case.

To visualize most clearly what happens when cooperatives are not banded together to supply their own power, take a look briefly into the New England area. A Maine cooperative now has a contract with a power company which provides for the lowest block of power at 9 mills. The contract has a fuel escalation clause. Now the power company is invoking that clause asking for an increase which would make the lowest block cost 12.5 mills, nearly a 40-percent increase. The company's data supplied to the Federal Power Commission show that only a fraction of 1 percent, namely 0.26 percent, of the company's power is generated by steam. Over 99 percent of it is hydro.

EXAMPLES OF DEALINGS CITED

An example of unfair, unbusinesslike dealing occurred just recently when a co-op attempted to renew its expired contract with a power company. The contract had a 20-mill rate and a provision that such rate shall be doubled unless the contract is renewed. The company demands a 10-year renewal or the rate shall be 40 mills. The company also refuses to relocate its substation closer to the cooperative's load center, thereby making the cooperative furnish a substation or continue to absorb line-loss of transmission at low voltage—an uneconomical practice regardless of who bears the loss.

Again, another New England cooperative has a contract with a power company which has 7 years to run. It is reported that the power company is asking for an increase in rates above those specified in the contract which would increase the cooperative's annual wholesale power bill by approximately $50,000. If the new rate is not paid, the power company threatens to go before the State public service commission to ask for a still higher rate. Another instance—several cooperatives have contracts with a company specifying voltage regulation within allowable commercial limits—10 percent. The voltage variation is now well in excess of 15 percent with some of them. Upon a request for better regulation the cooperatives were told that if they do not like the present service they should correct it themselves or go elsewhere for their energy needs.

POWER COST RATIO RISING

The importance to the cooperatives financed by REA of the Administrator having lending power for financing generating plants can be better understood when the statistics on the cost of power are compared with the cooperatives' operating ratios. In the early days of the program when power costs were much higher than today these items in the budgets were relatively small. Percentagewise they have been growing larger from year to year as loads continue to build up and operating ratios decline. The leveling off of kilowatt-hour usage in rural areas is not yet apparent in spite of the dilution of the average-use figures by continually adding newly connected member loads.

Only when area coverage has been reached will averages for consumer usage in rural areas become accurate and fully meaningful. In a few years the cost of power will be one-half of the entire operating budget. That is one important reason why rural electrics feel that they must continue to press for ever-lower power costs.

CONGRESS STUDY PROVES SAVINGS

The wisdom of Congress in giving the Administrator in the original REA Act of 1936 specific authority to make loans for financing the construction of generating plants is conclusively demonstrated by the known savings which have been achieved in power costs. In 1945 when the House Committee on Interstate and Foreign Commerce was considering H. R. 1742, the REA postwar planning bill, a comparison was made of the average rates charged by the power companies before certain REA loans for generating plants were considered in 13 States with (a) the average cost of power actually supplied by REA-financed generating plants and (b) the average rates charged by the power companies in those same States after the generating plant loans had been made.

This showed that an annual saving in power costs of $2,250,000 was effected by reason of these loans. More recent studies, using the same comparisons for the same States, show that almost $5,000,000 is now being saved annually as a result of these generating plant loans. It should be noted that this $5,000,000 annual saving is not all by any means. There are numerous instances where the mere announcement by a group of cooperatives that a study is being made to determine the feasibility of a cooperative generating plant has effected material lowering of wholesale rates in those areas.

The REA program could never have achieved such overwhelming success as it has had not Congress given the Administrator authority to make these generating loans. The right of rural electrics to generate their own power is their only protection against excessive power costs. The future of the program hinges on a continuation of this authority, and power company tacticians are probably well aware of this.

Formosa Stand Said To Put All Pacific in Jeopardy

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. SMITH of New Jersey. Mr. President, there appeared in the New York Herald Tribune on Wednesday, January 10, in the column entitled "The Air World" by Gill Robb Wilson, an article, the title of which is "Formosa Stand Said To Put All Pacific in Jeopardy." As I feel that this is a very important contribution to the pending debate on Formosa by one of the leading authorities in the United States on air power, I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE AIR WORLD
(By Gill Robb Wilson)
FORMOSA STAND SAID TO PUT ALL PACIFIC IN JEOPARDY

Foreign policy in the air age can never afford to be militarily unrealistic.

Prior to the rise of air power, national defense could be compromised occasionally with impunity. The past radius of military action was short and the tempo of movement slower. The time lag between mobilization and combat gave opportunity for strategic recovery of untenable situations. This is no longer the case.

The island of Formosa is an air staging ground easily maintained and supplied from the ports of the China coast. Formosa-based air power outflanks air power on Okinawa, Japan, and Luzon, which forces must be supplied from the United States mainland, approximately 6,000 miles distant. This being the case, it follows that air power based on Guam is also strategically vulnerable.

An inviolate tenet of air doctrine holds that strategic air power must be based where it is not vulnerable to medium or short-range counterattack. Communist air power on Formosa would bring the most effective weapon of the United States into a vulnerable position. With the Philippines and Japan untenable by virtue of Formosan-based air power the American position in the Pacific would be as tenuous as in the days when Bataan fell.

It is difficult to reconcile American realism as exemplified in the Greek war, the Berlin air lift, and in the rearmament of Europe through the North Atlantic Pact with the appeasement represented by the State Department stand in regard to Formosa.

Was there something in the Yalta Pact or some other give-away program which brought the American withdrawal from China and which is continuing to exert its influence in respect to Formosa? Why does American policy seek to contain the aggressor in eastern Europe and pursue a diametrically opposite position in Asia? What baleful influence has the State Department inherited which makes our foreign policy a contradictory mystery? Are we sincere in Europe and insincere in Asia or vice versa?

The viewpoint is advanced that positive American action in Formosa will throw the United States into focus as an aggressor. How can such a ridiculous proposal be advanced by presumably intelligent leaders when the whole world knows that the problem is one of stopping the global aggression of the police concept of government?

Granted that Chiang Kai-shek may be little better than any other war lord; granted that Formosans do not want Chinese overlords—either Nationalist or Communist. Is there anything wrong with the concept of a free Formosa whose integrity is guaranteed by the United States as is that of the Philippines?

Somewhere in the Pacific the United States must become militarily realistic. Is that point to be in the defense of Formosa or in the defense of Honolulu and ultimately San Francisco?

If the problem is one of war or peace, let it come now while military realism still has some chance in the Pacific. If the problem is one of preventing war, why follow one policy in Europe and another in Asia? If the problem is smoking out commitments that have been made in the past and unknown to the American people, let us also find that out.

Formosa is not only a place to stop aggression but also a place to ascertain the consistency of a foreign policy that the American people can know and trust. No less is safe or satisfactory in the air age.

A Political Program for Democracy

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered on October 24, 1949, before the New York Herald Tribune Forum on A Political Program for Democracy.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate your invitation to participate in this stimulating forum, to speak on the very important subject of the political program for our democracy. Tonight I use the term political as a descriptive term for the mechanics of decision making by government.

Professor Rogers has given us a good, succinct statement of the conditions that confront us in America as we attempt political reform. He lists federalism, localism, and seniority as formidable facts of our polity to be reckoned with. I agree. These conditions are obstacles to effective political leadership in this country.

The conduct of public affairs in these crucial days calls for positive direction and responsibility if we are to achieve the promises of the American life at home, and safeguard democracy in the world at large. What we seek, within the framework of our inherited form of government, is a series of arrangements which will at once promote better teamwork between the Congress and the President, avoid dangerous deadlocks, inculcate national rather than provincial loyalties, and give the spirit of youth a larger place in legislative halls.

Ours is a Federal system in constitutional theory, but it is increasingly becoming a national system in actual practice. While we have 48 State legislatures, we have one national economic and industrial system. The trend from State government to National Government has been fortified and accelerated by the Civil War, by the onward sweep of science and technology, by the unifying forces of transportation and communication, and by a long series of Supreme Court decisions. The same evolutionary influences are operating in our political system. There are still lags here and there, particularly in the South, but State bosses and local-party machines are slipping, as in Jersey City, Kansas City, and Virginia while national party organizations gain force and strength. The American people recognize the interdependence of our economy. They sense the necessity for broad national policy. Adequate testimony to this trend of American politics is found in the wide-scale activity of a host of educational, social, and political organizations. This is a healthy trend, and one that is helping to dissolve the traditional sectional divisions and political alignments of the American people.

One of the articles of our political faith has been our belief in the biparty system. We believe that political parties are the principal instruments of democratic government and that the party which wins a majority of the popular vote should have the responsibility and the power to govern the country.

The major party is the only political organization in American life which is in a position to claim that it can measure up to the requirements of modern public policy. It has sought and won a general control of the Government. It alone possesses the kind of political organization required to make government work. It alone may reasonably be held responsible for the general state of public policy. Of all the varieties of political organization, it alone gets a mandate from the people to govern the country. Party government is therefore as right as democracy itself. The American people have long accepted the principle of party responsibility for the conduct of our National Government. We must translate that principle into practice.

But why has the American party system not yet produced that fullness of authority which is necessary to make the Government work without recurring deadlocks and without lag, leak, and friction?

OBSTACLES TO PARTY RESPONSIBILITY

There are several explanations. The Federal structure, our inherited system of separated powers, and the piecemeal practices of American Government create formidable obstacles to effective government. Part of the explanation is to be found in the deep internal divisions within the majority party. Like the Republican Party, the Democratic Party has both conservative and liberal members who wear the same party emblem, but lack a common political philisophy.

Another contributing cause is the influence of special and sectional interests which receive a loyalty that transcends a sense of responsibility to the national interest, as in the tidelands oil controversy. The part is often valued above the whole; the district above the State; the State above the Nation.

Furthermore, legislative procedure, especially in the United States Senate, is such as to give every advantage to the tactics of obstruction by individual Members and minority blocs. The choice of committee chairmen by seniority rather than party regularity, and the unrepresentative character of the congressional committees are also part of the explanation. The fact that Senators and Representatives are responsible to State and local electorates, while the President is responsible to a national electorate, presents a basic difficulty of our system.

I have been a Member of the United States Senate for 10 months—not long enough to become indoctrinated and reconciled to the

ancient ways of that body—but long enough to have observed a fundamental obstacle to effective party government in Congress. I refer to the diffusion of party responsibility for legislative action in both houses among a variety of political mechanisms.

I had not long been a Member of the Senate before I made two discoveries: (1) that there are 28 stages in the enactment of a law and at each stage on the legislative highway a few legislators can lurk, like the pirates of Tripoli, and take toll of the passing traffic; and (2) that the power structure of Congress has been so constructed over the passing years that the control of legislative action in both Chambers is scattered and splintered so that effective party leadership is almost impossible to achieve.

Before the so-called congressional "revolution of 1910," control of the House of Representatives was in the party caucus, practically the only organ in Congress for formulating the party will. The Speaker was the only agency for carrying out the party will. The caucus selected the party's candidates for office in the Chamber and formulated and enforced the party's will with respect to legislative action. Decisions reached in caucus were binding upon the entire membership of the party. Caucus decisions of the majority party determined the action of the Congress itself. Thus, the line of party responsibility ran straight from the electorate through the majority caucus to the party leadership in Congress.

This type of party government existed in Congress during the first administration of President Wilson. The success he had during his administration, in having Congress adopt the greater part of his legislative program, has always been considered one of his great achievements. Undoubtedly he deserved credit for the masterly way in which he held together and led the Democratic Party. But the real credit for this achievement is due to the effective way in which the Democratic Party made use of its caucuses in both Houses of Congress. To an extent never equalled before or since, that administration adopted the policy of having all major legislative proposals first considered in caucus, and of binding its members to abide by the action of the caucus. As a result, differences were resolved and a majority vote was assured when they were taken up for consideration.

Contrast that situation with the conditions of today. The caucus has become a conference. Little attempt is made to unite the party membership and hold them responsible to vote for measures designed to carry out platform pledges. The powers formerly concentrated in responsible party leadership are now split up in both chambers and both parties among the committees on committees, the steering or policy committees, the floor leaders, and the party whips.

The function of leadership has been transferred from the Chair to the floor. The power of direction was broken up and diffused among a number of agencies; the appointing power was given to the committee on committees, the strategy function to the steering or policy committee, and the tactical function to the floor leader.

Moreover, the standing committees of Congress exercise large powers over legislation. They have the very important power of determining the whole agenda of the two Houses, by the rule which provides that all bills and resolutions, immediately upon their introduction, shall be referred to the appropriate standing committees for consideration and report. By this rule the House and Senate have declared that they will refrain from the consideration of any bill or resolution until it has been examined by its proper committee and has been reported back to the House or Senate with recommendations for action.

This rule gives great power to the committees because (1) it does not require them to consider or report back bills referred to them; and (2) in practice, only those bills are reported back which the committees favor. Thus, the DP bill and the District of Columbia home-rule bill were pigeonholed in committee for several months, despite party promises to pass them. In short, each committee, acting within its own jurisdiction, is almost sovereign with respect to the determination of the bills that shall come before the two Chambers for action. And their chairmen are immune to party discipline.

The standing committees also play a dominant part in controlling and directing proceedings on the floor when their bills are under consideration. This dominance is partly the result of formal rules and partly that of conventions which have acquired the force of written rules.

The long-standing custom of unlimited and irrelevant debate in the Senate is an additional heavy handicap to effective party leadership and political performance in the upper Chamber.

Thus, the dispersion of political responsibility in Congress, together with its archaic rules and customs, go far in my opinion to explain its repeated difficulties, regardless of which party is in control, in translating the will of the people into public policy. The party leadership is not to blame. Who can lead where others will not follow?

A DEMOCRATIC SOLUTION

There is a growing recognition among political leaders of the need of a more responsible and effective party system in the United States. Various proposals to this end are being advanced. In a forthcoming report a committee of the American Political Science Association crystallizes informed opinion on the means of strengthening party government. Their recommendations impress me as constructive, and worthy of wide consideraiton.

I have time here only to outline the steps which might well be taken toward the new party system. They are threefold:

First, I believe that we must try to integrate party membership and keep that membership at all levels informed through the discussions of party policy and the development of explicit party programs. Each party should be encouraged to reformulate its platform every 2 years—it might be that national conventions should be held every 2 years—and the platform should be regarded as commitments by all candidates for office and officeholders of the party. This would go far to make our congressional elections, as well as our presidential elections, more meaningful to the American people by providing them with an opportunity effectively to choose on basic issues rather than personalities. American politics should not be a beauty contest or a popularity contest. Policy and issues must be the standards for decisions. Party elections must increasingly become issue elections, otherwise more and more people may lose faith in representative government and become impatient with democratic processes. Despite platform pledges, for three decades now civil-rights bills have been repeatedly defeated in the Senate by various parliamentary strategies.

Second, our political parties must become more responsible to the American people and to their own membership. I believe we must reinvigorate party leadership at the national level by making that leadership more representative of the people. This can be accomplished only as the local and State political organizations more truly represent a broad cross-section of the electorate. This means politics becomes the business of the people, not the special privilege of the professionals. Then, too, party research and education are the political vitamins that insure strength and continuity to a political program. With an educated and informed party membership, party platforms on a national level will increasingly come to represent policy decisions made on the local level. It should be the function of the local party membership to express itself on national issues not only by choosing delegates to national conventions, but by making on a local level decisions on national issues which their representatives are to carry forward to the national convention. Party membership would come to feel that its views and decisions on policy matters have an effect on national party policy decision, and would be an alert and active and responsible membership.

Third, I believe that we must reorganize and modernize the machinery of party responsibility in Congress. This step calls for a number of subsidiary steps, none of which seems to me to be beyond the realm of practical politics, and seem worthy of further consideration and discussion.

1. We should revive and make more extensive use of the caucus as an instrument for the formation and promotion of party policy.

2. A joint congressional policy committee for both Houses of Congress should be created. It should be the function of this joint congressional policy committee to plan legislative strategy and programs, and to be held responsible for the legislative implementation of party policy.

3. The party policy committees should be allocated the function of making standing committee assignments. The party policy committees, or the membership of each committee, might well be allocated the function of selecting the standing committee chairman. Seniority is the most sacred cow in the legislative zoo, but it is not imbedded in the body of the Constitution nor the statutes. It is a custom that can be changed in party caucus.

Twentieth century America is a dynamic society facing complex problems. Our task is to evolve a political mechanism which will utilize the democratic process, place responsibility for action, and maintain an unobstructed connection between the electorate and the elected representatives in Government.

History of Laying of Cornerstone of the White House

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

The PRESIDENT pro tempore. The present occupant of the chair asks unanimous consent of the Senate to have printed in the Appendix of the RECORD a history of the laying of the cornerstone of the White House on October 13, 1792, by Lodge No. 9 of Maryland, now known as Potomac Lodge No. 5 of the District of Columbia. This history includes a very interesting article from the Charleston (S. C.) City Gazette, as published in that newspaper on November 15, 1792.

The entire article is exceedingly interesting, and I call the attention of all Senators to it, and hope they will read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE LAYING OF THE CORNERSTONE OF THE WHITE HOUSE, OCTOBER 13, 1792, BY LODGE NO. 9 OF MARYLAND, NOW KNOWN AS POTOMAC LODGE NO. 5 OF THE DISTRICT OF COLUMBIA

(A report prepared for the lodge by R. Baker Harris, past master)

The Eighty-first Congress created a special Commission, at the recommendation of President Truman, to determine plans for the general renovation and partial reconstruction of the White House. Prior to turning work over to the contractor, the Commission has been making an extensive study of the historic old mansion.

Recently the Commission revealed it is believed the cornerstone has been located at the southwest corner of the original building. Using a new mine detector supplied by Army engineers, and with information that a brass plate was mounted under the cornerstone, the detector was used all around the building. The most distinct response was obtained at the southwest corner, about chest high from the present outside ground level. It was possible to obtain a cross-check on it, the location being at a corner.

Although no definite decision has yet been made, Maj. Gen. Glen H. Edgerton, executive secretary of the Commission, has stated it is entirely possible the cornerstone may be removed, examined, and replaced. Since 1950 is the National Capital's sequicentennial, such an examination of the stone and its contents, and its relaying, might well take an appropriate place in the year's ceremonies. An examination of the contents of the cornerstone would, of course, reveal additional historical information.

While the Commission feels reasonably certain the White House cornerstone has been located, because of its brass plate, by the mine detector, nevertheless the fact has yet to be confirmed by removing surrounding stonework and by actual examination of the brass plate and cornerstone.

CHARLESTON CITY GAZETTE, NOVEMBER 15, 1792

However, of equal if not greater interest, and certainly of particular importance to Potomac Lodge No. 5, is the Commission's discovery of a newspaper account of the cornerstone laying, published contemporary to the actual occasion. This account appeared in the City Gazette, a newspaper published at Charleston, S. C., in its issue of November 15, 1792.

It is believed that only one copy of this particular issue has survived, and this is located in the Charleston Library Society.

The fact that the only known contemporary newspaper account of the ceremony should have appeared in a newspaper at Charleston is not surprising. James Hoban, who designed both the Capitol and the White House [then referred to as the President's House, and later as the Executive Mansion] was a resident of Charleston at the time he submitted his designs. He was thereafter engaged as the supervising architect during construction.

The full text of the account as it appeared in the City Gazette's issue of November 15, 1792, taken from the original copy, is as follows:

[Extract of a letter from a gentleman in Philadelphia, to his friend in Charleston, dated October 20, 1792]

"On Saturday the 13th instant the first stone was laid in the southwest corner of the President's House, in the city of Washington, by the Free Masons of Georgetown and its vicinity, who assembled on the occasion. The procession was formed at the Fountain Inn, Georgetown, in the following order, viz:

"1. The Free Masons, in masonic order.

"2. The commissioners of the Federal buildings.

"3. Gentlemen of the town and neighborhood.

"4. The different artificers, et cetera.

"They proceeded in procession to the President's Square. The ceremony was performed by Brother Casenave, master of the lodge, who delivered an oration well adapted to the occasion. Under the stone was laid a plate of polished brass, with the following inscription:

" 'This first stone of the President's House was laid the 13th day of October 1792, and in the seventeenth year of the independence of the United States of America.

" 'GEORGE WASHINGTON, *President.*
" 'THOMAS JOHNSON,
" 'DOCTOR STEWART,
" 'DANIEL CARROLL,
" 'Commissioners.
" 'JAMES HOBAN, *Architect.*
" 'COLLEN WILLIAMSON,
" 'Master Mason.
" 'Vivat Republica.'

"After the ceremony was performed they returned in regular order, to Mr. Sutter's Fountain Inn, where an elegant dinner was provided, and the following toasts given in honor of the day:

"1. The 15 United States.

"2. The President of the United States.

"3. Our worthy brothers.

"4. District of Columbia: May it flourish as the center of the political and commercial interests of America.

"5. The city of Washington: May time render it worthy of the name it bears.

"7. The French Nation: A happy issue to their struggles for liberty and justice.

"8. Marquis de la Fayette.

"9. The Masonic brethren throughout the universe.

"10. The Rights of Man and the author of Common Sense.

"11. The fair daughters of America.

"12. The memory of those who have bled in the cause of liberty.

"13. General Wayne and the western army: May their efforts be crowned by a speedy and honorable peace.

"14. The Governor of the State of Maryland.

"15. The Governor of the State of Virginia.

"16. May peace, liberty, and order extend from pole to pole.

"The whole concluded with the greatest harmony and order."

THE MASONS OF GEORGETOWN

In the year 1792 there was only one regularly chartered lodge in the area now comprising the District of Columbia. This was Lodge No. 9 in Georgetown, then a separate and distinct community older than the newly established city of Washington. Lodge No. 9 had been chartered by the Grand Lodge of Maryland, meeting at Easton, Talbot County, Md., on April 21, 1789. On that date there was no President of the United States, no city of Washington, no District of Columbia, and the Congress of the United States had met for its first session, in New York, only the month before. But General George Washington was even then on his way to New York to be inaugurated first President of the United States. Lodge No. 9 had its birth in an historic month and time.

The earliest minute-books of the Georgetown lodge which have survived (now in possession of its lineal descendant, Potomac Lodge No. 5 of the District of Columbia) are those for the year 1795.

BROTHER CASANAVE, MASTER OF THE LODGE

It has long been known, from early Grand Lodge of Maryland records, that Peter Casanave was master of Lodge No. 9 in the year 1792. There has also survived an original document, issued by Lodge No. 9, a dispensation (for brethren to meet at Port Tobacco), dated June 25, 1792, which bears the signature P. Casanave, master.

He was a young man, probably in his middle twenties, in 1792. A copy of his will, signed Peter Casanave, dated April 14, 1856, and probated March 31, 1860, is in the archives of Potomac lodge.

In passing, it is interesting to note that the first master of Lodge No. 9, Charles Fierer, was not yet 30 when he presided over the lodge. He was a young Hessian officer, taken prisoner the night General Washington crossed the Delaware at Trenton. On parole at Dumfries, Va., he became attached to the American cause and served notably as an officer in the American forces throughout the remainder of the war. He edited the first newspaper in Georgetown, the Times, and Patowmack Packet.

MR. SUTER'S FOUNTAIN INN

John Suter was keeper of the famous inn (also known as Suter's Tavern) in Georgetown, where George Washington stayed on March 29, 1791, and the next day met Commissioners Charles L'Enfant and Andrew Elliott to sign agreements for acquiring the territory comprising the Federal District. (See A Manual on the Origin and Development of Washington, by H. Paul Caemmerer, Washington, Government Printing Office, 1939, pp. 19–20.)

From Charles Fierer's newspaper it is known meetings were sometimes held by Lodge No. 9 at Suter's Tavern, and that the brethren also met there to celebrate St. Johns' days.

Lodge No. 9 ceased to work in 1794. A number of its members had gone to the new lodge at Port Tobacco. It must be remembered that the total membership of the lodge in the seventeen nineties was never more than 15 Master Masons, so that the loss of even a few members could be a crippling handicap in those days.

John Suter was one of those who petitioned for the lodge to be reconstituted in 1795. The lodge was reconstituted as Lodge No. 19 of Maryland, and the minute-books for 1795 and 1796 show Brother Suter to have been present at nearly every meeting, holding office, and taking an active part in lodge labors.

JAMES HOBAN, ARCHITECT

James Hoban, a native of Ireland, and, like Peter Casanave, a devout Romanist and Freemason, was engaged to supervise the construction of the Capitol building and the President's house both of which he had designed.

In the year following the laying of the White House corner stone, 1793, James Hoban became first worshipful master of the first regularly chartered lodge in the new city of Washington, Lodge No. 15 of Maryland now Federal Lodge No. 1 of the District of Columbia. As of December 20, 1794, he was recorded as treasurer of the lodge, and he was closely identified with the first activities of Royal Arch Masonry in the city of Washington.

"THE CEREMONY WAS PERFORMED * * *"

Old guide books to the city of Washington had stated, without citing the source, that the White House cornerstone was laid October 13, 1792. The date is now confirmed by the Charleston newspaper account.

Kenton N. Harper in his History of the Grand Lodge and of Freemasonry in the District of Cilumbia, 1911, page 16 said:

"In the absence, however, of any evidence to the contrary, and taking into consideration the known fact that the leading men in the government and in the corps of architects and builders at that time were Master Masons, it is a reasonably fair assumption that the ceremony (laying the White House cornerstone) was Masonic, and while this is not historic it is given as an historic probability."

In 1792 there were only two lodges in the entire nearby area which might have conducted such a ceremony: Lodge No. 9 in

Georgetown, which was the nearest, or Alexandria Lodge No. 22 (now Alexandria Washington Lodge No. 22) across the river in Virginia. The Alexandria lodge minutes for that time showed no mention of the lodge participating in such a ceremony. The Lodge No. 9 minutes for 1792 were missing. The Charleston newspaper account now establishes that it was Lodge No. 9 which conducted this ceremony.

From the newspaper account it is apparent that this was not merely an informal occasion at which Masons were present. Any Mason will recognize immediately the significance of these phrases: "The first stone was laid * * * by the Free Masons of Georgetown. * * * The procession was formed. * * * The Free Masons in Masonic order * * * The ceremony was performed by brother Casaneva, master of the lodge. * * * After the ceremony was performed they returned, in regular order." The cornerstone was laid according to Masonic ceremony, in the tradition of the craft.

POTOMAC LODGE NO. 5

The foregoing is a notable new chapter to the history of Potomac Lodge, the lineal descendant of Lodge No. 9 of Maryland.

The valiant efforts of John Suter and others to continue an active lodge in Georgetown, when Lodge No. 9 was reconstituted as Lodge No. 19 in 1795, succeeded only through 1796. Early in 1797 the lodge again ceased to work. Lodge No. 19, beginning with 12 charter members, had held 22 meetings, received 7 petitions, raised 4, and lost 1 by death.

Remember again: That Georgetown in 1797 was a small community, entirely separate from the city of Washington; that the lodge's highest membership at any time was 15 members; that the loss of even several of these, or their temporary absence on business or travel, could make it impossible for the lodge to work.

Georgetown, for the next 9 years, remained in Masonic darkness. No other lodge was chartered in Georgetown during that time. No other lodge conferred degrees, assumed charge, or did any Masonic work in Georgetown.

During these intervening 9 years, the newly established capital city drew thousands of people to the area. Many settled in Georgetown, and by 1806 its population had grown phenomenally to more than 4,000 persons.

Early in 1806, Valentine Reintzel, who in 1793 had been worshipful master of Lodge No. 9, together with nine other brethren, most of whom had been members either of Lodge No. 9 or of Lodge No. 19, or both, petitioned to reestablish their lodge in Georgetown. These were not new Masons attempting to form a new lodge, but former members of the earlier Georgetown lodges who were petitioning to reestablish their lodge. The grand lodge of Maryland granted the petition on November 11, 1806, and designated the lodge as Potomac Lodge No. 43 of Maryland. This lodge has had continuous life, without interruption even during the anti-Masonic period, to the present time.

In 1811, the Grand Lodge of the District of Columbia was established. Potomac Lodge No. 43 was one of the lodges participating in the formation of the new Grand Lodge. As is customary, the lodges acquired new numbers based on the dates of the Maryland charters under which each was then working. By its Maryland charter of November 11, 1806, Potomac Lodge No. 43 became Potomac Lodge No. 5 of the District of Columbia.

Valentine Reintzel was elected the first grand master of Masons of the District of Columbia. Past masters of Potomac Lodge who have held the office of grand master are: Valentine Reintzel, 1811; Daniel Kurtz, 1819; John Mason, Jr., 1842; Thomas P. Chiffelle, 1886; Malcolm Seaton, 1902; Lemuel Towers, Jr., 1918.

THE CHARTER OF LODGE NO. 9

On the evening of April 21, 1939, Grand Master John H. Hesse, of Maryland, accompanied by officers of that grand lodge, visited Potomac Lodge No. 5 to participate in the sesquicentennial program. On this occasion, the grand master of Maryland, declaring that Potomac Lodge No. 5 had originally been chartered as Lodge No. 9 of Maryland, permanently returned to the lodge the original charter dated April 21, 1789. (See Proceedings of the Grand Lodge of Maryland, 1939, p. 21.)

ACKNOWLEDGMENTS

To President Harry S. Truman, past grand master of Missouri, for his kind personal letter giving assurance that all information possible concerning the White House cornerstone would be furnished to Potomac Lodge for its archives.

To Miss Virginia Rugheimer, librarian, Charleston Library Society, Charleston, S. C., for giving permission to have a photostat reproduction made for us of the November 15, 1792, issue of the Charleston City Gazette.

To the Washington Post which, so far as we know, was the first newspaper to publish the complete story on the Commission's findings regarding the White House cornerstone, in a carefully written and authentic article by Post reporter, Chalmers M. Roberts.

At a stated communication of Potomac Lodge No. 5, November 21, 1949, on motion, ordered to be prepared and printed.

ANDREW D. PRICE, *Master.*

Attest:

RICHARD P. WADDEY, *Secretary.*

WASHINGTON GAVEL

First used by President George Washington September 18, 1793, to lay the cornerstone of the United States Capitol. Valentine Reintzel, then worshipful master of lodge No. 9, of Maryland, participated with the lodge in that historic ceremony.

The famous gavel has since been loaned by Potomac Lodge for use by each of the following Presidents of the United States: James K. Polk, in 1847; Millard Fillmore, in 1851; James Buchanan, in 1860; William McKinley, in 1899; Theodore Roosevelt, in 1902, 1906, 1907; William H. Taft, in 1913; Warren G. Harding, in 1921; Herbert Hoover, in 1929; Harry S. Truman, in 1948.

Program for Strengthening Congress

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 11 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a letter which I recently received signed by Robert Heller, chairman of the National Committee for Strengthening Congress. I am happy to bring this letter to the attention of the Members of the Senate because of the very important contribution it makes to the whole problem of legislative reorganization. The Heller Committee made a significant contribution in its 1945 report, and I believe its present activities follow in that tradition. I am particularly interested in its report because, as Mr. Heller's letter indicates, it coincides with much of my own thinking on this subject. I plan, in fact, to introduce a joint resolution in the Senate very shortly to create a Joint Committee on the Organization of Congress.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL COMMITTEE FOR STRENGTHENING CONGRESS,
Washington, D. C., December 27, 1949.

MY DEAR SIR: With the opening of the second session of the Eighty-first Congress, we are writing, as we did last year, to present our observations and recommendations, for whatever they may be worth, to you who have on your shoulders the greatest legislative responsibility in the world.

The strengths and weaknesses of the internal organization and operation of our Congress were revealed with striking clarity in the session which adjourned on October 19.

Strength and improvement were seen as follows:

1. The maintenance and effective functioning of the committee structure as reorganized in 1946–47, including the marked decline in the use of special committees and subcommittees in the lower House.

2. The growing use of joint committees and joint action in the performance by Congress of its supervisory functions. Joint hearings between House and Senate committees and between committees of each House were helpful.

3. The expansion of the legislative reference and bill drafting services, the gradual transition to a professional status of committee staffs, and the increases in compensation for the legislative staffs.

4. The growing emphasis upon the congressional function of overseeing the operations of the Government, especially by the Committees on Expenditures in the Executive Departments.

5. The gradual increase of registrations under the lobby law and the creation of a select House committee to modernize and improve operation of that law.

6. Adoption by the House of Representatives of the new 21-day rule to provide a procedure whereby blockades in its Rules Committee can be broken.

7. Passage by the House of all the general appropriation bills in record time by April 14.

8. Agreement in both Houses to include all general appropriation bills in one consolidated bill, beginning in 1950.

9. The submission by the Comptroller General of the report called for by section 205 of the Legislative Reorganization Act dealing with antiquated and obsolete restrictions on the expenditure of appropriated funds.

On the other hand, weakness and continued procedural defects were seen, as follows:

1. The failure of Congress to adopt a legislative budget on the ground that the procedure was unworkable.

2. The unprecedented delay in the passage by the Senate of some of the general supply bills, causing the worst log jam in congressional history and requiring the passage of six continuing appropriation resolutions to keep the Government going.

3. The continuance of a heavy work load of private claims and immigration bills, although this burden was somewhat reduced by the partial ban on the introduction of private bills imposed in 1946.

4. Certain defects in committee procedure, including the failure of the House Committee on Appropriations to hold open hearings.

5. The turn-over of one-third of the professional committee staffs in both Houses

with the change in party control at the beginning of the Eighty-first Congress. Some of those released, however, were not fully qualified and some were patronage appointees of the Eightieth Congress.

6. The prolongation of the session for 11 weeks beyond the July 31 termination date set by the Reorganization Act, due largely to a 3-week filibuster in the Senate last March, large-scale time-consuming irrelevancy in Senate debate, extensive absenteeism in the upper Chamber, and deliberate slow-down of the legislative process in that body.

7. Amendment of the Senate cloture rule on March 17 which plugged some of the loopholes in the old rule, but also made it more difficult to limit debate hereafter by increasing the voting requirements, and which perpetuated the possibility of filibusters on future changes in the rules.

8. The marked increase of absenteeism in the Senate, affecting the pace of the legislative process, the fate of legislation, and public opinion of the upper Chamber.

9. The partial break-down of party government in the Senate, owing to a variety of political factors and social forces.

10. The continuation of antiquated, obsolescent, and duplicating organization and methods to administer the underlying housekeeping services of the Congress.

NEXT STEPS TOWARD STRENGTHENING CONGRESS

The first session of the Eighty-first Congress pointed up five main improvements upon which attention might well be focused. These are:

1. Creation of machinery for continuing improvement.
2. Better control of expenditures.
3. Modernized procedure in the Senate.
4. Increased party responsibility.
5. Reduction of work load.

PROVISION FOR CONTINUING IMPROVEMENT BY CREATION OF A JOINT STANDING COMMITTEE ON ORGANIZATION OF CONGRESS

We recommend the establishment of a joint standing committee on the organization of Congress. The work of the La Follette-Monroney committee, and the Legislative Reorganization Act of 1946 which it fathered, went far to strengthen internal organization and operation. But the experience of the last 3 years, and especially of the past session, indicates that strengthening the Congress should be a continuous process and that much remains to be done to increase its efficiency. In controlling public expenditures, in performing the overseer function, in the staffing of Congress, in committee and floor procedures, in the regulation of lobbying, and in the lightening of the work load, there is much room for improvement.

In these as well as other respects, the reorganization of Congress to keep it abreast of the requirements of the time in an atomic age is a continuing problem which demands continuous attention. The executive branch of the Government is in process of reorganization after the disruptive influences of the late war. As a coordinate branch of the Government, Congress should also be organized and equipped to perform its vital functions effectively.

The joint committee should not be barred, we believe, from studying and making recommendations with regard to the rules and parliamentary procedures of either House. Such a prohibition was imposed upon the La Follette-Monroney committee, which was thus not at liberty to suggest any changes in floor procedure.

The appalling delays of the past session and the unprecedented log jam of appropriation bills have convinced us that the time has come for a reconsideration of the standing rules of the Senate, which have not been revised since 1884.

Preoccupied with a thousand tasks, Congress is not likely to make much headway in improving its internal organization and operation unless the continuing duty of making studies and reporting appropriate legislation is definitely assigned to one of its own committees. Everybody's business is nobody's business. We strongly recommend, therefore, that a joint committee with legislative authority be set up for this purpose early in the Eighty-second Congress.

Congress has within its own membership the wisdom and capacity, and should provide the organizational means, for continuously strengthening itself to meet its overwhelming present-day responsibilities.

BETTER CONTROL OF EXPENDITURES

The Legislative Reorganization Act of 1946 provided, in section 138, that a Joint Budget Committee, or subcommittee thereof, should report to Congress by February 15 each year a legislative budget for the ensuing fiscal year, including estimated over-all Federal receipts and expenditures for such year. The act also provided that the report should be accompanied by a concurrent resolution adopting such budget and fixing the maximum amount to be appropriated for expenditure in such year.

The first attempt to apply the legislative budget provisions of the act failed in 1947. Although the Joint Budget Committee brought in its budget resolution, which was adopted by the House, and by the Senate with amendments, it became deadlocked in conference and died there. The conferees were unable to agree upon the division of an expected surplus between tax reduction and debt retirement.

In 1948 the Joint Budget Committee submitted its report on February 9, and the concurrent resolution passed both Houses. Thus, Congress complied with the law on its second application, but it was merely a formal gesture, for total appropriations that year exceeded the budget ceiling by more than $6,000,000,000.

This year—1949—both Houses agreed to postpone the date for reporting the legislative budget from February 15 to May 1. But the May 1 deadline came and went without further action.

While congressional fiscal policy leaders regard the legislative budget idea as laudable, in practice they say it has proved unworkable because: (1) the time allowed for preparation of the legislative budget—5 weeks—is too short; (2) the Joint Budget Committee is not adequately staffed to do the job; (3) unpredictable expenditure demands in the form of supplementary and deficiency bills render it impossible to keep total appropriations below the ceiling agreed upon early in the session; and (4) the piecemeal nature of the appropriation process. Thus, during the first session of the Eighty-first Congress, 17 separate appropriation bills were passed and became law.

The failure to give the legislative budget a reasonable trial is most unfortunate. It can be made to work in either of two ways:

1. Establish a Joint Budget Committee, reduced in size to about 20 members, to meet early in the session; examine the Treasury's revenue estimates and the President's expenditure estimates; and upon the basis of such a comparative view of over-all fiscal prospects, without undertaking a detailed scrutiny of individual items, to report to Congress by February 15 a concurrent resolution recommending such an increase or decrease in total appropriations or revenues for the next fiscal year as will produce either (1) a balanced budget of a Treasury surplus or (2) require an increase in the public debt, as the joint committee's total over-all view of the Federal fiscal picture seems to justify.

Congress would thus have before it a coordinated view of estimated income and outgo for the coming fiscal year, together with the recommendations of its Joint Budget Committee. A high-level debate would then ensue in both Houses on the general fiscal policy of the Government, and Congress would decide early in the session the basic question: (1) Whether to balance the budget by reducing expenditures or raising revenues, or to have a surplus for debt reduction, or (2) whether to incur further indebtedness.

Such action would be subject to a roll call vote in both Houses. This general decision would thereafter guide the revenue and spendings committees in their detailed deliberations, operating under predetermined ceilings on expenditures and revenues.

Under this conception of the legislative budget, the difficulties of the past 3 years would be obviated. It contemplates arriving at broad decisions, expressed in aggregate figures, rather than framing a detailed itemized budget comparable to the Executive budget. So conceived, the time allowed would be ample, if a proper staff of experts had given careful study to all details; an amount could be reserved for deficiencies based upon past experience; and the consolidated bill procedure would facilitate compliance with the general fiscal prescription.

The Appropriations Committee would retain control of the distribution of the grants as between and within the several supply bills. But they would have to keep the grand total of proposed expenditures, combined in one bill, within the budget ceiling set by Congress in the legislative budget.

2. Provide for a consolidated general appropriation bill and for its submission, on or about April 15, by the House Committee on Appropriations to the Joint Budget Committee which would review it in the light of the latest revenue estimates. On or about May 1 the Joint Budget Committee would report the consolidated appropriation bill to the Congress accompanied by a concurrent resolution recommending such increases or decreases in total appropriations or revenues for the next fiscal year, and/or such an increase or decrease in the public debt, as it thought wise.

Congress would then have before it the recommendations of the Appropriations and Budget Committees. After a major debate on over-all fiscal policy, the Congress would decide whether or not to accept the consolidated appropriation bill, as introduced, or to recommit it for appropriate pruning or enlargement.

If the task of preparing the legislative budget were assigned to the majority policy committee of the two Houses, acting jointly, and if these policy committees were composed of the chairmen of the standing committees, as recommended in Strengthening the Congress—the Heller report of December 1944, Congress would then have gone all the way in establishing a center of responsibility for the determination of legislative policy in all fields, fiscal and otherwise. The majority party leadership would thus be formally responsible to the people for the formulation and adoption of the legislative budget. In this case, a joint budget committee would not be necessary. This plan would presuppose the selection of standing committee chairmen on some basis other than seniority.

In addition to the enforcement of the legislative budget, we also recommend that Congress strengthen its control of fiscal policy by:

1. Expanding the staffs of its Committees on Appropriations by the appointment of expert accountants, statisticians, et cetera, on a full-time basis. Though highly competent, the existing staffs of these committees are too small to make a really intensive scrutiny of the departmental estimates. The staff of the House Appropriations Committee numbers only 12. This is a work load of more than 3,500,000,000 per staff member.

What was gained in time by the speedy reporting and passage of the supply bills in the lower House during the past session was lost in the lack of thorough review of the requests for funds. Economy can be gained

only by extensive knowledge of every request for funds and the actual need for them.

2. Amending its rules to provide that a point of order can be made against the omnibus appropriation bill if the Joint Budget Committee has not yet reported its concurrent resolution recommending a ceiling on expenditures.

3. Careful inspection of the reports of unnecessary expenditures of Government agencies and corporations which the Comptroller General submits from time to time to the Committees on Expenditures in the Executive Departments.

4. Requiring the House Committee on Appropriations to comply with section 133 (f) of the Legislative Reorganization Act, which provides that "all hearings conducted by standing committees or their subcommittees shall be open to the public."

MODERNIZED PROCEDURE IN THE SENATE

The past session dramatized in unmistakable fashion certain long-standing defects in the legislative methods of the Senate. Senator ESTES KEFAUVER described these procedural defects in a cogent article What's To Be Done About Congress? which appeared in the New York Times Magazine on September 11. We refer to the continued tolerance by the Senate of unlimited and irrelevant debate, and the marked decline in the attendance of Senators in the Chamber. These practices, as the RECORD shows, exasperate the Members themselves.

As regards the limitation of Senate debate, we agree with Senator MYERS that the change in the cloture rule adopted last March, after a bitter 3-week filibuster, was a retrogressive step.

Certainly the old 1917 cloture rule had proved ineffectual in practice, having been successfully applied only four times in 32 years. The new rule makes it possible to stop a filibuster on the approval of the Senate Journal and on motions to take up bills. But by requiring the approval of 64 Senators to close debate, compared with two-thirds of those present under the old rule (which might be as few as 33), the new procedure so stiffens the voting requirements that we anticipate that it will be harder hereafter—rather than easier—to limit debate when it is designed not to instruct or persuade, but to prevent action.

Under these circumstances, we urge the Senate to reconsider its decision of last March and to liberalize its rules to enable a majority of its Members, or of those present, to limit debate on any motion, measure, or other pending matter after there has been an adequate opportunity to debate it fully.

The protracted delays of the past session were also due, in large part, to irrelevancy in debate, which we feel is a luxury that a busy Senate can no longer afford. We believe that there is growing sentiment in the Senate in favor of amending its rules to require debate to be germane to the pending business. The House of Representatives has had a rule of relevancy since 1789. We urge the Senate to adopt such a rule at its next session.

In regard to absenteeism, Vice President BARKLEY has said that it is growing worse each year. Hardly a day passes when the Senate is in session that several Senators do not ask for and obtain leaves of absence for periods of time ranging from a few hours to several weeks. More than 250 leaves of absence were granted Senators during the first session of the Eighty-first Congress.

Such large-scale absenteeism is bound to affect the fate of legislation and to slow down the legislative process. We urge the Senate to be less lenient in permitting absences, to consider seriously Senator TAFT's suggestion for staggering Senate sessions and committee meetings on alternate days, and to enforce the law which provides that a Member's pay shall be docked every day he is absent without leave except on account of illness.

Underlying the procedural defects which handicap the Senate in the efficient performance of its constitutional functions is a code of rules which has not been revised since 1884. There has been no general revision of the 1884 rules and only two important modifications have been made: First in 1917 when the cloture rule was adopted, and second in 1949 when this rule was retrogressively amended.

These rules may have been adequate for the parliamentary needs of the Senate in the leisurely days of the nineteenth century. But the need of a new, up-to-date codification to bring order and clarity into the patchwork of 65 years has long been evident and often expressed by twentieth-century Senators.

INCREASED PARTY RESPONSIBILITY

In my 1945 report, Strengthening the Congress, I said that "the attainment of a high degree of party responsibility and accountability * * * will aid strongly in a renewed effort to accomplish in fact as well as in form a government of the people, by the people, and for the people."

In the same report I went on to say that "there should be a focal point within Congress where the people could fix responsibility for Congress' action and inactions. * * * Expansion of party accountability is the most practical method of bringing responsibility to a focus."

I recommended in my report that "each House should establish a majority policy committee, composed of the chairman of each major standing committee and chairmaned by the majority leader, and a minority policy committee composed of ranking minority members."

This recommendation was endorsed in principle by the La Follette-Monroney committee in 1946, and majority and minority policy committees, partially constituted (the majority policy committee did not and does not include the chairmen of all standing committees), were created in the Senate in 1947. The House of Representatives did not follow suit. Experience with these senatorial policy committees in the Eightieth Congress was reasonably successful.

The partial break-down of party government, which occurred in the Senate during the last session, was primarily due not to procedural defects but to deep cleavages within the majority party on certain fundamental issues. So long as this condition exists, it will be difficult to achieve effective party government in Congress. But some progress in this desirable direction can be made, we believe, by further strengthening the machinery for it. Similar recommendations were made by Senator HUMPHREY, of Minnesota, in an address before the New York Herald Tribune Forum on October 24. We suggest the following steps:

1. Revival and more extensive use of the caucus as an instrument for the formation and promotion of party policy. Both parties have used this device effectively in both Houses in times past. It is the only known means by which the parties may formulate their legislative policies and by which the majority party can bind its members and execute its decisions.

Objection may be made that, if recalcitrant party members and chairmen are disciplined for not following the party line on a particular important issue, they cannot be relied upon to support the party program in other respects. The answer to this is:

(a) Their support is probably lost anyway on the fundamental matters, and

(b) Chairmen who cannot meet the test of party regularity should be deprived of their chairmanships.

2. Election of party policy committees every 2 years by party caucus without regard to seniority and collaboration between the majority policy committees in both Chambers in planning legislative strategy and program and implementing party policy.

3. Allocation of the function of making standing committee assignments and of selecting committee chairmen to these party policy committees, the chairmen to be chosen not on seniority but upon the basis of ability and willingness to cooperate in carrying out the party program as an arm of the majority administration.

4. Reconsideration of the committee assignments at certain intervals, say every 2 years, to allow the shifting of uncooperative members.

REDUCTION OF WORK LOAD

We call attention again to the need of reducing the work load on our national legislature. In the Heller report 5 years ago, I pointed out that "the congressional work load should be reduced or reallocated. * * * In large part, the burdensomeness of the congressional work load can be alleviated by Congress itself. * * * Unless some action is taken by Congress," I said, "it will remain overburdened and hence unnecessarily handicapped in its more important functions. * * * Members of Congress should not spend one working minute on anything that somebody else can do just as well."

To this end, the Legislative Reorganization Act of 1946 imposed a partial ban upon the introduction of four categories of private bills. As a result, private bills introduced fell from 32 to 21 percent of the total from the Seventy-ninth to the Eightieth Congresses, and private bills passed dropped from 55 to 34 percent of the total in the same period.

So many loopholes were left in the ban on private bills, however, that Congress is still bedeviled by floods of private claims, immigration, and deportation bills which it cannot possibly handle on their merits. Forty-four percent of all the bills passed by the first session of the Eighty-first Congress were private bills.

The Reorganization Act also proposed home rule for the District of Columbia. But Congress still sits once every 2 weeks as the city council of Washington, a burden it ought not to bear.

With the present pressure upon Congress to decide momentous international issues and to act as a board of directors for our vast Federal machine, we believe that it should divest itself of its petty private and local business. We urge, therefore, that Congress complete the evolution so well begun in 1946 and eliminate all private and local legislation from its congested calendars.

We respectfully urge the second session of the Eighty-first Congress to consider the above recommendations seriously and to act upon them promptly. By creating a joint committee to study further improvement in its internal organization, by strengthening its power over the purse, by modernizing Senate procedure, by implementing party responsibility, and by reducing its work load, our National Legislature will go far to improve its efficiency and to justify popular confidence in representative government.

Sincerely yours,

ROBERT HELLER, *Chairman.*

Address by Paul G. Hoffman Before Association of American Colleges

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD a very able and illuminating address delivered by Paul G. Hoffman, Economic Cooperation Administrator, before the annual meeting of the Association of American Colleges, in Cincinnati, Ohio, on January 10, 1950. I commend the article to every Senator who is interested in the Marshall plan.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I feel sure that I have at least one thing in common with most college presidents. To me, and I think to you, a billion dollars looks like a lot of money. In my opinion, that is the way a billion dollars ought to look. It is a lot of money. It is so much money that some people are inclined to doubt whether anything which costs that much can possibly be worth it.

As you can imagine, I meet up with that kind of doubt about the Economic Cooperation Administration. Through the ECA, the United States is already committed for the expenditure of not one but ten billion dollars. To finish the job may cost us five billion more. It is no wonder that thoughtful taxpaying Americans want to know whether, at such a cost, the job is worth finishing. That's the question I want to try to answer tonight. I want to answer it first of all, because it is our money—yours and mine—that is being spent. I want to answer it also because of my convinction, a conviction that is rooted in the facts about the world we live in, that it is our future and nothing less than that that is involved in spending it.

Everyone of us has a vital stake in knowing just what the Economic Cooperation Administration is, just what it is up against, and exactly what in America's behalf it is achieving. We have a dollars-and-cents stake in knowing that. And we also have a stake which cannot be reckoned in dollars, even in billions of dollars.

The basis for the answers to those questions can be found in the fact that the ECA today is not only what it started out to be, it is much more than that. It is true that through ECA America's dollars are being used for foreign aid; but it is not true—in fact, it is dangerously untrue—to describe ECA any longer merely as foreign aid or to regard it any longer as merely a foreign-aid program, The truth is that ECA has become a first line of defense for western civilization. It is a first line of defense not only for America's freedoms, for America's free institutions, but for freedoms and free institutions everywhere. It is a first line of defense against those who ceaselessly aim and plot and threaten to destroy democracy. To regard ECA as any less than that is to reveal a perilous lack of knowledge about the menacing facts of our world. It is to reveal a perilous lack of understanding of what is required of us if we are to defend our freedom so that children of free men can live in that world in peace.

Now, it is neither by chance nor by design that ECA has become a first line of democracy's defense. It has become that under the pressure of dire events. We did not bring those events to pass, but America can no more escape their consequences than America could escape the consequences of Pearl Harbor.

The first broad principles which led to ECA were laid down by General Marshall, then Secretary of State, in his historic speech at Harvard University on June 5, 1947. In that speech General Marshall called upon the nations of Europe to join in a vast, cooperative effort to repair their shattered economic health as the only means whereby political stability could be restored, progress resumed, and freedom once more set firmly on its feet. For our part in that undertaking General Marshall declared that the Government of the United States stood ready to "do whatever it is able to do to assist." There were no ideological strings attached to that offer. It was an offer made in good faith. It was backed by good will. Its sole objective was a more prosperous world in which peace and freedom would be more secure. And when that offer was made we believe—or at least we hoped—that that was an objective which every government shared and that that was a task in which every government would be not merely willing but eager to join.

The nations of Europe quickly accepted our challenge. In Paris, hardly a week after General Marshall's speech, the representatives of most European nations—east and west—met to accept our offer and begin to turn that challenge into practical fact. That meeting was attended by the representative of the Soviet Union in the person of Mr. Molotov, its Foreign Minister. It looked for the moment as though, on this technical and desperately urgent level of economic recovery, something close to joint cooperative action for the common good was about to be achieved. For 3 days Molotov attended that Paris meeting, and for those 3 days the hopes of freedom-loving, peace-seeking nations ran high. Then on the third day Molotov, with his entourage of satellites in tow, walked out of the meeting and enplaned for Moscow.

That departure, as we now know, was not merely another uncouth Communist gesture. We know now, as Walter Lippmann so trenchantly said, that it was a declaration of a "cold war." It was a declaration of war by world communism against recovery in the free world. And the issues brought into conflict by that declaration were no less momentous for us because the tactics employed were those of a cold war rather than a hot war.

Make no mistake about it. When the leaders of the Soviet Union and of world communism declared war on recovery in western Europe they knew coldly and precisely what they were doing. Their aim to make the whole world Communist is no secret aim; it is written down for anyone to read; it has never been denied; it is continually being reaffirmed. And these men, being realists, know the conditions which are essential to that Communist success. They know that free and prosperous peoples do not choose voluntarily to pass under the Communist yoke; no free and prosperous people ever have. The conditions essential to Communist conquest are hunger, and misery, and hopelessness. The more hunger and misery and hopelessness, the more likelihood of Communist success. Mr. Molotov, when he enplaned for Moscow, and all of Mr. Molotov's colleagues, know perfectly well that if the Marshall plan were to succeed then the Communist program of world conquest would be placed in great jeopardy. At the time of that Paris conference in mid-1947 Mr. Molotov had good reason to believe that recovery could be halted.

Europe's productive machine, shattered in the war, was no more than patched up and pieced together. Industrial production was lagging, and owing partly to bad weather, a crop failure was in prospect. Too many people were hungry and there was far too much unrest and despair. Throughout much of western Europe, a powerful, highly trained, highly disciplined Communist Party was already mobilized and prepared at a signal from Moscow to use every weapon in the Communist arsenal to intensify Europe's hunger and unrest and despair in order that those evils could be turned to more evil account.

On his return to Moscow, Mr. Molotov gave the signal and the cold war was on. Ever since and unceasingly the Communists have used sabotage. They have used riots. They have used Moscow-directed strikes. They have flooded Europe with vicious, lying, poisonous propaganda. And back of all this they have spread terror with the dark threat of a march by the Red Army.

That is the world in which the Economic Cooperation Administration was called on to operate. That is the breach in which America was called to stand. That is what the ECA has been up against. That is the cold war in which the ECA has been a first line of defense. Now we need to know in what manner and with what success that defense has been conducted and that line held.

The weapons we have used in the cold war have been very different from the weapons of the Communists. As vastly different as our faith and our objectives are different from theirs.

Our faith is in man as an individual. Our objective is that kind of society in which men as individuals can live in decency and dignity, a society in which free inquiry and free institutions, such as our colleges and universities can flourish. Only weapons suitable to such objectives could be used by ECA.

We knew, of course, that only the people of Europe could save Europe. We could help, but our role was that of helping them to help themselves. We have fought hunger with food; we have helped increase production in both plants and on farms by providing materials and tools; we have fought against lying propaganda with the truth and nothing but the truth. Such have been the weapons we have used to restore confidence, to revive hope, and to help the people of Europe lift themselves by their own efforts and their growing strength beyond the reach of either the lure or the threats of communism.

And with what success has this unique campaign met? Perhaps my best answer is a quote from Anne O'Hare McCormick:

"Anyone who compares the picture today with that of 1947 can hardly believe that such progress could be made in 2 years. A miracle of recovery has been performed. To look back and see where Europe was when the war ended and where it would be now without American support, is to understand what the European recovery program has done for its beneficiaries—and for the United States."

To Mrs. McCormick's appraisal, may I add my own? Due to—and I repeat myself deliberately—the very great efforts of the Europeans themselves, the Communists are losing their battle to perpetuate hunger and misery and hopelessness in country after country, Communist-engineered riots have flopped; Communist-engineered strikes have miserably failed; and Communist propaganda and hate and lying have begun to backfire. Europe is recovering. Today, on an average, agricultural and industrial production is again up to the level of 1938. In fact, during 1949, levels of European industrial production reached an all-time peak. Today there are jobs and the people of these countries are working at them. There are tools of production and the people are using them productively. There are more things to buy and more of the means to buy them with. And as a result, the most powerful forces at work today are courage and self-confidence and hope.

This should be remembered: Every step that Europe takes toward recovery is, as the Communists knew it would be, a step away from communism and toward the strengthening of freedom and the establishment of a just and lasting peace. Events are proving that the Communists' fears as to the effects of recovery on their plans were well founded. Indeed, in these 2 years there have been many elections in these western European nations. The Communists, just when they thought they were on the threshold of their greatest gains have lost every one of those elections. More than that, in every one of them the

Communist vote has been dramatically reduced.

But we must not exaggerate the extent of our gains. The Communists who are realists know full well the significance of this fight for recovery that is going on in Europe. They know that as of the present that fight is being won by the free nations. But they know also, and you and I as Americans must face this fact, that the cold war, even in Europe, is not yet won. Freedom is being strengthened, but freedom is not yet secure. There is a better chance for peace, but we cannot yet be sure of it.

The Communists know that Europe is still faced with the stupendous problem of earning more dollars than she is now earning if she is to have the dollars she needs to buy the goods and services she can obtain only in the Western Hemisphere. They know that as long as the western European economy remains compartmentalized recovery will be uncertain and the prospects dim for building in western Europe that more dynamic expanding economy which alone can bring a steady improvement in the conditions of life for all its people. They know that Europe's economy grew to greatness when its trade was free and competitive. They know that if it is ever to achieve that greatness again compartmentalization must give way to integration and that the chokeweeds of high tariffs, cartels, and import, and exchange controls must be swept aside.

The men of the Kremlin know that if the Marshall plan should be stopped midway, or that if appropriations were reduced too drastically, progress both toward building up dollar earnings and toward the more enduring task of economic integration in Europe would be disastrously slowed down. They know also that in some countries a sharp reduction in Marshall plan aid would bring a return to short rations and a stoppage of the tooling programs now under way. Above all, they know that if as a result of our quitting they can bring a division among the free peoples once again a situation will have been created where a dictator can divide and conquer. Is it any wonder that they are eagerly awaiting word that the dollars needed to carry on the Marshall plan will not be forthcoming? This is their great hope.

Of course, even if the needed dollars are forthcoming, no one can guarantee that western Europe will take advantage of that aid sharply to step up her dollar earnings or boldly to reduce trade barriers and thus start to integrate her economies. But this is the historic moment when those goals must be won if they are to be won. Later the heads of governments in Europe may have neither aid from the West nor threats from the East to help them overcome the natural aversion to change. Later it may be too late to start building that new continent in western Europe which will be so strong and whose free people will be so prosperous that no dictator would dare march against them.

It is my hope that before Marshall aid ends that Europe will be well on the road toward achieving the goals which I have set forth. It is also my hope that the Russians will wait in vain for word that America is either pulling out or pulling down its aid to too low a level. I hold these hopes for Europe because Europe has already produced one miracle and can produce another. I hold these hopes for America because I am an American. It is not in the American tradition to fail to finish a job. Faced with a crisis it is not in the American tradition to give up and go on. It is our American tradition to stand by our guns, to carry on, and to see it through. And if we do—if we stand steadfast—there is a sound basis for the great hope that the free world will regain the initiative and in the second half of this twentieth century resume its forward march.

Local Public Works Planning and Hospital Construction

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, while the Federal aid to local public works planning and hospital construction has not received the great publicity that other more controversial issues have gleaned from our press, this aid is, nevertheless, vitally important to all members of every community in the Nation, large or small. In a recent issue of my Washington News Letter to the people of Pennsylvania, I explained how the loans are made by the Federal Government and how each community may participate and obtain the expert help and funds necessary to better public works and hospitals in the community. I ask unanimous consent that this news letter be printed in the Appendix of the RECORD.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

Two of the administration-supported measures passed by the Eighty-first Congress almost without fanfare will be vitally important to almost every Pennsylvanian, and I want you to know about them. They involve local public works planning and hospital construction.

How big is the planning backlog in your community? Before any community can build a new school, enlarge its sewerage or water system, put up a bridge, or undertake any local public works, plans must be drawn up.

Making plans sounds easy, but it's frequently difficult, because local budgets provide small planning funds. But Congress has provided $100,000,000 in loans for local community planning during the next 2 years, and Pennsylvania communities can borrow $1,343,328 this coming year, and three times as much next year in Federal loans.

As I pointed out during the Senate debate on the bill, "these are loans—not grants—for engineering planning work—not for construction work, not for a new WPA or PWA, but for drafting plans and specifications only. There is absolutely no commitment that the Federal Government now—or in the future—intends to pay any part of the construction costs of these projects." (CONGRESSIONAL RECORD, September 23, 1949, p. 13215.)

Loans are repaid to the Government when the community floats a bond issue to cover construction costs. Because planning is about 3 percent of total construction costs, local communities should be able to plan about $40,000,000 worth of needed projects this year.

This is a tested program. It was first passed in 1944, but the Eightieth Congress let it die. Hundreds of Pennsylvania communities planned $265,000,000 in local projects with less than $4,000,000 worth of loans under the earlier program.

Application blanks and details will be ready in a few days. Get your community off to an early start by writing for particulars. Address Mr. William J. Finley, Bureau of Community Facilities, U. S. General Services Administration, box 899, Harrisburg, Pa.

Are your local hospital facilities sufficient? If not, there may be something you can do about it soon. The Eighty-first Congress liberalized the highly praised and very successful Federal hospital assistance program initiated by the Seventy-ninth Congress in 1946. The 1946 act was enthusiastically received in Pennsylvania, and under it more than 20 hospitals have been approved for Federal grants amounting to more than $9,000,000 in the past 2 years.

Hospital construction can be greatly accelerated under this year's enlarged law.

Areas with the greatest need will still be helped first, and up to now most of the funds have gone to smaller communities because they needed help most. But many more communities, including some of the largest, will be able to participate in the enlarged program.

How does the program work? It's a three-way affair—local, State, and Federal. Federal grants used to meet one-third of the total cost of each project, but the new law will increase Federal contributions to about 40 percent for each Pennsylvania hospital. The local communities make their own plans and arrange for financing their share. Funds are available for public, or nonprofit, hospitals, and projects may cover entirely new hospitals or enlargement of existing ones. To obtain Federal grants the local projects must be approved by the Pennsylvania Department of Welfare and the United States Public Health Service. Approval by these agencies is based on a showing of local need.

Federal grants formerly amounted to $75,000,000 a year, with Pennsylvania getting $4,547,000 annually. The new law doubles this to $150,000,000 a year. So Pennsylvania will be eligible for $9,241,058 for each of the next 6 years.

Twenty-two Pennsylvania hospitals have been, or are about to be, authorized for grants—Altoona Hospital, Memorial Hospital of Bedford County, J. C. Blair Memorial Hospital at Huntingdon, Bradford Hospital, Brookville Hospital, Centre County Hospital at Bellefonte, Chambersburg Hospital, Citizens' General Hospital at New Kinsington, Clearfield Hospital, Corry Memorial Hospital, George F. Geisinger Hospital at Danville, Delaware County Hospital at Upper Darby, Harrisburg Hospital, Harrisburg Polyclinic Hospital, Gnaden Huetten Memorial Hospital at Lehighton, Lancaster General Hospital, Lewistown Hospital, General Hospital of Monroe County at East Stroudsburg, Ohio Valley General Hospital at McKees Rocks, Sunbury Community Hospital, Wayne County Memorial Hospital at Honesdale, and Williamsport Hospital.

Where do you get the details? If your community needs additional hospitals, and you're interested in helping out, write either to the Pennsylvania Department of Welfare, Harrisburg, or to Federal Security Agency, 42 Broadway, New York 4, N. Y.

Hoover Report

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, in my News Letter of December 1, 1949, to the people of Pennsylvania, I discussed just what the Hoover Report means to the

American people, and also the extent of Government reorganization already achieved during the first session of the Eighty-first Congress. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

DECEMBER 1, 1949.

You're getting your money's worth out of the Hoover report. A billion and a quarter tax dollars will be saved yearly by Government reorganization achieved in 1949.

The Hoover report is the first comprehensive survey of our Government in 160 years. It found a multitude of agencies, bureaus, boards, commissions, and administrations piled, one on top of another, by all the Congresses and Presidents since the start of our Republic. Obviously, in examining this complex pyramid of Government, which like Topsy, had "just grow'd," the Commission uncovered tremendous duplication of function, contradiction of effort, conflict of jurisdiction, and cumbersome accounting systems. The report is a blueprint for order out of this chaos.

Reorganization aims at getting the most out of every tax dollar and has the full support of President Truman, who said last summer: "I am taking steps to assure that there shall be a continuous and systematic effort throughout the executive branch to evaluate and improve the effectiveness and economy of Government operations."

Government reorganization is a tremendous task. It means revamping the biggest, most complex business in the world—a business for which the Congress has already authorized a $43,500,000,000 Federal budget for the present fiscal year.

To get an idea of how big a job reorganization really is, keep these facts in mind: The Hoover Commission devoted almost 2 years to its job; 300 experts participated in its comprehensive investigations; the Hoover report is a 2,000,000-word treatise on efficient government; its 300 recommendations are broad blueprints, not detailed specifications; 60 percent of the recommendations require legislative action by Congress.

The Eighty-first Congress and the President were determined from the start to translate these 2,000,000 words into action * * * and everyone is enthusiastic about the results to date. In October, noting what had been accomplished during the Eighty-first Congress, the Citizens Committee for the Hoover Report said, "During 3½ months, more reorganization has been accomplished than in any previous time in the Nation's history."

The Commission estimated its proposals would save $3,000,000,000 or $4,000,000,000 yearly. So far, we have already carried out 20 percent of their recommendations * * * reforms so far reaching that they will account for one-third of the total savings visualized by the entire report—a remarkable achievement in 1 year.

Where do we stand on reorganization to date? Here's a partial list of the solid accomplishments made in recent months by President Truman and the Eighty-first Congress:

The Military Unification Act of 1949 will probably save a billion a year.

The newly created General Services Administration should save $250,000,000 yearly by consolidating all Government "housekeeping" functions.

Secretary Acheson, former Vice Chairman of the Commission, is speeding into effect the State Department reorganization approved by the Eighty-first Congress.

Six reorganization plans submitted by President Truman were approved by Congress this year, renovating parts of the Labor Department and the Post Office Department; the Maritime and Civil Service Commissions; the Public Roads Administration; and the Executive Office of the President.

Long overdue salary increases went through to attract and hold skilled executive personnel in Government service.

Where do we go from here? Everyone recognized that the job was far too big to complete in a single session of Congress. The executive branch is making numerous recommended internal changes requiring no new laws. At the same time, committees of Congress are drafting technical language to accomplish additional reforms. I feel that we can take real pride in the progress we have made to date, and I am confident the job will be tackled with renewed vigor and determination when we reconvene in January.

Sincerely,

FRANCIS J. MYERS.

Early Senate Legislative Calendar, 1950

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, during the interim between the two sessions of the Eighty-first Congress speculations began to run high as to what the second session would bring forth on its Legislative Calendar early in the year. In my news letter of December 15, 1949, I pointed out to the people of Pennsylvania some of the more important pieces of legislation that were due for action by the Senate. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

DECEMBER 15, 1949.

Count on a lot of talk in the Senate early next session. We will return in January to face a calendar that's a tinder box of filibuster issues. Here are some of them:

Civil-rights legislation, a hardy filibuster perennial, awaits us. A Federal fair employment practices bill is on the Senate Calendar, and the House of Representatives passed an anti-poll-tax bill last summer that is now pending before the Rules Committee of the Senate. Can't predict the outcome on either of these. My own moral convictions give them strong support, and I have fought, and shall continue to fight, for their enactment. I'm proud to note the progress made in enlarging the civil rights of our people in recent years, and I honestly believe a growing national maturity is responsible for this.

Oleomargarine (southerners aren't the only filibusters): Senators from dairy States have promised to talk down efforts to repeal the Federal tax on colored oleo.

Repealing the Federal oleo tax won't make any difference in Pennsylvania, because until the legislature at Harrisburg repeals the State law, it's illegal to sell colored oleo in Pennsylvania. So whatever happens in the United States Senate this winter, Pennsylvania housewives will stay busy adding color by hand; but in the 32 States where the sale of colored oleo is now legal, there will be new relief when the Federal tax is removed.

The displaced persons bill is due back on the Senate Calendar January 25, and as usual, faces a filibuster, but I believe we'll win this fight. The 1948 DP law is a vicious and discriminatory piece of legislation that is now blocking thousands of victims of fascism and communism from a haven in America, victims who can't return home because they have fought, and lost the battle for liberty and democracy in their own countries.

Displaced persons are proving to be fine Americans, and we should be proud that Pennsylvania has taken so many. Only New York has a larger DP population than we.

The basing-point issue is still in the air, and when the bill returns to the Senate January 20, it may set off a filibuster. Basing-point pricing has played an important role in the growth of Pennsylvania industry but ever since a decision of the Supreme Court a year and a half ago, there has been uncertainty in the business community as to whether delivered-pricing practices are legal.

I proposed a 2-year basing-point moratorium bill last winter, to give those who used delivered pricing systems in good faith a breather while Congress studied and overhauled our conflicting maze of antitrust laws, but my proposal was set aside during the Senate debate, and Congress has sought ever since to work out language which will safeguard small business and at the same time permit good-faith use of basing-point pricing.

So we're probably due for a lot of useless, time-consuming and expensive talk, as small, resolute bands of Senators seek to block legislation, and it will be more difficult than ever this year to apply cloture, as we call it, when the Senate seeks to limit the time for debate. The assent of 64 Senators is now required to invoke cloture, as a result of the new Senate rule adopted after our filibuster over filibustering of last winter. The new rule is a real victory for willful minorities who are long-winded enough to force a majority to abandon its fight in order to undertake other pressing, dead-line legislation.

If you're interested in more details on filibusters, and the problems they pose to expression of the majority will in a democracy, write me at the Senate Office Building, Washington, for a copy of an article I wrote recently for the Temple Law Quarterly.

Nineteen hundred and forty-nine draws to a close with America in good shape, and I sincerely hope that for all of you, the coming holiday season will prove the happiest, most peaceful and most prosperous you've ever had. My best wishes to you all for a

Very merry Christmas,

FRANCIS J. MYERS.

Improvement of General Welfare in 1949

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD my Washington News Letter of December 29, 1949, in which I discussed some of the striking achievements of the American free enterprise system during 1949.

There being no objection, the news letter was ordered to be printed in the RECORD, as follows:

WASHINGTON NEWS LETTER—A PERSONAL REPORT TO THE PEOPLE OF PENNSYLVANIA

DECEMBER 29, 1949.

The American free-enterprise system gave the general welfare a big boost in 1949. Our standard of living moved up a few more notches as industry after industry turned in all-time high production records for commodities that vitally influence the way we live.

Almost a million new, non-farm homes were begun in 1949, a new record. It may come as a surprise to you, but the previous record for home building was set in 1925, almost a quarter of a century ago.

Home construction should be larger still in 1950, for two big reasons:

Private construction has increased steadily since the end of the war, and new building continued at high levels through August, September, October, and November, instead of dropping off in fall as it usually does. If this trend continues, as it should in view of the huge demand for housing, we should see private home building pass the million mark in 1950.

Construction under the low-rent Public Housing Act of 1949 will get under way shortly, and that program should start on new housing for 100,000 or more American families in 1950, thus swelling the total still further.

The automobile industry broke a 20-year-old production record this year by turning out some 6,200,000 cars and trucks. This is about 800,000 more vehicles than were made in 1929 when 5,358,420 set the record that has stood unbroken until this year.

And we traveled more than twice as far by motor this year than in 1929.

More people used more electricity in 1949 than ever before. Electric power production is up almost 28 percent this year over the 1944 wartime peak. This increase alone in the past 5 years is greater than our total use in 1925.

Television production reached 2,700,000 sets this year, as compared to about a million sets in 1948. The industry planned to make only 2,000,000 sets in 1949, but finding it could sell everything it made, stepped up its sights another 75 percent. And for 1950 a production of 3,500,000 is now planned.

This year about two out of every three American families have telephone service. This has risen in 10 years from about 2 families in 5—or from about 40 percent to almost 70 percent. Long-distance calls, as a result of improved service and wider usage, have increased from 750,000,000 in 1939 to about 2,000,000,000 in 1949.

These are some of the striking achievements of private American enterprise in 1949. They are signs of an expanding economy, and reflect the essential soundness of the give-and-take adaptability and resourcefulness of our system in which security and freedom of the individual are cornerstones.

Not all the signs on the economic front are good. There are, of course, rough spots which, if left uncorrected, threaten the whole health of our national life. With our employment this year close to peak levels, unemployment is up somewhat from last year. In some areas—such as our anthracite region—there are severe local dislocations. We're aware of them, and are determined as a Nation to do something about correcting them.

Promoting the general welfare means getting rid of the rough spots. Our Constitution charges the Government with this duty in the name of our people. Judging from our success over the 161 years our Republic has existed, we have done, I believe, a good job at our task of buttressing the free-enterprise system without shackling it, in promoting the general welfare of our people without regimenting them. I am proud of our achievements, and confident of our future.

A happy new year to you all.

FRANCIS J. MYERS.

Senator Green's Advocacy of Fisheries Conservation

EXTENSION OF REMARKS

OF

HON. EDWARD L. LEAHY

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. LEAHY. Mr. President, I ask unanimous consent to have inserted in the RECORD an editorial from the Pawtucket Times. The editorial is a tribute to my colleage the senior Senator from Rhode Island [Mr. GREEN], and is entitled "GREEN for Conservation." The editorial was occasioned by the fact that my colleague has introduced a measure which would make effective an international treaty for conservation of fisheries off the New England coast.

I cannot let pass this opportunity to comment on the aptness of the title. The distinguished senior Senator from Rhode Island long has favored liberal legislation and his advocacy of progressive and humane government antedates by many years, in many instances, the time when measures for its accomplishment have been adopted. Throughout his long public life, however, he has been in the best sense a conservative and those of us who have known him and served with him over the years appreciate the very agreeable significance of GREEN for conservation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREEN FOR CONSERVATION

Probably nothing which Senator GREEN of of our State will do at this current session of Congress will be more constructive than his proposal the Senate make effective an international treaty for conservation of fisheries off the New England coast.

The treaty which, we are reminded, is one of three signed by the United States in 1949, is designed to halt depletion of the 300-year-old fisheries of the Grand Banks and other banks from this State to Greenland. The Senator, we are told, suggests the means to carry out our obligations under the treaty in a bill he has drafted. The bill calls for appointment of three United States members to an international commission created under the treaty. These, with others, would name an advisory commission, who would advise the commissioners on all regulations affecting this country. Other signatories to the treaty are Canada, Denmark, France, Iceland, Italy, Norway, Portugal, Spain, and the United Kingdom.

There can be no lack of knowledge of the need of such conservation on the part of newspaper readers, even casual readers. For, in many articles by press associations and others, they have been told how modern methods of fishing at the Banks have taken fish too fast, have caught fish too young and have taken fish of too small a size. The result has been such a depletion of fish in the Atlantic grounds, that some steps must be taken if fish are to survive in numbers sufficient to make them valuable as a food.

It is being brought home to the human family on several fronts that conservation of resources is destined to be a factor for serious consideration by our Nation and others in the second half of this twentieth century. The old days of laissez-faire, of taking more than one needs are about at an end. This country needs to conserve oil, iron, fish, game, lead, and one hardly knows how many other natural resources. Other nations are confronted with a need of saving other precious and dwindling resources. So conserve, we all must. For when what we have is gone, nature is not going to quickly provide us with more. Even water is now a national problem, where once it was as cheap and plentiful as the air we breathe.

Senator Morse's Advice to the Republicans

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in a recent issue of the St. Louis Post-Dispatch, with reference to our friend and colleague the Senator from Oregon [Mr. MORSE].

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A MAVERICK'S ADVICE TO THE GOP

What Senator WAYNE MORSE said about the Republicans sounded like good advice to his party—if this Oregon maverick is really a member of the GOP in good standing.

In St. Louis for a speech before the Liberal Forum, he said that the party needs a program—a real, meaningful program. The American voters cannot be scared with words like "statism." They cannot be dragooned into a crusade against the welfare state. It's their welfare which they have in mind when they mark their ballots.

Such tactics will make of the GOP, to the Senator's mind, a party exclusively of rich men. It will end up with far too many campaign contributions and not nearly enough votes. Senator MORSE does not want to see that happen. And he is right. The United States should not be politically divided according to the pocketbooks of its people. That way lies trouble.

It would be the undoing of even the more liberal of our two parties because that party would no longer have the discipline of genuine opposition. Sure of victory, it could go lax, forget principles and purposes.

Such a division of haves and have-nots of course, is not a novelty in the politics of a considerable number of modern nations. But elsewhere the impulse toward it comes from the Marxists. They work hard to create this cleavage and to deepen it. How odd that here in the United States those who have most to lose should be exposing us to this risk.

Yet how many men are saying—perhaps with the hope of nominations and campaign contributions in mind—that the Republican Party needs a rebirth of that kind. Apparently they know little of its birth and of its first successful candidate, Abraham Lincoln.

Senator MORSE does know. He knows what made Republicanism valid in the past. He knows what can make it valid in the future—in a nation ruled by the many rather than the few. Will he be heard? Or is his a voice in the wilderness?

Fiftieth Anniversary of the Nebraska State Bar Association

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered on October 21, 1949, at the fiftieth anniversary meeting of the Nebraska State Bar Association at Omaha, Nebr.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am sincerely grateful for the high honor of your invitation to address this important meeting, celebrating the fiftieth anniversary of the Nebraska State Bar Association.

I share with all Americans a profound sense of pride in the progress of the Cornhusker State and the brilliant achievements of its sons and daughters.

Here the spirit of American freedom, enterprise, and self-reliance is deeply rooted. It lives in the tradition of the courageous pioneers who broke the prairie sod and transformed what had been called the Great American Desert into one of the leading agricultural States of America.

I have been greatly impressed by an inscription above the north doorway of your State capitol, which states:

"The salvation of the State is watchfulness in the citizen."

Nebraska citizens have followed that injunction. They are watchful over their government. They demonstrate their determination to have good government by electing to public office men of outstanding ability and strong patriotic conviction.

Such men represent Nebraska in the United States Senate. They have won the confidence, respect, and admiration of all their colleagues in the highest degree.

It is a sincere pleasure to express my personal high esteem and regard for HUGH BUTLER and KEN WHERRY. Their distinguished service to Nebraska and to the Nation is deserving of the highest praise.

I have had the honor of close association with Senator BUTLER in the work of the Senate Finance Committee, and I can assure you that his whole thinking is directed toward preserving the solvency of America through economy and efficiency in government.

When Senator WHERRY was selected as minority leader of the Senate it was in recognition of his courage, conviction, and ability. He has made a remarkably consistent record in the battle to restore sound fiscal policies in the Federal Government.

He has been a strong advocate of a clear-cut line between the two great political parties in order to give the American people a definite choice as to the principles they prefer to support.

Perhaps as a member of the Pennsylvania Bar, I should discuss with you some phase of the law in which you are all interested. Perhaps we could talk about the rule against perpetuities, or the rule in Shelley's case, or perhaps the two recent decisions of the Supreme Court, the Church and Spiegel estates, and what Congress has done to correct these two decisions.

But, this afternoon, instead of discussing some phase of the law, I want to discuss a matter which is of far greater importance—a development which means so much to every man, woman and child, and to the future of our great Nation.

I want to talk to you about an atomic bomb. We have heard a great deal about the atomic bomb since the first one was dropped on Japan. Recently, we have become even more bomb conscious and more apprehensive of the future because of the knowledge that Soviet Russia has made substantial advances in this field.

Only a short time ago, Bernard M. Baruch, elder statesman and adviser of Presidents, called for a stand-by mobilization plan to be ready in case we are attacked with atomic bombs some time in the future.

Today we are spending billions of dollars in preparation of such a plan; in stock piling critical war matériel; in the hope that we will be prepared to withstand such an enemy attack.

As a strong advocate of preparedness, I think that is the proper course.

But this atomic bomb, which gives us so much concern, is not the atomic bomb which I desire to discuss with you this afternoon. Another type of atomic bomb threatens America. One of these days that bomb will explode right here in America. It will cause as much suffering and destruction as the bomb produced by the atomic scientists.

The atomic bomb I have in mind is the bomb of national bankruptcy.

The danger of the bomb of national bankruptcy is not remote at all. It is something close at hand. Unless quick and drastic steps are taken it will shatter the framework of our Constitution and our way of life.

I am thoroughly convinced that national bankruptcy is more imminent and more dangerous to the freedom of the American people than atomic attack by Soviet Russia. Let me tell you why.

I am convinced that Russia cannot afford to go to war, nor does it need a shooting war so long as Russia can make progress in a cold war by bleeding us economically. Thus the Soviets are doing both on the international and on the domestic fronts. In world affairs, they are forcing us to spend billions upon billions of dollars each year for a defense program and to arm the nations of western Europe.

On our home front Soviet agents have infiltrated every sort of organization and pressure group. These people, their fellow travelers and their innocent dupes, wage a never ending war on Congress for greater and greater spending by the Government. Here again the Nation is being bled and weakened and forced deeper and deeper into debt, month by month.

Those who follow the Russian broadcasts to their own people and to the rest of the world, and the Russian propaganda newspapers, know that what I am saying is the absolute truth and absolute basic Soviet policy.

The Communist line that capitalism is a doomed way of life which must be forced to spend itself into destruction, was preached and laid down as basic doctrine by Karl Marx and Lenin. It has been followed and repeated by Stalin and others in the Kremlin. It is used constantly in the propaganda broadcasts and in the articles of which I speak.

The people of the Soviet Union are told repeatedly that America's economy is crumbling; that unemployment is growing worse here; that another great crash is in the making. They don't have to drop bombs on us. They are convinced that we will be the victims of economic self-destruction.

Soviet agents, working on this plan, are using every trick and every weapon at their command. They are seeking to speed up what they believe is the inevitable political and financial destruction of this country. They are being aided by pinks and pressure groups. They are also aided by thousands upon thousands of misguided do-gooders, by a spendthrift administration in Washington, and the spendthrift attitude of the people.

In this gasoline age we seem to have lost all of our horsesense.

Let us face the facts and figures and see what has happened to our Nation in the past 20 years. In 1929, only 20 years ago, the Federal Government spent less than $4,000,000,000. In this fiscal year our Government will spend more than 11 times as much, or approximately $46,000,000,000. It is impossible for the average man to comprehend just how much that is.

Let me make some comparisons that give a better idea of the amount the Federal Government will spend this year. If every life insurance policyholder in the United States cashed in all of his life insurance the total would amount to $44,000,000,000. This would not be enough money to run the Federal Government for 1 year at the present rate of spending.

If every city home owner in this country disposed of his home the total would amount to $30,000,000,000. That would run the Federal Government for about 8 months.

If every farmer sold his farm, all the equipment on it, and all the livestock, the total return would be $25,000,000,000. The Government could not run 7 months on that amount of money.

If every industry converted its net working capital into cash a total of $39,000,000,000 would be realized. That would not be enough to run the Government for 11 months. That is the pace at which the free spenders at Washington are burning up the Nation's wealth.

That is what I mean when I warn of the atomic bomb of national bankruptcy. Remember that when the Government takes on new services and new functions they are never withdrawn. Once established, they grow by leaps and bounds from year to year.

In view of this terrible spending spree, how can we face the future with any degree of confidence? Do you wonder why the masters of the Kremlin are in no hurry to engage in a shooting, atomic-bomb-dropping war?

Do you wonder why they believe all they have to do is to keep us spending at the present rate in order to bankrupt us and finally conquer us from within?

Amazingly prophetic are these words spoken by Abraham Lincoln, and I quote:

"'At what point then is the danger to be expected?' I answer: If it ever reaches us it must spring up among us. It cannot come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of free men, we must live through all time or die by suicide."

How significant are his words today.

The tax collections for this year will be far short of expenditures. We will undoubtedly end this peacetime fiscal year with a deficit of at least six to eight billion dollars. This will be the greatest peacetime deficit in the history of America.

It will also be the year of the greatest peacetime spending since the birth of our Nation.

Down in Washington, when Senator MCCLELLAN, of Arkansas, Senator BYRD, of Virginia, your own two great Senators, and many other economy-minded Senators fought to reduce by 10 percent the over-all spending for this fiscal year every legislative trick was resorted to by the administration to block economy and retrenchment.

Now let us continue our comparisons. In 1929 the national debt was $16,500,000,000. Today, just 20 years later, it is 15½ times as big, or approximately $256,000,000,000.

Since July 1, the beginning of this fiscal year, the Federal Government is already in the red approximately two and one-third billion dollars.

Do you wonder why radio Moscow blares out today and every day that America is headed for financial and economic disaster?

In 1929, the Federal Government had less than 600,000 employees on its pay rolls. Today the number of persons working for Uncle Sam is more than 2,200,000.

They are increasing daily and they will continue to increase if the present trend is not stopped.

Today approximately 30 percent of the total income of our people is being taken away from them to support local, State and Federal Government. In other words, we are working about 3½ months out of every year just to pay the cost of government. This is an alarming situation. It should arouse every patriotic citizen.

This deadly infection has not been confined to the Federal Government alone. It has spread from Washington to local governments and State governments all over the Nation.

Let me pause here to praise the courageous stand for efficiency and economy taken by your distinguished Governor, Val Peterson. He has won national recognition for his fight to maintain a sound economy in Nebraska in line with the State's historic pay-as-you-go tradition, based on conservatism and sound common sense. He has refused to follow the example of those who would spend State governments into the same dangerous condition as the Federal Government. I want to commend him. I wish there were more governors like him throughout the United States.

Seventeen years ago Franklin D. Roosevelt, then a candidate for President, made this statement:

"Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuance of that habit means the poorhouse." Truer words were never spoken.

Since then the Federal Government has spent beyond its income every single year with the exception of 1946 and 1947.

Yes, the poorhouse is the end for the family that follows that policy. But in the family of governments the disastrous end is national bankruptcy and all of the tragedy that goes along with it.

What happens to a nation on the march toward national bankruptcy? Taxes become more excessive and burdensome. Inflation destroys the purchasing power of the worker. Wages decline. The standard of living is lowered. Unemployment is increased. Venture capital is dried up. The expansion of industry and business creating new jobs is stopped.

With this comes rationing of food, clothing, and all the necessities of life.

Confusion and unrest spreads among the people.

Then the bomb of bankruptcy explodes with all the horror and suffering of atomic warfare. Not a single citizen escapes its destructive force.

Savings are wiped out. Life-insurance policies become worthless. Values established by generations of toil, thrift, and sacrifice disappear.

Out of the rubble of a smashed and ruined economy, a socialistic form of dictatorship rises to take control. Government becomes the all-powerful and absolute master of the citizens.

The people are controlled and regulated in their daily lives by the iron hand of a planned and regimented police state.

The free-enterprise system is destroyed. All industry is taken over by the Government and free labor unions are outlawed.

Human rights, human dignity, and freedom of the individual are lost.

As so well stated by that outstanding statesman, James F. Byrnes: "Every individual, whether farmer, worker, manufacturer, lawyer, or doctor—will be an economic slave, pulling an oar in the galley of the state."

I regret that I have to paint such a tragic picture. But the record of history from ancient times to our own day proves that this picture is not exaggerated or overdrawn.

It depicts the downfall of ancient Greece and Rome. It tells a tragic chapter in the history of France. It is an accurate portrayal of the events which destroyed Germany under Hitler and Italy under Mussolini.

England, once the most powerful nation in the world, is today struggling for its very existence. The atomic bomb of bankruptcy threatens the British, largely because they have given up a part of their freedom in return for the promise of security, offered by their socialistic government.

Can we fail to take warning from these examples?

Can we sit idly by and permit the cost of government to consume the substance of the people through reckless spending without any thought of the day of reckoning?

Can we ignore the false and dangerous promises of the demagogue who offers the people security and an easy way of life at the expense of the Government?

Time is rapidly running out, but it is not too late to arouse the American people to the explosive power of national bankruptcy.

Only the people themselves can save our Republic from disaster.

As members of the bar you are leaders in your communities and in your State. Some of you are Democrats, some are Republicans, but in the fight to save American liberty we are all Americans.

That sacred cause transcends political partisanship. It must be a holy crusade to save our homes, our churches, our God given rights to liberty, opportunity and individual freedom.

I appeal to you to enlist in this crusade. I ask you to give it a part of your time and effort as a patriotic duty.

There is so much at stake for our country and the world.

It is imperative and most urgent that we awaken the people of America to the dangers of the atomic bomb of national bankruptcy.

The voice of the American people must be heard in the halls of Congress. It must come from the farms, the hamlets, villages, towns, and cities. It must come from the farmer, the worker, the manufacturer, the lawyer, the doctor, the housewife. It must be the voice of every man and woman who cherishes freedom and our American ideals and institutions.

If that voice is strong enough and loud enough it will not only be heard but it will be heeded.

The people of America get just the kind of Government they vote for.

As lawyers, and as Nebraskans, you are perhaps better qualified than any other group to take leadership in a great protest against spendthrift Government.

You can convince others that the American people are capable of governing themselves without an army of 2,200,000 bureaucrats supervising their lives.

You can discuss the problem of excessive Federal taxation with your associates, with business men and with your friends.

And above all, you can spread the gospel of Americanism and our great duty to keep the doors of opportunity open to the youth of our land so that they, too, may share in the blessings of American freedom.

Talk with the young people, the boys and girls in the high schools and in the colleges, just starting out in life. Tell them of the fundamental values that are embraced in freedom and the rewards that come from initiative, hard work and thrift.

Impress upon them the lessons of our Nation's greatness—that this country was built by sturdy God-fearing men and women who depended upon their own efforts. They did not look to the Government for a handout even when the going was rough.

They were willing to support the Government. They did not ask the Government to support them.

Humbly we pray for divine protection that the atomic bomb may never drop on our fair land. But let me say to you that the atomic bomb of national bankruptcy is one which we alone have the power and the ability to prevent.

Let us reread and reexamine the blueprint of American greatness. Hard work, thrift, courage, humbleness, self-reliance, and love of God directed the efforts of the founding fathers. They should direct us today.

Address by Hon. Francis J. Myers, of Pennsylvania, Before the Pennsylvania Society of New York

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MYERS. Mr. President, on December 10, 1949, it was my unusual privilege and pleasure to address the Pennsylvania Society of New York at the annual dinner of that society at the Waldorf-Astoria Hotel. I ask unanimous consent that the text of my address on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It's customary for most speakers, and particularly those in political life, to start just about every speech to just about any group with the tested formula of how glad we are, how delighted and pleased we are, to have this wonderful opportunity to speak to such a group of fine, intelligent, patriotic men of such outstanding vision and leadership and so on; you're all familiar with the technique, and I'm sure many of you use it yourselves.

And yet I am pleased to be here and to have this opportunity to speak to the Pennsylvania Society.

I remember when I attended this dinner several years ago—one I enjoyed immensely—I was seated next to a friendly Pennsylvanian who made a very pleasant dinner companion. My partner was Thomas J. Watson, the think man, from International Business Machines. Mr. Watson, casting a practiced, thinking eye over the seating arrangements, confided to me why he thought we happened to be seated together.

"Together with Mayor Lawrence, we're probably the only Democrats here," he explained.

That may have been a slight exaggeration; there might have been a few others around, easily identifiable by the lean and hungry look ascribed by Shakespeare to dangerous

men, like Democrats, and so distinctive about Mr. Watson, Mayor Lawrence, and myself.

Obviously, this is not a branch of the New Deal Marching and Chowder Club. Since we Democrats are so badly outnumbered here, and since no speech by me or anyone else could logically be expected to change the political ratio here very significantly, I don't believe I shall attempt to tilt at any windmills.

I've tilted at lots of windmills in my time and there's always a challenge to one's eloquence or adroitness in a situation like this, but at the same time, all of us in public life eventually learn that in any fight, it always helps to have the votes.

I'm not going to try to convert the guests of the Pennsylvania Society here tonight to the Democratic Party. If any of you would like to come over, though—well, we always enjoy company.

I am reminded of what Congressman CHARLIE HALLECK, of Indiana, who was your speaker 2 years ago, had to say when asked what kind of a speech he was going to make in Philadelphia one evening. Charlie said it was going to be a nonpolitical Republican speech.

I don't think I'll even try a nonpolitical Democratic speech. Instead, I'd like for tonight to step out of the role of majority whip, and sometime acting majority leader of the United States Senate, out of the uniform of a spokesman for the Democratic administration and worker in the vineyard of the New Deal or Fair Deal, and instead, talk to you as one Pennsylvanian to another on some matters of politics in the highest sense, in the definition of politics as the science and art of government.

In nearly all of the big problems which face us conscientious citizens in a complex society, we have Republican solutions and Democratic solutions put forward to meet them, but in the rough and tumble of political controversy, it frequently happens that neither is a satisfactory American solution, that both may be special interest solutions of one sort or another. In the last analysis, it may be that neither is any kind of solution at all, but just a lot of political hot air designed to trick the voter into giving his support for what turns out to be an empty promise.

Our national structure and our political institutions are, and have been sound enough generally, to withstand the quadrennial verbal fratricide of our national political campaigns, in which each side ascribes to itself all the virtues and to the opposition, only vices, but I think that often those of us who participate in these orgies of partnership have been wasting a lot of time and campaign money because few of the electorate take it very seriously.

The growth of maturity in the American electorate has been a slow but consistent, day-to-day thing, like a child's growth, and, like a child's, has been almost imperceptible while it has been happening.

But when your son starts to tower over you, you suddenly realize he's grown up. And when we find the electorate consistently fails to fall for campaign double talk and hobgoblins, we might stop for a moment and consider that politics has got to grow up, too, if it is to be effective.

Those of us who engage in the science of politics, either as a career or as a hobby, either out of motives of the deepest sincerity in behalf of the public weal and the national safety (as, naturally, all of us here tonight do) or out of pure selfish interest of one sort or another (obviously, at this point, I'm talking about some other fellows and certainly no one here), in any event, those of us who participate in the political battles know that there is a good deal of sham and of distortion, of fakery and nonsense in them. While we on either side try to convince the public that our side is the more altruistic, more noble, more sincere, they may go out and vote on the practical reasoning, not that one side is better than the other, but that it is perhaps not so bad as the other.

So, recognizing that the people recognize what we in politics recognize, we might do well once in a while—particularly now, between election campaigns, when it isn't as difficult to do so—to come down off these pedestals of virtue each party erects for its chosen and admit that, fundamentally, the differences between us as Republican Americans and Democratic Americans, although important, are relatively few.

On the other hand, the areas of agreement among us as Americans are simply incredibly huge.

I don't know how many of you are particular students of congressional operation or machinery, but many of you know, I am sure, that a simply tremendous amount of the work of Congress in passing legislation is done by unanimous consent. A bill may be controversial when it is introduced—highly controversial—but after it has been worked over by the experts in this field in the House or Senate committee to which it is referred, it frequently comes out adroitly amended in such a way as to achieve the same goal in a manner which is not controversial at all.

In the Senate committees generally are established on a 7-to-6 or, in some cases, 8-to-5 ratio of majority to minority Members, depending upon the ratio of Democrats to Republicans in the Senate. The number of times in which all 13 agree, and they are usually regarded as the experts for the rest of the Senate on that particular issue, is tremendously high, and when it happens, as it frequently does, such a bill is almost certain to go through on the Consent Calendar, or perhaps, after short debate, to be passed without even a division.

In the realm of foreign policy particularly, admittedly our most important single concern these days, unanimity on the part of all 13 Senators of the Foreign Relations Committee has been the rule in recent years rather than the exception. The bills may be hard fought on the floor, but the results are seldom in doubt. If all of these Democrats and Republicans who specialize in the foreign-policy field can agree as they have in this Congress, and the results were much the same in the Eightieth Congress, most Senators are willing to take the advice of these experts.

That situation is frequently overlooked by those whose reading of congressional happenings is directed largely at the fights and disagreements—the fights are always a better show and get a better press and make more interesting reading. But the results are what counts, and results are what we generally get in the Congress despite the partisan political differences which arise continually.

As a good party man myself, and recognizing that many or most of you also are good party men, I want to make clear that I believe wholeheartedly in the political-party system, and I applaud any concrete definition of goals made by the respective parties demonstrating to the public their essential differences.

At the same time, however, as a Member of Congress for the past 11 years, as one who has been the target of all the pressures and propaganda from all sides on every major issue in that period, I am disappointed and sometimes distressed by the lack of common ordinary honesty in the presentation of facts on controversial issues to the public. This lack of honesty is evident on all sides, and is not restricted to any party or any lobby or any pressure group or any economic interest. I don't think it's so much a malicious and deliberate attempt to mislead the public—and the Congress—so much as it is a reflection of an unspoken and perhaps unconscious fear that unless the presentation of facts on political issues and problems is sketched in the jet blacks of deep villainy as against the gleaming whites of pure virtue, the average American, and particularly his representative in the National Legislature, could not be sophisticated enough to understand them or moved enough to do anything about them.

This whole practice seems to be based on the theory that Americans are fools and the people they send to Congress are particularly foolish.

Now I would be the last person to insist that the Congress, this Congress or any other, has never done anything foolish. And the rules of the Senate and House as to courtesy among Members and as to comity between the Houses—I once saw that referred to in print as "comedy between the Houses"—are not so strict that I cannot concede that fools have sometimes been elected to Congress.

But by and large, the men and women of the American electorate have been acutely aware in the last 20 years—since government began to affect them individually in so many ways—of the importance of national issues of war and peace, of taxes, full employment, public works, and general stability and prosperity. The mail received by every Member of Congress reflects this widespread interest, and shows it is highly informed interest.

And by and large, the men and women whom these Americans send to Congress are also not naive innocents; they are most often individuals who have made successes in a host of specialized fields before coming to Congress. And once there, regardless of party, most of them try conscientiously and hard to do a good job.

The Congress has suffered terribly in the past from lack of expert technical assistance and advice. We've been correcting that situation somewhat since the passage of the Legislative Reorganization Act, but even today, with our staff experts and our expanded Legislative Reference Service in the Library of Congress and with the experts of the administrative agencies downtown to draw from, we still find that the information we seek and need can come only from those directly engaged in the fields in which our studies must be made.

And that's where we get a good deal of our dishonest testimony, not perjured testimony, not untruths, but slanted testimony.

It is understandable enough and human enough that such should happen, for on the decisions of Congress rest, sometimes, profit or loss for a particular business, better or lower wages for some workers, better or smaller returns for some investors. Each economic interest so involved tries its best to color its presentation in the most convincing form. We have advocates before us, then, instead of advisers.

This is particularly true before the Joint Committee on the Economic Report, the committee set up under the Employment Act of 1946 to keep the Congress informed on all economic trends which threaten or advance the cause of a stable, high level of economic activity and to advise the legislative committees of Congress on appropriate steps for keeping the economy healthy.

In previous years, when the President's Economic Report came down, and the joint committee went into action to investigate the report and its recommendations and thus make our own recommendations to the Congress, we invited numerous businessmen, economists, and experts of various sorts to come and testify. It was interesting, but not very informative. Each gave us his own prejudices, partisan or otherwise, with a lot of material to back it up. We ended up arguing instead of investigating, and our results inevitably led to separate majority and minority reports, along strict party lines.

This year, we tried something new, and we are all intensely pleased with it.

Instead of having one businessman after another, one economist after another, and

one bureaucrat after another, come and make a formal presentation of his own views, we tried the round-table technique. The personal views were still expressed and ably so, but the intent was to find areas of agreement, rather than disagreement. We found substantial areas of agreement. We received, I believe, a much more rounded view of the whole.

When a CIO economist and an NAM economist can agree, and find their agreement also echoed by experts from Standard Oil and the Department of Labor, we are making some real progress and getting some real help. Of course, our round-table panel couldn't agree on everything—we would be in an awfully static economy and society if that ever happened—but we got what we were looking for, and that was informed, and generally frank and open, advice and help.

Whether we can solve the mysteries of the exact forces which cause collapse and depression, whether we can gage with any accuracy when Government should, or must, step in with affirmative action to head off collapse, whether we can draft any rule of thumb of investment in relation to employment which would serve as a weathervane, whether we can collectively help to maintain an ever-expanding economy without using collectivist methods—these are questions our joint committee seeks to explore.

Similarly, we are seeking the answers in the facts and in the informed knowledge of those who deal with the facts to the questions of Government debt, Government credit, Government fiscal problems.

We are assailed on every hand each year with demands that we cut the astronomical Federal budget. We get few specific suggestions on where these cuts are to be made. We are told to cut taxes, and also cut the national debt. These inconsistent but twin demands always go back to the first demand—that we must cut Federal spending. Federal spending can be cut, and must be cut, and in particulars is being cut every day by the Congress, but blanket demands to cut spending—backed up by no specific suggestions from most witnesses or in the mail we receive on this subject—are as helpful at this particular period in our international relations as a similar demand would have been at the height of the war. Indeed, blanket, across-the-board reductions in Federal expenditures could be as disastrous as blank-check appropriations.

The burden of this whole long discourse, if I have not already made it clear, is that our political responsibilities to our country and to its form of government go a whole lot further than merely voting or expressing our opinions on controversial issues, a whole lot further than campaigning for some candidates, and against others, a whole lot further than concentrating on political actions helpful to us individually or to our businesses or professions.

Each of our citizens who is in the possession of expert knowledge in any field in which the Congress must deal owes it to himself and to his country to give the Congress the facts which he has and to present them straightforwardly and honestly and completely.

The administration of this great country is not a game; it is a grim and earnest thing. In a football game, the idea is to overpower the opposition if you can, otherwise, outsmart him. With our complex economic interests and economic tensions, there is always the challenge to every party of interest to take home the bacon for his own gang. We in the Congress are the targets of these maneuvers.

We can be fooled—we have frequently been fooled. And one economic interest or another—it could be almost any economic interest—has made a fast play and scored a big victory. Over whom? Not just over the innocents in Congress who didn't know any better. No. Over the whole country, over the stability of the economy itself, perhaps; over their own best interests, when they stop to consider.

We can't go on with a high-level economy and real stability in this country if we play our national political and economic issues like a football game. For when this economy topples, as it did 20 years ago, it doesn't make much difference which side made the most brilliant plays or which interest outdid itself in performance—we all get hurt, and we all go down together.

As this country pulled together in war for a common goal of freedom at home, and for the opportunity for freedom to exist elsewhere where it was and still is in many cases denied, so we must soft pedal partisanship, the win-at-any-price theory of politics, and cooperate together on those ideals we hold in common, and they cover just about everything important in American life, and show a still unconvinced world that American democracy is going to continue to work effectively and efficiently for the stability of our own system and the achievement of a decent world of free people at peace.

The Genocide Convention

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Springfield (Mass.) Union of Saturday, December 24, 1949, entitled "The Genocide Convention."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE GENOCIDE CONVENTION

The Genocide Convention should be ratified, despite opposition of the American Bar Association, which it disapproves because the convention involves vital constitutional questions, including "international tribunals, which might supersede American courts and endanger the self-governing power of American States."

Proponents of the convention argue that the association's objections are not substantiated by an objective and analytical study of the documents involved.

It is true that article VI of the Genocide Convention contains a reference to an international penal tribunal which might supersede American courts if established and set in operation. However, the convention neither creates such a court nor establishes its unequivocal jurisdiction at any time in the future.

Article VI merely states that "persons charged with genocide * * * shall be tried by a competent tribunal of the state in the territory of which the act was committed, or by such international penal tribunal as may have jurisdiction with respect to those contracting parties which shall have accepted its jurisdiction."

The text of the convention is thus quite clear; the parties to the convention, by signing the treaty, do not assume any obligation to assist in the creation of such a tribunal, nor to accept its jurisdiction once the court has been established. They have reserved full freedom to decide upon such acceptance whenever a plan for the setting up of such a tribunal has been elaborated and its composition and general jurisdiction stipulated.

Corroborating evidence is to be found in the fact that article VI does not even set forth the instances in which the international tribunal is to be called upon to exercise jurisdiction, the legal basis on which its decisions are to rest, or the manner in which its sentences are to be executed.

The fact is that the reference to an international tribunal was included in article VI mainly because a proposal to study the possibility of international jurisdiction was made by the sixth committee, which discussed the Genocide Convention.

It was felt by those who drafted the convention that since such a tribunal might become a reality in the future, it would be advisable to insert a reference to such a tribunal in the document in order to avoid the necessity of amending the convention at some future date.

Senate ratification of the Genocide Convention would not constitute an agreement to have American courts superseded by international tribunals. If and when the statutes of an international penal court are set forth, the United States will decide whether it will be bound by such statutes.

It will then be time enough to discuss the advisability of taking such a step from the point of view of safeguarding the self-governing power of the American States. Meanwhile, the United States Senate would set a favorable precedent by ratifying the Convention on Genocide which outlaws mass killings of innocent peoples.

New York Times Educational Survey

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a regional break-down of a study undertaken by the New York Times through its education editor, Dr. Benjamin Fine, which appeared in the Times of January 9, 1950, and supporting statistics.

There being no objection, the study was ordered to be printed in the RECORD, as follows:

CONDITIONS IN THE NATION'S SCHOOLS, WITH PLANS FOR YEAR, AS FOUND IN TIMES SURVEY

(The status of public school education in the United States at present, in contrast with its status a year ago, as shown regionally in a survey by the New York Times, follows:)

NEW YORK, MIDDLE ATLANTIC

Despite the improved conditions generally evident in the New York-Middle Atlantic area, the elementary teacher shortage is still acute. Reports reaching the New York Times indicate that many substandard teachers are employed by the States in this region.

To meet the present needs, these States would need an additional 10,000 teachers to replace the emergency instructors, and another 7,500 teachers to fill vacancies or reduce class size.

Current public school enrollments in New York State are considerably above those of last year, and the trend is steadily upward. The estimated enrollment for all public schools is 1,917,586, an increase of 27,410 over

that of last year. The gain is distributed over all types of districts—cities, villages, union free, central rural, and common school districts.

New York State has a total of 76,250 teachers—just about what it had in 1948–49. In all, 45,500 children will suffer in their education because of inadequate buildings, and another 40,101 because of double sessions or part-time instruction.

Thirty-seven hundred hold emergency permits

The number of teachers holding emergency permits has increased slightly, going from 3,633 to 3,700. The State is unable to get enough adequately trained teachers for the elementary schools, but with the exception of agriculture, home-making, industrial and practical arts teachers, it can get enough on the high-school level. In addition to 3,700 additional qualified teachers to replace those on emergency certificates, the State could use 400 for special subjects on the secondary level.

New Jersey lists similar problems. According to Dr. John H. Bosshart, New Jersey commissioner of education, nearly 70,000 of the State's children will suffer an impairment in their schooling because of inadequate buildings, lack of teachers, poorly prepared teachers and double sessions or part-time instruction.

Pennsylvania also is unable to get all the adequately trained teachers it needs for the elementary grades. There is also a serious shortage of secondary teachers in certain departments, but this shortage is neutralized by an excess in the fields of English, social studies, and languages. There is an insufficient supply in home economics, science, health, and physical education and special education.

Conditions generally better

In general, however, conditions in Pennsylvania are better this year, as they are in many other States, for these reasons, cited by the school officials:

1. The teacher supply is better.
2. The number of teachers on emergency certificates has been reduced.
3. The State-mandated salary schedule is higher.
4. Many new school buildings have been erected and additions constructed.
5. The supply of materials of instruction, including textbooks, supplementary books, general supplies, equipment, and audio-visual aids has increased.

Both Delaware and Maryland report tnat on the whole, school conditions are better this year than they were a year ago. In Maryland 13,400 children will suffer from double sessions or part-time instruction. The number of emergency teachers increased slightly in this State, going from 1,274 to 1,365. The State suffers from an inadequate supply of elementary teachers. Delaware reports that it needs teachers for both elementary and secondary schools. The salary average in both States has increased—it is now $3,449 in Maryland and $3,325 in Delaware.

Conditions in the District of Columbia are reported as being about the same as they were a year ago. There are still 408 teachers on emergency or substandard permits, compared with 477 last year. In the elementary field, the enrollment in the teachers college has been low for a number of years, and many graduates do not go into teaching. As a result, a rather serious shortage of adequately trained elementary teachers confronts the District. The average teacher salary is $3,793, a slight increase over last year's $3,733.

NEW ENGLAND

The New England States are not badly off, compared with other sections of the country. However, a serious teacher shortage still exists in most of the States, while emergency teachers are being employed to some extent. Operating expenses for the schools have gone up somewhat, although not any more proportionately than in the rest of the country.

Massachusetts indicates that it does not have a sufficient number of trained elementary teachers, although the danger of a teacher shortage on the high school level has vanished. Approximately 400 teachers have no more than a high school education, while 700 have had less than 2 years of college training. The State could use 200 additional qualified teachers.

Rhode Island, likewise, employs a number of teachers with less than college training. According to Dr. Michael F. Walsh, director of education, the state has 150 teachers with only a high-school education.

Seven hundred and fifty others have had 2 years of college or less. On the other hand, 2,150 hold college degrees, while 400 have more than 4 years of college. However, Dr. Walsh reports that an insufficient number of adequately trained teachers are available for the elementary fields.

Connecticut notes that 22,200 students will suffer an educational impairment because of inadequate buildings, 12,000 through poorly prepared teachers and 6,600 because of double sessions or part-time instruction. Four hundred and seventy-five teachers are employed on emergency or substandard permits, compared with 511 a year ago.

An adequate supply of well-trained teachers is not available in the State although in most subjects enough high-school teachers can be obtained. Four hundred and thirty additional qualified elementary teachers and 80 more high-school instructors could be used immediately. The average teacher's salary this year is $3,405 as compared with $3,328 a year ago, Connecticut needs $60,000,000 by September 1, 1951, for new buildings and $181,000,000 by 1960.

Both Maine and New Hampshire face serious educational problems during the coming year. Maine, in particular, is concerned at the difficulty in getting elementary teachers, although New Hampshire is hard hit too.

Officials in Maine estimate that 50,000 children will suffer because of inadequate buildings, 800 because of lack of teachers, 15,000 because of poorly prepared teachers and 5,400 because of double sessions or part-time instruction. At present 207 teachers are employed on an emergency basis compared with 500 a year ago. Because the rural communities neither pay adequately nor offer satisfactory living conditions, the schools are unable to get a sufficient supply of elementary teachers. Salaries in Maine range from $1,000 to $4,900 annually.

SOUTH

Nine of the twelve Southern States report that school conditions this year are better than they were in 1948–49. Only Alabama finds the situation is worse, while Mississippi and Kentucky say conditions are about the same.

Nevertheless, the educational picture for the South is gloomy. According to the Times survey, 1,125,000 pupils will receive an inferior education this year because of inadequate buildings, the lack of teachers, poorly prepared teachers, and doubled or part-time sessions.

The shortage of qualified teachers is a serious problem. Elementary teachers are in widespread demand; only three States—Arkansas, North Carolina, and South Carolina—say they can obtain all the secondary teachers they need.

Teachers of poor grade

The educational level of the South's teachers is not high. More than 23,000 teachers have only a high school or a year of college education at most. In fact, 887 teachers in Mississippi and 300 in North Carolina have never completed secondary school. Another 56,287 teachers have 2 or 3 years of college preparation, while the remainder, 135,170 teachers, have 4 or more years of higher education.

Salaries have risen, in some cases as much as $300 or $400, but as a whole teachers in the South are the most poorly paid in the Nation. Mississippi pays some teachers $500 a year and its average salary is only $1,393, the Nation's lowest. Kentucky has a low of $524, South Carolina $696, and Arkansas $700.

The present average salaries are far below the national average. Kentucky's $1,900, South Carolina's $1,795, and Arkansas' $1,675 are among the lowest salaries in the Nation.

Aware of the need for expanded school facilities, most Southern States have mapped building programs. By and large, they fall short of meeting needs. For example, six States, which say they need $594,000,000 to provide adequate facilities, report that they intend to spend only $283,379,014.

As in the case of teachers' salaries, the lack of sufficient funds is handicapping efforts to build new schools. Some officials concede that Federal aid is needed to help save the South's schools.

SOUTHWEST

More than 790,000 children in the Southwest—Oklahoma, Texas, New Mexico, and Arizona—are receiving a second-rate education this year, the Times survey discloses. Except for the South, conditions in the Southwest are probably the worst in the country.

More than half of those receiving impaired education are suffering because of inadequate school facilities. In addition, 138,000 pupils in Oklahoma are receiving inferior schooling because they have substandard teachers.

Despite this, conditions in the Southwest have improved—although much remains to be done. Although good elementary teachers are still in demand, the teacher situation is far less critical than it was a year ago. Oklahoma, however, which has nearly 18,000 teachers, added only 500 teachers this fall and could use 2,594 elementary and 608 high-school teachers.

All four States, in addition to hiring new teachers, have succeeded in cutting down the number of emergency teachers this year, though in varying degrees. Oklahoma reports a drop from 3,489 in 1948–49 to 2,412 for 1949–50; Texas, from 2,250 to 2,000; New Mexico, from 209 to 157, and Arizona, from 351 to 111.

Teachers' salaries in Oklahoma and Texas have risen. Oklahoma now pays an average annual wage of $2,726; last year it paid $2,327. Texas increased average salaries from $2,470 to $2,900. Municipal teachers in New Mexico now earn $3,091, while rural teachers receive $200 less. Salaries in Arizona average $3,575, about the same as last year, and are among the highest in the country. This State says it has no difficulty in obtaining all the teachers it wants. Moreover, the educational level of Arizona's teachers is exceptionally high. Five hundred teachers there have 4 years of college preparation; all the rest, 5,740, have more.

MIDWEST

Compared with other sections of the country, conditions in the 12 Midwest States show a slight improvement. Half of the States indicated that school conditions were better, while only one State—South Dakota—reported that they were worse than a year ago. The Midwest plans a total expenditure of $117,177,395 for buildings for the 1949–50 period, compared with $57,803,818 last year. During the next 5 years this region expects to spend $609,000,000.

More teachers are employed in the Midwest this year than last, while the number of emergency or substandard teachers has dropped substantially. Teachers' salaries are higher, although in some States the

average is considerably below that found elsewhere. Operating expenditures for elementary and secondary schools have gone up considerably in the last 12 months.

All of the Midwest States reported that they faced a serious teacher shortage on the elementary level. Frequently, as in the case of Nebraska, the high school teachers receive higher salaries than elementary teachers. For this reason, more students in teacher training institutions prepare for high school teaching. The result is that the State could use 2,000 additional qualified elementary teachers, while only 200 high school teachers.

Dakotas face problems

Both North and South Dakota face fairly similar problems: the need for more buildings, better elementary teachers, and a plan to reorganize the school districts. About 600 teachers in North Dakota have not gone beyond high school, while most of the others have anywhere from 1 to 3 years of college. Ten percent of the children suffer because of inadequate buildings, 15 percent because of poorly prepared teachers, and 10 percent because of double sessions or part-time instruction. Similar conditions exist in South Dakota. Both States have a large number of teachers who lack regular teaching permits.

The school budget in Iowa is now up to $101,500,000, an increase of $7,000,000 in 1 year. A capital outlay of $15,000,000 is planned. Conditions, in general, are listed as better, although these needs are noted: Adequate salaries for elementary teachers, increased standards for beginning teachers, and school district reorganization.

One thousand teachers needed

Minnesota and Michigan report that the teacher shortage still exists in the elementary field. Minnesota can use 1,000 additional elementary teachers, while Michigan can use 6,500. Michigan at present has 7,000 teachers working on emergency certificates, about the same as last year's figure. As school improvements within the State, Michigan cites these: Improved teacher supply, additional buildings, enlargement of school districts, and extension of the school program to include thirteenth and fourteenth grades (junior college).

Indiana is in a much better position this year than it was in the past. The average annual salary for classroom teachers is $3,280, as compared with $3,096 a year ago. The salary ranges from a low of $1,600 to a high of $6,440. Although there are not enough elementary teachers, Dr. Deane E. Walker, State superintendent of public instruction, reports that enrollments are rapidly increasing in the training institutions of the State. One hundred million dollars will be needed for buildings in the next 5 years.

Wisconsin and Ohio report that their school conditions this year are about the same as they were a year ago. Wisconsin notes that 50,000 children will suffer an impairment in their education because of inadequate buildings and poorly trained teachers. Wisconsin employs 3,100 teachers on emergency licenses, while Ohio employs 3,767.

ROCKY MOUNTAIN

Educational conditions in the Rocky Mountain region continued to show a slight gain this year, but officials conceded they were far from good. With the exception of Nevada, which has only seven substandard teachers, the percentage of emergency teachers is still high; classes are overcrowded, facilities inadequate, and the salaries of teachers in two States are comparatively low.

Utah, which this year added 450 teachers to its schools, now has 807 emergency teachers in a total force of 5,400. This, however, is a decrease of 280 emergency teachers from last year. Wyoming reported a decrease of 12 substandard teachers to a present total of 170. Colorado, which has 9,000 teachers, now has 1,475, or 25 fewer, emergency teachers.

Teachers' salaries represent a contrast. Two States are above the national average and two are below. Wyoming gave teachers a $200 raise and now pays an average of $2,740. Colorado increased the salaries of its teachers from $2,480 to $2,650. On the other side of the national average are Utah, which increased salaries from $2,900 to $3,100, and Nevada, $3,004 to $3,058.

An extensive school-building program is underway in Wyoming, Ray E. Robertson, commissioner of education, said:

"School bond issues for approximately $13,000,000 have been floated since 1945 for the purpose of school-building construction. Seventy-seven new school buildings or additions are in the process of construction—a number which is significant when one considers the State has a total of only 88 4-year accredited high schools."

However, the picture is different for Nevada. Although the State needs $20,000,000 during the next 5 years for school construction, at most, it will spend $5,000,000.

NORTHWEST

Conditions in Idaho and Montana are reported slightly better this year, but the picture for the Northwest as a whole is still grim. The States are finding it difficult to obtain competent teachers, particularly on the elementary level, although in one respect they are fortunate: there is no heavy increase in school population and Montana reports a slight drop in the school enrollment.

The number of teachers on emergency certificates in Montana has decreased from 950 in 1948–49 to 700, while in Idaho there is a total of 840, or 160 less, substandard teachers. Montana this year has 160 fewer teachers, which may be partly explained by the drop in school attendance.

Of Montana's 4,620 teachers, only 2,230 have four or more years of college education. Four hundred and fifty teachers have 1 year of college training, 470 have 2 years, and 1,550 have 3 years. There are 50 openings for teachers in the State. An estimated 10,000 pupils will receive an inferior education because of poorly prepared teachers; an additional 10,000 will suffer because of inadequate facilities.

Salaries in the Northwest have risen only slightly. Montana pays its teachers an average annual wage of $2,930—$150 more than last year—and Idaho has increased salaries by only a few dollars. Idaho now pays $2,463 a year, which is far below the national average of $2,886. Some teachers in Montana and Idaho receive as low as $1,700 and $1,600, respectively.

FAR WEST

Although conditions in the far West have improved slightly in recent years, the number of children who will receive impaired instruction this year has doubled over 1948–49. Even without complete returns from Oregon, the number of pupils receiving second-rate education totals 449,700; last year it was 250,000.

A break-down indicates that 140,000 pupils in Washington and 60,000 in California are attending classes held in out-moded, overcrowded, and otherwise inadequate buildings; 90,000 pupils in Oregon have poorly prepared teachers; 150,000 in California are enrolled in double sessions or are receiving part-time instruction.

Contrasting pictures of education can be obtained by examining the reports from the three States. Oregon says conditions are better now than they were a year ago; California says it is about the same and Washington says conditions are worse.

Although salaries of teachers have improved to a point above the national average, the States are finding it difficult to obtain elementary teachers and in many cases there is a lack of qualified secondary teachers.

California raised teachers' salaries almost $200 to an average of $3,940—the highest in the Nation. Oregon initiated a $300 increase and Washington effected a $100 raise; both States now pay about $3,300—more than $400 above the national average.

Nevertheless, the teacher shortage there is critical. An official of the California State Education Department declares tersely: "The teachers simply are not available. Many have left the profession since 1942. Teacher-training institutions have graduated too few teacher candidates."

Likewise, Mrs. Pearl A. Wanamaker, superintendent of public instruction for Washington, comments: "The number of teachers graduating from teacher-training institutions are not adequate to make up the shortage of teachers suffered during the war years and to meet needs for additional teachers to take care of expanding school enrollments."

California, however, did succeed in improving its teacher problem. It added 9,000 new teachers during the year and now has the Nation's second largest staff—62,700 teachers. It also decreased the number of emergency teachers from 13,000 to 12,500.

UNITED STATES SCHOOLS STILL IMPAIRED DESPITE GAINS IN TEACHERS—MILLIONS OF CHILDREN ALSO HANDICAPPED BY LACK OF FACILITIES, SURVEY SHOWS—SOME STATES REPORT IMPROVEMENTS

(By Benjamin Fine)

More than 3,000,000 children attending public schools in the United States will receive an impaired education this year because of inadequate classroom facilities, overcrowded buildings and poorly trained teachers. Although conditions in the Nation's schools have improved somewhat in the last 12 months, a serious teacher shortage still exists, particularly on the elementary level.

With the exception of Arizona, every State in the Union reports that it is unable to get all the adequately trained teachers needed for elementary school teaching. Sixteen States lack a sufficient number of high-school teachers, although the situation on the secondary level is not as serious as it was in past years. The public schools now employ 86,000 teachers on emergency or substandard certificates, a drop of 19,000 since 1948–49. This amounts to approximately 1 emergency teacher in every 10 teachers employed, as compared with 1 in every 400 before the war.

These conclusions are reached in a Nationwide survey conducted by the New York Times, which analyzed public school data for each of the States and the District of Columbia. Many grave problems are faced by the Nation's schools, the survey showed. An unprecedented school population increase, coupled with inflationary building costs, have combined to check the upward advances that the school systems started to make in the last year, it also was found.

In the current school year the public elementary and high schools will reach an enrollment of 25,000,000, an increase of 750,000 over the figure for a year ago. From all indications available to this writer it appears that public school enrollment will continue to increase during the next 10 years at the rate of about 750,000 a year. This will add from seven to eight million children to the schools by the end of the next decade. As a result, the present inadequate school facilities and teaching staff will cause even greater grief to school administrators everywhere.

Twenty-four of the States reported that school conditions are better this year as compared with last. Interestingly enough, the greatest improvements, the Times study indicates, are found in the Southern States. Conditions are worse in the District of Columbia, New Hampshire, Connecticut, Alabama, South Dakota, and Washington.

Twelve States said that conditions are about the same as they were a year ago.

State commissioners of education and superintendents of instruction were asked to cite the most pressing needs for the improvement of education in their State. They listed many "needs" that plague their their school systems. Those most frequently mentioned by the educators were the following:

1. More elementary school teachers.
2. Better prepared teachers on both elementary and secondary levels.
3. More school buildings, equipment, and supplies.
4. Reorganization of school districts to eliminate the small, inefficient school unit.
5. A better, improved curriculum for the Nation's high schools.

By far the greatest needs, the country's top school administrators agree, are the necessity for more teachers and the urgent need to construct more school buildings. They estimate that they will need a minimum of $5,000,000,000 to provide adequate school facilities. However, they indicate that less than half of that amount will be available in the next 5 years. A number of State commissioners say that without some form of Federal aid, the necessary buildings will not be constructed.

VAST BUILDING PLANNED

However, even without aid from Washington, the States are planning a huge building program this year. Twenty States report they will spend $500,000,000 during the current school year—about double the amount spent last year. Probably never before has so much been allocated for school buildings. Every section of the country plans to construct schools, ranging from nearly $200,000,000 worth of buildings in the Middle Atlantic States to $35,000,000 in the Southwest. New York State, with an estimated expenditure of $95,000,000, leads the country.

Of equal importance with the serious building shortage is the teacher crisis. Educators are worried over the lack of a sufficient corps of elementary teachers. Although the number of emergency teachers has decreased, many are still employed 5 years after the end of the war. Many teachers on substandard certificates do not meet even the minimum educational requirements of their States, and are frequently lacking in teaching experience.

As shown in the study, 86,005 elementary and high school teachers are needed by the Nation's schools; the States indicate they could use 75,858 more elementary teachers and 10,147 additional high-school instructors. The greatest need was found to exist in the South and Midwest, where virtually every State reports that it could use more teachers.

As serious as the teacher shortage itself is the poor training and education many classroom teachers possess. The study shows that many teachers do not have a high-school education, while about half have not completed their college program. Actually, some States report that they employ teachers who have less than a high-school education. For example, Mississippi notes that 887 of its teachers have not finished high school, while North Carolina has 300 such teachers, and Texas has 60. All told, 70,000 teachers have 1 year of college training or less.

Probably as serious as any other factor is the large number of boys and girls receiving an inadequate or an impaired education because of incompetent teachers or the shortage of school facilities. A total of slightly more than 3,000,000 children will get a second-rate education this year because of poor teaching conditions. A break-down of the data reveals this picture: 1,596,145 will suffer because of inadequate buildings; 892,726 will be penalized as a result of poorly prepared teachers; another 202,740 will suffer because of a lack of teachers, and 333,590 will have their schooling impaired because of double sessions or part-time instruction.

SOUTH TO SUFFER MOST

The greatest number of children will be affected in the South, where more than 1,000,000 boys and girls are scheduled to get an impaired education. Georgia, for example, reports that 400,000 of its youth will suffer because of inadequate buildings and 125,000 because of poorly prepared teachers.

In Alabama the reports indicate that 200,000 children will get an impaired schooling because of poorly prepared teachers, and 150,000 will suffer as a result of inadequate buildings. Oklahoma presents the worst picture of all in this respect. It reports that 442,834 children will suffer because of inadequate buildings.

The Middle Atlantic States present the best picture. New York reports that 45,500 children will get an impaired education because of inadequate buildings, and 38,401 because of double sessions or part-time instruction. New Jersey lists 11,981 children as suffering through poor buildings, 374 because of the lack of teachers, 49,140 because of poorly prepared teachers, and 6,388 as the result of double sessions. The other States, with the exception of Pennsylvania, report few if any children suffering from a lack of adequate facilities or competent teachers.

For the fourth year in a row the average teacher salary has increased. This year the teachers will average $2,886, as compared with $2,676 in 1948–49—an increase of $210 a teacher. Almost every State reports that its salary schedule has increased this year, although in a few instances the averages reported are slightly below those of last year.

NEW YORK RANKS SECOND

For the first time, New York does not lead in the average salary paid to its teachers. California is now on top, with an average of $3,940. New York is second, with an average of $3,875, while the District of Columbia is third with $3,793. Other States, with averages above $3,000, include: Massachusetts, $3,625; Arizona, $3,575; Michigan, $3,550; New Jersey, $3,460; Maryland, $3,449; Delaware, $3,325; Oregon, $3,305; Washington, $3,300; Indiana, $3,280; Rhode Island, $3,100; Utah, $3,100 and Nevada, $3,058. More States have passed the $3,000 mark than ever before.

The highest average salaries are paid to teachers in the Far West and Middle Atlantic States. The lowest salaries are found in the South and Midwest. Mississippi remains on the bottom, with an average of $1,393, or $27.78 a week, compared with a national average of $55.37 a week. Arkansas is next to the bottom, with $1,675, followed by South Carolina, with $1,795. Kentucky, with $1,990, is the only other State that has an average of less than $2,000.

Although the salaries have been greatly increased in recent years, many educators note that the economic position of the average teacher today is not substantially better than it was just prior to the war. While the national average salary has doubled since 1939–40—it was $1,441 that year—it has gained only about $300 in purchasing power, the National Education Association says. Part of this gain has been offset by the Federal income tax, which did not apply to public school teachers before 1939.

Despite the high average, many teachers receive incredibly low salaries. The Times' study shows. In some States teachers are employed for less than $10 a week. For example, Nebraska reports a salary range going from $450 a year to $4,000. Mississippi has a range from $500 to $3,200. South Carolina from $696 to $3,048 and Kentucky from $524 to $4,300. Thirty States pay some of their teachers less than $2,000 a year.

"How can you expect to get a competent teacher for $500 a year?" one of the State commissioners asked incredulously. "Why, you can't even get a decent janitor at that price."

Every State reports a booming school population. In some instances the increased elementary enrollment is offset by a declining high school student body. However, the States report that the influx of the "war babies" is being felt. Some communities have jumped from 25 to 50 percent in their first two or three elementary grades. The situation, educators agree, will be much worse a year from now, and far more serious 5 years hence. By that time, they say, the high school enrollment will begin to rise, too, thus adding to the needs of the school system on both levels.

TEACHER PERSONNEL RISES

On the hopeful side is the increased number of teachers that are now found in the Nation's public schools. This year the schools report a total teacher staff of 942,530, an increase of 42,000 in a year. A number of States report substantial increases in the teaching staffs. California has employed 62,700 teachers this year, as compared with 53,824 a year ago. Washington has 10,500 teachers, 1,000 more than a year ago. Other States have made smaller gains.

Although the number of emergency or substandard teaching certificates has dropped, many educators are disturbed at the fact that 86,000 teachers are retained on an emergency basis. According to the Times' study, for the most part the emergency teachers lack the qualifications that the regular teachers possess. Many of the substandard teachers do not have much more than a high-school education; they have been "drafted" for classroom use because no competent teacher is available in the community.

OPERATING COSTS SET RECORD

The operating expenditures for the public elementary and secondary schools of the Nation is at a record high this year. The States report that the 1949–50 school budgets will amount to more than $4,600,000,000, as compared with $4,190,000,000 a year ago, roughly a 10-percent increase. Nearly every State points with pride to increased school operating expenditures. New York leads with an operating budget of $525,000,000, a $25,000,000 increase in the last 12 months (this represents the total for all local and State support).

Pennsylvania notes a substantial gain, going from $253,846,551 to $294,994,452. North Carolina has jumped from $87,000,000 to $103,600,000, while Texas has shot up from $217,000,000 to $275,000,000. The greatest gain made by any single State was recorded by Indiana, where the school budget increased from $78,256,696 to the present $155,000,000. California, with a budget of $380,000,000, shows an increase of $24,000,000 during the past year. By contrast, the smallest school budget is found in Nevada, where $6,629,640 has been allocated this year public elementary and high-school support.

Almost without exception, the States report that many serious problems remain to be solved. They are optimistic, however, that the necessary funds will come from the public. Even though money is at the bottom of many of the problems, money alone is not the answer. One of the major issues that a number of States face—particularly in the South and the Midwest—is that of reorganizing or modernizing their school districts. Several States still maintain the school districts that came down from the horse-and-buggy days, when it was impossible for the children to get to a school that was not within walking distance of their farm. With good roads and modern transportation facilities, however, the large number of inefficient, small units can be eliminated.

IMPROVED CONDITIONS SEEN

Although these problems remain to be solved, by and large the school leaders are convinced that conditions are slightly better this year than they were a year ago. The National Education Association believes that the deterioration of the war period in our school system has stopped. It observes that even though strenuous efforts by State legislatures, local school boards, the organized profession, and the public are producing results, much remains to be done.

It is evident that the downward trend has been stopped. More money is being allocated for the operating expenses of the schools, and a huge capital outlay budget has been set aside for the current year. Teachers' salaries have gone to record heights, and in general, the attitude of the public toward the free public schools has improved considerably within the last few years.

On the other hand, much remains to be done before the public can sit back complacently. The unprecedented birth rate, with the record school enrollments that are just around the corner, cannot be easily discounted. With an expected increase of at least 750,000 children a year during the next 10 years, the Nation's schools will be taxed as they never were before. It will require the combined energy, effort, and good will of all citizens, nonprofessional as well as professional, to meet the urgent school problems ahead.

Educators and responsible citizens everywhere are confident that the Nation will meet the coming school crises, as it has the grave postwar problems that for a time threatened to destroy America's valuable free public-school system. It has long been recognized by all segments of the Nation that the public schools are essential for the continuance of a strong, democratic form of government.

STATISTICS OF STATES ON SCHOOL TEACHING AND OPERATING

The present status of total teaching staff, emergency teachers, teachers' salaries, range of salaries, and operating expenditures for elementary and secondary schools, as reported throughout the Nation is as follows:

	Number of teachers		Number of substandard or emergency teachers		Average salaries		Range of salaries (1949–50)		Operating expenditures for elementary and secondary schools	
	1949–50	1948–49	1949–50	1948–49	1949–50	1948–49	Lowest	Highest	1949–50	1948–49

TEACHER NEEDS BY STATES

The number of elementary and high-school teachers needed, as shown in the Times survey, is as follows:

	Elementary	Secondary
Middle Atlantic:		
New York	3,700	400
New Jersey	709	146

Recognition of Spain

EXTENSION OF REMARKS

OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. O'CONOR. Mr. President, the interest which many of our Maryland people feel with regard to United States relations with Spain is reflected, I am sure, in a similar interest elsewhere throughout the country. For this reason I believe the attached column from the Washington Star of November 15, 1949, from Madrid, by Constantine Brown, concerning the results of the United States boycott of Spain offers information which our people and the Congress should have.

I ask unanimous consent that it be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS CHANGING WORLD—UNITED STATES BOYCOTT OF SPAIN HAS RALLIED PEOPLES BEHIND THE FRANCO BANNER

(By Constantine Brown)

MADRID.—The American boycott of Spain has accomplished something which the Communists and their associates have not been able to accomplish in 9 years of trying.

The Spaniards are wondering whether our Government, which has spent or is spending $20,000,000,000 to save western civilization, is really aware of what the situation in Europe would become if the Spanish economy collapsed.

Spanish politicians and economists maintain that the Communist threat to western Europe has not been removed yet. The Communists in Italy and France now are merely on the defensive. So long as the peoples in the Marshall-plan countries receive American gratuities to the tune of several billion dollars a year, so long as communism from the east is being contained, everything appears all right on the surface.

HEAVY SACRIFICE MADE

Spain has been able to carry on without any outside assistance for a number of years. It has been able to heal some of the more obvious wounds caused by the civil war. This has required hard work and heavy sacrifice, particularly on the part of her industrial and farm workers.

Since the end of 1948, when it became apparent that the present regime would not be overthrown by any internal move against General Franco, the western nations have resumed economic relations with this country.

Spain's trade agreements with all the Marshall-plan countries amount to nearly $750,000,000. But most of the goods thus obtained—by virtual barter—are not of real value to the economy of this country. None of the western European countries can provide Spain with oil refineries. Nor can they send her the tools needed for heavy industry or for the vital improvement of the Spanish transportation system, although British busses are one exception. They cannot provide Spain with motors for planes or the machinery for road building, electric power, and irrigation.

Because of our economic boycott and Spain's shortage of dollars trade with the United States has reached a new low. The Government as well as economic leaders in this country feel that Spain cannot recover without the active support of the United States. All their efforts to correct this condition have so far been useless. To their approaches they got the answer: "Change your regime, get rid of Franco, and we shall help you."

SPANISH PRIDE OFFENDED

The campaign against Franco, which was led originally by atheist Russia and her Communist mouthpieces throughout the world, has set these fanatically religious peoples at the side of their dictator. At one time there were definite movements, particularly among the high-ranking military, to dispose of General Franco to enable Spain to enter the concert of western European nations. But when the United Nations voted in 1946 to punish Spain by withdrawing ambassadors from Madrid, Spanish pride was offended and the Spaniards have been supporting Franco ever since.

Europe has realized its mistake and has started doing business with Spain again. The American Government is continuing its synthetic diplomacy and has refused to follow Europe's example. Our Government seems to believe that by continuing its policy of attrition now, when the Spaniards need our assistance desperately, we may still bring about General Franco's downfall.

A revolution in Spain might be fatal to recovery of the Continent, according to all realistic observers with whom this reporter has talked. It might spread across Spain's borders. The fall of Franco under such conditions might be a catastrophe since it would upset the shaky balance which we are striving to create in Europe.

Value of Inspection Trips by Members of Congress

EXTENSION OF REMARKS

OF

HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. FERGUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Chicago Daily News of January 6, written by Mr. Fred Sparks, foreign correspondent for the Daily News.

I think it is a valuable article as it may serve to put in better perspective the inspection trips of Congressmen which are so easily passed off as junketing.

Mr. Sparks' observations also emphasize a point of great concern to me, that our great need in foreign lands today is a band of evangelists, rather than apologists, for the American system of life and government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESSMAN UPHELD—SPARKS DEFENDS JUNKETEERS' RIGHT TO CRITICIZE ALLIES—UNITED STATES OPINION OF OTHER NATIONS IS WHAT COUNTS, WRITER SAYS

(NOTE.—Recently there's been much excitement about Congressmen traveling in Europe and criticizing foreign affairs. Fred Sparks, Daily News correspondent, here offers his own opinion on this matter.)

(By Fred Sparks)

BELGRADE, YUGOSLAVIA.—I rise in defense of junketing Congressmen and their right to say what they please.

I don't necessarily go along with Senator THOMAS, who withered Sweden (that profitable nook of neutrality).

But rather than worry Congressmen into silence I'll put up with occasional speeches made in Rome, Italy, to impress voters in Rome, N. Y.

Congressmen—unlike the expanding army of bureaucrats abroad—are responsible directly to you and me.

If they don't have the diplomatic polish preferred by the State Department's tea-cup tipplers, well—neither have you and I.

I'm burning at the bureaucrat who applies finger to lip and stage whispers: "Shhhhh. Hush. Don't say that. Don't print that. It might offend the Dutch or the Norwegians or the Yugoslavs or the Ubangis."

Rubbish. Action, not chatter dominates history.

Who is picking up the world's dinner check today, anyhow?

It is not as important what they think of us—as what we think of them.

In my extensive travels I've met too many United States officials who automatically side with European governments against American critics.

Why? The average bureaucrat abroad doesn't care a bean about the natives. But he shivers in his payroll envelope, terrified that congressional criticism might shrink the next appropriation, and wash out his job.

Here are several disgusting incidents:

A diplomat in a central European country told me. "Six Senators arrive tomorrow. I'll exhaust them with sightseeing and cocktail parties. I'll tell them nothing. What I know goes directly to the State Department."

(Woodrow Wilson warned against the cancerizing danger of secret diplomacy.)

The directing general of a United States military mission invariably takes the advice of natives and overrules his own officers. His alibi, "Oh! They're very sensitive. We can't dare offend them."

An ECA mission chief said, "I often explode at the way this country wastes our grants. But Hoffman (ECA chief) would be furious if I spoke out—might offend the locals."

When a report showed the French press ignoring Marshall-plan activities, an ECA spokesman said, "We can't push them. We can't offend them."

On an air liner I met Congressmen leaving a land kept breathing by our dollars. When I told them some ECA scandals (moneys misappropriated; contracts bought and sold), they gasped, "The Embassy never told us that."

To offset the possibly critical impact of junketing Congressmen's statements, bureaucrats conduct a "smear" campaign.

Congressmen are jokingly depicted as village idiots, uncouth provincials, Rotarian bores, party hacks, "tools of the 'interests'," and just plain stumblebums.

A British diplomat once told me: "Before I met a visiting congressional committee, I was amazed by what your Embassy chaps said about them. They described them as the very worst type of American. Just what kind of people go into politics in your country?"

Unfortunately, too many editorial writers, groping for a daily space filler, join the howling pack to "smear" junketing Congressmen.

The whole thing discourages investigation into foreign expenditures. By abusing junketing Congressmen, who speak freely this year, bureaucrats hope to shut off next year's trippers.

Bureaucrats abroad spit hate for an American Congressman who sports a 10-gallon Texas hat. They are vicious about a southern Congressman who likes a few bourbons and the rebel yell.

Yet these "expatriates" sigh with artistic admiration in the atmosphere of a creepy left-bank bistro—a jernt where the waiter shoves his black fingernail in the coffee cup and the bartender hasn't washed below the neck since the liberation.

A good American said after a continental tour: "Too many of our officials feel that Marshall-plan funds should be mailed directly to foreign governments—and we should hide in a gopher hole.

"I wish everybody was as well fed as Americans. But I see no reason to be ashamed of our God-given prosperity, or our freedom to criticize our Government or our allies."

The Formosa Crusade

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Formosa Crusade" by Walter Lippmann, which appeared in the Washington Post of January 9, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE FORMOSA CRUSADE

A United Press dispatch from Tokyo, written after the President's clean and honorable statement on Formosa, says "that one veteran member of General MacArthur's staff, who talks to the Commander in Chief daily, said it was obvious that the State Department's views were not drawn up by anyone with military experience."

Perhaps it is about time to remind the veteran member of General MacArthur's staff who talks daily to the commander-in-chief that in this Republic the President of the United States is General MacArthur's commander-in-chief. And so, soldiers who respect the traditions of the Republic have a duty and a right to submit their views through official channels to their superior. But while they wear the uniform of the United States, and especially when they are in a foreign country, they have no right whatsoever to conduct a public agitation, using the press and politicians as their mouthpiece, to challenge and discredit the policies of their Government. If they disagree with those policies and feel it their duty to make a public issue, they should ask to be relieved, should come home, should take off their uniforms, and then as civilians should exercise their rights as citizens to express their views.

If they came out into the open and explained their views and had to debate them, it might just possibly become clearer than it is from the speeches of the interventionist Senators just what the Formosa business is about. It cannot be that these men of military experience really think that the island of Formosa, 100 miles from the coast of China, some 15 minutes by air, within easy range of long-range missiles, would be a desirable place to lock up American troops and American equipment. They cannot wish to tie down American forces in the defense of such an exposed fixed position, and to make of Formosa another and far more indefensible Bataan. Nor can they believe that the Red forces—Chinese or Russian—can do anything by sea, by air, or by invasion from Formosa that they cannot do far more conveniently from Shanghai, Foochow, Amoy, Canton and all the other ports and airfields along the 3,000 miles of coast from Kamchatka to the Gulf of Tonking.

It is difficult to believe that the veteran member of General MacArthur's staff, or any other military man, will care to argue that Formosa, in American hands, would be a necessary asset to our strategic security, and not a dangerous liability.

As a matter of fact, the case for military intervention in Formosa really rests on the argument that we should wage an undeclared war against Red China. The argument for the undeclared war is that if we commit ourselves in Formosa, which has been solemnly declared to be Chinese territory, we cannot be at peace with the Peking government. We cannot recognize it. We cannot have de facto relations with it. We shall be openly at war with it if it attempts to take over Formosa.

The idea behind this is that if we can keep Red China nominally at war with Chiang, but really with us, Red China will not be able to demobilize and, therefore, will be unable to consolidate its victory and to carry out the economic reconstruction. If I had not heard this idea expounded by Senator KNOWLAND himself, I would not have believed that anyone could think that the way to save Asia from communism was to make sure that the Communists had the biggest army in Asia.

The sheer lunacy of the idea comes from Senator KNOWLAND's failure to ask himself what Mao Tse-tung would do with his army if he had to keep it mobilized and if he could not feed the Chinese people. Mao would have the most powerful army in eastern Asia, sitting around eating its head off while his people were starving. Can anyone think of a greater inducement and a greater provocation to make him use his undemobilized army to raid the rich and almost undefended countries to the south of him—to burst into Burma, Siam, and Indochina?

And if that happens, because Senator KNOWLAND has contrived to keep Red China mobilized, will he and Mr. Hoover and Senator SMITH of New Jersey and Senator TAFT send the navy, or will they send General MacArthur, or will they merely send some military advisers, to defend human freedom in the jungles of Burma and in the ambuscades of Indochina?

All they can accomplish by this agitation is to prevent this country from playing any useful part in Asia. Their effort to keep us embroiled with Red China in order to prevent recognition will mean, if they succeed, that we cannot collaborate with anyone in Asia. For every other nation with interests in Asia will soon have recognized Red China. Those nations cannot be at peace with Mao and at the same time allied with a government that is in effect at war with Mao.

Surely as the night follows the day the absurdity and the practical confusion of such a posture on our part will soon be so self-evident that, in order to have any policy at all in Asia, we shall have to aline ourselves with our friends and we shall have to recognize Mao's government. But then recognition will not be, as it is in the case of Britain and the other members of the Commonwealth, a recognition that the facts are what they are. Our recognition, if it is long delayed, if it is preceded by fierce debate, will be a recognition of our own defeat.

To Peking and to Moscow it will bring the immense prestige of having the strongest of the western powers reverse itself and bow to the inevitable. The longer we wait the more we emphasize the importance of the issue; the more we quarrel over the fallacy that recognition means approval, the more we shall lose face before the world and among the peoples of Asia.

Problems of the Disabled Veterans

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent, I include in the RECORD an admirable and very penetrating statement recently made by Rev. Jeremiah M. Reardon, celebrated spiritual leader of South Barre, Mass., before a meeting of Massachusetts Members of Congress.

Father Reardon has for years given unselfishly of his great ability, energy, and talent to help the veteran, particularly the disabled, the hospitalized, and the distressed. His cogent views will be of great interest and valuable assistance to our membership.

STATEMENT OF FATHER JEREMIAH M. REARDON

Ladies and gentlemen of the Congress, I do not need notes to discuss this subject with you but I wish to be as brief as possible and to confine myself to the pertinent points. There are those of you who have given long and honorable services in the Congress of the United States and you know this subject as well as any of us. Others of you may not be so well acquainted with the beginnings of and the reasons for the Veterans' Administration. Briefly let us review the situations.

After the First World War there were two major problems facing the disabled veteran. His first was medical care for his wounds and disease. His second, some form of financial aid to compensate him for his inability to compete on equal terms with his fellow men in earning his living, because of the handicap of his war disabilities. Both had been promised to him. For the first he was to look to the Public Health Service. For the second to the Treasury Department. Some of you know of the tragedies this system caused. We speak of our own here in Massachusetts. You know the tragic influx of veterans into the Rutland area, spurred on by the hope of help there, either suffering from tuberculosis or the effects of poison gas. Nobody knew which. You know of the almost shacks that passed for sanatoriums in that area. You know of the sums of money the veterans paid for medical service they could not get. You know of the tragic deaths that daily took place there from tuberculosis or gas; nobody knew. Because nobody knew the exact effect of poison gas upon the human system; and apparently nobody cared. You know the tragic helplessness of disabled veterans trying to obtain the financial assistance guaranteed to them by the Congress of the United States and unable to do so—for seemingly nobody knew how and apparently nobody cared. For the system then in operation was one of divided authority, and so, one of divided responsibility, and nobody was responsible and nobody cared.

But the infant American Legion cared and a sympathetic Congress cared and out of the mutual labors of both there was created the Veterans Bureau, with a single task, a single authority, and a single responsibility; to care for the veteran in whatever might be his needs. The House established its Committee on Veterans' Affairs to consider those needs and provide for them justly and adequately. Working together we built the Veterans Bureau into a responsible unit. Working together we had a hospital in Rutland in 1922. In Northampton in 1925. We replaced the disgraceful old West Roxbury with Bedford in 1928. We aided in securing Newington as a medical hospital in 1931, and only through your magnificent work were able to secure our diagnostic center in the new West Roxbury in 1940. We had our contact units and our adjudication units, our training units, our medical section, and our finance section. In short we had a working unit. It was not without its headaches and its heartaches. We dislike to look back over the days of charges and countercharges; of investigators and hearings; of transfers and dismissals. Of human inefficiency and human dishonesty. But they were there and we weathered them and out of our trials and labors; out of headaches and heartaches we built a single efficient agency for the care of the veteran and his dependents. We dread to think of the chaos and the suffering; of the anguish and despair that would have resulted, did we not have that single unit for the Second World War. We dare not think of it.

And now, through the report of the Hoover Commission, you are asked to break up and disrupt that unit. You are being told that division is efficiency; and confusion is economy. Ladies and Gentlemen of the Congress—we submit that not one member of that commission knows anything about the disabled veteran and his problems. We submit to you the incontrovertible fact, that not one of us sitting here with you stands to gain or lose by the adoption or rejection of the Hoover report. It will not effect us personally. But we know that it will disrupt and destroy the work that we have carried on for more than a quarter of a century, and you cannot expect us to do other than protest. The medical section of the Veterans' Administration is the primary, essential section of our unit. We must have it, not alone for the care and treatment of the disabled veteran but for diagnosis, and for medical reports to the adjudication section. This work is so essential that we as an organization are compelled to employ one service officer and one contact representative in these hospitals. Can we render efficient service if you compel us to do business with a multiplicity of agencies in this work? We know from experience the confusion that is caused by division. We have it here in Boston. Because we are unable to locate the various sections of the Veterans' Administration in one building we must go from Tremont Street to Court Street to Causeway Street. We know that this means delay and confusion even within the Veterans' Administration. What then will be the delay and confusion in a multiplicity of agencies? We submit that a multiplicity of agencies means multiplied forms, multiplied letters, multiplied telephone service and consequently multiplied personnel. Division is confusion and confusion is waste. The day that you vote to transfer the medical section of the Veterans' Administration to any other agency is the day you vote to destroy the Veterans' Administration.

One brief word in regard to a constant bugbear. I like to recall my days in theology. Among others, we had a brilliant and kindly old professor. One day with a knowing twinkle in his eye, he called one of the students and said: "Compare the word 'lies'." We looked at each other, trying to guess what he wanted. Then he began: "Positive, lies; comparative, damn lies; superlative, statistics." He was about to demonstrate the age-old adage that statistics can be made to prove anything and are often the superlative lie; and he did not want us ever to forget it. Statistics are the bugbear in considering the cases of disabled veterans. You have been given the statistics of non-service-connected cases in veteran hospitals. But it is necessary to look beyond the statistics and consider the veteran. Often we are called upon to make a choice. We are given the case of a disabled veteran in need of hospitalization. The story of his disability convinces us that the case should be service connected. We must make the choice of delay while we connect the case; or else hospitalize the case as nonservice, and immediate hospitalization wins out. Then nothing can be done until hospitalization is complete and the veteran is discharged from the hospital; so that his medical record is complete for the rating board. But the case remains nonservice in the statistics. Veterans are hospitalized with nonservice long term disabilities, such as N. P. or T. B. Some of these cases are service connected after the veteran has been in the hospital for a year or even longer. But since the admission was listed as nonservice connected; it remains so in the statistics. The vast majority of the nonservice cases in veteran hospitals today are men of World War II; and yet it is but four short years since their discharge from service. Then, one of two things is certain. Either the statistics with regard to nonservice cases are grossly in error, or else the laws and regulations governing the granting of service connection are not broad enough to cover the majority of cases.

And so for the proponents of the Hoover report. They are dealing with statistics; we are dealing with disabled veterans. They offer you a promise, we give you performance. They offer you division; we give you unity. Their way is chaos; ours is order. They ask for divided authority. It is the experience of the human race that divided authority is divided responsibility. And it is axiomatic that divided responsibility is nobody's responsibility. These are lessons to be learned from Pearl Harbor other than those in the military field.

Laying Away the Colors

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an excerpt from an address delivered by me at the ceremony of laying away the colors in the hall of trophies, Pennsylvania State Museum, Harrisburg, Pa., on October 19, 1949.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Pennsylvania was founded to perpetuate the ideals of peace.

Yet it has tasted the horrors and the tragedies of war more bitterly than any of our sister States.

On the soil of Pennsylvania great and decisive battles have been fought.

Within the borders of our Commonwealth are many scenes of struggle, heroism, and sacrifice.

They stand as shrines of patriotic inspiration, dedicated to the honored and everlasting memory of brave men who suffered and died for the ideals of freedom.

We have Fort Necessity, where George Washington, military genius of American liberty, first commanded troops under fire, and Bushy Run, where Pontiac's Indian warriors were routed to give the settlers of the western part of the colony an opportunity to live in peace.

In the war for independence, Germantown, Brandywine, Whitemarsh, the Wyoming Massacre, the Battle of Thompson Island, and the terrible winter at Valley Forge, all recall the valor of a people struggling to maintain their God-given right to life, liberty, and the pursuit of happiness.

The battlefield of Gettysburg is sacred soil, consecrated by the blood of the North and the South. Here Pennsylvanians rallied in tragic and decisive conflict to preserve the Union, and for 3 days, led by Gen. George G. Meade, worthy son of the Keystone State, fought to glorious victory one of the greatest battles of all time.

Pennsylvania boasts of many distinguished names in industry, in craftsmanship, in the professions, in economics, in culture, and in religion. But none surpass the great figures of Pennsylvania's military history.

Wayne of the Army and Barry of the Navy were Pennsylvanian leaders in the Revolution.

In the War Between the States, Meade, Hancock, and Reynolds were among the many intrepid Pennsylvania leaders who covered themselves with fame and glory.

In World War I, March, Bliss, and Price led a galaxy of brilliant sons of Pennsylvania.

In World War II, Marshall, Arnold, Spaatz, Devers, Craig, Embick, Grunert, Patch, Brereton, McNarney, Gronenger, were only a few of the 1,300,000 gallant Pennsylvanians who wore the uniform in defense of human rights, freedom, and justice.

In every war we have waged that men might be free, Pennsylvania has contributed outstanding and historic military organizations. They were made up of legions of trained men whose devotion to duty and bravery under fire has never been excelled.

Pennsylvania was settled by men of diverse religious, political, and industrial ideals, but deep in the heart of each one of them was the ideal of freedom.

We meet tonight to place in this hall of trophies the honored flags of the Pennsylvania units of World War I and World War II.

The names of the Pennsylvania military units are indelibly written upon the records of the various communities from which they come. They fought in Mexico, the Philippines, Puerto Rico, in Europe, and the Far East.

All have proud histories.

The historical commission of our Commonwealth is to be congratulated upon creating this beautiful and permanent place for these priceless colors.

May they be an inspiration for future generations.

Our constant prayer should be that it may never again be necessary for our men to engage in war to preserve our freedoms.

But as Americans let us never forget that great armament alone will not defend us. We must retain the American way of life. Only total individual freedom will make our position secure. That freedom is our secret weapon in war and our security in peace.

Three things are necessary in the preservation of our country:

Economic stability, an adequate armed force based upon equal service, and a spiritual awakening as to the glories of our country.

We must be strong economically. Our fiscal policies must be sound. Centralized and costly government can destroy us.

We must have an organized defense. We must have the finest small Army, Navy, and Air Force in the world. It should be backed up by well-trained civilian components, directed by the best of our Regular Establishment.

We should step up industrial mobilization by stock-piling critical war materials, by organizing for scientific laboratory work, and by preparing plants for the production of the urgently needed materials of war.

Again our prayer is for peace. We cannot have peace unless there is a spiritual awakening in our country. We must have great mobilization of all the moral forces.

We must understand the greatness of America; we must understand our obligations as well as our rights; we must obey the law.

Tolerant religion, uniting all faith in obedience to the will of God, is the greatest of our spiritual resources.

Our greatest enemy is the ideology which teaches that man can better plan than God.

Should that enemy plunge us into armed conflict, we will fight a holy war.

Jews, Catholics, and Protestants, believing in an omnipotent God, will be massed together a wage a war against a godless people.

Let us put our house in order so we may be properly prepared.

The Farm Program

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. LeCOMPTE. Mr. Speaker, at the annual meeting of the Wapello County, Iowa, Farm Bureau held on October 24, 1949, a comprehensive set of resolutions were adopted by this fine organization. I ask unanimous consent to extend my remarks in the RECORD and include these resolutions in order that all Members of Congress may have an opportunity to read and know the position that the Farm Bureau of Wapello County, Iowa, has taken with respect to the problems and proposals confronting our country at the present time.

The resolutions are as follows:

We believe that it is important to have the farm program developed through a bipartisan approach.

We believe that guarantics of 100 percent of parity as compared with lower supports would result in more drastic controls. It is important to keep controls at a minimum and still get desired results.

We believe there is danger of losing farm programs if the cost is too high.

We are in favor of flexible supports to average 90 percent of parity.

We believe flexible supports tied to the amount the commodity is in surplus with a minimum floor established by the law and the Secretary of Agriculture having the authority to set support prices from this minimum up.

We do not believe that if production payments are used the prices of commodities to the consumer would drop enough to have a marked influence on consumption, however, a cheap food philosophy established in the minds of the consumer would be dangerous to the long-time interests of farmers.

We believe that it is dangerous to have the income of farmers dependent to a large extent upon direct appropriations from Congress, however, we favor the use of production payments in support of perishables (nonstorable commodities).

We favor using surpluses for school-lunch, blue-stamp, and relief programs.

Satisfactory compliance with soil-conservation practices should be a requisite to eligibility for price supports.

We are not in favor of abandoning the parity concept for the income support standard plan.

We are in favor of the human approach of mediator for settling labor disputes inasmuch as they are somewhat social, ethical, and economic in nature.

We favor the organization of a worker extension service similar to the Agricultural Extension Service which would work with labor groups for the purpose of helping them solve problems relative to family living.

We favor the changing of mail routes so that the principle of free mail delivery becomes an actuality to all rural families.

We are in favor of establishment of a Federal agency for the purpose of setting up telephone cooperatives.

We favor a farm program set up on the following bases:

Give Secretary of Agriculture power to set support prices on commodities in excess production as low as 75 or 80 percent of parity provided the support prices of commodities in which increase of production is desired be set high enough that if desired shifts of production are obtained total support prices plus soil-conservation payments equal at least 95 percent of parity—or modernized parity, if preferred?

Use European relief, school lunch, aid to disabled, underprivileged and aged groups (blue stamp) to increase consumption of farm products.

Use acreage controls and soil-conservation payments to prevent costly surpluses and keep down cost of program.

Announce support prices of livestock not later than November 1 of preceding year. Announce support prices on crops not later than March 1 of current year, or earlier if possible, especially in southern States.

We believe an all-weather road should be built to every farmstead in the State as soon as possible even if this should delay the construction of cross country superhighway indefinitely.

We believe rural children should have educational opportunities equal to those of urban children.

We favor increasing Federal aid to encourage more doctors to enter the medical profession.

We favor a voluntary prepayment health insurance plan.

We favor increasing Federal aid for the construction of more hospitals.

We favor more Federal aid to aid for medical research.

We do believe we should revise our health program and adopt a county health unit program for Iowa.

National Phases of the Universal Water Problem

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

INDIANAPOLIS, *December 19, 1949.*

Hon. RALPH HARVEY,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR RALPH: Remembering that you sponsored our Indiana law for conservation of ground or well water, and that you also took a leading part in the enactment of our statute setting up a flood control and water resources commission, I am taking the liberty of writing you on some national phases of the universal water problem. I wish to invite your attention to gross inequities that have crowded into the so-called regional-improvement program as it relates to flood control, irrigation, navigation, and hydroelectric power—all water problems.

Since then I've been examining the idea of regional development as a Federal function—not as a man in the electric-power business, nor as a member of the flood control commission, nor as a member of the Indiana Economic Council, but as a private, taxpaying citizen. With everybody wondering how we can put on the brakes, get back within our budget, and begin to reduce taxes, I've come to the conclusion that regional development is one obstacle we can either remove or whittle down substantially. And I'm go-

ing to ask you to read a personal discussion of the subject.

We may say regional development was born in the depression days, when, to assist in providing employment, WPA was set up to make jobs, and PWA was established to create public works of lasting value. Now, job making is not as vital as it was then, and we can, further, pass the point whether job making is a proper Federal function.

PWA started out soundly enough, offering to lend 70 percent and grant 30 percent of the cost of local public works jobs. There was relatively little criticism and much good was done. Then, half way along, PWA liberalized, lending 55 percent and granting 45 percent; and more good was done, with some increase, of course, in the griping from those who cannot see Uncle Sam as everybody's Santa Claus.

Now we have made two jumps—a broad jump from local to regional projects; and a high jump, from granting 45 percent to granting 100 percent. Planners assume blithely that we can afford it, and it is our duty. Nationally, our property is worth $1,043 per capita—assessed value—and we can afford (?) to pay Federal income taxes of $285 per capita. Whom, then, shall we help? How much? Look—

Per capita	1948 individual income	Property value	Income taxes
United States	$1,410	$1,043.00	$285.00
Indiana	1,403	684.56	258.30
Kentucky	909	743.20	308.00
Tennessee	955	539.50	111.00
Oregon	1,302	768.76	193.30
Washington	1,453	641.05	216.40

All figures, official sources.

Three fair indices of wealth. Oviously, Tennessee is the one we should help; Oregon and Washington don't need us—but wait, we have just finished giving Tennessee roughly $1,000,000,000. And we're better than half way to the billion-dollar mark for Oregon and Washington.

Where is a clue? Let's look back 10 years, to 1939, when the Federal income tax bill (including all kinds) was only $8.52 per capita. At that time, Indiana's total payments figured $5.23 per capita; Kentucky's, $3.71; Tennessee, $2.66; Oregon, $3; and Washington, $4.35. The billion we dumped in Tennessee increased her income-tax average by 4,073 percent, which indicates a phenomenal improvement in the economy of that area—or does it? Indiana's increase, without benefit of a billion not to be repaid, was 4,833 percent. And Kentucky, Oregon, and Washington, all three, jumped higher, in proportion, than Tennessee did.

Looking at the property valuation figures of Oregon, Kentucky, and Washington, you are bound to wonder whether we, in Indiana, should be contributing to their upkeep. (Kentucky is able to pay more income tax than we do, but that is probably excise on whisky.)

Indiana people are probably about as liberal as the next fellow who earned what he got. Too, we are doing fairly well on our own, without Federal largess. We might examine that angle:

	1947 farm income per capita (excluding Federal payments)	Manufactured goods per capita[1]
United States	$206.50	----------
Indiana	275.60	$760
Kentucky	203.00	261
Tennessee	153.10	300
Oregon	225.90	410
Washington	248.40	337

[1] Value added by manufacture, Census Bureau says.

This table makes us wonder again whether the billion we gave Tennessee has accomplished anything. Tennessee farm production is down because, perhaps, the TVA has flooded much of the best bottom land—more than was ever flooded temporarily; and her manufactures are not especially impressive. Federal bounty might help Oregon and Washington industrially, but both States are a long way from the center of population, and industry likes to be handy to the middle, for raw materials and sales-distribution reasons. Kentucky could do with some more farm income, but here again we are busy, as we were in Tennessee, drowning her more fertile river bottom lands.

As for navigation benefits in river improvements, if the railroads and trucks can handle our heavier loads of farm products and manufactured goods, it would seem the lighter loads of those other States could get to market without using up a lot of money for slow river barges.

Indiana, in the light of these two tables, would need a lot of crust to ask much in the way of Federal aid. And Indiana is not asking much, except for flood control in legitimate projects that are part of the Mississippi Valley program, started 21 years ago under President Hoover. (Strictly flood control, too, with no hydro, irrigation, or waterway transportation or other phonies as benefits in the picture.) One of these days we may need to add water supply to flood control, but I wonder whether the present beggar States will agree to let us insert it in the program.

More, doing well herself, maybe Indiana can afford to help the national effort at regional aid, if it is sound and not too expensive. Another table:

1950 PUBLIC-WORKS APPROPRIATION, FLOOD CONTROL AND RIVER WORK

United States (to spend) $5.04 per capita, total, $664,178,190.

Indiana (to receive) $1.96 per capita, total, $7,580,000.

Kentucky (to receive) $8.71 per capita, total, $24,966,000.

Tennessee (to receive) $3.10[1] per capita, total $9,030,000.

Oregon-Washington (to receive) $16.26 per capita, total $67,475,000.

This, of course, is the table that gives you a headache, following the two already studied. We have nothing at all against the people in those other States. We hope they do well. But—

Our property is as valuable to us as theirs is to them; there are more of us and we produce more and pay a better share of the taxes than most of them pay. We pay approximately as much Federal income tax as Tennessee, Oregon, and Washington combined, and we receive about 10 percent of what they get for flood control and river work.

Maybe something should be done to help Kentucky bring up farm production and industrial production, despite her high property valuation of property and high income-tax ranking. But should Indiana pay 50 percent more in total Federal income-tax dollars and then receive less than one-third the total dollars that Kentucky receives?

Moreover, if we are rich enough to carry more than our share of the load, and generous enough, too, how can we justify the sacrifice or discrimination in the face of the pitiful showing Tennessee makes after we've dumped a billion-odd dollars into her valleys? Actually, if the people of Kentucky, Oregon, and Washington really knew what we've done to Tennessee, wouldn't they lock the doors when we heave in sight with grants, appropriations, regional improvements, and what-not?

[1] Excluding fifty-seven millions for steam-power plant to firm the four to five hundred millions spent on hydro.

Again, which one honestly needs help most? Much of this regional development is tied up with electric power development, or public ownership. About half of Tennessee's billion-dollar grant is clearly and indisputably in electric power—and only half of Tennessee's farms have electric service. But Indiana farms, about 50–50 supplied by companies, and REMC's with borrowed-and-being-repaid Federal loans, are past 95 percent supplied. And Oregon and Washington farms, like Indiana's, are right at the saturation point on electric supply.

If industrial power supply is what is needed via hydro at dams demanded first and loudest for flood control and irrigation, in the Northwest, look again at the horrible example of Tennessee. Oak Ridge had to have dependable power for atomic development, so built its own steam-generating station, instead of relying on TVA. And now TVA is building steam plants itself—with taxpayers' money, of course. How long would it be, do you suppose, before Oregon and Washington, their billion exhausted for hydro, etc., will be back showing how necessary it is for them to have more funds for steam plants, to firm their hydro?

If we strain ourselves and pay more than our share for the Northwest, will it repeat the sad story of Tennessee? I didn't mean to bring electric power into this matter, but it has a definite bearing. Will you look at one more table, please?

	Per capita power supply	Power use per year	Industrial use
	Horsepower	*Kilowatt-hours*	*Kilowatt-hours*
United States	0.52	1,644	1,130
Indiana	.57	1,805	1,247
Kentucky	.33	----------	----------
Tennessee[1]	----------	----------	----------
Oregon	[2].78	----------	----------
Washington	[2]1.12	----------	----------

[1] Not 365 days calculable, because "infirm."
[2] Including some "infirm" hydro.
[3] Much of it "infirm"—witness 2 aluminum plants down recently due to hydro shortage.

Figures based on Edison Electric Institute survey, January 1949.

Indiana's power supply, as noted above, is about 10 percent above the national average for capacity, general usage, and industrial usage. That position directly reflects our strong positions in both industrial and agricultural production. (All three positions, we earned—nobody gave them to us.)

Washington has almost double our power supply on a per capita basis, but seems to accomplish about half what we do with it in Indiana. But like Tennessee, Washington is handicapped because its power supply is crippled periodically by river fluctuations—too high, or too low, water.

Should we spend more to help them? If they need help, can't they pay a little on the cost themselves? Are we sure, in the light of Tennessee, that dollars will really help them? If we can afford or spare them? We might balk and say, "Look, you guys, Indiana was a swamp woods once, but our folks licked it, can't you come through on your own?"

If you've come this far with me, Ralph, I'm much obliged. I should not have bothered you with this letter, except that I am convinced that economy is going to be dogoned good politics, beginning in a day or so from right now. I'm convinced that throwing money around is a long way from being an automatic, infallible answer to everything, regional improvements, or anything else.

Besides, didn't you stumble over that "vulgar" fraction—4,833-percent increase in Indiana's per capita income-tax payments?

Best regards, and merry Christmas.

JOHN C. MELLETT.

Contempt of Congress

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Tribune:

CONTEMPT OF CONGRESS

President Truman has created a temporary Water Resources Commission and named Leland Olds chairman. Olds is the radical, tyrannical, mischievous, egotistical chameleon whose predominant color is pink, as Senator JOHNSON of Colorado called him last year when the Senate refused, by a vote of more than 3 to 1, to confirm his reappointment to the Federal Power Commission. He has a long record of association with Communists.

This time Olds won't have to run the Senate gantlet. He and the other members of the Commission are being paid out of the President's emergency fund. Associated with him are old Morris L. Cooke, the original head of the Rural Electrification Administration, who at 78 is still ardent to bring private enterprise to the bureaucratic heel, and five college presidents and professors.

Appointment of a Water Resources Commission was recommended by the Hoover Commission on Reorganization of the Federal Government. The pork-barrel competition between two Federal agencies, the Bureau of Reclamation in the Interior Department and the Army engineers, has already cost the taxpayers billions of wasted dollars.

No commission headed by Olds is going to save anyone anything. He is part of the socialist apparatus by which Mr. Truman and his totalitarian advisers are trying to concentrate the rule of every phase of American life in Washington.

There are, as there always have been and always will be, conflicting claims to the Nation's water resources. They are not so important in the Middle West, although we have a ground water deletion problem in Illinois and neighboring States, or in the East, except as municipal bureaucrats fall down on the job, as they did in engineering New York's shortage. But in the arid West water is of first importance and the rights to what there is of it for power and irrigation are the subject of bitter fueds between individuals and States.

Such a situation gives a Socialist the chance, in the guise of allocating the supply of water fairly, to make every individual, corporation, and municipality bow the knee to Washington authority. Beyond that, it offers the opportunity to spend billions of dollars in various fantastic schemes to develop water resources.

In these schemes the Socialists have little interest in irrigation, except as a means of bribery. Irrigation is for farmers, who are hard to push around politically. When the Socialists talk about conserving water resources their eye is on public power. The Tennessee Valley Authority, it may be remembered, was introduced as a great experiment in conservation. Except for a little social worker folderol, conservation is out the window in TVA, which is now building steam-engineering plants at points designed to serve areas far beyond the Tennessee Valley.

The Socialists want to control electric power because, with labor, it is the tool of production that all industry uses. By controlling it they expect to control industry. When they control industry they will also control its workmen and their jobs.

The Olds appointment demonstrates again Mr. Truman's contempt of Congress. A man held unfit for one job is placed in another of possibly greater importance.

Report From India

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, January 12 (legislative day of Wednesday, January 4), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD two articles by Mr. and Mrs. Harris Wofford; one in the November 1949 issue of the magazine, Common Cause, with one which appeared in the St. Paul Dispatch of November 25, 1949. Mrs. Wofford is a former student of the University of Minnesota.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

[From Common Cause of November 1949]

REPORT FROM INDIA

(By Harris and Clare Wofford)

The Chicago Committee's Draft World Constitution raised the sights of many federalists, including the two of us, from the goal of an atomic emergency government to that of a positive world republic. In 1947 in Europe we sensed the existence of a "middle world" of perhaps a billion and a half human beings who desired neither America nor Russia as world master. If even the people of American-aided western Europe properly belonged in this category, then we guessed that most of the Asians, Africans, and South Americans belonged there more surely. Since the economic problems of these people seemed paramount, any world government seeking to win their allegiance would need wide economic powers. In this light, the Chicago constitution's maximalism looked like irreducible minimal political sense.

Because of this, some of us campaigned ardently though ineffectively to persuade our fellow federalists to move onto a new road leading to a full-fledged world republic, proceeding by means of a genuine world people's movement able to mobilize the middle world, and beginning with an unofficial world people's constituent assembly as the first step. We failed to convince them, and decided that rather than continue the repetitious debate or try somehow to commence separately we should first reassess our own position. We recognized that our arguments, although deeply felt, had only tender roots in real evidence.

A fellowship from the Foundation for World Government made it possible for us to come to study in India. We resigned our connections with the foundation and with United World Federalists, and for 6 months now, in this heartland of the middle world, we have been focusing on the history of Gandhi's Indian national congress and on the current economic situation—seeking light on the problem of world government. It is fitting that our first public report go to Common Cause.

India is a vast school offering lessons in all of life. We, in the first grades, have learned simple facts of world life which any students from the white, industrialized western one-fifth of mankind should be expected to learn from the Indian continent's one-fifth—or from any country among the colored, underdeveloped majority of mankind.

India made us acutely aware that two-thirds of the world's citizens are ill-fed, ill-clothed, ill-housed. They are suffering and dying from diseases man knows how to cure, illiterate, without useful work much or all of the time, still using wooden tools and techniques which the industrial revolution antiquated. They are struggling for survival on overworked, unfertilized, tiny, and often rented plots of land; they are facing discrimination because of race, religion, class, or sex; unable to think, speak, or act politically as free men because of lack of facilities or because of direct governmental repression; and they are lacking democratic self-government because of national dictatorship, colonialism, or, in another sense, world anarchy.

From India, it seems certain that these once silent, sleeping masses are waking. One idea is arousing them: equality. The majority of poor or landless peasants in the villages—85 percent of India—are already questioning the right of one man to own a thousand acres and most men to have 1 acre or none. The majority of underemployed city workers, living 10 to a suffocating tenement room, are already questioning the right of a few thousands to live in their midst in luxurious western mansions. The majority of underfed Indians are questioning a world society in which their country is without food while the white countries of the west have plenty. The questioning is simple but goes deep. Likewise, equality is a simple but penetrating idea. The voiceless millions are finding their tongues. The questions have led to universal grumbling, the thunder of revolution.

Every step of reform taken to satisfy the demands for equality—abolishing feudal landlords, reducing land rent—only whets the appetite for fuller equality and further arouses the consciousness of the masses. The dam of complacency, lethargy, and ignorance has been pierced by the explosive idea of equality and an irresistible tide is pouring through.

In China the revolution has taken one form. It may take another in India and the rest of Asia.

This revolution fast overtaking us, which is destined to cut through the history of modern civilization, appears to be double-edged.

One side is toward world unification, as we federalists early realized. The other side—sharper for more of the world, and doing most of the initial cutting in the middle world—is toward equality.

The separate national state system is going to end in our time, whether the revolutionary change to a world state comes peacefully before war, or by conquest through war. But federalists will be blind and hopelessly lost if they fail to recognize and cope with the other side, the revolution against privilege.

This economic and social revolution is understood in most of the world in Marxian terms because none others have been suggested. In these terms, there is today a class struggle inside each country and between countries. Inside each country, particularly in Asia, four-fifths of the people, who were born to no choice but misery, are rising to end the hated status quo—by whatever means necessary—and to establish some kind of just social order. Equality of sacrifice and of opportunity, abolition of landlordism, land redistribution, establishment of cooperatives, public control of industry, planning for over-all economic development—all add up to the product labeled "socialism," which is almost universally approved and

desired. Some kind of socialism seems inevitable as well as desirable for these underdeveloped countries who in one generation aim to achieve the industrialization and modernization which took the West a hundred years.

Moreover, an even greater class struggle exists between the whole of the west and the rest of mankind.

Every poverty-stricken Indian peasant seems to know one thing about America—it is rich. (One out of four we questioned had heard that Negroes were badly treated.) In many forms we have been asked by villagers, "Why is it that Americans are all rich and happy, and we Indians are sad and poor?"

The Asian mind seems grimly determined to end this giant inequality. Hostility to the west, generated by centuries of imperialism and racialism, and now continued by gnawing contrast between American dominance and wealth and Asian misery, is growing. This is dynamite lodged in a hundred million minds.

Either the west takes rapid steps to eliminate the dynamite by eliminating the misery, or it will explode in war. One western businessman here prophesied: "Four hundred million Indians are going to industrialize, whether it takes 20 years or three times that, whether it takes a few thousand or a few million lives. If the west helps them enough and in time, we may end up pals. If not, then God help us."

Potentially, in any war today, the masses of India are on the side of the Soviet Union The same peasants who know that America is rich and racially prejudiced, believe that the Soviet Union is a workers' land, run for the good of the poor, with full economic and racial equality. One in four we talked to knew and approved of the Red revolution in China, where, they had heard, "the tiller of the soil was getting the land." Any world war now could easily develop into a war between the Western one-fifth of mankind and all the rest, led militantly by the billion bitter people of Asia, who could be fired with hatred for the pale-pink prejudiced people with the colonies, depressions, and wars. This would be one resolution of the world "class struggle."

Federalists are fools if they think that world government can be formed without coping with the problem of equality in each country, and between the West and the world. Such a world government, protecting the status quo, would soon be overwhelmed. It would explode from inside dissension, or be submerged by the tidal wave coming across Asia.

Nor can world-wide equality be established without world government. International anarchy means a fearful, frenzied climate of war preparation in which any steps toward social and economic reform become difficult. The economic development and planning required to solve such problems as food shortage can be successfully carried out only by world planning and mobilization of all human resources. Both sides of the world revolution make one problem which must be solved, for good or ill in our time.

In Asia, the Communists are the only forces, with positive proposals to solve both dilemmas rapidly. With courage, intelligence, and dedication the Communists propose proletarian armed revolution to end the status quo, Communist party dictatorship to establish equality, and a World Soviet Union with respect for national cultures to prevent war and to organize world economy rationally.

Among the billion Asian people, civil liberties are unknown. Misery, with its slow daily violence and starvation of body and mind, is their heritage. The Communists claim to offer a swift, violent way to end this. Communism is increasingly winning the allegiance of the young, educated, politically conscious citizens of India. Communist revolution seems like a clean knife to be used in an operation on a cancer that has resisted all other treatment.

World federalists may oppose the Communist solution—refusing to believe that equality, fraternity, and democracy can come through violence, dictatorship, and blood purges—but we must propose a better solution. We cannot and we as Democrats ought not oppose the revolution against injustice. The tide may be forced into terrible destructive channels but it cannot be stopped.

Sadly, from India, it seems abundantly evident that the American Government's policy has no positive proposals either for world equality or world unification. United States policy in Asia seems to consist of half-hearted, vacillating efforts, or gestures, to support the status quo. Chiang Kai-shek's collapse ought to suggest to us that the whole of the American Army plus the atom bomb might be insufficient to maintain the old order. Asia is villages, and the peasants there fear rain and sun, not unknown nuclear fission. The revolution in Asia takes place in each of these villages. To stop the coming changes in India alone would require 700,000 atomic bombs—1 for each village.

Democrats ought to rejoice at this awakening in Asia. Instead of opposing the tide, they should join in, and seek to ride and guide the wave to a successful conclusion through peaceful and democratic channels.

The only forces in India presenting any real alternative to communism are the Democratic Socialists, lead by Jayaprakash Narayan and a half dozen other outstanding young men of integrity and courage, such as Rammanohar Lohia, Achyt Patwardan, and Ashok Mehta. These men of the Gandhi Age, who spent their youth in jail (where they became the best-read politicians in the world), have hammered out in their own lives a union of socialism with Gandhism. Social democracy they conceive as a revolution, which should be achieved nonviolently, which begins by a Socialist living socialism in his own life. By their example of complete dedication and their ideology of full-fledged democratic socialism, these men have inspired confidence and their faith has won considerable allegiance. The Socialist Party is the most hopeful political fact in India.

However, Indian socialism seems insufficient compared with communism. The Socialists have no such direct international answer as have the Communists, and therefore their program goes only halfway at a time when either the whole revolution is achieved or none: halfway across the chasm means destruction. Socialism is so far half-baked because it has no program for world unification.

Indian people and Socialists particularly lean toward an Asian bloc, organized around the negative goal of opposing both the Russian and American blocs. We have suggested instead that India should lead in forging a bloc of world citizens, based on the "middle world" but extending into both power blocs, organized around the positive goal of a world federal republic.

A representative world federation, designed to establish justice, with its first aim the equalization and raising of living standards everywhere, copes with the revolutionary needs of our time.

Through such a world government, the "class struggle" between the west and the rest can be peacfully and voluntarily resolved, with beneficial results for every country. For example, a world development administration could mobilize all the world's resources, including the industrial machine of the west, for a full-production, full-employment, one-generation program to wipe out famine, illiteracy, mass disease, and to develop the vast economic resources of Asia, Africa, and South America for the welfare of all mankind.

Such a program has potential appeal for most people. The problem is how to bring this idea forward as a real alternative to American-Russian power politics. The existence of the "middle world," which we believe could include a majority of the American people, is the first cause for hope. Indians could lead in mobilizing this camp of world citizens. At least the history of India's own struggle for independence through nonviolent popular action throws light on this problem.

The national Indian aim was swa-raj—self-government. This required the development of a responsible consciousness of Indian national citizenship and the organization of a citizens' party, or, as Gandhi called it, army, which would force the British and the 500 state princes and rulers to turn over power to 1 common democratic Indian government.

Gandhi shaped the Indian National Congress into nonviolent revolutionary lines. At times it won such mass support that it acted as a de facto, unofficial parallel government to the British Raj. The Indian Congress met annually as the unofficial legislative body of the millions of Indians who had registered through it as free Indians. Gandhi geared the Congress to a constructive program of concrete, immediate, individual projects which put all politically conscious Indians to work in service of the people—which meant work in the villages. It aimed to end untouchability, establish village industries and cooperatives, promote Hindu-Muslim friendship. Do these things now, pleaded Gandhi, and you will not only convince the people that Swa-raj is worth fighting for but you will prepare yourselves and the country for good self-government. From the popular energy generated in this program the Congress was able to conduct a successful political program of action on immediate issues and later of actual contests for election to office. From this base Gandhi was able to lead the people in mass campaigns of satyagraha ("firmness on truth")—nonviolent direct action which threw the people's weight onto the scales against great armies and prison gates.

Our aim is world Swa-raj. We seek a peaceful world revolution establishing a world republic. This requires the development of world citizenship and the organization of a world-wide people's movement capable of persuading the national governments to transfer their world powers to a government of the people of the whole earth.

Why not a world citizens' congress? The world congress would consist of registered world citizens and affiliated public organizations fighting on some front for a united world community. These forces are powerful, although scattered and without common strategy. They include the forces for world government, UN strengthening, internationalism and one world, the democratic Socialists and other groups struggling for justice inside each country, and the national independence and liberation movements in the colonial areas. Under the banner of a world republic and a common assembly of the world congress sessions, they could develop a dynamic world program based on world constructive service. World citizens need to be put to work on immediate problems like food, health, and education, especially in seeing that refugees and children get a chance for the satisfaction of these needs. A world congress could initiate practical projects which would support the UN agencies already doing good but unsupported work and excellent but neglected planning. A constructive program should include local action for fuller establishment of the UN Universal Declaration of Human Rights—which means that American world citizens must work to end racial inequalities at home.

A world congress could become a powerful people's lobby in the UN and in national

governments, applying to immediate political issues its principles of opposition to colonialism and war measures, and support of UN strengthening, development of backward areas, and economic steps to prevent depression.

Is mass world satyagraha inconceivable? The time may come when people everywhere could act concertedly and peacefully in effective demonstrations against war. Or, more constructively, the idea of an unofficial people's world constituent assembly might provide the issue around which nonviolent direct action could revolve. This can come only after a world congress has taken root and has real strength and vitality.

The real problem, as so often with Democrats, is to begin. So far, world government is nowhere to our knowledge a living, bread and butter political issue among the people. It has not yet become politics. We suggest that this is because it has not yet been linked to the social and economic issues in the world which are bread and butter, rice and chopati issues. Therefore, we federalists have talked nobly in a world of our own, while the real political forces have been out fighting on the social and economic frontiers. These forces need the unifying and inspiring common aim of a world republic just as much as federalists need their aid. Until the alliance between federalists and these forces is forged, neither will make real progress. Once forged, there would be a political program loose in the world which might accomplish strange and wonderful things.

If this course makes sense it can begin anywhere—with the world movement for world federal government, among Indian socialists, by American federalists in any city or State in the United States of America. We believe that the people of the world are waiting for something like this to be offered. Once started, there might result a chain reaction of hope and constructive work.

A peasant in a Kashmir paddy field stopped planting his rice to ask us just what world government would be like. We described the kind of government envisioned in the Chicago constitution and the sort of things it could do. He told us solemnly: "That world government would help the poor people. All the world is praying to God for such a government."

But as Gandhi insisted about Indian Swaraj, world government will not descend from heaven; it must be earned and deserved.

[From the St. Paul (Minn.) Dispatch of November 25, 1947]

SEND WHEAT TO INDIA

(By Clare and Harris Wofford)

SIR: Indians are starving while America's wheat surplus overflows storage space and America's merchant marine lies underemployed in port. This fantastic contradiction faces us on our return home this Thanksgiving time after 6 months in India.

For lack of enough food, the hungry Indian people, especially the thin, undernourished children, lack the strength for long, useful lives. (An Indian's life-expectancy is about 25 years—an American's is over 65.) In their misery the Indians will one day turn, as the Chinese before them, to the Communists who promise a rapid, if ruthless, program to provide food, land and longer lives.

Yet for lack of enough people with dollars to buy America's vast surplus of wheat, our Government, which purchases the wheat to prevent a farm depression, is now spending more money to build great new storage depots. We hear that Victory ships are being tugged down the Hudson River to be reconditioned at great expense as warehouses for unused wheat. But we cannot stockpile wheat like atom bombs: wheat rots.

Is this a Christian—or businesslike—answer to a wheat surplus in a starving world? Cannot we work out some sensible way to send the wheat before it rots on our unused ships to the ill-fed children of India and other lands?

We spend billions of dollars arming ourselves and other governments; but the battle for democracy and peace will be won, not by atom bombs, not on the battlefields, but by bread in the rice fields.

India and the economically underdeveloped countries are unable to purchase our surplus food because they have no surplus dollars. They are trying to raise themselves by their own poor bootstraps out of poverty, away from violent revolution. Their race against starvation can be understood by two facts: If all Indians attempted to eat the amount of food that the United Nations considers the minimum for human beings, 115,000,000 Indians would have no food at all; yet 5,000,000 more Indians are born every year than die.

Let us remember that the Indian continent represents about one-fifth of the human race. The Chinese fifth of mankind has already gone Communist. What happens to India—whether it grows democratic or totalitarian—may decide the future of us all. Yet American policy sticks to western Europe, and India has seen none of our generosity—no vast lend-lease, no dollar loans, no UNRRA, no Marshall plan.

Why not apply Christian principles to common sense and put our wheat to work for peace in a better investment than a dozen battleships? Let Congress vote that our food surplus, above a safe reserve level, is available free to groups outside the regular market, such as the children or the 10,000,000 refugees in India.

Why not have this act of peace do double-duty and help to strengthen world organization as well as the democracy of India? Let the food be a direct contribution from America to the UN Food and Agriculture Organization for distribution in the name of mankind as a whole.

This is an issue for the people and their organizations—particularly the churches, women's and other civic groups. This is something our statesmen might like to do if they thought the people were behind them. We believe the people will be ahead of them.

Courage

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. MANSFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting a story of great courage by a fine young American, Matt Vucurovich, of Butte, Mont.

I want to extend my congratulations to Matt and Florence Vucurovich for the tremendous fight they have made and are making against great odds; to their family for the fine assistance they have rendered to them; and to their numerous friends—many of them personal friends of mine—for all they have done to help Matt and Florence.

It is an honor for me to have the opportunity to bring Matt's own story to the attention of Congress because it typifies the courage of an American boy and his sister, the devotion of his family, and the true meaning of friends.

To Matt and Florence, I extend my wishes and my prayers that their recovery will be complete and their courage and fighting spirit rewarded.

[From the Montana Standard, Butte-Anaconda, Mont., of October 16, 1949]

MATT VUCUROVICH TELLS HIS STORY OF SLOWLY REGAINING EYESIGHT

(EDITOR'S NOTE.—Matt Vucurovich, one of the finest all-round athletes ever produced at Butte High School, and his sister, Florence, became blind at almost the same time in 1944. Now, after many months of treatment, Matt's sight is slowly returning and Florence is showing some improvement. At the invitation of the Montana Standard, in the belief that their game fight points up a lesson to encourage others, Matt Vucurovich tells their story of a return from darkness.)

(By Matt Vucurovich)

After nearly six long years, the shadows are lifting at last, and there is sunlight again.

What manner of miracle this must be is hard to understand and much harder yet to describe. Perhaps "miracle" is not quite the right word for it, because I never weakened during these years of blindness in my conviction that some day I would see again. And now that day is here.

My sister Florence, who is 3 years younger, and I both lost our sight early in 1944. Florence, then in Butte High School, had complained of severe headaches, but nothing unusual happened since the school nurse was treating her for them.

Then one evening in February, while sitting here at home (101 South Oklahoma Street) doing her homework, she suddenly discovered that she couldn't see out of her right eye. There seemed to be a film-like cloud, she said. The eye was badly bloodshot.

When she went to a doctor, he told her she had "pinkeye" and sent her home.

The "pinkeye" turned out to be iritis, which is an inflammation of the iris. Her condition grew increasingly worse, and she went to a doctor in Billings.

"How bad is it?" she asked.

"About as bad as it could be," he told her. The doctor sought to send her to a doctor in St. Paul, but the man he knew there had developed a case of blood poisoning and couldn't take her then. So she came home. Meanwhile her left eye had been failing, and soon she couldn't see at all, except to distinguish shadow from light.

I had entered Compton, Calif., Junior College in September 1943 as a freshman student. When my sister Angie was married to Mike Samardich the next February, I came home for the wedding, and didn't go back.

Then, in April, it happened to me. My eyes suddenly became bloodshot, like Florence's had been. I went to a doctor, but I couldn't learn what was the matter. Both Florence and I had our tonsils out, but that didn't help.

We turned to Rochester and in May that year made the first of our seven trips back there. We stayed until November and then came home for Christmas.

That was when we began to learn how many loyal friends we had in Butte. A committee which included Midge Griffiths, Emett Sullivan, Wreck Donnelly, Mike Popovich, Ed Sullivan, and others sponsored a huge dance program at the American Legion and miners' union halls and the Serbian Orthodox church. Nearly $6,000 was raised, as I recall. It was a wonderful thing, an unforgettable demonstration of help from one's friends and neighbors. Babe Elliott of the Northern Pacific was a great friend in need.

Back to Rochester we went in January and remained until July. We were given gold shots to settle the infection, and the doctors

took their daily looks at us. Florence had three shots a week and the best I could do was two.

Our sister Angie stayed with us in an apartment. She took us around, occasionally to shows or the ice follies—things like that. The time went surprisingly fast. On our first trip, mother had stayed with us. She and Mrs. Clare Jones, one of the best landladies in the world, and Denny Higgins, who ran the other apartment house, got along famously.

My first operation came in November 1946. They worked on the left eye. They got the pupil open quite a bit, and they told me my light perception was very good. But then, somehow, the pupil closed again. I had been able to distinguish colors and differences in fabrics, but now I couldn't any more. Cars which went past were reduced to mere streaky looking shadows. I was pretty discouraged.

There were more trips to Rochester. There was a big ice show staged here as a benefit, and again our friends were wonderful to us. But it was getting to be rather rough going financially, nevertheless.

I had a grocery store at 500 East Park, with Angie coming from Anaconda every day to help out. But it was too much, and I had to give it up after 8 months.

Through the efforts of Midge Griffiths, of the high school, the brothers at Butte Central, the school board, and the chamber of commerce, I was able to establish the concessions at the Butte High School football stadium. The concession part had been abandoned during the war, you now.

Mayor Barry O'Leary and several councilmen, among them Walter Kinared, John Lindquist, Pete Sodja, Art Mehrens, and John McCartan, helped me obtain the concessions during the baseball season at Clark Park. The concession work took a lot of pressure off the nerves, and my contact with the ballplayers and fans aided tremendously.

I had lots of help. Besides those in my family, there were Johnny Kovacich, Leonard Stevens, Joe Roberts, Bronko Stanisich, Bronko Borozan, Bob and Margie Mirich, and Arleen Markovich. They worked without pay, and the business practically ran itself.

It was toward the end of the baseball season this year that I started making improvement. I had gone back to Rochester for a quick 2-minute operation, and was back in Butte 24 hours later.

The people at the ball park were becoming just a bit more distinct, and again I could distinguish colors of clothing. I didn't say anything about it, though.

It was a thrilling experience, and I didn't dare to hope for too much. The first real thing I saw, I think, was Florence's bandana. She was excited, and so was I.

"Isn't that a housecoat you're wearing?" I asked her. And it was.

"How do you know?" she asked.

"I think I can see it."

Then, riding in a car from the ball park, I could make out the white guard posts and rails on the Texas avenue overpass. After that, people weren't just voices any more. They were figures I could see—not very well, you know, but I could see them dimly just the same.

And so I'm on my way back, I'm sure. I bowled three games last week, with Pete, my brother, at Marty's alleys, helping to guide me. I shot 126, 112, and 80, which aren't bad scores for a guy who couldn't even see the floor 3 months ago.

I can read, too—only large type, of course—but that's real progress, too. But it's like learning to read all over again. I have to take it pretty slow.

There's still much to be done, especially in Florence's case. I'm hoping to land the concessions at the new civic center when it's ready, and that would be a big help. Florence hasn't had an operation yet, but probably will sometime this next year.

I had a fine letter from Dr. W. L. Benedict at Rochester a couple of weeks ago. He wrote that he is "very happy to know that you have regained some of your lost vision" and adds that "I know of no reason why your improvement should not continue. Let nature take its course."

It's a wonderful letter, probably the best letter I ever got from anybody in my whole life. And one of these days I'll be able to read it myself—right there in the small typewriter print where it says the 6 years of darkness are about over.

Why Congressmen Travel

EXTENSION OF REMARKS

OF

HON. HERMAN P. EBERHARTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. EBERHARTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Pittsburgh Sunday Sun-Telegraph of December 4, 1949:

WHY CONGRESSMEN TRAVEL

(By E. F. Tompkins)

Some displeasure is being expressed because Members of Congress have been going abroad in considerable numbers and at public expense.

It is not unlikely that part of the criticism is inspired by the bureaucracy which carries on our multifarious projects across the oceans—including the disbursements of very large sums of money.

For Senators and Representatives who visit the foreign scenes are expected to discuss what they observe, and their reports are not always complimentary to the agents and agencies involved.

Discouraging or discrediting congressional tours may thus be a protective political device.

In another phase, the criticism of Congress comes from sincere advocates of Federal economy.

For example, the New York Sun disclosed alliteratively that:

"From Belgium to Bermuda, from Sweden to Siam, more than 100 globe-hopping Congressmen have roamed this year on junkets or missions * * * which will cost the harassed American taxpayer nearly $750,000."

That may seem like a good deal of money. But is it?

Actually, $750,000—three-fourths of one million—is approximately 0.0002 percent of the $40,000,000,000-budget for the current fiscal year which was submitted by the administration and which the Congress was asked to approve—almost an infinitesimal proportion.

Including the expenses of the Marshall plan and of the American occupation forces in Germany, Austria, Trieste, and Japan, plus numerous grants or loans, literally billions of dollars of our appropriated funds are being spent in foreign places.

Why should anybody—even a bureaucrat—object if Members of Congress deem it their duty to do a little overseas auditing?

If the demand is put upon them to provide vast sums, and to levy the onerous taxes implied, why should not the National Legislature ascertain for itself how the funds are being dispensed—and to what good purposes, if any?

In fact, how could Congress legislate capably when recurrent appropriations are proposed unless Congress has more direct information than the interested bureaucracies may choose to submit?

What appears to be overlooked is that the United States is no longer a stay-at-home nation attending to its own business.

We have troops and fleets and squadrons of airplanes in virtually every foreign sea and alien continent.

We have assumed, whether wisely or not, the responsibility of rehabilitating the rest of the world and of supporting much of it.

We are in the United Nations, paying the major share of its bills; we are in the North Atlantic alliance, presumably in anticipation of another European war; we are implicated in diplomatic imbroglios in the Far East, the Middle East, and the Near East; and we are lending money in important amounts to remote countries like Afghanistan.

These far-flung adventures require appropriations of money which only the Congress can make.

Consequently, as the elected Representatives of the people, Members of Congress have an obligation in international affairs that belongs to them alone.

Since the foregoing are the facts—and the facts they are—why should any Member of Congress, or all Members of Congress, be criticized or aspersed because they go abroad to discover for themselves what we are financing?

What they would spend on a few information junkets may be saved for us a thousandfold in carefully edited future appropriations; and no foreign-expenditure lobbyists should be permitted to restrict this prerogative of Congress.

Civil-Rights Compromise

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. LANHAM. Mr. Speaker, under the auspices of the Atlanta Christian Council, the Honorable BROOKS HAYS, of the Fifth District of Arkansas, appeared in Atlanta on Monday and Tuesday, December 5 and 6, and discussed before various groups the civil-rights problem with especial reference to his own moderate and practical suggested method of settling this problem without resorting to punitive laws.

In connection with Mr. HAYS' appearance in Atlanta, the Atlanta Journal on December 3, commented upon Mr. HAYS' prospective appearance. With my own remarks I am including this editorial which seems to me to be a very fair and able résumé of the approach which Congressman HAYS and other southern liberals are proposing toward improving race relations.

It is truly tragic that many so-called leaders of both parties and both races are using this grave problem for political purposes and are seeking to make political capital out of the perplexing situation.

It is my fervent hope that the voice of understanding liberals like BROOKS HAYS will be heeded and that the problem

will be settled by moderate and reasonable means instead of by the drastic punitive proposals offered by the politicians. I am convinced that if these drastic proposals should be approved by the Congress, the position of the Negroes would not be improved but that progress toward the real solution would be set back a quarter of a century. This is a problem that cannot be settled by punitive laws but which must be settled by the raising of the economic and educational level of the minority races in our midst.

The editorial above referred to is as follows:

HAYS WILL SPEAK HERE ON CIVIL-RIGHTS COMPROMISE

Arkansas' able and intelligent Representative in Congress, BROOKS HAYS, of Little Rock, is a southern liberal who has made a real contribution toward improving race relations. He is the author of a civil-rights compromise which he believes will be acceptable to moderate, clear-thinking people of North and South alike. His proposal has attracted much attention since he first brought it to the floor of the House last February.

Monday and Tuesday, Atlantans will have an opportunity to hear Mr. HAYS discuss the civil-liberties issue in person. He is being brought here by the Atlanta Christian Council to fill a tight 2-day speaking schedule that will include addresses to the Ministers' Conference, to the Christian Council itself, and other interested groups.

As we understand it, Mr. HAYS thinks that if an agreement could be reached that no legislation will be passed on the subject of segregation, southerners would prove themselves quite open-minded on the other issues. He feels that southerners would not then fight for the anti-poll-tax bill, and that a modus vivendi could be reached on antilynch and FEPC proposals. With regard to the former, his thinking is that a Federal antilynch bill would be acceptable provided such a law operates only in States having no antilynch laws of their own, and he would handle the fair-employment question by setting up a division in the Labor Department to "counsel with management and labor for the elimination of discrimination and work toward wider employment opportunities for all groups." The FEPC machinery he suggests would carry no "legal sanctions." It would employ reason rather than a big stick.

Most southerners would agree, we think, that in selecting segregation as a point of no compromise, Mr. HAYS has put his finger on the issue where Federal interference with custom and tradition here would be least practicable, and most dangerous. And it is perfectly clear that segregation is an issue upon which Dixie congressmen will not and cannot yield an inch. Thus the Arkansan's proviso on the subject, whatever northern critics may think of it, is only common sense so far as practical politics are concerned.

The Atlanta Christian Council deserves high praise for inviting Mr. HAYS to this community. In our opinion it is through the churches—and the honest, thoughtful, God-fearing people of both races who belong to them—that the most encouraging progress in the field of race relations is being made. And here is a southerner, born in Arkansas and a Baptist by faith, who answers the civil rights zealots with a constructive counter-proposal of his own.

Mr. HAYS' plan will not be satisfactory to Dixie demagogues who get themselves elected to office by peddling race hatred; nor will it please the cynical politicians who cater to minority groups in the North. But it is worth thinking over, and we are glad Atlantans are getting an opportunity to hear all about it.

The REA Program in Montana

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MANSFIELD. Mr. Speaker, the Rural Electrification Administration is an agency of the United States Department of Agriculture. It was established on May 11, 1935, by Executive order of the President under authority of the Emergency Relief Appropriation Act of 1935. The Rural Electrification Act of 1936 gave REA permanent status and authorized a 10-year lending program. In 1944 this lending program was extended by Congress indefinitely. Congress annually makes available the amount of funds REA may lend.

REA is headed by an Administrator who is appointed by the President for a 10-year term. His appointment is confirmed by the Senate, and in his official actions he is responsible to the Secretary of Agriculture. The present Administrator, Claude R. Wickard, of Indiana, took office in July 1945.

REA is empowered to make loans to qualified borrowers, with preference to nonprofit and cooperative organizations and to public bodies. Loans are made to cover the full cost of constructing power lines and other electric facilities to serve persons in rural areas who are without central station electric service. The loans bear 2 percent interest and are repaid over a maximum period of 35 years.

REA itself operates no rural-electric facilities, and no grants or subsidies are involved in its program. Its loans are repaid from the operating revenues of the locally owned, locally managed systems. A part of each individual consumer's monthly electric bill goes to pay off the Government loans. REA serves principally as a banker to the local systems. Its main functions are to lend money and give technical advice and counsel where needed in the construction and operation of the borrower's facilities.

Farm electrification had advanced very slowly in the United States during the 53-year period from 1882, when the first central generating system went into service, to 1935, when REA was created. A few farmers were connected to central-station power prior to World War I. The early twenties saw a short-lived spurt in which the progress made in electrical engineering was reflected by a small increase in the number of farms served. However, only 10.9 percent of all farms in the United States were receiving central-station electric service by 1935. Few power lines had been built beyond the immediate vicinities of cities and towns.

Farmers and farm organizations, chafing at the slow rate of progress, increased their demands for Government action in the field of rural electrification. The result was the establishment of REA, with an action program designed primarily to make electric service available to those farm people who were without electricity.

Since the establishment, REA has greatly stimulated the extension of service into rural areas. By July 1, 1949, a total of 3,838,062 additional farms had been connected to central power lines by all agencies, public and private. More than half of the farms connected to central station lines since 1935—about 57 percent—received electric service from REA-financed systems. The remainder were on lines of other suppliers, many of which were stimulated to greater activity in the rural field by the REA program.

REA estimated as of June 30, 1949, that 4,582,016 farms, or 78.2 percent of the Nation's total, were electrified. About 1,275,000 of the Nation's farms, more than 21 percent, still were unelectrified. In addition, there were hundreds of thousands of unelectrified rural nonfarm dwellings, crossroads businesses, schools, churches, and other rural establishments.

Many of these unelectrified farms are situated in isolated areas, or in areas of relatively low farm income. Consequently, the most difficult part of the rural electrification job remains to be completed. However, the REA program has succeeded in establishing a pattern which eventually can provide virtually every unserved farm in the country with electric service.

As of August 31, 1949, REA had approved $1,867,949,858 in loans to 1,054 borrowers. They include 968 cooperatives, 41 public power districts, 23 other public bodies, and 25 commercial power companies. At that time, REA had on file or in process in the field, additional loan applications totaling $424,111,000 for new system construction and various line improvements. Most of these applications are for expansion of existing systems financed by REA.

Some 968 of these REA borrowers had rural electric facilities in operation. Their facilities included 870,951 miles of line serving more than 2,871,701 farms and other rural consumers in about 2,500 counties of 46 States, Alaska, and the Virgin Islands. Additional lines are being built more rapidly now than ever before.

Of all the loans thus far approved by REA, over 85 percent have been for electric distribution facilities, to borrowers who buy their power at wholesale rather than generate it themselves. REA makes generation and transmission loans only when borrowers are unable to purchase an adequate supply of power or cannot buy it at reasonable wholesale rates. Only about 13 percent of the REA loans have been for construction of generating plants and transmission lines. About 1 percent of the loans have been made to power system operators for relending to their cussumers to finance installation of wiring, plumbing, and electrical equipment and appliances.

Membership in rural electric cooperatives is not confined to farmers. It is open to all people in a rural area who can be reached and who want electric service. More than three-fourths of all consumers on REA-financed coopera-

tive lines are farms. But also included are many thousands of rural nonfarm dwellings, schools, churches, stores, community buildings, and similar facilities. REA borrowers also serve thousands of rural industries and other commercial enterprises. Many of these rural industries themselves are operating on a cooperative plan.

As of August 31, 1949, REA had advanced $1,327,045,633 in loans to its borrowers. Under REA loan contracts, advances are made as the borrowers need funds with which to pay for construction that is under way or completed.

The difference between the amount of loans approved and the amount of funds advanced represents loan funds that are obligated to borrowers. Most of it has been further obligated by the borrowers to pay for materials ordered for the earliest possible delivery and will be advanced as construction proceeds.

As of September 30, 1949, the borrowers had returned to the Government $213,033,387 in principal and interest payments on their REA loans. This included $19,782,981 in payments on principal ahead of schedule. Only $965,241 was reported more than 30 days overdue. Only one REA loan foreclosure has been necessary to date on an operating power system; it was on a loan that had been made to a commercial power company.

REA has made more than 95 percent of its loans to cooperatives organized under State laws by rural people seeking electric service. These groups which make up about 92 percent of all REA borrowers are local independent private business enterprises. They are controlled by their consumer-members through boards of directors elected annually by and from the membership.

Rural electric cooperatives have proved the most effective instrument for carrying out the REA program because of their advantages as a method of making reasonable cost electric service available to farmers in rural areas. These advantages include:

First. REA-financed cooperatives operate on a nonprofit basis. This enables them to provide electric service at cost to their members.

Second. Directors of REA-financed cooperatives are elected because of their known interest in making electric service available to rural people at reasonable rates. They serve without compensation and keep operating expense at the lowest possible level consistent with good service.

Third. Members of REA-financed cooperatives also are interested in electric service at reasonable cost. For example, they help reduce operating expense by voluntarily reporting potential causes of service interruptions such as tree limbs touching the lines. Most of them read their own meters, and many make out their own bills.

Fourth. Previous experience of farmers with other types of cooperatives helps them to organize and operate rural electric cooperatives on a sound basis with a minimum of effort and expense.

Lines constructed by REA borrowers are built to serve entire areas, including less densely settled sections as well as those of greater population. This is known as area coverage. The test is no longer whether an individual line or section will be self-supporting, but whether the entire system as a whole is feasible. This policy has become increasingly important as the rural electrification job has progressed. Only through area coverage can electric service be extended to many of the more isolated farms, and to others which are remotely situated in pocketed areas far removed from any established source of power.

In every region in the United States rural electric cooperatives have demonstrated that farm electrification, far from constituting an additional cash drain on low-farm incomes, actually brings about a higher real-farm income and better farm living. It brings more business into rural communities. It encourages new local enterprises which come about when low-cost power is available. It stimulates private business, both locally and nationally. Surveys indicate that for every dollar invested in rural power facilities the farmer invests an additional $4.50 in wiring, plumbing, and electrical appliances.

The use of electric power in farm production and processing is constantly expanding. To date about 400 farm uses for electricity have been reported. Electric power on the farm is an economic necessity which can pay its way with handsome profits for the farmer. Guidance is given consumers on REA-financed lines as to which uses are the most efficient and the most profitable in these times of power shortages.

In the State of Montana, at the time REA was established in 1935, only 2,768 farms, or 5.5 percent, were receiving central station electric service. REA estimated as of June 30, 1949, that 23,462 farms, or 62.2 percent of all farms in the State, were served. An estimated 14,285 farms in the State still were without service.

The first REA loan in Montana was approved in May 1936, and the first REA-financed line placed in operation on December 5, 1937, by the Lower Yellowstone Rural Electric Association of Sidney, Mont.

As of September 30, 1949, REA had approved $27,051,598 in loans in the State to 24 borrowers, all of them cooperatives. The loans will enable these borrowers to finance the construction of 16,236 miles of line and other rural electric facilities to serve 31,284 rural consumers. Some of these facilities already are in operation and additional lines are being built as rapidly as possible.

As of September 30, 1949, REA had advanced $20,370,126 as loans in Montana, and the State's borrowers were operating 12,556 miles of line serving 24,066 farms and other rural consumers.

The average monthly farm consumption on REA-financed lines in Montana increased from 76 kilowatt-hours in December 1941, to 211 kilowatt-hours in December 1948.

This increase reflects greater use of electrical equipment to save time and labor in performing farm and household tasks to help bring about a more comfortable rural living.

REA's latest debt-service summary, covering all transactions to September 30, 1949, shows that the Montana borrowers have paid $2,013,340 in principal and interest on their Government loans. This includes $242,158 paid on principal in advance of the date due. Nine borrowers were ahead on their payments and none were behind. None were overdue on loans in the State.

This is a great record for a great program in a great State. It is my hope that the day is not too far distant when every farm in Montana is electrified. I will do everything in my power to achieve that goal.

Resolution of Abington (Mass.) Republican Town Committee

EXTENSION OF REMARKS

OF

HON. DONALD W. NICHOLSON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. NICHOLSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Republican Town Committee of Abington, Mass.:

ABINGTON, MASS.

The Honorable GUY G. GABRIELSON,
Chairman, Republican National Committee, Washington, D. C.

DEAR CHAIRMAN GABRIELSON: We, the members of the Abington Republican Town Committee, realize that once again, as in 1776, Americans are confronted with "a design to reduce them under absolute despotism." The enemies of constitutional government aim to gain complete control of the national income, and they have nearly attained their goal.

Our money has been debauched. Our Government has a public debt over $50,000,000,000 greater than all our country's gold money, and bank deposits, and has concluded this year with a sizable deficit. Unless present expenses are cut, there is the same outlook for the years that lie ahead. Yet, despite this bankrupt condition, those in power have planned ever increasing ways to spend the national income, and sums far beyond it, in their despotic design to enslave our people by extorting the fruits of their labors.

We cannot stand idly by in the face of such threats to our liberty and the liberty of our children. We know that our only defense is to insist that those we send to Washington strive constantly to cut present expenses while blocking all efforts to spend additional money, no matter what the pretense. In that way, and that way only, lies our salvation, and we believe it is the sacred duty of every elected Republican to oppose this traitorous plot at each and every turn.

But this is still not being done. Today Republicans side with the New Dealers on issue after issue, in both foreign and domestic policy, so that we who work to elect Republicans are deprived of representation and are "taxed without our consent."

The situation has become unbearable, and unless we get representation immediately we will no longer support these Republicans. Indeed, we will actively oppose these appeasers at the polls, because we intend to oppose

the enemy wherever he exists; and if the Republican Party cannot offer us a fighting leadership, we will continue the fight alone. We will no longer tolerate bipartisanism by Republicans.

We believe every elected Republican should strive constantly to try to attain the following objectives:

1. To restore a sound monetary system which would stabilize American money and restore to the American people the right of redemption of paper money.

2. To adopt a systematic plan for payment of the national debt.

3. To balance the national budget. We will not condone deficit spending or tax increases.

4. To reduce Federal expenses and eliminate all unessential employees. Taxes must come down.

5. To withdraw the Federal Government from competition with private business.

6. To stop politicians from buying votes by promising Federal aid (resulting eventually in Federal control) for education, public housing, socialized medicine, and socialized agriculture.

7. To eliminate Federal subsidies.

8. To establish a sound tax system that will restore and protect the incentive to produce. We believe the power to tax should be limited by constitutional amendment.

9. To return to States' rights and the restoration of local self-government.

10. To return to the constitutional government of our founding fathers which guaranties to individuals "the right to be secure in their persons, houses, papers, and effects," without fear of confiscation, and the right to work without fear of domination or control from any source.

We join with Abraham Lincoln to say:

"Let every man remember that to violate the Constitution is to trample on the blood of his father, and to tear the charter of his own and his children's liberty. As the patriots of seventy-six did to the support of the Declaration of Independence, so to the support of the Constitution and its laws, let every American pledge his life, his property, and his sacred honor."

As adopted by the members of the Abington Republican Town Committee.

WINSLOW A. ROBBINS,
Chairman.

United States Tariffs and Europe's Import Quotas

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. HORAN. Mr. Speaker, with the rapid recovery strides that have been made in Europe through American assistance, it becomes increasingly important that we recognize the necessity of some realistic thinking on the subject of tariffs and trade quotas. After all our ballyhoo about reciprocal trade, it now appears that the greatest hindrance to resumption of normal trade is not American tariffs but the import quotas imposed by European governments on many of the same commodities whose tariffs have been reduced.

The second most important point is that nearly all of the American concessions on tariffs have been against the interests of our own farmers and small manufacturers. In spite of all the Democrat administration's bleating about the plight of the small-business man, we find small businesses most sorely hurt by dumping of cheap foreign goods. In contrast, many of the items most highly protected by tariffs are made by American monopolies or near-monopolies. Of the 262 items which the ECA commerce mission reported European nations wanted to export to the United States and which were protected by tariffs of 25 percent or more, only 2 were farm products—wool grease and shelled almonds.

In the light of these facts, I have asked the United States Tariff Commission to prepare a statement showing the tariff situation on major commodities at the present time. Under permission to extend my remarks, I ask to include this statement at this point in the RECORD:

UNITED STATES TARIFF COMMISSION,
Washington, D. C., December 29, 1949.
The Honorable WALT HORAN,
House of Representatives.

DEAR MR. HORAN: This is in reply to your letter of November 28 in which you requested a table showing the tariff duties charged by this and other countries on 25 or 50 representative commodities. We have prepared the enclosed table giving information on the treatment of imports of 17 commodities by the United States, Canada, the United Kingdom, France, and Belgium-Luxemburg-Netherlands (Benelux). The data in the table are much less extensive than you requested but we believe any feasible extension of the material would leave it less significant for your purposes than you may have expected. The footnotes to the table and the discussion below will indicate that numerous complexities are involved. We shall be glad if you will inform us if we can assist you further in any analysis of the tariffs of this and other countries that you may wish to make.

We understand that your interest in the data requested arises from your desire to compare the degree of restrictiveness or protection in the import policies of this and other countries. One limitation on any conclusion in this matter that might be arrived at solely from the consideration of the tariff rates of different countries arises from the widespread use of import quotas and other nontariff controls referred to in your letter. Such controls have now superseded the tariff in importance for the bulk of the import trade of many foreign countries. Though these controls are in many cases regarded as temporary, to be moderated and withdrawn as balance-of-payments problems are overcome, it is uncertain when if ever the tariff may assume in many countries its former predominance. (We have not attempted in the enclosed table to indicate the bearing of such supposedly temporary restrictions on the imports of the commodities listed by the foreign countries covered. To do so would require more detailed information on the day-to-day administration of the controls than we are able to maintain.)

Even in the United States, which has not made such extensive use of nontariff trade controls as have many foreign countries, such controls have become of substantial importance or potential importance, particularly with respect to imports competitive with domestic agriculture. The sugar trade of the United States is conspicuously a case in point and United States imports of wheat and cotton and some other commodities are subject to quotas or import licenses. Moreover, section 22 of the Agricultural Adjustment Act makes possible (to the extent not in conflict with international obligations) the application of such controls where imports would seriously interfere or threaten so to interfere with production, marketing, or price support programs brought into operation by the Department of Agriculture. You may wish to refer to our letter to you of October 17 for information regarding the more important aspects of our international obligations in this matter.

Another difficulty arises from the fact that the restrictiveness of the import policies of different countries is probably not properly to be judged by comparing the rates of duty applied by different countries to the same commodities. It would probably be better to use different lists of commodities for each country, each list to be made up in consideration of the character of the industries and resources of the respective countries. Some examples will be useful in explaining this point.

Wool growing is not of much importance to the economies of the United Kingdom, France, and the Benelux countries. These countries are more interested in encouraging their wool manufacturing industries than their production of raw wool. The fact, therefore, that imports of raw wool into these countries are free is probably not of itself to be regarded as an element of liberalism or of moderation in their protectionism. The United States has a wool-growing industry that is of substantial importance to certain areas of the country. In a comparison of the foreign-trade policies of the several countries, free entry of wool into the foreign countries named does not have the same significance as would similar treatment of imports of raw wool by the United States.

Different considerations from those suggested by the wool example give the tariff treatment of certain imports by different countries little significance for a comparison of the restrictiveness of their import policies. For example, the United States is on a large export basis with respect to automobiles and the probability is that imported automobiles would not offer important competition to at least the major part of the United States automobile industry (namely, that producing the standard size American cars) even if automobiles were imported into this country free of duty. For this reason the rate of duty applicable to automobiles imported into the United States is probably of much less importance to the United States automobile industry than are the rates of duty on imports of the automobiles into Canada, the United Kingdom, or France to the automobile industries of those countries. For similar reasons the tariff treatment of imports of newsprint paper into Canada, wool fabrics into the United Kingdom, and wines into France are of less importance than the tariff rates applied by other important trading countries to imports of these commodities.

Another consideration which limits the significance of the data you request arises from the fact that in some countries substantial duties are levied on the imports of some commodities for revenue purposes and with little or no protective intent or effect. For example, a very high duty is levied on imports of tobacco into the United Kingdom but the United Kingdom does not have any significant production of tobacco and the duties on imports are not levied with a view to promoting such production. These duties are primarily designed to secure governmental revenue and, at least in recent years, to some extent for the purpose of discouraging consumption of an imported commodity the bulk of which must be paid for in dol-

lar exchange. Somewhat similar considerations apply in respect of the duties which the United Kingdom, France and other western European countries levy on imports of petroleum and petroleum products. The United States does not use import duties to any considerable extent for revenue purposes.

A full discussion of the problems raised by your request would involve many wide and varied considerations. We trust, however, the foregoing may be sufficient for your purpose.

Sincerely yours,

OSCAR B. RYDER,
Chairman.

Duties on imports of selected commodities in the United States, Canada, the United Kingdom, France, and Benelux, 1949 [1]

[Percentages are ad valorem rates]

Commodity [2]	United States	Canada [3]	United Kingdom [4] [5]	France [5] [6]	Benelux [5] [7]
Caustic soda	½ cent per pound	0.3 cent per pound	10 percent	20 percent	8 percent.
Coconut oil [8]	3 cents per pound [9]	10 percent	15 percent	12 percent	5 percent.
Window glass	20 percent [10]	do	do	20 percent	6 percent.
Automobiles	10 percent	17½ percent	33⅓ percent	35 percent	24 percent.
Pig iron	67 cents per short ton [11]	$2.37 per short ton	25 percent [12]	5 percent	Free.
Lumber, rough softwood	$1 per thousand board feet [13]	Free	4s. thousand board feet (65 cents).[14]	14 percent	3 to 10 percent.
Sugar, refined	0.53 cent per pound [15]	1.7 cents per pound	11s. 8d. per hundredweight (1½ cents per pound).[16]	130 percent	(2 to 5 cents per pound) [17]
Tobacco, cigarette	15 or 30 cents per pound	1.8 cents per pound	£2 18s. 2d. per pound ($8.14) [18]	Free [19]	(2 to 4 cents per pound).[20]
Apples, raw	¼ cent per pound	0.7 cent per pound	Free [21]	8 to 12 percent [22]	6 to 12 percent.
Cotton, short-staple	Free [23]	Free	do	Free	Free.
Whisky (per proof gallon)	$1.50	$8.72 [24]	£4 5s. 5d. ($11.96) [25]	30 percent	(60 to 76 cents.) [26]
Cotton cloth, bleached	17¾ percent [27]	17½ percent, + 3 cents per pound.	20 percent	20 percent	18 percent.
Wool, raw	25½ cents per pound [28]	10 cents per pound	Free	Free	Free.
Wool fabrics, woven	37½ cents per pound + 25 percent.[29]	30 cents per pound + 27½ percent.	17½ percent	15 percent	10 percent.
Wool knit gloves	do [29]	25 percent	20 percent	30 percent	24 percent.
Newsprint paper	Free	12½ percent	Free	25 percent	6 percent.
Gasoline (per United States gallon).	1¼ cents [30]	0.8 cent	9d. (9 cents) [31]	18 percent	Free or (9 to 11 cents).[31]

[1] Latest possible information has been employed. Duties are mostly those which were in effect during November 1949. The tariff treatment may have been different in a few cases because of some temporary special measure. Rates of exchange employed in converting foreign specific rates of duty into United States currency are as of Nov. 1, 1949.

[2] The tariffs of countries covered provide for different rates on subclassifications of some of the commodities listed. In such cases the rate shown opposite the commodity for the particular country may be that for a subclassification believed to be important in the trade.

[3] Specific rates shown are expressed in terms of United States currency only. Commodities which are dutiable when imported into Canada from countries other than those of the British Commonwealth are for the most part dutiable at lower rates when imported from countries of the British Commonwealth. The rates shown are those applicable to imports from the United States.

[4] Of the commodities listed, imports into the United Kingdom from the countries of the British Commonwealth are, except for tobacco, whisky, and sugar, free of duty. The rates shown are those for imports from non-British-Commonwealth countries. Figures in parentheses are the equivalent in terms of United States currency of the British currency converted at the rate of $2.80 to £1.

[5] Quantitative controls for purpose of conserving foreign exchange are of great importance in restricting imports into the United Kingdom, France, and the Netherlands (but not in Belgium-Luxemburg).

[6] Imperial preferences in the French tariff system are relatively unimportant for most commodities.

[7] Belgium, the Netherlands, and Luxemburg have a common schedule of customs duties, as such; but the Netherlands has additional charges on many products, including the "monopoly fees" which are varied from time to time by quasigovernmental economic control boards. Belgium-Luxemburg and the Netherlands have made considerable progress toward a complete customs union, but tariff (and excise) treatment still differs on some products. Where a spread is given in the rates in this column, this is because the duty schedules have not been completely unified (lumber, sugar, tobacco, apples, whisky).

[8] Coconut oil is competitive in considerable degree with most fats and oils used in food and in soap, like lard, cottonseed oil, and tallow.

[9] This is the processing tax collected on the first domestic processing of Philippine coconut oil or on the oil made in the United States from imported Philippine copra. At the present time coconut oil derived from copra imported from sources other than the Philippines is subject to a processing tax of 5 cents a pound and imports of coconut oil as such to a duty of 1 cent a pound and in addition, to the processing tax of 5 cents a pound. The non-Philippine products are imported in very small volume. See U. S. Tariff Commission, Summaries of Tariff Information, vol. 1, pt. 4, pp. 89–92 for complicating details.

[10] The actual rate is in specific terms; 20 percent is the computed ad valorem equivalent: The average rate of duty of the first 3 import classes of common window glass in 1949 divided by average foreign value in 1948 (1.1 cent per pound divided by 5.5 cents per pound), both averages weighted according to 1948 volume of imports.

[11] Expressed as 75 cents per long ton in par. 301.

[12] Volume of imports is greatly affected by concerted action of the British iron and steel industry in conjunction with European cartel and under Government sponsorship.

[13] M board feet signifies "per thousand board feet." The United States rate of $1 per M board foot is made up of 25 cents duty and 75 cents import excise tax.

[14] Primarily for benefit of Canadian and other Commonwealth-country producers. This rate is for the classification in which the competition for the British market is quite active. It does not apply to all imports of coniferous lumber into the United Kingdom.

[15] Rate on Cuban sugar: Import quotas are of greatest importance in restricting the importation of refined sugar (as well as raw). A comprehensive system of Government intervention is in effect, including internal-market regulation and direct subsidies to domestic producers (not refiners of raw cane sugar).

[16] The British duty on imports of sugar originated as a revenue measure. When in the twenties the United Kingdom undertook to encourage and support the local production of beet sugar, a direct subsidy to the growers was quickly followed by a considerable expansion of output. A comprehensive system of marketing controls with considerable governmental participation developed later. The rate of duty shown is the one applicable on imports of sugar from non-Commonwealth sources. Imports from the Dominions enter at a somewhat lower rate and those from the colonies at an even lower rate. The excise tax on sugar closely parallels the customs duty.

[17] The duties as such are, for 100 kilos: 300 francs or 18.16 florins; to the former should be added the Belgian excise tax of 60 francs, a turn-over tax of 2 percent and a stamp tax of 0.45 francs; to the latter, the Dutch excise tax of 27 florins, crisis tax of 2¼ florins, sales tax of 3 percent, and others totaling about 1 percent.

[18] Largely for revenue: Preference for Commonwealth tobacco amounts to about 21 cents per pound. Tobacco is not grown in the United Kingdom; imports from Rhodesia and Canada have increased greatly.

[19] Imports of tobacco are adjusted by a Government monopoly in accordance with regulation of the internal market; operations are conducted so as to contribute substantially to the national treasury.

[20] The duties as such are, per 100 kilos: 413 francs and 25 florins (Belgian and Dutch, respectively). The various internal taxes are additional.

[21] Free during the main marketing season for American (and other Northern Hemisphere) apples. Otherwise dutiable.

[22] These are the rates which are in effect during the principal marketing season for American (and other Northern Hemisphere) apples. During other months of the year, higher rates of duty are in effect.

[23] Protection to cotton growers of the United States is afforded through quotas on the importation of cotton. The internal-market price is supported through Government loans on stored cotton belonging to growers.

[24] Largely for revenue: Excise tax collected on the Canadian product is equivalent to $8 per United States proof gallon.

[25] Duty is largely for revenue and roughly corresponds with excise tax on production in the United Kingdom.

[26] The duties as such are, per hectoliter: 1,000 francs and 60.53 florins (Belgian and Dutch, respectively). Various internal taxes are also collected. The internal taxes differ as between the imported products and those of Belgium and the Netherlands, presenting a definite possibility of further discrimination against the imported product. These are the rates for bottled goods; the alcohol content is not specified in the tariff schedule.

[27] Rate of duty varies with value of the cloth and fineness of the yarn, measured by yarn count. The rate shown applies to bleached cloth valued over 80 cents per pound and of 31-yarn count, one of the important categories of commerce.

[28] This is the rate per pound of clean content applicable to wools of apparel type, i. e., of grades finer than 44's; in the grease. This is the most important category of imports. Carpet wools are free of duty.

[29] The specific part of this compound rate of duty serves as an offset to the cost of the duty on the raw wool used by the domestic manufacturer, leaving the ad valorem part of the rate as that intended to be protective of domestic production of the fabrics. The rate shown for woven fabrics is for those over 4 ounces per square yard and valued at more than $2 per pound; for gloves, those valued at more than $4 per dozen pairs.

[30] Import-excise tax. No duty as such.

[31] Free for industrial use only.

Cotton-Acreage-Allotment Program

EXTENSION OF REMARKS
OF
HON. TOM MURRAY
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. MURRAY of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely, sensible resolution adopted by the directors of the Henderson County, Tenn., Farm Bureau, on December 17, 1949, and a letter from Mr. John H. Pitts, of Cerro Gordo, Tenn., who is one of the most prominent farmers in my congressional district with reference to the cotton-acreage-allotment program under Public Law 12 of the Eighty-first Congress. Both the resolution and the letter present recommendations for the elimination of inequities and injustices under this program.

RESOLUTION

We, the directors of Henderson County Farm Bureau, in regular meeting in Lexington, Tenn., on December 17, 1949, unanimously recommended that the Congress, as early as possible upon reconvening in January, amend Public Law 12—special legislation on cotton acreage allotment for 1950—to remove inequities in distribution of acreage to growers.

We object to present law for following reasons: (1) does not give some growers just share of county allotment which their farms help obtain; (2) ignores special adaptation of soil, capital investment, and farmer

experience on certain farms to favor those growers in more diversified areas of county who have less interest and are less dependent upon cotton growing; (3) discriminates against the small farmer who has been growing 15 to 50 acres of cotton and favors the larger diversified farmer; (4) sets a dangerous precedent—should history of corn growing, hog production, etc., be ignored on the individual farm in any future control program as in case of cotton, diversified farmers and areas would be ruined just as under present law; (5) while the high percentage of cropland devoted to cotton in the past on some farms cannot be strongly defended, we do challenge the wisdom of applying the cropland factor which forces a sudden and unsound change in farming. Many farmers are not prepared for this change and many tenants will lose their homes.

We recommend that the cotton acreage control law be amended to include the following: (1) that no farm be alloted less in 1950 than 75 percent of average acreage planted to cotton during years 1946, 1947, 1948; (2) that law be amended to put cotton allotments permanently on history of individual farm production beginning crop year 1951.

LETTER OF JOHN H. PITTS

HARBOUR-PITTS CO., INC.,
Cerro Gordo, Tenn., December 27, 1949.

Hon. KENNETH MCKELLAR,
Senate Office Building,
Washington, D. C.

Hon. TOM MURRAY,
House Office Building,
Washington, D. C.

MY DEAR SENATOR AND CONGRESSMAN: I have seen no darker future, since the days immediately following 1929, than that now facing us under the application of our present farm-cotton program.

My friends, it is not so much the cut-back or reduction of acreage, which is to put our tenants and sharecroppers off the farms and on the roads looking for other jobs and finally on relief, but the new process of allotments of acreage—allotting to farms on the basis of acreage and regardless of whether or not the farm is suitable to cotton or whether or not the same has been planted to cotton in former and recent years; in fact, it seems, whether or not the farm wants or has any use for cotton acreage.

Apparently, as I reason, this program is attempted as a permanent program, though untried; in my judgment it will largely bankrupt our cotton States in less than 12 months, as a temporary program, provided the injustices or inequities cannot be corrected in its application.

Let me cite you a few cases, of which there are no reasonable estimate of the thousands:

First. Myself and three brothers are the owners of a farm near the mouth of Indian Creek, about 900 to 1,000 acres, largely uplands suitable to cotton but little acreage suitable to other than cotton. In former years we have had as much as 200 acres in cotton. On this there are nine tenant families, a number of them heavily in debt for machinery and other necessities, and all equipped for raising cotton. This farm has an allotment for 1950 of 53 acres for cotton, a little over 5 acres to the family, and will produce under favorable conditions about one-half bale to the acre. How are these tenants or families to avoid bankruptcy?

The adjoining river bottom farm of about 400 acres, on which there is not a tenant house and which, as informed by the man who has it in charge, has had no cotton planted on it since 1941. Yet this farm has an allotment for 1950 of 26 acres and probably not an acre of it rented or wanted for cotton. As I understand it, this condition is common all through this Tennessee River section, if not all over the Cotton Belt.

Secondly, a man, tenant from the eighth district of this county (know him but can't recall the name) came to me yesterday, said: "Mr. Hardy, I'm here to see if you and your brothers can furnish me a crop for 1950, will take any kind of a crop of sufficient size to make a living for myself and my family—wife and four children, all except our baby raised in the cotton patch and know nothing else." When I advised him that we were wholly unable to supply him, that our allotment was no way near what our present tenants needed, he said, "I had my same lands rented for 1950, but now my landlord is so badly cut back in his allotment as to have no land for me and I have to move, and I've nowhere to go." Gentlemen, this poor man's voice was trembling and I thought I could see tears in his eyes. It was a heart-rending scene.

Thirdly, the above man was accompanied by a young man by the name of Bridges and said Bridges advised that his father had a good tenant and no acreage for him and that his father had offered to give his tenant $100, if he could find a location. Surely, my friends, we should find a better route than this.

Fourthly, a Mr. Samp Boroughs, just across Indian Creek from our aforesaid Indian Creek farm, bought in late 1948 some 88 acres of upland off a 400-acre tract, largely in Indian Creek bottom. The above purchase of 88 acres of upland from the tract composed more than half the entire suitable cotton lands of the whole and on which the said Boroughs had 8 acres of cotton in 1949. His allotment for 1950 is, as shown by his papers, one-half acre, and, as I further understand, Boroughs owes mainly the purchase price of the 88 acres. What's to happen to him?

My friends, we need a more equitable distribution of this cotton acreage. We need this acreage distributed to cotton lands and cotton farmers, not to lands not suitable and not wanted to be planted to cotton. Our cotton farmers are equipped to raise cotton and those who handle heavy lands, not suitable to cotton, are equipped to raise other crops and, as is common reason, have no use for cotton lands. In other words, use the old method of distributing according to former acreage, at least temporarily until our people can become adjusted to such radical changes and by which we would hope that all could manage to get by, at least to the extent to keep them in their little homes and off the relief rolls.

Senator and TOM, as a permanent plan for agriculture, which must be found if we are to maintain our present high standard of living and ever pay our Government debts, am fully convinced that our only chance for success in this great undertaking is to be found in some properly administered domestic allotment plan, giving the American producer the American market—that is, full parity on that portion of his production domestically consumed or used, freeing him to further produce as he sees fit for the world's market at the world prices, and as to cotton, it would seem to me that such should be based on baleage or pounds of lint cotton, rather than on acreage, in an effort to place all sections with lands rich or poor on an equal basis. Of course, in such plan our producers would have to be protected by tariff against pauper or less paid labor. I have no faith in any plan which restricts production—such plan as advocates doing nothing to create something.

Now in conclusion, back to our present farm program: It is my opinion that, if we cannot get these inequities out of this program, then we will need no further boosts to our next depression; think this will complete the job in the next 6 to 10 months and, although I am in my seventy-second year and have seen a number of depressions, in my further judgment, this will, or would, be the first depression to be forced upon our people and by a wrong application of a well-intended program.

Sincerely your friend,

JOHN H. PITTS.

Freight Forwarders and Federal Regulations

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I take pleasure in including the splendid address delivered by United States Maritime Commissioner David J. Coddaire at the thirty-third annual dinner of the New York Freight Forwarders and Brokers Association, Inc. The subject of Commissioner Coddaire's address was most timely especially since it is recognized that he has become an outstanding expert on the subject. It would do well for all interested parties carefully to read Commissioner Coddaire's address in the light of the forthcoming proposed regulations of the freight-forwarding industry.

The address follows:

It would be difficult, indeed, to say anything about freight forwarders that you have not said about yourselves in the public record covering the recent cases before the Maritime Commission involving your industry. You have undoubtedly heard the old saying that the best way to teach a child to swim is to throw him in deep water. Shortly after I took office with the Maritime Commission, the Chairman referred to me the job of preparing the findings and recommendations in the then pending dockets concerning the freight-forwarding industry. There I was, a complete neophyte, thrown into the monstrous pool over 6,000 pages deep into which I had to dive and then work my way to the surface. Whether you feel I have learned to swim or merely to do a fast dog paddle depends upon your individual reactions to our decisions.

During the past two decades there has been a steady trend toward Federal regulation of all industry having an interstate or foreign-commerce aspect. Today, almost all such industry is subject, in some form or another, to Government-imposed restrictions. The freight-forwarding industry, as represented by your association, is no exception. Its sole distinction is that this regulation has been delayed longer than in most industries similarly situated. Whether one agrees with the concept of Government regulation in the public interest or not, the fact remains, it is here.

That the business of freight forwarding in the foreign commerce of the United States is subject to the jurisdiction of the Maritime Commission has been decided by the United States Supreme Court. Since then, the Commission has issued its reports in two cases involving freight forwarders and has taken action concerning the regulation of the forwarding of foreign relief and rehabilitation cargoes financed by our Government. While the various dockets are dissimilar, I feel it important to tell you of the principles upon which the Commission has made its decisions.

The public has an interest in every person's carrying on his trade freely; so has the individual. With respect to freight forwarders, among others, so has the Maritime Commission. There is justification for Federal regulation of individual business conduct only if such restriction is reasonable—reasonable, that is, in reference to the interests of the parties concerned and reasonable in reference to the interests of the public, so framed and so guarded as to afford adequate

protection to those in whose favor it is imposed, while at the same time not unnecessarily injurious to the regulated group. That, I think, is the fair result of the rules recently promulgated by the Maritime Commission in your interest.

I consider the Maritime Commission essentially as a public agency for the preservation of free enterprise and reasonably free competition in the carrying on of the foreign commerce of the United States. We have stated formally and to the world that freight forwarders play an important part in that commerce. We have prescribed measures of conduct for the forwarding industry based upon a common idea of reasonableness or fairness. Many of the complaints put forth in the investigation of freight forwarders contain a large moral element, so that the application of our rules calls for common sense and cooperation, not bureaucratic dictatorship or Government control.

If you have understood these comments, I must say you are possessed of astounding faculties of mental absorption and have been extremely attentive. I have read over the statements quite a few times since preparing them and must confess that they are somewhat involved. Boiled down, I merely have attempted to state my feeling that reasonable rules of conduct coupled with a voluntary code of ethics on the part of your association should result in the removal of most of the criticism that heretofore may have been directed toward some of those engaged in the business of freight forwarding. The ordinary shipper may be likened to the average purchaser, who is probably less informed than we think he is; he is generally inattentive, sometimes indifferent, and quite often careless. The shipper depends upon you gentlemen for the technical advice and professional handling of his export products. He is entitled to fair treatment, reasonable charges for the services performed, and freedom from discrimination.

Coming now to the brokerage case, I assume that you have heard about the recent decision in that proceeding. There again the freight forwarders offered page after page of testimony about themselves, and how indispensable they are. If nothing else, I must say you have not been bashful nor modest in the presentation of your facts. The Commission's decision in that case, concerning steamship conference prohibitions against brokerage, again recognizes the principle of free enterprise by holding that a carrier should, within stated limits, be free to pay brokerage or not as his individual managerial discretion dictates. Outright conference prohibitions against brokerage were condemned. Thus far no conference has amended its agreement or taken other necessary steps to accomplish the removal of the prohibition. As in any other case, my full support will be given to the enforcement of our decision. The Commission will, and must, on its own motion if necessary, enforce compliance with its official decisions.

May I point out to you that the Commission's authorities in connection with freight forwarding follow two patterns. On the one hand we have regulatory authority to protect the public against unfair and unreasonable actions by forwarders. Our second type of authority involves the protection and preservation of private freight forwarding facilities. We must always be astute to maintain a proper balance between the two purposes to be served.

The so-called Bland Freight Forwarding Act, section 217 of the Merchant Marine Act of 1936, as amended, is illustrative of the Commission's authority to regulate for the benefit of the forwarding industry. While on that subject, I might mention that a major problem facing the freight forwarding industry during the coming year will revolve around the Bland Act. Enacted during wartime and under highly volatile conditions, that act is broad in its terms and lacks clear definition of what the Commission's policy and authority should be. In order to fulfill its duty under the act, the Commission must have a more concrete expression of what the orders from Congress are. Accordingly, the Commission is considering going to Congress on the future of the Bland Act. Some people have advocated complete repeal on the grounds that it is unenforceable in its present terms and unnecessary. Others have proposed modification and clarification by the Congress. What the ultimate action of the Congress will be, I cannot tell. It will be incumbent upon the individuals interested to make their views known to the Commission and the proper congressional committees.

The Maritime Commission has jurisdiction only over those types of unfair trade practices that violate the shipping laws, and, as I have indicated, appropriate proceedings will be taken by the Commission to prevent the continuance of such practices. Other trade practices exist in the forwarding industry, as well as other industries, which are not in themselves violations of law yet are considered either to be unethical, uneconomical, or otherwise objectionable. Here is a field in which voluntary associations such as yours can do much for your own benefit as well as the benefit of the commerce of the United States and the American merchant marine.

Within the last 18 months or so, I have noticed there has developed a measure of cooperation between the Maritime Commission and the freight forwarding industry. Your association has been a leader in developing these closer ties. I am sure the Chairman, other Commissioners, and the staff of the Commission stand ready to continue this cooperation and to work with you in building a voluntary code for the forwarding industry over and above the matters of pure regulatory authority of the Commission. Cooperation along these and other lines should develop during the coming year a practice which will assure the maintenance and growth of a privately owned American freight forwarding industry capable of handling what I hope will be an ever increasing volume of exports from this country to the other nations of the world.

Whither Are We Drifting?

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which was published in the Fairmont Daily Sentinel, Fairmont, Minn., on January 2:

WHITHER ARE WE DRIFTING?

On this first day of the new year it is well to take stock of the prospects ahead, and with that in mind it will not be amiss to ponder the ultimate result of increasing governmental encroachment on individual initiative.

At the outset, let us say that what follows is not an attempt to decry, to view with alarm, or to point with horror. It is merely an attempt to encourage the individual, each for himself to take stock of what is transpiring.

Have we arrived at an age where we must be told how much we can produce, when our hens are permitted to lay, and at what price? Must we have such controls to protect ourselves against overproduction, glutting the markets, and destroying demand?

If such controls must be placed on corn, eggs, cotton, soybeans, poultry, livestock, peas, sweetpotatoes, dry beans, oats, barley, cottonseed, wool, turkeys, and grain sorghums and the number of hours we are permitted to work who shall say we shall not one day have controls that will determine what we may eat and when; what we may wear?

This Nation became great under a system that stressed individual initiative and incentive. It did not become great through governmental regulation that would stifle initiative and individual effort. The sky was the limit, and the men of that era took care of the Government instead of demanding the Government take care of them.

Congress will soon be in session, and now as never before, it behooves the public to keep a keen eye on what the visionaries have in their minds to further regiment and enslave under a crushing, mounting tax burden, the people of this Nation.

Christmas is over and we've played Santa Claus long enough.

Deficit Spending and Hidden Taxes Are Wrecking Our Economy

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. VAN ZANDT. Mr. Speaker, on January 10, 1950, it was my privilege to address the Pennsylvania Poultrymen's Association banquet at the Penn-Harris Hotel, Harrisburg, Pa. This banquet is held each year during Pennsylvania's great farm show.

My remarks follow:

It is a genuine pleasure for me to be here tonight. I am always glad to get away from Washington and mingle with my fellow Pennsylvanians. You men and women are producers of food, income, and wealth. What a contrast there is between your group and the bureaucrats in Washington who spend a lot of time and energy devising ways and means of spending the income which you produce.

I find it gratifying and encouraging to be invited to speak to a group of your character. You are independent and self-reliant, able and wanting to stand on your own feet rather than waiting in line for Government handouts and subsidies. In this day and age after 17 years of New Deal-Fair Deal philosophy it is rather rare to find a producing group like you poultry growers who are not clamoring for more Government aid of one sort or another. Some of our people talk strongly for free enterprise but are first in line for the hand-outs. I consider it an honor to be invited to speak to you.

I come to you from Washington where, during the past week, we have had the second—perhaps it is even the seventh—veil dropped from the Fair Deal body. If there was ever any doubt what the veils covered before, that is no longer the case. Although the surface curves and lines may look superficially attractive and tempting, the bones and muscles are those of state socialism, the poorhouse state or what you may choose to call it, and they are nurtured by Government spending, and it is deficit spending at that.

On January 4 we heard the President deliver his annual message on the state of the

Union in which he spelled out once again his so-called Fair Deal programs. You may have judged from the newspaper and radio accounts that most everybody thought that it was just ducky. It is true that the President was in good speaking form and that his tone was conciliatory. He did not ridicule the Republicans and call his opponents vicious and reactionary. But just read his message and you will see that he is still calling for the same socialistic and spending programs as when he was openly declaring war on those who oppose their enactment. So I warn you not to believe that the leopard has changed his spots. No amount of camouflage can hide the socialistic spots.

On January 6 we heard the President's economic report which merely provides academic dressing for the Fair Deal program. On January 9 we got the full impact of the cost of Mr. Truman's plans with the submission of his budget for the fiscal year 1951, which is in excess of 42 billion dollars. Make no mistake, our pocketbooks are to be raided again and again unless we stand up and fight this trend toward more and more Government hand-outs and spending.

A colleague of mine in the House has summarized the issue well when he said:

"The issue * * * is the choice between freedom and Socialist baloney. They may call it planned economy, the Fair Deal, or social welfare. It's still the same old Socialist baloney any way you slice it. Believe me, I am well aware of the Communist threat, and I do not discount it. But I am convinced that an even greater threat to our free institutions is presented by that group of hypocritical and cynical men, who, under the guise of providing political cures for certain social and economic problems in our society, are selling the American birthright for a mess of political pottage. Slowly they are chipping away the freedoms which are essential to the survival of a healthy, strong, and productive nation."

Former Senator, Supreme Court Justice, and Secretary of State James F. Byrnes, of South Carolina, gave us a vigorous warning last June when he said:

"We are going down the road to statism. Where we will end up, no one can state. But if some of these new programs, seriously proposed, should be adopted, there is danger that the individual, whether farmer, worker, manufacturer, lawyer, or doctor, will soon be an economic slave pulling an oar in the galley of the state."

Now some of you may think and say to yourselves that what I have just said is nothing but Republican political oratory. You may say we are going along pretty well and haven't been hurt—at least hurt much—by these so-called socialistic and spending programs. I want to be doubly frank with you when I say—it is later than you think—and let me just give you a couple of examples.

Let's take this Government spending—and let me remind you that we are back to deficit spending again—spending more than we take in to the tune of $5,500,000,000 this fiscal year. Some of you—I hope most of you—may have seen the figures in the Reader's Digest for December which show that during the administrations of our first 32 Presidents (Washington through F. D. Roosevelt's second term, 1941, excluding the war years of 1941–45) our Federal Government spent nearly $180,000,000,000 while under President Harry S. Truman in less than 5 years (July 1, 1945–September 30, 1949) the Government has spent the stupendous sum of over $191,000,000,000. In other words Mr. Truman has spent more in 5 years than all other Presidents spent in 156 years.

And I also wish to add that the Fair Deal total is mounting daily so that by next June Government spending will amount to more than $225,000,000,000, which the mathematicians call one-quarter of a trillion dollars. Furthermore, you should know that during the first half of the current fiscal year, June–December 1949, the Truman administration spent $20,974,000,000 which was $3,300,000,000 more than the Government took in. The deficit piled up at the rate of $18,000,000 a day. It certainly takes a lot of poultry and eggs to make up that deficit. Our national debt is now $257,000,000,000 which is about $1,700 for each and every man, woman, and child in the United States.

Now let us look at it in a little different way. Government—Federal, State, and local—is costing us $55,000,000,000 to $60,000,000,000 a year and of course the Federal Government accounts for about three-quarters of the total. Do you know that since 1932 the cost of our Government has increased 100 percent and our population 20 percent? In 1931 the per capita cost of our Government was $33 and now it is $333.

About 25 percent of all the national income produced in this country goes to government. Look at it this way: One chicken out every four and three eggs out of every dozen which you produce is taken by government. You poultrymen work nearly 2 days a week for the Government.

Do you know that there are at least 100 taxes on a dozen eggs, 151 taxes on a loaf of bread, 116 taxes on a man's suit, and 150 on a woman's hat?

There are about 11½ cents of taxes in the cost of a pack of cigarettes, and $300 to $500 on a $2,000 car.

This year the average family pays about $700 in hidden taxes, beyond income taxes. The average family pays in a year, $45 on tobacco, and $49 in the cost of gasoline. Sales taxes take another $48 and corporation income taxes—which the consumer also pays in the form of higher prices—take a healthy $317 out of the average family's purse. (Newsweek, December 12, 1949.)

I am confident that you will agree with me that this condition of high taxes and high spending is cause for serious concern and united action to correct it. You know that we now have a big deficit in Washington but do you know that Mr. Truman is soon going to ask for higher taxes. He may do it in a way which appears to be painless but a tax is a tax and the Nation has to pay for it. We must reduce this Government spending by cutting appropriations to the bone. But that is not enough. We must stand together in opposing and resisting proposals for new programs which once established will require many billions in addition to our current spending. Moreover, once the foot is in the door programs such as socialized medicine cost more and more year by year.

For a moment let us consider the deficit of $5,500,000,000 for this fiscal year. If Congress were to be called upon to increase taxes to meet this deficit it would mean that corporate taxes and personal income taxes each would have to be increased 18 percent. Already we are paying 20 percent of our income to the Federal Government in personal income taxes, and an additional 18 percent would make a total of 38 percent of our personal income paid to our Government in personal income taxes.

It is interesting to observe that those nations who have suffered economic collapse did so when their citizens were taxed 35 percent of every dollar they earned. Here in the United States the average citizen is now paying better than 30 cents in taxes out of every dollar he earns. Because of available resources and the ingenuity of the American people, some believe we can safely pay 35 cents or possibly 40 cents in taxes out of every dollar earned. We are warned, however, that once you reach the danger zone of 35 cents, our Nation is flirting with national bankruptcy.

The stark truth of the matter is that if we at the time of high prosperity deliberately embark on a program of deficit spending it is doubtful—very doubtful—that the budget of the United States will ever be balanced, unless our fiscal system is destroyed and we undergo the terrific hardships of the reestablishment of a solvent currency.

Next, let us take a second example of how the Truman socialistic program affects or can affect you. I want to refer to the agricultural program, particularly the Brannan plan, which the President and his cohorts are trying to sell to the farmers and the Nation.

During the past few years you have had considerable experience with the parity price support, production goals, and other agricultural subsidy and control programs of the Federal Government. You have also had plenty of experience with price controls, rationing, and poultryless Thursdays under the "Kluckman plan" back in 1947. You know also about the price-support provisions of the wartime acts, the Agricultural Act of 1948 and that of 1949, which is now in effect.

Now we come to the Brannan plan, which would enslave the American farmer and poultry producer in return for a promised security which would cost billions of dollars. You no doubt know more about the details of the Brannan plan and how it would work out than I do. I am sure that you will not be lured into supporting such a program by the bait of direct-production payments to provide you the promised 100 percent of parity income. You know that in order to carry out such promises your whole production and distribution will be controlled from Washington, and we will go completely bankrupt meeting the costs. Using football terminology, the Brannan plan is a real mousetrap play—they open a hole and invite you in—and then you get smacked plenty from both sides.

Much as we would all like to get out of this business of price supports, subsidies, controls, etc., we know we cannot do it all at once. You did not ask for the supports but as long as the other segments of agriculture get Government assistance which increase your feed and other prices, you should be protected from disaster by some guarantees. That I understand is your position and I certainly concur. That is what we did in the Agricultural Act of 1948 and it has been continued in the 1949 act.

In conclusion let me say that it is a privilege to come here and speak to you. I have been very frank and forthright in attacking the socialistic trend that dominates the administration in Washington. I oppose it and want to do everything in my power to stop it. Government spending, yes, deficit spending, is its lifeblood. We must cut down that spending which is sapping the lifeblood of our economy. But we must also be hardheaded and reject the many proposals for more spending or we will have failed in our task.

I hope you agree with me that the danger is real and that it is later than you think. You people have demonstrated that you want to stand on your own feet and not live on Government subsidies. As farmers and poultry producers you see the threat to your liberties in the Brannan plan. As consumers and taxpayers you should know what this socialistic program is costing you. And remember that much of the cost is hidden in indirect taxes. But the cost is there just the same, and you and I and all the country, are paying dearly for it.

The Late Bernard W. Doyle

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include a statement which I recently made on the occasion of the passing of the late Bernard W. Doyle, of Leominster, Mass., one of the outstanding businessmen and philanthropists of our State.

He was such an amiable man, such a beautiful modest character, such an outstanding citizen and business genius, such a wholehearted supporter of worthy causes, such a generous unselfish giver that I could not possibly in such short space give adequate expression to the superb qualities which so endeared him to his friends and community.

Surely his good works, charity, benevolence, and unselfish character will long be a source of inspiration and example to his fellow citizens. His virtue and selflessness will long be remembered. We will miss him. But his memory will remain with us always.

I include herein several newspaper excerpts concerning his untimely passing:

[From the Worcester (Mass.) Telegram of December 27, 1949]

CONGRESSMAN PHILBIN LAUDS LIFE OF BERNARD W. DOYLE

Congressman PHILIP J. PHILBIN, of Clinton, last night issued the following statement in connection with Mr. Doyle's death:

"In the untimely passing of Bernard W. Doyle the State and Nation have lost a great and most distinguished citizen, his home community a loyal, ever-thoughtful son, and his family a devoted husband and father.

"His career which started from humble beginnings and carried him to a foremost rank in the industrial and business life of the Nation vividly illustrates what the individual can achieve under our system of free opportunity when he is possessed of ability and imagination, is inspired by zeal and determination, and is motivated by ideals of service and love of humanity."

GAVE FREELY OF HIS TIME

"Great as his business achievements were, they were overshadowed by his sincere devotion and tireless work for the betterment of his fellowman.

"Bernard Doyle gave of himself unstintingly and unselfishly in all his many endeavors. He was a man of extraordinary and versatile talents, but the thing which distinguished him most was his profound sympathy for and eagerness to help the people of the rank and file.

"A very large part of his active and fruitful life was spent in quietly and modestly assisting the sick, the infirm, and the unfortunate. He was benefactor literally to thousands of fellow citizens. Many poor boys striving for an education know of his generosity."

AIDED MANY PROJECTS

"A philanthropist in the best sense, often anonymously, he not only gave of himself, his energy, his great administrative powers, but also lavished his fortune in order to sustain and expand numerous charitable, religious, and educational works which benefited many individuals and many worthy causes in his own city of Leominster, which he loved so dearly, and elsewhere.

"He was a man of noblest impulses, innately good, humane and kindly. By his unselfish and constructive life, he contributed immeasurably to the fulfillment of the age-old precept—'Love Thy Neighbor as Thyself.'

"No success story could excel his phenomenal rise from humble station to high place in industry, finance and charity. Yet he always was modest and unassuming. About him at times there was almost an air of self-effacement. He believed in sharing his success with others.

"Bernard Doyle was my friend for many years and I greatly esteemed and admired him. I am very deeply moved by his death and join with his family and friends in mourning the irreparable loss. He was a faithful and warm-hearted friend—a friend not alone of individuals but of great causes—causes of mercy, charity, justice and kindness—a friend of the common people.

"Of course, his place in the community can never be precisely filled because in this generation no man could succeed as he did through ability and effort in accumulating substantial wealth and then using it so wisely and so generously for the public good and for the good of so many not so fortunately situated.

"He will be widely mourned. His life's work will long remain as a monument to the great civic and spiritual virtues which he possessed in such abundance—his goodness of heart, his loyalty, his humility, his benevolence, his devotion to his fellow men and women.

"I extend deepest sympathy to his bereaved family for their irreparable loss.

"May he find rest and peace from worldly toil in his eternal reward."

[From the Leominster (Mass.) Daily Enterprise of December 27, 1949]

B. W. DOYLE DIES HERE AT HIS HOME ON LINDELL AVENUE—SERVICES TO BE CONDUCTED ON THURSDAY—ALL CITY DEPARTMENTS WILL CLOSE DURING FUNERAL OF FORMER MAYOR, WIDELY KNOWN BENEFACTOR AND CIVIC LEADER

Bernard Wendell Doyle, 76 years old, one of Leominster's most distinguished citizens, a pioneer in the city's industrial life, widely known for his philanthropies, his business and executive ability and public service, and a former mayor of Leominster, died yesterday at his home, 245 Lindell Avenue.

SERVICES

The funeral will be held Thursday morning from his late home at 9:15 o'clock followed by a solemn high requiem mass in St. Leo's Church at 10 o'clock. Burial will be in the mausoleum in Evergreen Cemetery.

Calling hours at the late home are 8 to 10 tonight and 3 to 5 and 8 to 10 p. m. tomorrow.

In a statement today Mayor Ralph W. Crossman said: "A truly great leader, who symbolizes what man should be. His memory will long live in the hearts of our Leominster people. How fortunate we have been here to have had the support and backing of the unselfish contributions of money, time, and energy of such a man as Mr. Doyle. He is ours, gone, but never to be forgotten."

DEPARTMENTS

All city departments will close during the funeral and all its employees are requested to attend the services. City Hall will be closed during the forenoon.

The Thomas F. Wright Funeral Home is in charge of arrangements.

Trustees of Leominster Hospital, the medical staff of the hospital and Leominster Hospital employees will attend the services in a body. They will meet in front of St. Leo's rectory at 9:45 o'clock Thursday morning.

Mayor Crossman ordered flags on all public buildings and on the common placed at half-mast out of respect for Mr. Doyle.

Born in Leominster, Mr. Doyle was the son of the late Mr. and Mrs. Bernard Doyle. He was educated in the public schools of Leominster, graduating from Leominster High School and entered the Eastman Business College in Poughkeepsie, N. Y.

EMPLOY

On completion of his studies there, Mr. Doyle entered the employ of the Horn Supply Co. here, and in 1897 became secretary and general manager of the company.

In 1901, in association with Alexander S. Patton and Ludwig Strauss, he established the Viscoloid Co., Inc., of which he was secretary and treasurer. The concern ranked as one of the largest of its kind in New England at that time.

In 1925 he became associated with the du Pont interests and the Viscoloid Co. was then reorganized as the du Point Viscoloid Co., serving as vice president and director.

KNOWLEDGE

Mr. Doyle's comprehensive knowledge of every phase of the business and his marked ability was considered one of the important factors for its continued success.

In 1925 he became mayor of Leominster and served the city for two terms as the chief executive during which time many improvements were undertaken.

In 1930 the Leominster plant was renamed the Doyle Works plant of the E. I. du Pont Co. in honor of Mr. Doyle and in appreciation for his contributions to the industrial life of Leominster and to the plastics industry as a whole. He retained an active interest in the company and served as vice president and a director until his retirement in 1938 at the age of 65.

ACTIVITIES

Mr. Doyle not only confined his interest to business activities of his company, but he was vitally interested in banking and financial affairs of Leominster and Fitchburg. He was director and one of the founders and organizers of the Merchants National Bank of Leominster and a director of the Safety Fund National Bank of Fitchburg. He was a trustee of the Leominster Savings Bank and was financially interested in other industrial concerns.

A stanch Republican in political affairs, Mr. Doyle in 1920 and 1924 was one of the delegates to the Republican National Convention from Massachusetts.

On taking over as the city's chief executive, the second in the city's history, Mr. Doyle sponsored projects for municipal improvements and was responsible, in part, for the erection of the junior high-school building and the start of development of the No-Town reservoir as a part of the city's water supply.

HOSPITAL

The city boasts several monuments which will perpetuate his memory. One of these is the Leominster Hospital, the site for which he presented to the city and through his zeal, generosity, and enthusiasm, and interest the hospital is rated as one of the best in Massachusetts.

Mr. Doyle served as president of the hospital association and as head of the trustees of the hospital and gave unstintingly of his time, finances, and energy toward its expansion.

On October 30, 1939, he established a $200,000 trust fund.

Still another monument to his memory is the beautiful 20-acre Doyle field stadium which bears his name. This was constructed at a cost in excess of $200,000 and given to the city by Mr. Doyle and dedicated to the youth of Leominster.

In keeping with his interest in youth and wholesome recreation and athletics, Mr.

Doyle also established, about the time Doyle field was opened in 1931, a scholarship fund to aid students to attend college and many have taken advantage of this scholarship fund since that time.

Many of his philanthropies will probably never be made known since he was always ready to lend a helping hand when the need was apparent.

In 1909 Mr. Doyle married the late Elizabeth H. P. Haley and they had two children, Marjorie Elizabeth, a graduate of the Bennett School at Millbrook, N. Y., and the Garland School of Boston, who is married to Richard C. Rockwell, and residing in New York; and Louise Doyle, a graduate of Mount Vernon Seminary in Washington, D. C., and Smith College.

He also has a sister, Mrs. Alice Sullivan, and a brother, Frank Doyle, both of Leominster, and two grandchildren.

On February 27, 1945, Mr. Doyle was elected a director of the Boston & Maine Railroad and at that time was a director of the Merchants National Bank of Boston, the Massachusetts Mutual Life Insurance Co. of Springfield, the Boston Edison Co., and the United States Rubber Co. He also served as a member of the finance committee of the board.

Mr. Doyle held memberships in the Boston A. A., the Oak Hill Country Club of Fitchburg, the Monoosnock Country Club, the Eastern and Corinthian Yacht Club of Marblehead, the Algonquin Club of Boston, the Fay Club of Fitchburg, the Homer Market Club of Boston, the State Republican Club, and was identified with the Boston Chamber of Commerce and Associated Industries of Massachusetts.

He was also a charter member of the Fitchburg Lodge of Elks, life member of the Leominster Sportsmen's Association, a member of the corporation of Northeastern University, trustee of Cushing Academy in Ashburnham, a member of Fitchburg Council, Knights of Columbus, and the Leominster Aerie of Eagles, the Links Club of New York, the United States Navy Club, and the Walsh Memorial Committee.

INTEREST

Mr. Doyle was interested in hunting, fishing, and cruising, and owned a yacht on which he made several cruises.

A stanch supporter of New England, he was ever optimistic over its future. Born in a typical New England manufacturing community he was a keen student of its history and a highly successful businessman who had risen to the highest position in an industry in which he was a pioneer.

On August 30 this year, Mr. Doyle married the former Rachel Butler Holbrook, of Palmer.

[From the Leominster (Mass.) Daily Enterprise of December 27, 1949]

BERNARD W. DOYLE

The passing of Mr. Doyle brings to the community a keen sense of great loss. For the city, both as a private citizen, as an industrial leader and as a public benefactor, and as a public official Mr. Doyle gave richly of time, of ability, and of help.

To him there will long stand many monuments. Those monuments will rise in the enduring esteem and affection in which a community held him. They will stand forth brightly in his many public benefactions, in those many things which he did in such generous measure for the good of the individual, for the advancement of the community.

Many of Mr. Doyle's benefactions are known. But there are those which are not, those kindnesses which he bestowed upon the many, that help which he gave to the many. In all things that were to aid others, to make their path easier, their life brighter, Mr. Doyle gave in the fullest and finest measure.

Doyle Field, one of the most magnificent football fields in the Nation, the Leominster Hospital, in its beginning and in its growth, are, to mention but a few things, evidences of his interest in the public good and in the welfare of that community which was so long his home and to which he gave his efforts in such full measure of devotion.

As mayor of Leominster, Mr. Doyle served with distinction. To the official task to which the people of the city called him, he devoted a fine and discerning touch, performed a work that was marked by that keen business judgment which had characterized his career as an industrialist of wide repute and marked distinction.

For Mr. Doyle to discern a need, one that was broad in its effect and one which when met would result in the greater good of the greater number, was for Mr. Doyle to appraise it, to study it, to apply to it that touch of judgment which was so richly his and, with generous act, to translate plans into the realities.

Fortunate beyond the power of reckoning is that community which has had a man such as Mr. Doyle for a citizen, and deep beyond reckoning is the loss of that community when such a man passes.

[From the Worcester (Mass.) Telegram of December 28, 1949]

BERNARD W. DOYLE

The passing of former Mayor Bernard W. Doyle is regretted in many circles, particularly in Leominster, where he had his home and lived all his life.

His career was a business romance. Starting as a bookkeeper, he became a great industrialist and a wealthy man. He was a director in many corporations in Leominster and elsewhere; his versatility matched his energy and enthusiasm; and he won all of his success by his own efforts.

He was a benefactor of his city, Leominster Hospital and Doyle Field being only two examples of his widespreading philanthropy. He was a generous contributor to his church and to many charities, and he helped many individuals who were sick and in need. He was especially interested in poor boys seeking an education.

He lived a useful life, freely sharing with others the riches which he gained. Yet with all his wealth he made no ostentation, and he never forgot his modest beginnings. He was a good man to know.

Vote Right—Or Else

EXTENSION OF REMARKS

OF

HON. ANTONI N. SADLAK

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. SADLAK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Haven (Conn.) Register of December 29, 1949:

VOTE RIGHT—OR ELSE

Taking a page from the CIO book, the American Federation of Labor has produced what amounts to a purge list of its own. In publishing a list of 107 Members of Congress whom it describes as having opposed the best interests of workers, the AFL gives notice of just how far this vote right—or else—spirit has come to dominate union thinking and to measure its arrogance and its disregard of not only national welfare but public welfare. Here, if anywhere, the average citizen finds the perfect example of the selfish interests President Truman is so fond of chastising when it suits his political purposes of the moment.

Publication of this list, particularly at this time, lets it be known that under administration coddling these unions have become so drunk with the wine of their own power that they can dictate as well as demand.

If they are not properly and soundly rebuked by a wrathful and aroused public for this cheeky piece of effrontery, we may soon reach a point where it can well be asked—why hold elections at all?

Why not allow the unions to select the candidates, conduct the elections, and pass upon the results? If the rank and file union membership is to be instructed in advance on not only how to vote but for whom to vote, why bother to send them to the polls at all? A single ballot cast by the national union secretary would then suffice.

It should be noted that the union makes passing bid for the approval of the farmers and small-business men. This is very "white" of them. However, the farmer and the businessman might like to retain the privilege of speaking for themselves, as the candidates and the issues might appeal to them as individuals, rather than as an organized and voiceless mass.

Because of long years of labor-slanted New Deal and Fair Deal legislation, the big union monopolists reached a height of power through which they could dictate what men could work and what men could not. As a country we came to a point where the economy was disrupted, slowed down, or brought to a halt at the whim of one man, or a small group of men. The tide of public anger brought a halt to such monopolistic advances, but was not of sufficient force to turn it back entirely.

Such antics as these should suffice to arouse the public to a point where a job but begun can be completed.

We Are Losing Patience

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. ELLIOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the January 1950 issue of the Progressive Farmer:

WE ARE LOSING PATIENCE

American Government is big business. Able men of unquestioned honesty and integrity are required in its administration for the public. Yet, no sooner does an able, courageous man accept an important post in public service than he becomes a target for the sharpshooters. No matter how honest he may be, no matter how capable in carrying out the duties of his post, the villainous crew starts tearing him apart.

There's always room for difference of opinion. Difference of opinion invites argument. But an argument, even though it be heated, does not justify vilification.

We are losing patience with those who differ with others just for the sake of being different. We have long since lost patience with those who, in their effort to win an argument, stoop to vilification of the person with whom they differ.

We hold no brief for those few who seek public post with selfish intent. These few are soon unmasked and made to pay the

penalty. Such persons should be exposed and we honor those who bring their shame to light. But in seeking out these few, why crucify the far greater number who are working ably in behalf of the public good?

How can any man in position of public trust render best service when he is forced to spend much of his time in parrying personal slander? How can any man, feeling the dejection that comes from unjust attacks, be expected to render top service? How can any able businessman, one who enjoyed the accomplishment of building up and directing a successful business, one who has enjoyed the prestige that comes from such accomplishment, have the courage to accept a high position in Government where he will be the target for all types and classes of vicious snipers?

We have many, many able men who have been in public service over a long period of years. These men continue to flinch when hit by the barbs cast their way. These men still have feelings. But their appreciation of the importance of the work they are doing, their feeling of responsibility for the proper performance of this work goads them on, dulls the pain from the uncalled-for attacks.

We are losing patience with those who can see no good, those who can think nothing but evil of those who disagree with them.

A Message on Tolerance From Our Colonial History

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. MULTER. Mr. Speaker, some weeks ago, on a Sunday afternoon—October 23, 1949, to be exact—about 35,000 people gathered on a hillside at Aaronsburg, Pa., to celebrate the one hundred and fiftieth anniversary of this village of 400 population. But more than the celebration of an anniversary—it was the celebration of an American ideal and a reaffirmation of the American way of life.

Aaronsburg, Pa., was founded by Aaron Levy, a Jewish immigrant from Europe, back in 1799. In the same year, the Salem Lutheran Church of Aaronsburg was founded on land donated by Aaron Levy. In recognition of this double anniversary and this act of early religious understanding, the people of Pennsylvania celebrated the occasion and the Governor of that State proclaimed Sunday, October 23, 1949, as "a day set apart for tolerance and understanding."

High dignitaries from all walks of public life joined in the special observances. All races and creeds which make up our country were represented. A great and inspiring patriotic community service was addressed by such eminent Americans as Gen. William "Wild Bill" Donovan, Supreme Court Justice Felix Frankfurter, the noted Christian minister, Dr. Daniel Poling, and Dr. Ralph J. Bunche, former mediator for the United Nations Commission on Palestine and now the director of the United Nations Trusteeship Division.

School children of the area presented a colorful pageant rededicating the lesson of brotherhood as it was understood and interpreted in the colonial period in American history. The events were broadcast by radio to the entire Nation. It was truly a memorable religious experience which touched many people throughout the country and brought to them a new appreciation of tolerance and democracy.

The message delivered that day by Dr. Bunche, it seems to me, is of significance to all Americans and should be read throughout the length and breadth of the country. He has succeeded so well in capturing the spirit of the occasion and in so thoroughly relating the full meaning of the message of Aaronsburg to present-day circumstances, that I am impelled to bring his words to the attention of all Members of Congress.

Mr. Speaker, the address by Dr. Ralph J. Bunche, entitled "The Aaronsburg Message," as reprinted in the Jewish Layman, of December 1949 is as follows:

THE AARONSBURG MESSAGE

(By Dr. Ralph J. Bunche)

One hundred and fifty years ago, the little village of Aaronsburg in Pennsylvania was founded by and named after Aaron Levy, a Dutch Jew. Aaron Levy, the Jew, was a citizen of the world. History attests that to him all men, irrespective of race or creed, were brothers. He was a man of tolerance and vision.

It is fitting that on the occasion of the one hundred and fiftieth anniversary of the village which he founded we should gather to muster new strength for the ideals and human values which Aaron Levy personified.

Were Aaron Levy here with us today, he would find himself in a strange new world. His village is no more remote. Man's progress in science, in the harnessing of nature, in transportation and communications, would confront him with an amazing and incomprehensible world.

Yet, in another and unfortunate sense, he would find himself not in unfamiliar surroundings. For despite the spectacular progress which man has made in this past century and a half, in things material, no parallel progress has been made in the spiritual realm, in the art of human relations. Aaron Levy would find in the world of today, and in abundance, the same racial and religious intolerances and prejudices, the same bigotries, the same hostility toward that which is strange, as characterized in the life of his day and age. But why? Why is it that man, with all his genius, has never been able to master the art of living with himself?

Who can doubt that there is anything so sorely and urgently needed in the dangerous world of today as a universal recognition of a fraternal bond of kinship among peoples, the realization of a sense of brotherhood among all men, of human understanding, of a broad spirit of tolerance toward those whose races, creeds, cultures and ideologies may differ from one's own?

There can be but one secure foundation for peace and justice in the world. That foundation must be in the hearts and minds of men. Without an all-pervading spirit of human understanding and brotherhood, the most perfect international machinery for peace will be of little avail. It is not the atomic bomb we must fear. It is in man's perversity, suspicion, and intolerance that our real danger is to be found.

No mechanical devices, no charters or pacts, can serve to save mankind from self-destruction if man in his spirit remains mean and brutish. There is but one road to peace and that is the road of human understanding.

Throughout man's recorded history his inter-group relations have been cursed by intolerances and bigotries. Yet there have always been individual Aaron Levys, men and women whose souls have transcended the narrow pettiness of their fellow-beings. In the meanest circumstances, in situations of sharpest conflict, there can always be found instances of man's ability to let his essential goodness shine through.

BROTHERHOOD UNDER STRESS

In the past 2 years I have spent much time in the troubled Near East. In that region, the Palestine issue had stirred emotions and animosities mightily. People, Arabs and Jews, had been speaking grimly of bitter hatreds, of enemies, of fighting animal-like to the death. Arabs and Jews were shooting each other down like cattle. Yet, even in that frightening atmosphere I have witnessed many evidences of man's innate ability to love his fellow man. I have seen Jewish doctors and nurses of the Hadassah Hospital in Jerusalem attend Arab patients in that hospital with kindest solicitude. I have seen, in the midst of the war, Arab legion troops lining the road between Tel-Aviv and Jerusalem, daily watch unarmed convoys of indispensable food and medical supplies for the beleaguered civilian Jews of Jerusalem pass through their lines, unmolested. I have seen in the Hotel des Roses at Rhodes the head of the Israeli delegation in the room of a member of the Transjordan delegation, sharing, in deep compassion, the sorrow of the Arab delegate at the word he had just received of the loss of his entire family in a tragic accident at his home. As I walked into the Arab's room to express my own sorrow, I saw there in silent mourning, not an Arab and a Jew, but only two sorrowful men, who though enemies yesterday were bound together today in a warm bond of human brotherhood by the stark tragedy which had befallen one of them. I have seen, last Christmas, Arab and Israeli military commanders open their tense military lines in order that civilians might pass through to worship at Bethlehem.

DIGNITY OF MAN

It is of very great significance that the 59 members of the United Nations have solemnly pledged themselves in the preamble of the Charter:

"To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women * * *"; and

"To practice tolerance and live together in peace with one another as good neighbors."

It is peoples with which the United Nations is concerned, for it is recognized that in the attitudes of peoples must depend the success or failure of this tremendous effort to achieve a peaceful and a just world. It is in the day-to-day relations of man with man that the future of all mankind is being determined.

In the modern world, the really challenging problem is the imperfect relations among its peoples. The costs to societies, domestic, and international, of bad human relations have been beyond calculation. In an atomic age, the future costs would appear prohibitive. Suspicions among peoples, group exclusiveness and chauvinistic pride, holier-than-thou attitudes, racial and religious bigotries, master race theories, nationalist egoisms—these are all cancerous growths which attack the very foundations of peace in the world. Indeed, the combination of bad human relations on the one hand and the development of the weapons of modern warfare on the other can only mean that all of us are living on borrowed time.

There is nothing in the nature of mankind which renders it impossible for men to master the art of tolerant and peaceful living.

The future before us would be bleak and hopeless indeed were it to be doubted for an instant that man has it in his power to purge himself of those iniquitous attitudes and practices which are leading him along

the road to doom. I do not doubt it. For I believe in man. I believe firmly in his reason and essential goodness. Bigotry, race-hate, intolerance, prejudice are not innate human traits. They are the products not of nature but of man's social experience. What society does it can undo. It is the will that we have lacked, not the means. We need desperately an intensive mobilization for world brotherhood. It is in our schools, our churches, our homes that the determined effort must be made, that the transformation in people's attitudes must take place. The obligation rests solemnly upon every individual who believes in democracy, who cherishes the American way of life, who loves peace.

It is to men of good will that the world today owes tribute. May their tribe increase.

Rent Decontrol Has Helped Spokane

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. HORAN. Mr. Speaker, in the Appendix of the RECORD, on pages A58 and A59, there appears a reprint of an article from the New York Times entitled "Upswing in Rents Is Found Where Controls Are Ended." While I cannot quarrel with any of the factual information quoted in the article, it appears obvious to me that the flavor of several statements therein is such as to indicate that excessive increases in rents were experienced in decontrolled areas.

Of the many cities discussed in the report, I am familiar with only one. Yet if the quotations on the city of Spokane, Wash., are a true sample of the fairness of the entire article, the writer of the story has badly distorted the national picture by omitting many important facts. Since the story of decontrol in Spokane has been fully and fairly told in the report of the Spokane rent advisory board to Housing Expediter Tighe Woods, dated December 14, 1949, I think readers of the Times report are entitled to view the full picture. For that reason I intend to insert the entire Spokane report at the end of my remarks.

The Times, for instance, quoted the Spokane report to the effect that rent increases since decontrol averaged 14.3 percent. That sounds like quite a bit but the reporter failed to mention that Spokane rents, prewar, were frozen at an abnormally low average. Even dozens of tenants in Spokane admitted that and asked for increases while controls were still on.

The Times' report further quoted the Advisory Board's report to the effect that "a few rental housing operators had taken advantage of the situation to put unreasonable increases into effect." What he failed to mention was that, after a week-long campaign urging tenants who thought they were being gouged to report to the Board, only 151 tenants out of a total of 21,000 home renters in the city filed complaints. That is just seven-tenths of 1 percent. Of these, most were tenants who had been beneficiaries of abnormally low rents—giving examples of two- and three-bedroom apartments at rents previously frozen at $35 per month.

Neither did the Times' reporter mention the reference to a number of landlords who actually reduced rents since decontrol.

Here, briefly, are a few other important facts on decontrol which the Times' reporter blandly overlooked:

First. New home construction has been accelerated in Spokane since decontrol.

Second. Rental units withheld from the market under control have now been rented.

Third. New construction for rentals has increased and homes previously built for sale are now being offered for rent.

Fourth. Landlords have been forced to clean up their premises, modernize facilities and reinstitute services abandoned under control, all to the benefit of tenants and prospective tenants.

Fifth. Distortions and inequities in rent values which controllers consistently refused to adjust have been leveled.

Finally, I should mention that the Spokane Rent Advisory Board, which made this survey, is a bipartisan body whose chairman, a Democratic State legislator, has made a record for fairness and impartiality in his work. Its report deserves to be interpreted by the press in the same spirit in which it was written and presented to the Housing Expediter.

SPOKANE, WASH., *December 14, 1949.*

MR. TIGHE WOODS,
National Housing Expeditor,
Washington, D. C.

DEAR MR. WOODS: Four and one-half months have elapsed since Federal rent controls were lifted from Spokane by your order. This report, showing the results of decontrol in Spokane, has been compiled by the rental advisory board for your information.

In summary, the records indicate the following developments:

1. Rents in Spokane are leveling off at rates about 14.3 percent above the controlled schedules. At the time of decontrol, the rent average in Spokane was $28.50 a month. The average monthly increase is $5.25.

2. Rents are being held at this level by the pressure of an expanding supply of rental accommodations and a progressively mounting ratio of vacancies.

3. New home construction has increased 94 percent over the same period in 1948 when controls were in force.

4. The Washington State Department of Health in its allocation of State funds credits Spokane with an increase in 12 months of 19,000 people, which is substantially higher than any other city in the State. Neither local pride nor local wishes enter into this calculation—it is a coolly analytical estimate for the disbursement of State funds. The population estimate of Spokane City, as of July 1, 1949, is 170,000.

Data supporting these and other important conclusions follow an explanation of the board's activities.

During this period of a free rental economy in Spokane, the rental advisory board has been compiling data on rent trends, availability of rental housing, new construction, and other related statistics. To implement its purpose the board established an office through which data could be channeled for proper recording. The press and radio have given substantial publicity to the request that rent changes be reported to the board in person, in writing, or by telephone, with particular accent on rent increases which tenants felt were unreasonable. This has been a continuous program since the date of decontrol, July 26, 1949. A digest of the board's records follows:

A. THE EFFECT OF DECONTROL ON RENTS

1. Tenant complaints: 151 tenants, out of a total of 21,000 tenant-occupied units, have registered complaints of unreasonable rent increases. The average OPA ceiling of the cases reported by the complainants was $35.40 a month. The average of their increase is $13.02 a month, being a percentage increase of 37.1.

2. Report of property rental agencies surveyed by the board: 5 leading rental agencies reported an average increase of 21.6 percent on the 699 units under their management. The average OPA ceiling of this group was estimated to be about $40 a month, and their average increase about $8 a month.

3. Owner-operated units: 95 percent of all rental units in Spokane are privately managed by owners, or lessors. Individually their operations are small, averaging less than three units each. Their sum total, however, comprises about 20,000 units. The surveys in this group covered 1,059 units. The average of the OPA ceilings reported was $35.70. Their increases average $4.18 a month, or 11.7 percent.

From these surveys, which were unusually comprehensive, the Board feels justified in concluding that the over-all average of rent increases since decontrol is approximately $5.25 over the controlled rates, or 14.3 percent.

B. AVAILABILITY OF RENTAL HOUSING

1. A tabulation of classified rental ads taken from newspapers shows a progressive increase since decontrol, with listings now exceeding those of March 1939, which was the last normal rent year in Spokane prior to rent controls. Counts were made from the last Sunday edition of each month shown:

	For rent	
	Apartments	Houses
July 25, 1948	37	13
July 31, 1949 (decontrol)	45	10
Aug. 28, 1949	55	20
Sept. 25, 1949	53	22
Oct. 30, 1949	79	35
Nov. 30, 1949	85	29
Dec. 4, 1949	81	41
Dec. 10, 1949	91	46

A count of the classified ads in the for rent columns of a Sunday edition gives you approximately 10 percent of the total units available. This is proved by comparing the annual vacancy surveys with a count of the Sunday edition ads for any number of years. They run fairly true to this pattern. There are probably 1,200 to 1,500 vacant units in Spokane at this time.

2. Sources of this expanding supply of rental units.

(a) Return to the market of hundreds of locked-up units following the removal of rent controls. (The existence of 1,200 of these was established by a survey conducted by the board when it made its recommendation to you that the area be decontrolled.)

(b) Return to the rental market of homes previously held for sale only, by owners who refused to rent them while rent controls were in force. (Some had been rented and vacated and were thus still under control. Others feared the inclusion of their property by legislative action.)

(c) Release of rental units by tenants who have purchased new homes.

C. EFFECT OF DECONTROL ON THE CONSTRUCTION OF NEW RESIDENCES

1. New residence building permits:

Under rent control in 1948:	
August	156
September	99
October	87
November	100
Total	432
After decontrol (July 26, 1949):	
August	156
September	229
October	165
November	247
Total	797

This tabulation shows that building permits issued during the 4 months following decontrol of this year jumped 84.4 percent over those of the corresponding period of 1948. The Spokane Home Builders Association reports that the stimulus to new construction followed immediately the announcement of decontrol and came at a time when building activity was lagging severely. Tenants in numbers who would normally have purchased their own homes elected to remain in frozen rental quarters as long as possible. When decontrol was announced, they placed their orders. This activity is undiminished.

2. The sale of existing homes. Realtors report an increase in the sale of houses which parallels the record of new construction. They report a scarcity of listings. This record is confirmed by—

	1948	1949
Mortgages filed:		
August	458	621
September	257	570
October	445	688
Total	1,260	1,879

This is an increase of 48.2 percent, which reflects the improved position of the home sales market following decontrol.

D. GENERAL CONCLUSIONS

1. The removal of Government rent controls has set in motion all of those factors which tend naturally to keep rents under automatic control.

2. Better and cleaner accommodations are being offered. Owners are beginning to find it necessary to clean up and dress up their units in order to hold and attract tenants. This has opened up a long neglected business field to the finishing tradesmen and to those who supply them with materials.

3. There is a better relationship between tenants and landlords. The return of competitive conditions in the rental market is compelling owners to make their premises attractive to tenants, and tenants now realize that if they become undesirable residents they cannot retain possession of properties against their owners' wishes. Consequently each is anxious to retain the good will of the other.

4. Decontrol is ending the distortions and inequalities in rent values which resulted from years of changing regulations. According to the realtors and home builders, the natural leveling of these maladjustments is putting the whole housing industry here on a sounder foundation.

E. FOOTNOTE COMMENTARIES

Board members James P. Dillard and Wayne Durham personally investigated more than a score of the facilities where tenants had complained of unreasonable increases. In some instances they were able to effect a moderation of the proposed new rates. They found that most of the complaints came from tenants who had been the beneficiaries of abnormally low rents—such as two- and three-bedroom apartments having floor footages running up to 1,200 square feet or more, at rents frozen at $35 to $50 a month. Many were even less. The highest ratio of increases came from this type of accommodation.

The unusually low rent schedules which prevail in this community are the result of rents being frozen at a time when thousands of its citizens had moved to the coastal regions, where prewar preparedness activities were centered.

With the competitive factor already holding rents to a level only slightly above the OPA average, owners appear to be facing a permanent loss in income position in the national economy, as compared with that of the prewar years.

Word has just been received that Western Builders, Inc., the largest home construction and rental company in Spokane, announced that effective today there will be a $10 decrease in all vacant units under their control.

This report is sent to you in compliance with your request that boards continue to function and operate even in areas that are decontrolled. We would appreciate your comments. Any correspondence should be addressed to the board in Mr. Dillard's office, 202 Hyde Building, Spokane, Washington.

Very truly yours,

JAMES P. DILLARD,
Chairman, Rental Advisory Board.

The Forgotten Soldiers

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news item from a recent edition of the Minneapolis Star-Journal of that city entitled "The Forgotten Soldiers":

FORGOTTEN SOLDIERS—PHILIPPINE WAR VETERAN PUSHES FIGHT FOR PENSIONS

(By Ben Kern)

In May 1948, a car honked at James M. Hamilton, 66, 3546 Forty-first Avenue South, and he jumped so hard he strained his hip.

A sympathetic streetcar conductor took Hamilton aboard and let him off at Fort Snelling, where Hamilton confidently limped into the veterans' hospital.

Having been an American soldier in charge of an artillery range finder in several engagements with Moros in the Philippine uprising following the Spanish-American War and having previously been a patient at veterans' hospital, Hamilton thought his hip was as good as fixed when he walked in.

NOT CLASSED AS WAR

He was wrong. A Veterans' Administration employee looked at his file and noticed that his service was limited to the Philippine uprisings subsequent to July 4, 1902.

"They told me in a nice way to scram," Hamilton says.

Hamilton's previous hospitalization in the veterans' hospital had been a "mistake." The hitch was that the Philippine insurrection from July 5, 1902, to December 31, 1913, has never been designated by Congress as a "war" and that body has never voted its veterans any benefits.

In Hamilton's words: "No bonus—no pension—no hospitalization—no nothing. I guess there aren't enough of us around. We don't make enough noise."

Since the day when he strained his hip, Hamilton has been trying to make some "noise" by writing to Congressmen and Senators, but it hasn't done much good.

Four proposals to grant the Philippine Insurrection veterans pensions have failed in Congress since 1939, the latest last January.

Yesterday Hamilton walked into the Tribune and plunked down some Mankato newspaper clippings describing Philippine Insurrection battles, one Philippine Insurrection Medal, one first-class gunner's medal, two Veterans of Foreign Wars Medals, and a copy of his honorable discharge with character of "excellent" and a listing of seven battles, engagements, skirmishes, and expeditions in which he took part from January 27, 1905, to March 15, 1907.

TELLS OF BATTLE

Headlines on two of the clippings were: "Fight hard battle" and "Battle with Moros." The third quoted a letter he wrote to his mother in Mankato: "There were about 1,000 Moros killed. I saw the whole thing, as I was there all the time. Most of them were killed by our shell and shrapnel, and by the rapid-fire guns (the barrels were set in a circle and the hammer went around like the hand on a clock from a long distance)."

About 20 American soldiers were killed in this battle, Hamilton said, "and there were more men killed and wounded in the so-called peacetime battle of Bud-Dajo in March 1906 than in the wartime bombardment and capture of Manila."

(This last fact was cited in a speech by the chairman of the Philippine-Pacific War Veterans national legislative committee, an excerpt of which was among Hamilton's documents.)

"Some war veterans who never got out of the United States are getting pensions, but we get nothing," said Hamilton, "and if Congress doesn't get going, we'll all be dead."

Hamilton is a yardmaster for the Great Northern Railway Co. He has been a railroad man for 31 years and could get some railroad retirement pension, but not enough to suit him. "If I could get a veteran's pension, I'd walk off the job tomorrow," he said.

Economy and Competence in Government

EXTENSION OF REMARKS
OF
HON. CLARENCE J. BROWN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. BROWN of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Herbert Hoover before the National Reorganization Conference of the Citizens Committee on the Hoover Report, Shoreham Hotel, Washington, D. C., December 12, 1949:

REMOVING OBSTACLES TO ECONOMY AND TO COMPETENCE IN GOVERNMENT

Six months have passed since our Commission finished its reports to the Congress on economics and improvements in the executive branch.

In the meantime, these recommendations have had a magnificent support by the press and the public. Added to this is the astonishing growth of your committee of citizens under the admirable leadership of President Johnson, of Temple University.

This has become a crusade for the intelligent reduction of the expense of government. It is a crusade to clear the track for competency. It is a nonpartisan crusade.

It is a job for citizenship rather than partisanship. The Commission itself represented both political parties. Its work is supported by President Truman and by the leaders from both sides in Congress. Your citizens committee embraces our two living and wise former Vice Presidents and five former Cabinet officers from both the Democratic and Republican side. You include educators, writers, editors, publishers, labor, and farm leaders. You come from every State and congressional district. You are a mighty host and you are in dead earnest.

It was not the field of our Commission to discuss the merit or demerit of governmental policies. Whatever those functions may be, our purpose is to make them work more economically, more efficiently, and with better service in their contacts with the people.

PROGRESS MADE

You can have confidence that you are succeeding.

The last session of Congress adopted several important recommendations of the Commission and of the President. These measures have already secured large savings. In the Defense Department alone they will soon be at the rate of about $1,000,000,000 a year, and Secretary Johnson believes they will amount to fully $2,000,000,000 without impairing national defense. And other measures have been enacted into law. We are already clearing the tracks for competence in Government.

I am going to make some suggestions as to what we should undertake next. But first, I want to tell you four reasons why this crusade of ours has wider implications than specific reforms.

1. Fiscal and economic survival

The first implication relates to our fiscal and economic survival.

During these last 6 months, the financial situation of our Government has become still more difficult. Federal expenditure of over $43,000,000,000 and a deficit of over $5,000,000,000 are announced for the present fiscal year. I believe it may be much greater for the next fiscal year. We may be turning two Frankensteins loose in the land. Their terrifying names are Higher Taxes and Inflation. We are interested here in combating them.

When you listen to "billions" over the radio, you no doubt try to size them up in terms of your church contributions. I might remark that the decimal point leads a restless and uneasy life in the Federal Government. Those groups of three ciphers which are separated by commas are moving steadily to the left.

Government spending and taxes must be related to increased per capita production. Therein lies the key of increasing new enterprise, increasing real wages to our workers, increasing real income to our farmers, and an increasing ability to give security to our youth and our aged. Government is a powerful element in this progress. The method and amount of taxes can seriously affect productivity.

Our economists seem to agree that taxation beyond 25 percent of our national income will bring disaster. Possibly your life has been brightened by some economists who dismiss the Federal expenditures as amounting to only 20 percent of the national income, anyway. On that subject, if you add up the actual and prospective annual expenditures of the Federal Government and the local governments, and if you truly compute the national income, you will find this warning red light no longer shines with an intensity of only 20 percent but with considerably over 30 percent. This means far more than 30 percent of the national income. It is a combustion of your savings and your possible standards of living.

Some one remarked that about the time we think we can make ends meet, somebody moves the ends. Despite this, you should not be discouraged in the work we have undertaken. Whatever we can accomplish helps confine the two Frankensteins. And we can ask our people to think it over.

2. Education in good government

Second, another of the wider implications of this crusade is its byproduct in public understanding. Millions of American people are receiving a lesson in the fundamentals and methods of good government. We are making some of the people economy-minded.

One of our results has been the setting up of Reorganization Commissions in 20 States and 10 municipalities for a treatment similar to that of our Commission. We are thus clearing other tracks of obstacles to competence in Government.

3. Preservation of the American experiment

Third, in a larger sense, this is a crusade to make democracy work. There is today much apprehension lest the American experiment will fail. We have need to reestablish faith that the whole of the preamble to the Declaration of Independence and the Gettysburg Address are still related to Government. If the Republic is not to be overwhelmed, the people must have such methods and systems as will enable good officials to give them good government.

Success in our crusade will help bring faith instead of cynicism and disillusionment.

4. Helping in the cold war

Fourth, success in our crusade to reduce cost of government is a necessary condition to winning the cold war. We are fighting this war at frightful cost. The way to win that war is to reduce our wastes, give competence a chance, and defer some Government ventures. By these reforms and these self-denials, we can help disappoint Mr. Stalin.

A PROGRAM FOR ACTION

The question before us now is how to further these reforms. Somebody said that wisdom consists not so much in knowing what to do with the ultimate as in knowing what to do next.

Obviously many of these reforms require legislation. Our congressional leaders requested the Commission staff to draft this legislation. The Budget Bureau is cooperating. Congress is a busy institution, and we cannot expect it to do everything all at once. It has the responsibility to inquire into these proposals, and it has the intricate job of putting them into law as far as they meet with its approval.

Having regard for the burdens of our Congress, it would be well to concentrate on some of the most urgent of these reforms. Some may differ on what this list should be. My own belief is that the following are in the most urgent category:

1. Reorganization of Civil Service—the personnel problem.
2. Reorganization of Budgeting and Accounting.
3. Reorganization of the Post Office.
4. Unification of the Federal hospital services.
5. Unification of water conservation services.
6. Unification of agricultural land services.
7. Unification of transportation services.
8. Relief for the President of the United States.

This is not the whole program, but it would do to go on with.

I believe that $2,000,000,000 of savings and more efficient service to the public is to be had in these areas alone.

The reports of the Commission are filled with facts in support of these eight reforms. I shall only mention them briefly here.

THE CIVIL SERVICE

Above all things, if we are to have economy and service to the people, the country must have a skilled, nonpolitical civil service, and one which will attract and hold the best in the land.

At present "Red Tape" himself dwells in the civil service of 2,200,000 employees. The result is an accumulation of waste and deadwood—and discouragement of good officials. The sword to cut this Gordian knot is to decentralize the engagement and control of these employees (except for certain general services) into the departments and agencies. This must be done under rules to be established by the Civil Service Commission and enforced by it.

BUDGETING AND ACCOUNTING

Next on our list of priorities comes budgeting and accounting. I am sure you will agree with me that this is one of the dullest subjects on earth, but it is potent nevertheless. The ghost of Alexander Hamilton still wanders in our fiscal machinery. I doubt whether more than 15 men in the world can make head or tail of the 10,000,000 words and sums in the present Federal budget—certainly not all at one time.

We urge that the budget be rebuilt on a functional or performance basis, by which the costs of a given function can be compared year by year. That is both before and after taking. This system has been written into the law as to the armed services. It should be made universal. Hitherto no one could know what it costs to operate a hospital or the forests. You would need a sort of Geiger counter to discover it in two dozen different appropriations.

The accounts, except for Government corporations, are kept by the Congress, not by the executive agencies. Any executive needs to sit on top of his accounts.

There has been no adequate personal or real-property accounting at all. We estimate that the Government has $27,000,000,000 of personal property. When officials know more about what all this property is composed of, and where it is, the departments might live off this fat for quite a while.

THE POST OFFICE

The Post Office is a big business. Our criticism is not directed to its 500,000 employees. They are courteous, helpful, hardworking, and the friends of everybody—the nearest agent of Santa Claus most of us meet. What we object to is the form of organization that is a relic of Ben Franklin plus 160 years of oft-conflicting laws. They cover more than 800 finely printed pages.

We want the Post Office set up as a modern business. We want it taken out of politics.

UNIFICATION OF GOVERNMENT HOSPITALS, PUBLIC HEALTH, AND MEDICAL RESEARCH

Next we propose a unification of the Government hospitals, health service, medical research and guidance to governmental grants-in-aid to civilian hospitals. As an indication of waste, there already existed in Federal hospitals at the time of our investigation beds for 225,000 patients, and only 155,000 were occupied. Yet Congress had made appropriations for, or authorized, hospitals with 50,000 additional beds, despite the fact that 70,000 are empty—at a cost of $1,300,000,000. President Truman canceled out $300,000,000 of this program, and Congress restored the authority.

But beyond savings, we are striving for something even greater. That is better medical service to our armed forces, our veterans, and our seamen. We also want this service set up better to stimulate preventive medicine. We want it not to deprive our civilian population of its doctors.

UNIFICATION OF OUR WATER-CONSERVATION SERVICES

Fifth on our list of priorities is the Federal conservation of water resources. At present this function is scattered over many agencies. They employ over 5,000 engineers and about 70,000 other people. They overlap;

they have duplicate offices; they compete in procurement of both supplies and skills and jobs to do. A pork barrel floats in those rivers.

We not alone want to save great sums of money but we want to save water.

UNIFICATION OF FEDERAL LAND MANAGEMENT

The sixth on this preferential list is Federal land management. In continental United States, the Federal Government has about 169,000,000 acres of grazing and forest lands administered by the Department of the Interior. We have about 65,000,000 acres of forests and grazing lands administered by the Department of Agriculture. In the Western States they compete with each other and, cheek by jowl, each maintains a staff in almost every county. Millions are being wasted "in them thar hills."

UNIFICATION OF TRANSPORTATION SERVICES

Seventh in these urgencies is solution of a major problem in Government services to transportation. Aside from the agencies regulating transportation rates and services, there are about a dozen agencies scattered over a dozen different parts of the Government to deal with these matters. We must eliminate their overlap and waste. We should give the people one central agency to go to when they seek Government service in these matters.

There is something even more vital. The Federal Government directly or indirectly subsidizes or provides facilities for aviation, highways, waterways, and overseas shipping. We loan money to the railroads. They are all an essential part of our national defense. We must have coordination of our national policies, aiming at the development of a balanced national transport system. The troubles of the railroads are a daily exhibit.

RELIEF FOR THE PRESIDENT

Finally, there are some 65 different agencies in the executive branch which report directly to the President. If he gave to each of them an hour a week for administration, he would have no time to formulate leadership in the major policies of the Government, or attend an occasional game. By our proposals we can ultimately reduce these 65 agencies by more than one-half.

Beyond this there is a big confusion of authorities between bureaus and between the Executive and the Congress. They form great barnacles on the ship of state. Under our Constitution, in logic and common sense, there can be only one Chief Executive officer in our Government, delegating authority ultimately down the line to the office boy. In executive matters Congress should be content to be the board of directors, with agencies of inspection and audit to see that their decisions are properly executed.

OTHER REFORMS

There are many reforms, other than the eight goals I have mentioned. We can furnish them on demand.

OPPOSITION

We have opposition of course. There are still people who hold to the theory of reduced Government expenses but not to its practice. Your job is to minister to their mental disorders. The best treatment is to persuade them to join in this historic movement toward progress and enduring national security.

IN CONCLUSION

These are not merely statistical assertions nor academic theories. These forces reach into every cottage in the land. They carry with them the future of our youth and of our country.

We must conserve our strength and stop wasting our heritage if we are to survive as a free people.

"Our Terrible Blunder Regarding Formosa Invites Disaster," Says the Editor of the Altoona (Pa.) Tribune

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. VAN ZANDT. Mr. Speaker, a terrible blunder has been committed by the administration in its handling of Formosa.

This blunder is best illustrated by the following editorial dated January 6, 1950, from the pen of Mr. Robert W. Boyer, editor of the Altoona Tribune, Altoona, Pa.

(The editorial follows:)

A TERRIBLE BLUNDER

It is entirely possible that history a decade or so from the present will call President Truman's refusal to try to save Formosa from the Communists America's major policy error in the Far East, topping the whole China debacle.

It is, too, entirely possible that this Formosa declaration will be revealed as one of the most costly errors in American history, perhaps surpassing the tragic blunder committed by the American Government on Pearl Harbor.

Mr. Truman said Thursday that this country will not intervene to save Formosa from the Chinese Communists.

It seems almost beyond belief. In the light of events, it seems downright stupid. An invitation to disaster.

We do not want war, nor do we want anything that will cause war. No sane person does. Yet Formosa represents the crux of everything the administration says it has been fighting the Reds to obtain, except for this vital difference:

The administration, Mr. Truman and his cronies, have centered their attention on western Europe, persuaded thus by the world's ablest diplomats, the British.

In western Europe, we have provoked the Russians to the point of desperation, even while they have been provoking us likewise. We have risked war by sending military advisers to Greece, by sending arms to Greece and Turkey, by organizing the whole of western Europe against the Russians.

It is a strange thing, but true, that Greece and Turkey were far more vital to Britain than to us. Britain did not want Russia to gain domination of the Mediterranean—British life line to the east.

And so, we stuck our necks out for Britain.

But, what do we do for ourselves in the Far East? Formosa is vital to ultimate defense of the United States, so Mr. Truman turns it down.

In the Far East, Mr. Truman refuses to move to save this country's defense arch in the western Pacific, Formosa.

General MacArthur is regarded, not only in America but in London and other world capitals, as the foremost military authority on the Far East. Even the British have not hesitated to acknowledge his leadership in this respect, as demonstrated when he was given top command over Australians during World War II.

General MacArthur advocates that we endeavor to save Formosa. This island lies athwart a perimeter of potential United States defense bases in the western Pacific. Formosa in the hands of the Communists places us in exactly the same position we were in when Japan struck at Pearl Harbor. Even worse, for then we had free access to China. Now we haven't.

As we have said time and again, we need a President and Secretary of State who will not be overawed by European diplomats and who will assume real leadership in world affairs.

Observe how Britain follows its own course. It has decided to recognize the Chinese Communists.

Britain is playing the game of another Chamberlain Munich—by appeasing the Reds—who cannot be appeased.

Mr. Acheson says this country will not alter its position against Red China—but, he infers—"yet."

Senator CONNALLY says Formosa is not important enough to risk war over.

Was Greece? Was Turkey? Is western Europe?

Is it important that we let the Reds take China? Is it important that we give them leave to take all of Asia? Is it important that we give them Formosa, and thus give them, too, a terrible base for Russian naval and air strength to dominate the Philippines, to harass Hawaii, to menace Guam and Wake and even Alaska and our west coast?

If communism is a threat in western Europe, why is it not at least an equal threat in China, in Formosa, in Indochina, in Burma and Malaya?

The inconsistency—the utter weakness—of Mr. Truman's foreign policy is appalling.

He drives us down a road upon which we squander our strength in all quarters of the world, the while he rants about the dangers of Red Russia; then he proceeds to hand over to Russia the domination of all we fought to retain in World War II in the Pacific.

How Cheap Is Cheap Power?

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 12, 1950

Mr. SCUDDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the San Francisco Chronicle of January 7, 1950:

BOOKKEEPING AND CHEAP POWER

In one point particularly President Truman's statement Thursday on his water and power program was incomplete. He said that where private interests can transmit power as cheaply as the Government he will be glad to see them take on the job.

What did he mean by "as cheaply as the Government"?

Did he have in mind the cost figures as shown by the bookkeeping of Government enterprises as compared to the cost figures shown by the bookkeeping of private enterprises of the same nature?

The accounting of Government enterprises never presents a true picture. The Government pays no taxes to States and municipalities on the physical properties it installs and uses; it does not, at the end of the year, have to give up a large share of its income from them to the Internal Revenue Bureau.

The Government uses interest-free funds in its enterprises. It is true that some of these enterprises are supposed to return interest in time from their operations. But

this is a deferred return; the interest is not compounded as it would be in the case of private enterprise deferring its interest payments.

The Government puts into its enterprises all sorts of subsidies which do not appear in their cost accounting.

With the utilities it operates the Government sets up for itself a selected market through maintained priorities. In other words, it takes the cream, whereas the privately owned utility has to take the skim milk along with the cream in the areas it serves. If this gives the Government an advantage it also makes it tougher for consumers outside its priorities by making it tougher for the private enterprises that serve them.

Do these factors make Government enterprises cheaper to the people? Not by one penny. The people have to make up every one of them by taxes. The subsidies all come out of the Treasury, which gets its money from the people's pockets. The people have to dig up taxes to pay the interest on the funds the Treasury raises to put into the construction and operation of Government enterprises. The people go down into their jeans to make up the taxes which Government does not pay on its enterprises but which would be paid by private capital if it built and operated them.

Government bookkeeping brings the appearance of its cost figures down by omitting such factors, but it is only an appearance. The hidden cost to the people remains for them to pay.

Add the costs of bureaucratic red tape, which the Hoover Commission has shown to be excessive, and the human nature factor—the spenders of Government money have no critical stockholders on their necks—and it is altogether unlikely that Government can construct and operate any enterprise as cheaply as can private interests. This would be clearly shown if Government enterprises were compelled to keep their books in the manner State commissions compel privately owned utilities.

The President's statement needed clarification.

Remember Poland

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. HESELTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered recently by Miss Grace Humphrey, a graduate of Wellesley College and the author of several books. The address was broadcast under the sponsorship of the Western Massachusetts Congress. Miss Humphrey emphasizes the immortal moments in the history of Poland with which every free man and woman should be familiar. Our responsibility for the plight of this gallant nation is one of the black spots in our history. We should remind ourselves constantly of the words Miss Humphrey quotes from the Polish national hymn, "Poland is not yet dead, while our lives remain." When the day comes of Poland's liberation, may this Nation have done all within its power to that end and so, in some measure, have removed the guilt we now bear for the stupid, cowardly, disgraceful thing we joined in doing at Yalta.

The address follows:

Ladies and gentlemen, remember Pearl Harbor. Remember Dunkerque. Remember Stalingrad. I would ask you to remember Poland.

Twice Poland, the knight among nations, has saved western Europe from invaders from the east. In 1683 the Turks marched as far west as Vienna and only the timely arrival of the Polish king, Jan Sobieski, with his army saved the Austrian empire, saved western civilization. In 1920 Polish soldiers defeated the Bolshevists in the battle of Warsaw, which Poles call "the miracle of the Vistula," so hopeless resistance seemed at the outset—a 2-percent chance of winning, said their leader Pilsudski, but hour by hour that hot August day revised his figure upward until the Russians fled in utter rout. Have you forgotten those two victories and their results for Europe?

Poland, first to fight against Hitler's aggressions when, with no declaration of war his Brown Shirts invaded the so-called corridor in September of 1939, and entered Danzig, a so-called free city under the League of Nations, and World War II began. Have you forgotten listening to the broadcasts of Mayor Starzynski, telling the day-by-day events in Warsaw and reminding England of her promise to help?

People remember Mussolini's stabbing France in the back, dramatized by Churchill over the radio. Poland, too, had a stab in the back from Soviet Russia, despite the treaty of nonaggression, a bully's threat of attack with planes and tanks and artillery at the very time the Poles were doing their best to meet Hitler's blitzkrieg, until Warsaw burning, with no water to fight the fires breaking out everywhere, had to surrender. Polish military resistance on Polish soil was ended, but they fought on; 12,000 of their men in England's RAF made brilliant records during the bombing of London; their troops at the Cassino monastery added a new glory to the long list of Polish successes. Have you forgotten?

Then came a German army of occupation in Poland. The faculty of the university in Krakow summoned to a conference with the German governor and were carried off to concentration camp. That university is the oldest in Poland; its library endowed by the beautiful girl-queen Jadwiga, had the largest book collection in the country, with many rare volumes, some the only copy in the world. Soldiers sorted out the books printed in German, to be shipped to Berlin. All the rest they carried into the courtyard of that beautiful Gothic building where I have walked so often, piled them around the statue of Copernicus, once a student there, and set fire to them. Have you forgotten?

Poles are skillful plotters, thanks to the 120 years of the partitions. Scarcely had Warsaw surrendered than they organized the underground—some men and women with the same tasks as in 1915 and 1916 and 1918 when they lived through another occupation. They planned and waited till the fortunes of war brought a Soviet army westward in July of 1944. Approaching the Polish capital, they signaled the Poles to rise. Led by General Bor, the uprising broke out at an agreed-upon hour in one quarter of the city after another, timed like a radio program. The Russians were just across the bridge in the suburb called Praga.

"Can you hold out 5 days?" they had asked.

"Yes."

"We ought to make it in 2, but we'll say 5 days just in case—"

Some RAF planes flew over Warsaw, dropping medicines and ammunition at a certain minute at a certain street intersection—a perilous mission that, but many pilots volunteered. And just across the bridge were the Russians waiting. It's not a long bridge, shorter than our Brooklyn Bridge; I've often strolled across it. Meanwhile from this section held by the Poles to that one, from Pilsudski Square to Mokotow, from the suburb Zoliborz to the beautiful Stare Miasto, Polish women and high-school students carried messages and grenades and morphine, crawling through the sewers as Jean Valjean crawled through the sewers of Paris—but that was in a book; this was reality; I've talked with women who did it.

Not in 2 days nor in 5 did the Soviets cross the Vistula to Warsaw, nor in 10, nor yet 20 days. Sixty-three days the underground held out at last. General Bor surrendered then only because there was no more morphine for the wounded, no more bandages, no more ammunition, no more of anything. How proud I was to be invited to the city hall when the mayor of New York presented to that Polish general the freedom of the city.

To an American journalist who told the story to me, the Russians tried to explain the delay: "We had to rest our men. We had to regroup our divisions. And—anyway—the uprising wasn't well organized."

A refugee friend of mine who was in the underground all those weeks of bombardment exclaimed, "Not well organized. Why, I was 1 of 200,000 Warsaw women organized in 2-hour shifts for duty day and night. My turn was always midnight till 2 a. m.; but it made no difference—no one could sleep, ever; the German artillery never stopped firing. All the men, civilians and soldiers, were organized with the same meticulous care." Have you forgotten the uprising?

The Yalta Conference between Churchill and Roosevelt and Stalin meant one more partition for Poland. As once with Czechoslovakia, the Allies sold Poland down the river, giving Russia her eastern provinces and taking territory on the west from Germany to compensate her. No one consulted the Polish government in exile, no one asked the hundreds of thousands of people affected by this sudden change of frontiers. Poland sold down the river because, forsooth, Roosevelt and Churchill thought it necessary to give Stalin whatever he suggested. Have you forgotten Yalta?

Not one quisling could the Germans find in Warsaw. Have you forgotten that? And the much publicized parliamentary elections which the Allies promised would be honest, under their supervision. Honest? with opposition parties not allowed to hold meetings or publish their newspapers, even to put up candidates? The American Ambassador, Arthur Bliss Lane, watching affairs in Poland during those anxious months, wrote a book, I Saw Poland Betrayed, giving the story of the puppet government installed in Poland by Moscow. Have you forgotten that?

How long will America forget the Poles? Their stirring national hymn begins, "Poland is not yet dead while our lives remain." Justice will come, the enemy be expelled, freedom restored. Take courage, Americans and Poles alike.

"Their cause is just and their victory certain,
For God is always the upholder of justice."

"Slave Labor" or "Semiservitude"

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 12, 1950

Mr. MURRAY of Wisconsin. Mr. Speaker, on the floor of the House last

Monday, January 9, my distinguished colleague Hon. CARL D. PERKINS, of Kentucky, made inquiry about the provisions of the Sugar Act, at which time I quoted from a letter from the Department of Agriculture. Under unanimous consent, I am placing this letter in the Appendix of the RECORD together with a newspaper article from the Washington Times-Herald of May 4, 1947:

UNITED STATES
DEPARTMENT OF AGRICULTURE,
PRODUCTION AND
MARKETING ADMINISTRATION,
Washington, D. C., March 25, 1949.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in response to your telephone request to the Sugar Branch for information concerning features of the Sugar Act and its administration.
